Regarding Church Organs

And the Value of a Guaranty

THE WORTH OF A GUARANTY DEPENDS ON THE MAKERS

Financial Standing

If he is new to the business, but has plenty of money, perhaps you can make him give your money back if his guaranteed organ goes wrong.

Business Life

Some manufacturers are in business to stay; others move on after a few months. If your organ maker stops making and selling organs during the term of the guaranty, his promises will not do you much good.

Reputation

If your organ maker has been in business a long time and has always kept his promises to others, you have a right to rely upon his dealing fairly and honorably with you.

WITHOUT THESE HIS GUARANTY IS WORTHLESS

THE WORTH OF THE ESTEY ORGAN COMPANY'S GUARANTY IS KNOWN

By their well-known financial ability.
By their sixty years of past business life and growth.
By the fourth generation of Esteys now growing up to continue the business.
By their unbroken record for doing the square thing.

No matter how small or how large an organ purchase is contemplated, don't fail to write

THE ESTEY ORGAN COMPANY

The Musician

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY
OLIVER DITSON COMPANY

SUBSCRIPTION PRICE

SINGLE COPY.....$ .15
PER YEAR.....1.50

Free of Postage in the United States, Canada, and Mexico.
Foreign Postage, 36 Cents.

The entire contents of this Magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

DISCONTINUANCE.—IF YOU WISH THE MUSICIAN STOPPED, AN EXPLICIT NOTICE MUST BE SENT US BY LETTER; OTHERWISE IT WILL BE CONTINUED. ALL ARREARAGES MUST BE PAID.

Subscriptions to this publication are not discontinued at expiration unless so ordered by the subscriber. The courts invariably hold a subscriber responsible to the publisher for the subscription price of all papers received until the paper is paid for in full up to date and ordered discontinued.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor, MR. THOMAS TAPPER.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 18th of the month.

All REMITTANCES should be addressed and made payable to

OLIVER DITSON COMPANY
Publishers of THE MUSICIAN,
Ditson Building, 150 Tremont Street
BOSTON, MASS.

THE MUSICIAN begins with this number its eleventh year and a new epoch in its career. In the future we shall have a greater proportion of foreign contributors, and an even broader range of thought will be opened to our readers. American writers will still be well represented, however. The eagerness with which THE MUSICIAN has been welcomed in Europe speaks well for American musicianship.

In this issue begins a series of practical articles on the voice, by William Shakespeare, the famous London teacher. In the February issue will begin the serial publication of the *Commonplaces of Vocal Art* by Louis Arthur Russell. The February MUSICIAN will also contain a biography of Loeschhorn. This will be the first of a series of biographies of the semi-classicists, for which we have received many requests. Czerny, Duvernoy, Heller, Bertini, Hiller, Lemoine, Spindler, and Wieck will be taken up in later issues. A series of articles on pianoforte technique, by Mrs. Mary Wood Chase, will begin in the March MUSICIAN. This will constitute a most thorough work on the subject, and will be published at a later date in book form. Dr. C. W. Pearce, a famous English musician, will contribute articles this year on the organ and choir. There will be several additions to the list of biographies of American composers. Mr. Finck is now preparing one of Edward A. MacDowell, which will appear in an early issue.

A new department, the "Amateur's Page," will interest especially the many people who love music but do not study it professionally. *Music Worth Knowing*, *Music at Home*, and *Books about Music* are titles which show in a general way the scope of this page.

The regular departments, upon which the prestige of THE MUSICIAN is largely built, will be continued. Especially valuable to the editor are the suggestions which our readers send to him. These are always welcome.

VICTOR TALKING MACHINES AS PREMIUMS

By arrangement with the manufacturers of the Victor Talking Machine we are able to offer their Jewel Premium Outfit for nineteen full paid subscriptions. This outfit consists of a highly polished dark oak cabinet, the latest improved concert or exhibition sound-box with case, a seven inch turntable and an eighteen inch black body horn with brass bell. For twenty-five full paid subscriptions the No. 1 Premium Outfit will be given. The cabinet which goes with this outfit has a hinge top. The turntable is ten inches in circumference, and the horn twenty-four inches long. Two hundred needles with needle-box, and three ten-inch or six seven-inch records will be included with either outfit. The Victor Machines will play all disk records. Premium offers are also made on extra records of either size, in any quantity.

On receipt of the necessary number of subscriptions the outfits will be crated and shipped to any address, the only expense being the cost of transportation. These machines are of the latest improved models. The Victor is the only machine which gives a perfect reproduction of the speaking or singing voice, or of musical instruments. We are distributors of Victor Talking Machines, and carry the most complete stock of machines and disks. Catalogs containing full information free for the asking.

A NEW EDITION OF FOSTER'S SONGS

Twenty Songs, by Stephen Foster, is a selection of the most characteristic of the 164 songs by this composer. Foster was the founder of American folk music. *My Old Kentucky Home*, *Massa's in the Cold, Cold Ground*, *and Old Folks at Home*, are still sung throughout

STEPHEN C. FOSTER

the country. They have found a permanent place in the hearts of the people. N. Clifford Page, the editor of the present volume, has revised the accompaniments, and has made them more fit for the modern piano by eliminating the evident traces of hasty composition. Marks of expression and phrasing have been added, and the choruses have been arranged for mixed voices. They may be sung as solos, if preferred.

The volume is one of the Half Dollar Music Series, and will appear shortly after this issue of THE MUSICIAN. It is a source of satisfaction to know that the fame of these songs has spread beyond our own borders, and that they have attracted much attention in Europe. The volume is worthy of the composer and his established and growing reputation.

BACK NUMBERS

Although many thousand extra copies of each number of THE MUSICIAN were printed during the past year, several issues have been almost entirely exhausted. The same is true of the *Choir and Choral Magazine*. We have on hand, however, a few complete sets of both magazines. These, while they last, may be had at the regular subscription price. Those who applied too late to get certain issues of the past year may secure them now if they take all twelve numbers. Teachers who make a practice of cutting out articles or pictures for musical scrap books can use both sides of the page if they order duplicate sets. Over 500 titles of sketches, essays, and other articles are given in the index of THE MUSICIAN for 1905. There are also eighty-four separate selections of vocal and instrumental music.

The *Choir and Choral Magazine* for 1905 contains 152 pages of new church music, the great bulk of which consists of selections for mixed voices. The music alone represents many times the price asked for the complete set of twelve issues. The subscription price of the *Choir and Choral Magazine* last year was $1.00, but we have decided to offer these sets at 50 cents each.

SEVEN GRAND RENEWAL OFFERS

THE MUSICIAN and the *Choir and Choral Magazin* for one year, $1.60.

THE MUSICIAN, the *Choir and Choral Magazin. The Organ Loft* for one year, $3.10.

The *Choir and Choral Magazine* and *The Organ Loft* for one year, $2.00.

THE MUSICIAN for one year and either volume of Handel's *Songs and Airs* in paper, $1.75; in cloth, $2.25; THE MUSICIAN with both volumes in paper, $3.00, in cloth, $4.00.

THE MUSICIAN for one year and *A Guide to the Ring of the Nibelung* by Richard Aldrich, $1.63.

THE MUSICIAN for one year and either part of *Mason's Pianoforte Technics*, $1.60; with both parts, or complete in cloth, $2.10.

THE MUSICIAN for one year and *Elson's Music Dictionary*, $1.60.

TESTIMONIALS

I wish to thank you for your great courtesy in sending me a typewritten list of the piano pieces revised and fingered by John Orth. I shall order the Orth Edition as I need the pieces. I think that every earnest teacher and musician should give preference to such editions. They are supplied with modern fingering and with phrasing marks. The slur is used in its only legitimate sense, to show the punctuation and nothing else. Adequate pedal signs have been provided in all cases. All these things I find in Mr. Orth's work, more particularly in the later numbers.

JULIUS R. WEBER, CALIFORNIA.

We shall be pleased to send to any teacher a copy of the typewritten list to which Mr. Weber refers. [ED.]

The magazine is a good and useful publication, and deserves a wide circulation. It is good to the beginner, the advanced student, and the general music-loving public, and is a help to all.

R. E. FOX.

THE MUSICIAN is improving rapidly, and I find that the children enjoy it as thoroughly as the older people.

MRS. LILLIE HERSEY GREEN.

It seems to me that THE MUSICIAN is getting better all the time. It is the finest book of the kind I ever subscribed for. The plates of different artists are gems. It gives us all an opportunity to know all these celebrated artists and musicians. When we read or speak of them we know how they look and we become friends of one family. The reading matter is interesting and instructive for young and old alike.

MARGARET BLAKE ALVERSON.

THE MUSICIAN is steadily improving in beauty and general make-up. A fine array of writers is represented. I am especially glad to see the excellent photographs, illustrated supplements, and biographies of contemporary musicians.

CLARENCE CHANDLER.

I renew with great pleasure my subscription to THE MUSICIAN. It is a truly wonderful magazine, and one that every musician must delight in possessing.

I advise all my pupils to subscribe for it. We are more than benefited by its contents.

MADAME E. S. LORRAINE.

I have been a subscriber for a number of years. I am a teacher and earnest student, and could not do without THE MUSICIAN. Have noted its improvement each year.

MISS M. GRACE ROWLEY.

I have been receiving your paper regularly for over a year, and like it very much.

W. H. DAVIS.

After examining carefully the *Graded Course* for the piano by Tapper, I find it to be unsurpassed by any other method.

BLAUVELT WILLIAMS.

The Greatest Composers in the World

Have spent the best part of 1905 in writing for THE LADIES' HOME JOURNAL. Early last spring the magazine sent a musical authority abroad for the sole purpose of procuring from these world-famous masters examples of their best recently-completed work. He visited the noted musical centres of Europe, traveling from London to Paris, Vienna and Berlin, and from Italy to Norway. After months of unremitting effort he secured for us:

Ignace Paderewski

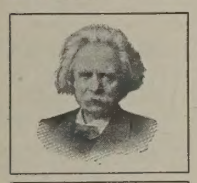
A Beautiful Nocturne by Ignace Paderewski

Full of charming qualities heretofore not found in his music. So tender and haunting is its melody that it seems as if the marvelous Polish composer were dreamily recalling the touching romance of his early marriage to the sweet Roumanian bride, whom he loved and lost long ago, before he became known as the greatest pianist of his time.

Madame Chaminade

A Dance Waltz by Madame Chaminade

This is the latest, as well as the most playable and danceable waltz she has composed. Romantic and weird in tone, very melodious, and throughout brilliantly characteristic of this gifted French composer's vivacious style, it combines all that is most individual and striking in her work.



Edvard Grieg

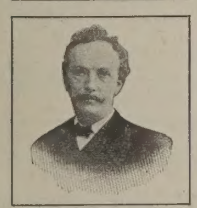
An Easter Song by Edvard Grieg

As graceful and captivating as anything the "Chopin of the North" has ever done. It is simple, too, like all really great works of art—simple enough to be easily played and sung. Through its flowing melody sounds the distant pealing of Easter bells, and the whole song pulsates with the beauty and joy of Eastertide.

Josef Hofmann

A Piano Composition by Josef Hofmann

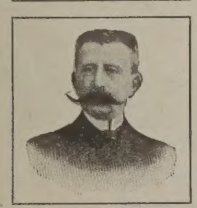
Which displays all that is best in the creative work of this distinguished master of the piano. The movements are highly interesting and delightfully harmonious—the stream of melody as unfailing as Mendelssohn's, and the atmosphere suggestive of much of Schumann's dreamlike charm.



Richard Strauss

An Exquisite Song by Richard Strauss

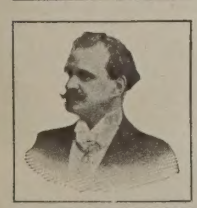
Germany's wonderful musical genius, whose songs have repeatedly captured the popular heart. His wife, the noted singer, Madame Strauss-de Ahna, made them famous throughout this country by singing them in all the concerts of his American tour. This song is a sweetly mournful setting of Burns's "John Anderson, My Jo."



Moritz Moszkowski

A New Waltz by Moritz Moszkowski

Spirited and flowing in style, full of sparkle and color, yet easy to play; in short, another "Germany" by this "king of melody." Its length is about the same as that of his famous "Maurice Waltz," and he has carefully marked the fingering and the expression so as to make both absolutely clear to every player.



Eduard Strauss

A New "Strauss" Waltz by Eduard Strauss

One of his daintiest and most readily played efforts. It well sustains the high reputation as a writer of dance-music of this aged Austrian composer, who has acted as conductor of music at the court balls of the Emperor Francis Josef for nearly forty years, and has played before more crowned heads than any other musician in Europe.

We shall also publish a number of other carefully-selected pieces of music, including

The Josef Hofmann Music Awards

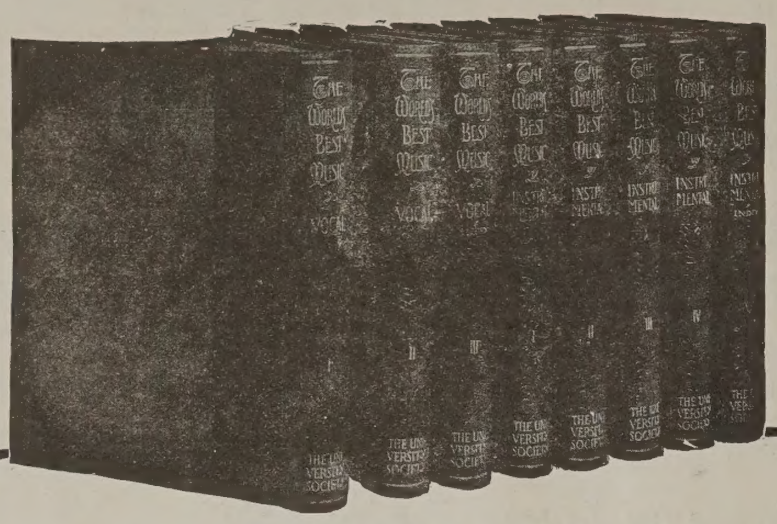
This great competition for American piano compositions naturally aroused the most widespread interest and brought out a very large number of submissions. Mr. Hofmann is now busy examining them, and as soon as possible after January 1, 1906, the awards will be announced and the three prize compositions published in THE LADIES' HOME JOURNAL.

The Madame Nordica American Song Awards

Her offer is meeting with a gratifying response from all parts of the United States and Canada. She will give three prizes of $500, $300 and $200 for the best constructed and most melodious songs of not more than 36 bars in length. This offer will also be decided very soon, and the prize songs published in THE LADIES' HOME JOURNAL.

All these and 20 other compositions will be published in THE LADIES' HOME JOURNAL during 1906

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.



JUST OUT!

New and Revised Edition

SEE SPECIAL OFFER BELOW

The World's Best Music

VICTOR HERBERT, Editor-in-Chief.

Why go on buying expensive sheet music, which lies in ragged piles around the house, and soon becomes scattered and torn? You can secure the best works of all composers, as well as popular pieces of recent years, in beautiful bound volumes, which open flat at the piano—strong and durable, yet light and easy to handle.

No music lover can afford to be without the new and revised edition of "The World's Best Music." It is bound in eight large handsome volumes, containing numerous illustrations in colors; many full page portraits of famous musicians, hundreds of musical biographies, graded and general indexes, special practice music for students, and many other unique and attractive features. The selections have been carefully made to suit all degrees of musical taste and ability. It will provide endless entertainment for yourself and friends—music for every occasion. Fifty thousand sets already sold. Endorsed by the music-loving public of every country on the Globe. Will soon pay for itself in the saving on sheet music.

A LIBRARY OF MUSICAL MASTERPIECES.

EDITORS—Victor Herbert, Reginald DeKoven, Fanny Morris Smith, Gerritt Smith, Louis R. Dressler, Joseph M. Priaulx, Helen Kendrick Johnson and others.

COMPOSERS—More than 200 of the world's famous composers, such as Wagner, Liszt, Paderewski, Sullivan, Mozart, Handel, Chopin, DeKoven, Strauss and Gounod.

INSTRUMENTAL MUSIC—Five volumes of instrumental pieces, comprising popular and operatic melodies, dances, marches and classic and romantic piano music.

VOCAL MUSIC—Three volumes of vocal music, constituting the largest, best and most complete library of songs ever gathered together in one collection.

SPECIAL LIMITED OFFER.

The 2,200 pages of music in this Library would cost you over $250 if purchased one piece at a time. We offer you the complete set in cloth binding for $1.00 down and $2.00 a month—total price $24.00. This offer is limited to 400 sets. After that it will be sold exclusively by agents at the regular price, $48.00 a set. In ordering now you buy direct from the publisher, at the lowest wholesale price—no agent or middleman makes a profit.

Of the 400 sets, about 35 are bound in half leather, like the above illustration. These we will close out at $28—terms, $1 down and $2 a month.

We do not ask you to subscribe for the Library until you have thoroughly examined it in your own home. Mail the accompanying coupon to-day. We will send you a set (express paid by us) for five days' examination and use. If it does not suit you, simply notify us, and we will arrange for its return at no expense to you whatever.

FREE To the first fifty persons answering this adv. we will give absolutely free of charge, a beautiful and serviceable oak bookcase made especially to hold a set of "The World's Best Music."

The University Society 78 Fifth Avenue NEW YORK

FREE INSPECTION COUPON.

THE UNIVERSITY SOCIETY, 78 Fifth Avenue, New York:
You may send me, charges prepaid, for five days examination, "The World's Best Music," 8 vols., cloth binding. If satisfactory, I agree to pay you $1 down and $2 a month thereafter, until the total price, $24, has been paid. If not satisfactory I will notify you and hold the set subject to your order. Also send me the oak bookcase which I am to receive free of charge if I keep the set. (Mus. 1, 10C)

NEW SONGS

The following have just been issued although a number have been before the English public for some time and have found much favor in that country. No singer, amateur or professional, can well afford not to know these songs.

Barnard, d'Auvergne. Life's Consolation. C (b-c,) D (c♯-d), E♭ (d-e♭), F (e-f)..... .50

—The same, with Violin or 'Cello Obbligato.... .60

An important new song by the composer of the well-known "Plains Peace." It is published with violin or 'cello obbligato, although very effective without these instruments.

Barry, Katharine. Time's Roses. E (a♯ F (b-f), G (c♯-g)..... .50

A beautiful melody and one that haunts the memory. The words are also excellent. We predict a very large sale for this song.

Chipman, Florence Ednah. Why do I Love You? C (c-e), D♭, (d♭-f), E♭ (e♭-g) ..... .50

One of the best, if not the best, of this popular writer's compositions, and will eventually become as popular as any which have preceded it.

Fortescue, Edith. Giver of Life. D (a-d), E♭ (b♭-e♭), F (c-f), G (d-g)..... .50

—The same, with Violin Obbligato ..... .60

An excellent song of the semi-sacred character. It is in the English style and has a strong climax. It is published in four keys to suit all voices, and may also be had with violin obbligato.

Needham, Alicia Adelaide. The Links o' Love. F (c-f)..... .60

A Scotch love song. The setting is original, possessing that refined musical thought that will instantly appeal to the artistic singer. Suitable for alto or baritone.

—Among the Stubble Barley. G (d-c)..... .60

For medium voice. A delightful melody with a well-contrasted accompaniment; musical yet not difficult, and closing with an especially effective climax.

Sheldon, L. T. Sea Way. C (g-d), E♭ (b♭-f) .50

A rather serious Song of the Sea. Especially good for low or medium voice. It has many good points and an effective climax.

Slater, David D. The Reef Bell. B♭ (f-d), C (g-e)..... .75

A descriptive song especially written for bass or baritone, with a strong, telling melody.

"I ring, I ring o'er the shifting sands,
True sentinel am I,
To warn the brave on the ocean wave
As the ships go sailing by."

Temple, Gordon. I cannot Forget You. C (e-f), B♭ (d-e♭), E♭ (g-a♭) ..... .50

A splendid song, one that sings itself. The words are excellent, and the music melodious, leading up to a fine climax.

—The same, with Violin Obbligato ..... .60

on the most favorable terms offered by any RELIABLE music house, and we will be glad to examine meritorious compositions, either vocal or instrumental. Our many years' experience in presenting new candidates for public favor are at your disposal, and we are prepared to handle the matter right.

May we send you our catalog?

SUCCESS MUSIC COMPANY
356 Dearborn St., Chicago, Ill.

Forty Anthems for use in Liberal Churches

THIS volume contains anthems by twenty-eight composers, among whom are Buck, Barnby, Gounod, Sullivan, King Hall, Foster, Tours, and Mendelssohn; Frederic Field Bullard, Frederick M. Stevenson, Herbert Walter Wareing, John E. West, and J. Varley Roberts are also represented. Four of the numbers are for Christmas and several for Easter and other occasions.

The collection was compiled by a committee appointed by the American Unitarian Association for the improvement of church music. The selection of the music was entrusted to Benjamin F. Whelpley, F. W. Wodell, and Arthur Foote. The words were carefully scrutinized by several clergymen under the direction of Rev. Samuel A. Eliot, D.D.

The book comprises two hundred and twenty-seven pages and is bound in serviceable board covers with cloth back. **Price $1.00, Post-paid.** *Copies sent for examination.*

Choir and Choral Magazine

A monthly publication devoted to the music of the church.

The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

STUDY MUSIC FREE

Full Two Years' Course in Your Own Home

Even if you have never taken a music lesson and do not know one note from another, we can soon teach you by mail in your own home, to play the ***Piano, Organ, Violin, Guitar, Banjo, Cornet or Mandolin***. We will teach you to play not only simple melodies but the most difficult music written for these instruments. Our methods of instruction are absolutely unique. No expensive teachers, you arrange the time for your lessons to suit your own convenience without interference with other duties or your regular occupation.

All Instruction is Absolutely Free

Your only expense is the necessary music, the cost of which is small, and the postage. All lessons are personal. They are prepared by the foremost teachers of America and each lesson is exactly graded to your individual needs. Success is certain by our methods. We have been established seven years and have thousands of graduates in every part of the country.

Send to-day for Free Booklet and full information and endorsements from former pupils. This Free Tuition offer is made to you only to quickly introduce our school into your locality and may be withdrawn at any time. **Write to-day.**

U. S. SCHOOL OF MUSIC,
Box 77,

GRADED EDITION FOR THE PIANO

The Teachers' Edition

Your labors will be reduced while the pleasures of teaching increase, if you adopt the

L.F. GRADED EDITION

of MERITORIOUS STANDARD COMPOSITIONS consisting of one hundred carefully selected compositions in all grades, representing the best productions of successful and intellectual writers. Standard prices prevail.

FIVE HUNDRED BUSY TEACHERS used the edition last season with complete satisfaction, and will repeat the action this year. 50% of them have written that they recommended the edition to other members of the guild and have caused many dealers to handle the line entirely of their own accord, unsolicited by us.

L.F. GRADED EDITION

was built to suit the requirements of the greatest number of teachers by eminent instructors who selected the numbers which comprise the edition.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:

The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.

The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.

FRITZ KREISLER.

Endorsed by Jan Kubelik

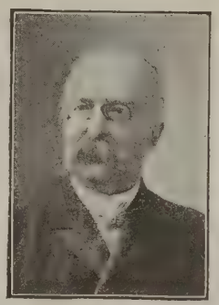
Elson's Music Dictionary

By LOUIS C. ELSON

Professor of Theory of Music at the New England Conservatory of Music



OVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

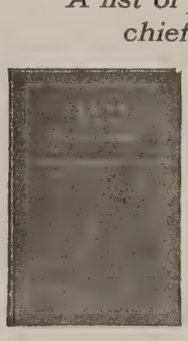
There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation.* By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Balakirew = Bal-*lah*-kee-reff.

Besides 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music, are the following:

Rules for pronouncing Italian, German, and French.

A list of popular errors and doubtful terms in music.

A list of prominent foreign composers, artists, etc., with their chief works, the pronunciation of their names, and the date of their birth and death.



A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.

The book comprises 306 pages and is bound in serviceable cloth covers.

Announcement

THE School of Music of Northwestern University, located at Evanston-Chicago, on the shore of Lake Michigan, has inaugurated a Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

P. C. LUTKIN, Dean.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

MRS. FLETCHER-COPP, 107 THORNDIKE STREET, BROOKLINE, MASS.

The American Institute of Applied Music

(The Metropolitan College of Music.)
EDGAR O. SILVER, President. 212 West 59th St., NEW YORK CITY.

The Faculty and Examiners: William Mason, Albert Ross Parsons, Harry Rowe Shelley, Kate S. Chittenden, Paul Savage, Paul Ambrose, H. Rawlins Baker, Herwegh von Ende, William F. Sherman, Geo. Coleman Gow, McCall Lanham, Mme. Adrienne Remenyi von Ende, Felix Boucher, Fannie Greene, Margaret Goetz, and others.

The advantages are unequaled in America. Send for circulars and Catalog.
KATE S. CHITTENDEN, Dean of the Faculty. **20th year begins Monday, September 25th.**

PART-SONGS FOR MEN'S VOICES

Compiled by GEO. L. OSGOOD

A collection in two volumes comprising fifty-one part-songs. Selections by such composers as Abt, Dregert, Jüngst, Nessler, Schumann, Silcher, Wilm, and others of equal prominence make it the most desirable compilation of its kind available. It is especially adapted for the use of singing societies. Copies sent on examination. Price in paper, $1.00 each; cloth, $1.25 each, post-paid.

MUSICAL INSTRUMENTS IN THE METROPOLITAN MUSEUM, NEW YORK

FRANK H. MARLING

II. STRINGED INSTRUMENTS

I. REBEC
(France, 16th Century)

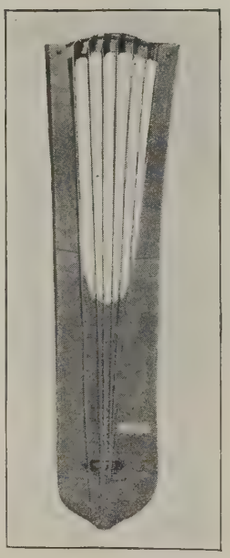
The division of stringed instruments in the Metropolitan Museum collection is of unusual interest. Authorities are agreed in giving the highest place in the scale of musical evolution to the stringed instruments, not only for their unequaled capacity in expressing human feeling and emotion, but also for their practical usefulness in daily life. For convenience, the stringed instruments are divided generally into three main sections, Plucked, Struck, and Bowed stringed instruments. The division of Plucked instruments may again be divided into two classes, those with "open" strings and those with "stopped" strings. The piano and its precursors, which form the class of Struck stringed instruments, were described in the November issue.

THE HARP

The class of instruments with "open" strings is represented by the harp. The strings rise vertically from a sound-box. It is said that this principle of construction was derived from the hunting bow of primitive man, who first made music by twanging its tightly stretched string with his fingers, or by playing on it with a rough stick. The harp's development was greatly facilitated by the addition of the front pillar, or support, which permitted the strings to be stretched to a much greater tension, and made possible a corresponding increase in tone.

The history of this instrument is a fascinating one. Its use goes back to Old Testament times, and it was employed in the Jewish temple service. Later we find it used in the service of the medieval church, and it has been for many years a distinctive feature of the orchestra.

Nowhere has the harp flourished more successfully than in Ireland, which is full of its traditions and memories. A most interesting Irish specimen in the Metropolitan collection is a reproduction of the celebrated Brian Boiroimhe harp. The original is in the Trinity College Museum, Dublin, and is supposed to have been the harp of this famous Irish king, who reigned about 1001. It is 3 feet 2 inches high, and is made of bog oak, ornamented with incised lines and circles. There are twenty-nine wire strings, and the sound-board is pierced in front with four small holes. Our illustration (see the front cover of this issue of THE MUSICIAN) shows its quaint outlines, and places it, in our minds, with the ancient period to which it belongs. Lack of space prevents our speaking of the French harp, which is of the type used to-day. The Museum has an excellent specimen, the graceful curves of which are shown in Illustration VII. It has also a reproduction of the noted "Dalway harp." This is another Irish instrument, dated 1621. For many years it was in the possession of the Dalway family. It is covered with important Latin and Irish inscriptions.

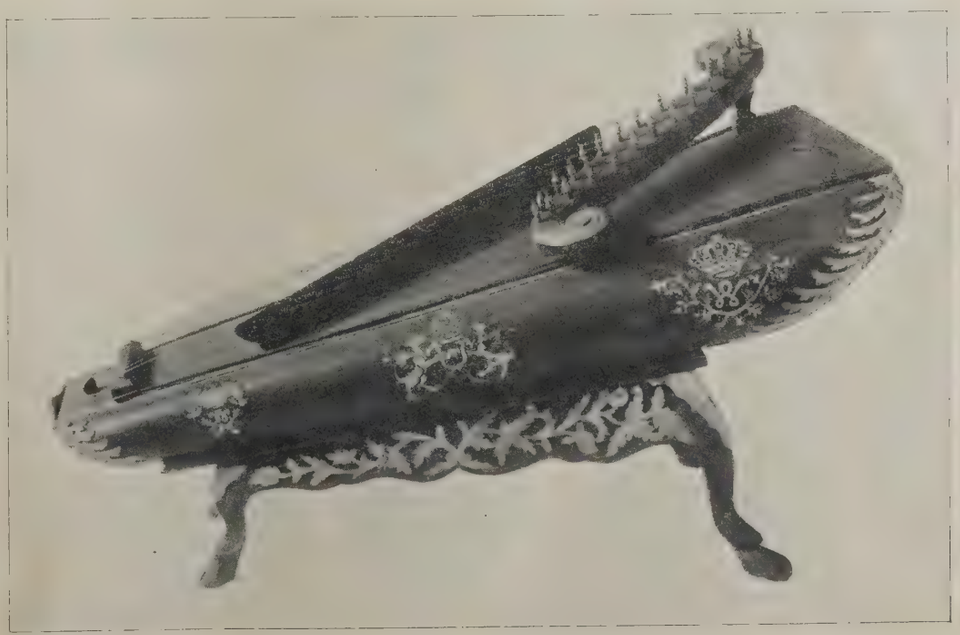


II. ROTE

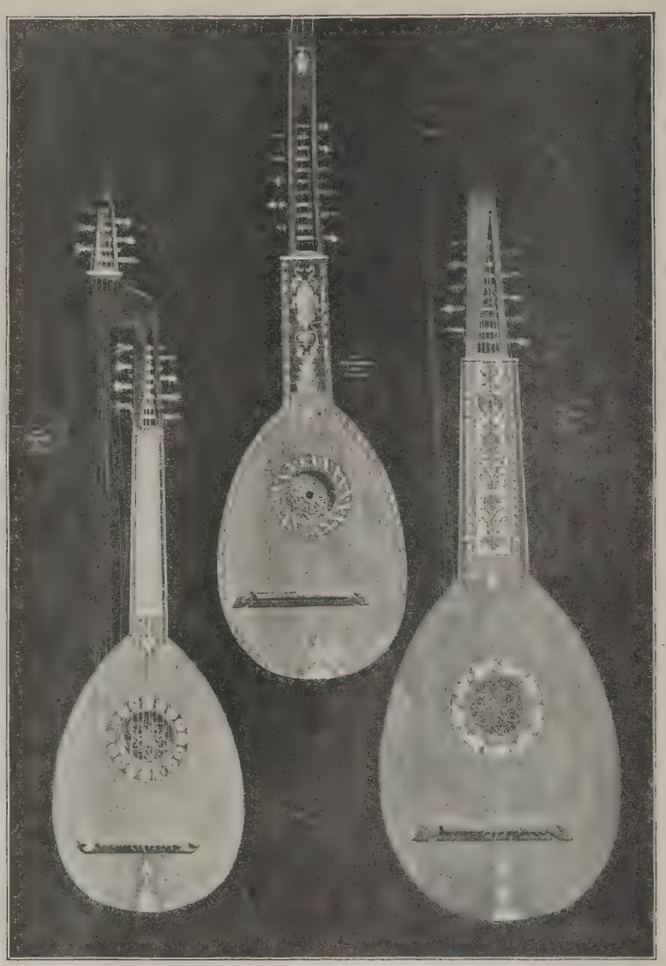
THE GUITAR AND THE MANDOLIN

The group of instruments with "stopped" strings comprises those in which the strings are stretched horizontally over a short sound-box, and a long neck. On this neck the fingers of one hand are placed, and the strings "stopped" or shortened for the sound required. The proper position of the fingers is noted, and the resonance of the "stopped" string is increased by strips of gut, wood, ivory, or metal, which are attached to the flat surface of the neck, and are known technically as "frets."

Of this class the mandolin and the guitar are good examples. They have taken the place of their predecessors, the citterns and lutes of a bygone age. Illustration IV gives several examples of these older types. The archlute is seen at the right side of the cut. The ordinary lute has an additional peg-box, which gives greater length to the bass strings. The lute figures extensively in the history of the Middle Ages, and is associated romantically with the lovers of that



III. RAVANASTRON



IV. THEORBO CHITARRONE (Italy, 17th Century) ARCHLUTE (Italy, 17th Century)

V. VIOLS

period. The theorbo, on the left side of the cut, is very similar in form, but smaller. It was used to accompany the voice. The chitarrone, in the middle of the cut, is a species of lute with elongated neck. It was used in the orchestra, and was often strung with wire instead of gut. All these instruments are of Italian make, and date back to the sixteenth and seventeenth centuries.

The various instruments of the family of guitars form together a bass, tenor, alto, and treble quartet. The visitor will notice their remarkably shallow bodies as well as their flat heads. The Museum possesses some very interesting mandolins, including one which formerly belonged to Adelina Patti. The guitar and mandolin are plucked by the hand, either directly by the fingers or by means of a small piece of bone or wood, called a "plectrum," held between the first finger and the thumb. Passing over the division of instruments with struck strings, as it was practically covered in the previous article on the pianoforte and its precursors, we come now to the most important section of all,—

The Bowed Instruments

The invention of the first violin bow is shrouded in mystery. It is frequently attributed to Ravanon, king of Ceylon, who lived about five thousand years ago, and is said to have been inspired to replace the rudely notched stick of his predecessors with horsehair. An instrument named after him, the Ravanastron, is the first known bowed instrument. This is still used in India and the far east. Its body is of bamboo, and its belly is usually of snake-skin. An eastern instrument of similar type, from Java, appears in Illustration III. From India the Ravanastron was introduced into Persia, Arabia and Northern Africa. In the eighth century we find the Saracens bringing into Spain its descendant, the rehab or rebec (Illustration I).

The Rebec

The body of the rebec is pear-shaped. The neck and head are formed of a solid piece of wood, the lower part of which is hollowed out. Three gut strings fastened to a tail-piece and passing over a movable bridge are attached to three wooden pegs in the peg-box, which projects over the sound box. The example shown here is a reproduction from one made in France in the sixteenth century. A rather enlivening tradition about this instrument, which is known as the Kleine Geige, is to the effect that it gave its name to the jig, for which it usually furnished the music.

The Rote

In Illustration II is pictured the medieval rote. The Museum's specimen is a reproduction of one made in Germany, in the seventh century. The original is now in a museum in Berlin, but was found upon the bones of a knight in an old tomb in Southern Germany. The shape of the rote is said to be derived from the old kithara, a form of the lyre. It is formed like a narrow lyre, and is made of a solid piece of oak wood, forming a very shallow box, to which are added a soundboard and six gut strings which pass over the

small bridge and are attached to six pegs fixed to a cross-bar between the two horns. Two narrow slits across the lower part of the horns were used for inserting the cords which supported the instrument on the player's arms.

The Crwth

The European nations soon learned to use the bow, and applied it to many instruments which formerly had been plucked by the fingers. The Celtic instrument, the crwth (pronounced crooth), was a descendant of the ancient lyre and rote. The Museum's example is lyre-shaped with a flat back. It has two small holes in the sound-board, in one of which is placed the left leg of the long bridge, which acts as a sound-board. Four of the strings are stopped with the fingers and sounded by a bow, and there are two open strings plucked from behind by the thumb. This instrument is of Welsh construction, and of the eighteenth century.

The Trompette Marine

The monochord, or trompette marine, is another claimant for priority of use. The date and place of origin of this "sea trumpet" are unknown. It was once largely employed as a popular instrument in Germany and France, and was used even in the service of the church. It fell into disuse early in the eighteenth century. The notes produced by it were powerful, but hard and nasal. One writer says that "its tones were far less melodious than the bray of a jackass." When played correctly, it sounded like a trumpet, and this gave it its name.

The Viols

Viol is the generic title of a family of instruments that succeeded the medieval fiddle. They were made in different sizes, were invented in the fifteenth century, and became obsolete in the eighteenth century. The viols have been called the "elder cousins of the violin." They had a century's start of the violins, for another century were their rivals, and finally were vanquished by them. A group of viols is shown in Illustration V. In the height of their popularity, two sizes were played together.

They differ from the violin in having deeper sides and a flat back that slopes toward the neck. Because the back was flat, it had to be strengthened by cross-bars. The middle one was much wider than the others, and on it rested the sound-post. The belly was arched, and the sound-holes were usually C-shaped. The strings numbered five, six, or seven, and were tuned in fourths instead of fifths. A very interesting collection of old viols is found in Illustration VI, including three specimens of the *viole d'amour*. One of these instruments, called the baryton or *viola di bordone*, is worthy of special notice. It was made by J. J. Stadlmann, an Austrian and a contemporary of Haydn, who composed a number of solos for this instrument.

The Violin Family

We come at last to the violins themselves, the finished product of many centuries of development. In Illustration VIII* is presented a complete family set of the violins. They are distinguished from the viols by having only four strings. The largest instrument, at the left of the picture, is the double bass. It is called by some the bull fiddle, and is the fundamental bass of the whole orchestra. Beethoven greatly developed its capacities, and revealed powers in it of which previous composers had never suspected the existence. This example was made in Germany, and was played in a church in Stonington, Conn., in the eighteenth century. It is 6 feet high and 2 feet 2 inches wide.

The Violoncello

The instrument next to the double bass is the violoncello. It is tuned an octave lower than the viola, and generally has a compass of three and one half octaves; from the low C to the G just above the treble staff. It is most effective in broad and fluent melody. Berlioz says of it: "Nothing is more voluptuously melancholy, or more suited to the utterance of tender, languishing themes than a mass of violoncellos playing in unison on their first strings." On account of its unusual compass the 'cello can be used as the bass of the string quartet, as a solo instrument, or as the singer of the melody, to an accompaniment on the other strings. The example shown in the picture was made in Europe in the eighteenth century.

The instrument to the right of the violoncello is the tenor violoncello. This is really a half-sized violoncello. It represents the proper size for the tenor instrument of the violin family, but is now discarded.

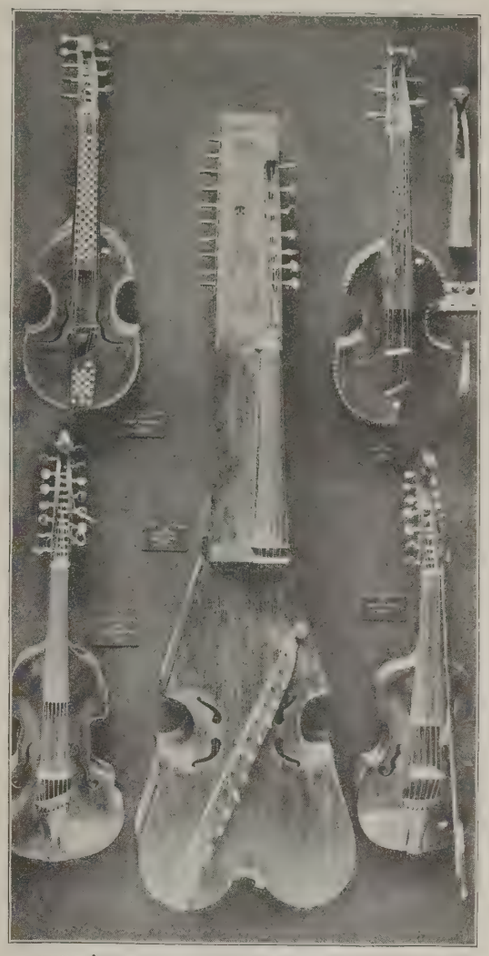
The Viola

The instrument to the right of the tenor violoncello is the viola, or alto. This instrument is often unknown to the average concert-goer, and to lovers of music, by reason of the position of its players, who sit behind the violins. It is in reality a larger violin with a deeper compass. It is both a tenor and a contralto, although most modern composers write the tenor part for it. Its lowest register is peculiarly sepulchral in tone, and suited to tragic music. In the middle register it has an unusual pathos, and in its highest part a penetrating sweetness and gentleness of tone.

The Violin

The instrument at the extreme right of the picture is the violin. Mr. W. J. Henderson calls this "the *prima donna* of the orchestra." This instrument is so well known that we do not enlarge upon it in this article. In the Museum there is a fine copy after the famous maker, Stradivarius. The violin is a triumph of human skill and invention. With its wonderful capacity for emotional expression, it may be said to stand at the highest point that any musical instrument has reached. Numberless volumes have been written upon it, and thousands of men and women have recorded their love for it. Its fascinating history is too lengthy even to be outlined here. The reader who attempts to follow up its story is sure to find a rich treat in store for him.

*See page 30.



VI. VIOLE D'AMOUR VIOLE D'AMOUR — BARYTON (Viola di Bordone) — ALTO VIOL VIOLE D'AMOUR

VII. FRENCH HARP

FIRST CONCERTS IN ENGLAND

JAROSLAW DE ZIELINSKI

CHARLES II*

When Charles II re-entered London in 1660, on that smiling 29th day of May, after nearly a decade spent on the Continent, one of the first things that he did was to retain as part of his household a band of musicians. It must have surpassed in many ways the fourteen violins and nineteen wind instruments which his unfortunate father had maintained. Indeed, as in many other things, he meant to follow the example of his royal cousin, Louis XIV of France, whose bounty he had not disdained. The very year of his return to England saw established a band of twenty-four performers on violins, violas, 'cellos, and basses. It became known as the "Four-and-twenty fiddlers," and Thomas Baltzar or Balsar — one of the finest violinists of the period, as well as a composer — was appointed leader.

A pound sterling went further in those days than it does at the beginning of the twentieth century. The amount paid annually to the twenty-four musicians was about £1433; the lowest salary being £20 and the highest £152 a year. Labor organizations had not yet undertaken to regulate the wages of these picked musicians, who were listed as "Gentlemen of his Majesty's Private Musick."

If Louis XIV danced in company with the Dukes de la Tremouille, de Boufflers, de Montmorency, and a number of other high nobles of France, not to mention the Demoiselles Prévost, Guyot, de Lisle, besides other dancers from the theatre, Charles II did likewise. His troop of mistresses replaced the *demoiselles* of the French king, and gave to the events a certain *éclat*, causing at the same time many heart-burnings and jealousies.

Living in England at that time was one John Banister, son of a rustic musician. Either because he was born in the same year as his gracious Majesty, King Charles II, or because his style of fiddling pleased the royal patron, he was sent to France to improve his art. There Lully, Goupillet, Minoret, Paschal Colasse, and some others, could have taught the sturdy Briton many a trick in handling bow and fiddle, in composing, or in courtly grace. Without doubt they did so, for on his return to England he was appointed in 1663 "Chief of his Majesty's violins." Even if he had profited musically, he had failed to improve in generosity of the large, good-hearted kind, which costs nothing and never fails to make friends. In other words, Banister could not see anything good in other musicians, particularly in one Louis Grabu, who came in 1666 from France to London, found favor with Charles II, and was assigned to a prominent place in the direction of the court-music, its dances, and the chapel service. These favors, bountifully bestowed by Charles upon the Frenchman, irritated greatly good John Banister. Otherwise he never would have forgotten himself so far as to say in the king's hearing, "'English performers on the violin are superior to those of France." King Charles was too great an admirer of the French, aside from being a secret ally of Louis XIV, to pass such a remark unnoticed. John Banister promptly received his dismissal from the king's service, and lost thereby a salary of £100 a year.

*From a miniature by Samuel Cooper, in the South Kensington Museum, London.

Among the prominent men of that day was the clever satirist John Dryden, who first became known by his *Heroic Stanzas*, a magnificent tribute to the memory of the Protector who died in 1658. Twelve years later — in 1670 — Dryden became laureate, and with the appointment received a pension of £300 a year and a butt of canary wine. Monsieur Grabu, who in time was accepted as a fast friend by Dryden and found in the poet a strong defender, helped his patron to put away many bottles of this product of the Island of Teneriffe.

Grabu wrote a number of cantatas and operas, some of which were unfavorably commented upon by Pepys and Pelham Humfrey. Yet there was merit in many of them, and their success would have been much greater were it not for opposition on the part of the Duke of Buckingham and his friends, among others Clifford and Sprat. They were bitterly opposed to Dryden, whose text to *Albion and Albanius* Grabu

LOUIS XIV OF FRANCE
(From the painting by Hyacinthe Rigaud, in the Louvre)

utilized for an opera which was produced in 1685.

The Clifford just mentioned was the Rev. James, son of Edward Clifford, a cook. Aside from being a clergyman who preached more love and less damnation, he was an earnest and ambitious worker. His collection, bearing the title of *The Divine Services and Anthems Usually Sung in the Cathedrals and Collegiate Choirs of the Church of England*, is justly considered a landmark in the history of English ecclesiastical music.

Pelham Humfrey, by twenty-five years the junior of Clifford, was unmistakably a talented composer when still but a youth. He also was sent by Charles II to France and Italy, and had opportunities of becoming acquainted with such men as François du Val, Henri Dumont, the noted soprano singer, Baldassare Ferri, Jean Baptiste de Lully, and Alessandro Stradella. Humfrey returned to London in the early autumn of 1667, and was sworn in at once as a Gentleman of the Chapel Royal. This brought him into relationship with Pepys, whose criticisms he failed to disarm even by the potency of a most gracious presence. Indeed, Humfrey's efforts were not put forth to avoid jostling the good opinion that the London musicians had of themselves. Full of confidence, possessed of great vanity, and ambitious to make a name for himself, he was intent on elevating musical art in England. When he condemned the native musicians, he found a ready listener in Charles II. Had he not tasted of the more elegant, rhythmically defined, and richly embellished French style, which had come into existence under the reign of his beloved cousin whom the good French people called *Dieudonné?*

The wisdom of Humfrey was greater than that of the disgraced Banister. When, in due course of time, his friend and early teacher, Captain Henry Cooke, died, Humfrey was appointed to succeed him as Master of the Children at the Chapel Royal. In addition to this he received an appointment as Composer in Ordinary for the king's violins. We must not mistake the brave captain who fought in the royalist army, and who afterward produced some of the best singers in London, with another man of a slightly similar name, a Captain Cocke, who lived in those days and whose wife, a lady of German birth, was a great beauty. Pelham Humfrey was only twenty-five years of age when he succeeded Captain Cooke. English music sustained a great loss when he died a couple of years later.

Meanwhile John Banister was not idle or discouraged. He recognized that the rich needed education no less than the poor, and for the benefit of the former, as well as to promote art, he established concerts in London. These were the first to which admission was obtained by payment. They began Dec. 30, 1672, at his home in Whitefriars, near the Temple back. The place became a musical school, and these events continued for six years. An observing commentator remarks that the room was fitted round with seats and small tables, alehouse fashion. There was a large raised box for the musicians, "whose modesty required curtains." One shilling was the price of admission, and it gave one also the privilege of asking for anything one wanted. It was on these and similar occasions that the guitar began to supplant the lute in accompanying vocal music. In the same way, the viol, an instrument of the fifteenth, sixteenth, and seventeenth centuries, gradually yielded to the violin, which was brought prominently into notice in Cromwell's time by the above-mentioned Baltzar, who came to England from Lübeck.

JEAN BAPTISTE DE LULLY

The concerts of John Banister were booked for four o'clock in the afternoon. As the George Tavern was close to this place of Banister's, it was liberally patronized by the musicians and their noble friends and patrons after each concert, lackeys and link-boys keeping merry outdoors to the tune of their masters within.

Of course there were other places, taverns and gin-shops, where so-called "public consorts" were held. Such performances were, however, for audiences of shopkeepers and foremen, who came to enjoy ale and tobacco, and supplied their own music, with the aid of a professional harpsichord player.

The gentlemen who gathered in places like Banister's, having been taught to sing at sight, indulged often in part songs, catches, and canons, an easy style of composition in comparison with the learned counterpoint of madrigals and motets, which gradually fell out of favor. The restoration of Charles II brought about also an entire change in instrumental music, which had been suppressed for a time by an act of Cromwell's third parliament, passed in 1656–57. This act was "against vagrants and wandering, idle, dissolute persons." It was ordained that, "if any person or persons, commonly called fiddlers or minstrels, shall at any time after the first of July be taken playing, fiddling, and making music, in any inn, ale-house, or tavern, or shall be taken proffering themselves, or desiring, or entreating any person or persons to hear them play or make music in any of the places aforesaid, they shall be adjudged rogues, vagabonds, and sturdy beggars, and be proceeded against and punished accordingly."

About 1680 the professional musicians severed their connection with publicans, and started the performances from which our modern concerts have descended.

THE SONGS OF SIDNEY HOMER

LAWRENCE GILMAN

The student, professional or amateur, who adventures into the field of contemporary song-writing is sure of diversified entertainment, much instruction, and not a little profit. He may range from the amiable effusions of Chaminade and Reynaldo Hahn, through the sentimental deliverances of Massenet and his like, to the moving utterances of MacDowell, the vivid impetuosities of Strauss, and the luminous and haunting subtleties of Debussy, Fauré, Loeffler, and De Bréville.

SIDNEY HOMER

An elastic and commodious art form it must be that can comprise such absolutely alien and diverse products as the songs of Massenet and MacDowell, Strauss and Loeffler — about as grotesquely heterogeneous a group, perhaps, as could well be conceived! What is, or what is soon to be, one wonders, the dominant impulse in modern song-writing; or is it to exhibit any paramount or particularly significant phase? Is Strauss to assume the aspect and proportions of a prototype, so that the average music-wright of a decade hence will compose songs as evidently an offshoot of *Liebeshymnus* and *Sehnsucht* as the average song of to-day declares the origin of its being in Grieg or Godard, Tosti or Nevin? Or is it possible that the esoteric beauties of Loeffler and Debussy will be the familiar jargon of a lyrical to-morrow?

In viewing the current manifestations of an art so various, unsettled, and — in Mr. Henry James' serviceable phrase, "unguided," — it is not easy to avoid the appearance of a too summary disposition of its elements. If it is something of a problem satisfactorily to correlate such confusing and unaccommodating phenomena as, say, Strauss and Debussy, how is one to behave toward personalities less assertively conspicuous (though conceivably as interesting and consequential) who yet exhibit equally diverse and discordant properties? For though their merits and defects may be less obvious, their prepossessions and allegiances are assuredly not lacking in positiveness and variety. From this point of view — admittedly, of course, a special one — we in America may consider ourselves quite comfortably situated. Having no music-makers — song-writers or others — of commanding and international eminence, we stand in no danger of being dazzled by the proximity of a musical Personage. There is no Strauss to obscure or engross our field of vision; and we are, as yet, unlikely to find ourselves in the lamentable situation of the musical Briton of to-day, from whom the tonal horizon is almost entirely hidden by the majestic apparition of Sir Edward Elgar.

It has been sufficiently insisted upon that America has done nothing of consequence — measured by the most exacting standards — in musical art. Whether this is quite so or not, it is beside the purpose of this screed to discuss. Perhaps a counter claim might most easily be established by alleging certain achievements of the American composer as a writer of songs. Indubitably we have in this country a not inconsiderable body of music-makers who are writing with dignity, artistic sincerity, and a varying order of eloquence, in this perilous and tempting form. Among those whose artistic purpose is most steadfast and consistent is Mr. Sidney Homer, who has already impressed himself upon those who know his work as a writer of taste, sobriety, and noteworthy ability. Mr. Homer is an excellently equipped musician, and a craftsman of dexterity and resource. It is characteristic of him that he writes both abundantly and, not infrequently, with distinction. It is not often that a writer of songs is at once prolific in his output and salient in the quality of his inspiration. This is by no means to say that Mr. Homer, working, as he does, in a dangerously elastic form, is always at his best — that he has written many songs as admirable as his setting of Browning's *Prospice;* but the general level of his musical thought is, nevertheless, on a notably dignified plane.

I have before me a group of Mr. Homer's published songs. There are twenty-four of them, and they comprise settings of verse by Browning (who would appear to be his most constant inspiration), Tennyson, Thomas Hood, Longfellow, and Robert Louis Stevenson; yet, despite the diversity of his subject-matter, Mr. Homer has a way of finding just and significant equivalents for the moods and emotions which he elects to enforce. He belongs, roughly speaking, among the composers who have felt most strongly the persuasiveness of Teutonic ideals and methods. He writes, that is to say, after the manner of those who follow the traditions of the modern dramatic *Lieder*, as those traditions are understood in Germany to-day. He believes that, the poem to be reuttered in music having once been selected, the composer may not depart from the spirit of its emotional content — may make no concessions to presumed requirements of melodic or harmonic "effect." He adheres, however, rather to the dominant spirit of his text than to the significance of individual phases — as in, for example, his fine *Prospice*, — the best, I think, of his songs, and an uncommonly noble and impressive achievement. In setting Browning's poem, many modern writers would have stopped to emphasize its different parts — would have been tempted, one can

easily imagine, by the inviting suggestions offered by such lines as

"... the heroes of old,"

or

"the elements rage, the fiend voices that rave."

Mr. Homer, however, does not mar the totality of the impression he aims to make by an over-elaboration of details. In this respect he reminds one of Edward MacDowell, whose songs are a superb exemplification of this method. Mr. Homer does not always, on the other hand, bring his purposes to an entirely successful issue. In his setting of Stevenson's *The Country of the Camisards*, for instance, there is a lack of the diversification of accent which would have given his music the expressional poignancy inherent in the poem. There is, in a word, monotony of effect where there should have been the bite of sudden dramatic contrast. This is so, too, of his version of Hood's *A Lake and a Fairy Boat* — an ingratiating and spirited song, but deficient in its communication of the complete significance and the whimsical charm of the poem. Again, his music to Browning's *A Woman's Last Word* lacks something of the passion and tenderness of the verse — a lack which might have been obviated by a more scrupulous regard for the precise implication of each separate phase of the poem.

He is very nearly at his best, however, in *Home They brought Her Warrior Dead*, from Tennyson's *The Princess*. Here the richness of the harmonic color, the dignity of the melodic design, and the vigorous rhythmical structure convey with excellent effect the sincerity and continence of the musical conception. Only at the close is one aware of a sense of disappointment at the words,

"Sweet, my child, I live for thee!"

Here the deep and climactic emotion of the poem is not realized. Instead of being the emotional apex of the song, it is quite the reverse: which invites an avowal of one's conviction that Mr. Homer, although very often successful and felicitous in his method of approaching and declaring the substance of the poems which quicken his musical imagination, is not always attentive enough in his preliminary contemplation of its essential meanings. He does not, that is to say, wholly steep himself in its mood and atmosphere.

Although his gift seems rather dramatic than lyric, it is to be noted that some of his happiest accomplishments as a song-writer have been in the setting of such poems as Hood's *It was the Time of Roses*, and *Minnie and Winnie*, from Tennyson's *Child-Songs*. The first is a very charming inspiration — harmonically ingenious and finely lyrical in feeling. It is among the best of his productions; and, together with such others as *Prospice*, *The Stormy Evening* (after Stevenson), *Enid's Song* (from the *Idyls of the King*), *Home They brought Her Warrior Dead*, and *Minnie and Winnie* — which has the authentic childhood quality — represents very justly his capacities as a song-writer.

It may fairly be said of Mr. Homer — and it is a pleasure that there are not a few others of whom it can be affirmed — that he is making a distinctive place for himself among those American musicians who choose to view their art with consistent seriousness and dignity.

THE VAGRANT PHILOSOPHER

WILSON G. SMITH

These were the circumstances that brought it about. My friend, the vagrant philosopher, was seated in an easy chair in my studio, smoking one of my Cuban *perfectos*. I put the question to him direct.

"Vagrant," said I, "what is the use of all this strenuous endeavor for excellence? Most men are rewarded with laurel wreaths on their graves and posthumous praise to this effect — 'he was really a man of exceptional ability, but no one knew it except perhaps a few friends. They only mentioned the fact in whispers.'"

My friend puffed long and leisurely at his cigar, watching the while with affectionate gaze

WILSON G. SMITH

the curling smoke-rings vanish. This silent prologue finished, he launched forth after this wise.

"Professor," — he always honors me with this somewhat equivocal title — "the popular saying, 'What's the use?' is the cause of many a man's supineness and lack of effort. That things do not always come one's way is no sane reason why one should give up hope and aspiration. All things come to him who waits, except, perhaps, to the country bumpkin who wished to test the verity of the proverb, and seated himself on a rock in the pasture, waiting for the cows to back up and be milked. Like our what's-the-use man, he got no butter milk.

"Nor is it necessary to knock a man down because we imagine he is in our way. It is far better to go around him and show him our back. We cannot build ourselves up on the ruins of another. Why envy another his success? Rather emulate his example and study his methods. There is no patent upon success.

"Success means hard work and diligent application on the part of the aspirant. If a man passes you in the chase after fame or success, bid him Godspeed and quicken your own pace. He has left his footprints to serve you as a guide through dark places and over rough roads.

"Our lives are very much like links in a continuous chain. All we have to do is to see that the link represented by our individual life is well forged and connected. Former links and those to follow will take care of themselves. Samaritans are not out of place even in this twentieth century. Besides, a generous act is retroactive; it makes a man friendly with himself and acts as a stimulating tonic upon his own aspirations.

"'What's the use?' is decidedly a poor motto. 'Why not?' is a much better one. There is always room for energy and talent at the top, and when, after strenuous and ofttimes discouraging efforts, one has attained the higher elevation, the vista of realized hopes and future possibilities that spreads out before one is a reward well worth the effort put forth.

"Personally, I am a man of mediocre attainments, but this fact does not rob me of the pleasure of recognizing the ability of others. We cannot all be original thinkers and creators, but we can derive much benefit and profit from a hearty appreciation of the works of others more gifted. Appreciation is but a few degrees removed from participation and production. We cannot all be geniuses, but we can by cultivation attain an appreciative mood towards them. They speak to us in a personal language, and it is our duty towards them and ourselves to endeavor to understand them. That a man, although aspiring, may not become a Mozart or a Beethoven, is no valid reason for our ignoring his efforts. As long as what he utters has a tendency to elevate the standard of general culture, he is entitled to our respect and admiration.

"A small stone often plays an important part in the foundation of a magnificent palace. If it is free from blemish, it may assume its part in the general structure.

"A constant struggle for self-advancement and culture brings us of necessity ultimately nearer the goal of our ambition. In struggling for ourselves let us not forget the similar efforts of those with whom we come in contact. Surround yourself with the atmosphere of altruism and this spirit will infect others, who will gather impetus from your radiated congeniality. Thus in helping yourself you unconsciously assist others.

"Life, after all, is but a succession of moods, and the altruistic mood is the one that makes life most enjoyable for oneself, as well as most agreeable to others.

"Another cigar? Thanks! Since you insist. Your Cuban cigars, professor, are like little deeds of kindness. They are inexpensive, and do a fellow a deal of good."

After lighting his second cigar and indulging in a few smoke-clouds, my vagrant friend — as he is rather given to poetizing — read the following verses. The sentiment expressed seems apt, even though the versification may be devoid of inspiration or ornate expression.

What's the use to borrow troubles
As we tramp along through life?
Like as not they are but bubbles
Floating on the pond of strife.

Let the bright sun shine upon them,
As they float on useless quest,
And we see reflected on them
Colors of the rainbow's crest.

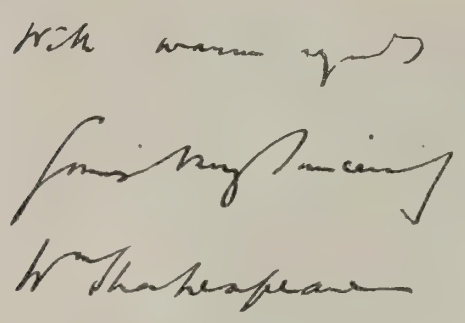
Bubble-troubles are but fleeting;
Soon they burst and vanish quite.
Let us learn this from their meeting,
Just to tramp along and fight.

THE VOICE

Conducted by WILLIAM SHAKESPEARE

All communications regarding the Voice Department of THE MUSICIAN should be sent directly to the Editor-in-Chief. Students who follow the work which is outlined in this Department may write freely regarding any further helps and hints that they need. If there is any point in your study or teaching which you desire to have discussed here, please communicate with us about it.

In acting for a time as Editor of the Voice Department of THE MUSICIAN, *I feel that I must first express my admiration of the earnestness of purpose and high standard of this journal, in which I have read with the deepest interest many valuable articles.*



THE POINT OF VIEW

I would begin by saying that the success of every man's career depends upon the steady and unswerving gaze which he fixes consciously or unconsciously throughout his life on the goal of his ambition. He may make mistakes as to the starting-point; who does not? But having once decided upon the path, he must prepare to follow it out and to struggle on through disappointments and difficulties towards the achievement of his object.

As time passes I realize more and more the difficulty of impressing on the mind of the student the supreme necessity of thus concentrating his attention on the subject which he intends to take up as the work of his life. I am emboldened to insist on this by my long experience as a student, a public performer, and a teacher.

At the early age of twelve I gave up the career intended for me, and for five years studied harmony, counterpoint, and composition under Molique, the violinist and composer, the friend of Mendelssohn. Meantime, I learned pianoforte playing with the well-known professor, Dr. Wylde. Coming straight from the country at the age of seventeen and a half, I was awarded the King's Scholarship at the Royal Academy of Music, where I continued to learn composition under Dr. Sterndale Bennett, simultaneously studying the pianoforte and traveling about as a solo pianist with the best artists. At twenty-two years of age, having gained the Mendelssohn Scholarship, I was enabled to continue my studies at Leipsic under Professor Reinecke. Here it was discovered that I had a voice. I was transferred to Milan and placed under the celebrated Lamperti, the teacher of Madame Albani, of the tenor singer Campanini, and of many other great artists. Although I believed that I had already made some progress in singing under other masters, Lamperti soon made me feel the necessity of beginning a serious study of the very rudiments. The experience gained by my former studies enabled me to appreciate the splendid character of the genius by whom I was now to be guided. His patience and zeal served to form my future career. It was only after two years and a half of diligent study that I made my début as a tenor vocalist at a concert of the Philharmonic Society in London. My habit was to go back to Lamperti each year, when it was possible, to add fresh zest to my practice, and to be brought back to the right path, if I had strayed. The year of his death found me on the same errand. With him I discussed his works, and at his suggestion I ventured to begin writing the *Art of Singing*.

Like all other arts, singing has its time of drudgery, and it is not all romance that Porpora taught Caffarelli from one sheet of exercises for five years, and then dismissed him with the words, "Go, my son, you are the greatest singer living." I know to my cost how long the training of a vocalist must take, for Lamperti kept me for a year and a half to the air, *Ecco ridente* from Rossini's *Barbiere di Siviglia*.

This is an age of competition, and if singers are to gain a livelihood by their art, they will have to go through a more serious course of training than has been required hitherto. The organist or pianist who undertakes the teaching of singing without special knowledge of the art will no longer find pupils. The singers who lack voice or musical talent will no longer be listened to.

Of the many who come from America as aspirants to public singing, how few have capability for entering on such a career! Many have a fine time in Europe, wasting the means provided for them by the worthy congregation of a church or by some rich patron. With regard to such it is needless to waste words.

Many study with Mr. A. for voice production, and after a course of twelve lessons conclude that they have learned all that he can teach them. They proceed to Mr. B. for oratorio, afterwards to Mr. C. for German songs, and then to Paris for French songs. They return to me completely confused with regard to the "art of singing," their voice broken down, their purse exhausted, but they are at last stirred by a desire for submitting to a course of serious study before returning to the other side.

My sympathy is certainly with the stranger arriving in England, who is beset by those who have some wonderful secret or method by which the training of a singer may be curtailed, when in reality this cannot be done. "Ars longa, vita brevis." Lamperti wrote valuable advice to the young student. "He should consider the expense of a good master as a sum invested, which will be returned with interest. He should also *commence* with a good master, for on leaving him an unworthy successor would be discerned, whereas the inexperienced student is apt to believe that his first master must be infallible." He learns, often too late, that he has been mistaken. Having found a master worthy and helpful, be true to him. Do not go from one teacher to another for the sake of change.

A great artist and splendid singer was asked, "Whom shall I go to, for I am returning for the purpose of studying in Europe for a few months?" She answered, "With whom did you first study? Why, go to him, of course."

For my own part, nothing would have induced me to quit Lamperti and his exquisite teaching of exercises, solfeggi, and arias, for any other master. Students are so often advised to study under a variety of masters, to give them the privilege of saying that they have learned with professors who have a reputation, but it is unwise to give up the guidance of a good master. After all, much depends upon the pupil himself. When he has once been taught the foundation of good singing, he must practice with such conscientious care that the method becomes a habit and his own character appears in his performance. To encourage those who lack confidence (and these are often the most sensitive and artistic minds), to stir up the enthusiasm of the indolent, to place a high ideal before each pupil, such are the qualifications of a good master.

Lamperti, long before his death, deplored the fact that few students with good voices and with musical talent could be induced to study for more than a year or so, whereas little can be done under three years. Madame Marchesi of Paris expressed the same regret in a conversation I had with her.

It is lamentable to hear the ballads and trash which are considered good enough for our English public. In Italy, in Germany, and in France, it is necessary to study more seriously in order to gain sufficient physical force to make the voice last throughout the long operas. Nevertheless, how few singers touch their hearers by the true expressiveness and the sustained character of their singing! Time has a way of avenging itself. Before long the low standard of vocalists will have produced such thousands of half-trained or ill-trained singers, that the so-called music which is sung will pall on the taste of the public, and a superior set of vocalists will arise, who will present anew the classics of the art, — the works of Handel, Bach, Mozart, and all the old Italian writers.

The time is surely not far off when the "art of singing" will be taught in greater simplicity by many masters who will use more or less the same methods. The human voice is simply nature's instrument, capable of expressing the emotions of the mind by its tones, capable of acting as a musical instrument in a manner similar to most other musical instruments, but idealized and endowed moreover with the unique quality of association with speech.

The voice, both in singing and talking, is the result of our breathing on an instrument not outside the mouth, but stretched across the larynx in the Adam's apple of the throat. If the lips of this instrument are awkwardly held, more breath is required than we can rightly control. If the instrument is poised in unconscious ease, the breath is apt to slip out on our attempting to produce any power or fulness of tone, and disaster is caused by our finding ourselves out of breath before the end of the phrase we wished to sing.

On the one hand, the student cannot produce a loud sound without *rigidly holding* the instrument, so that his judgment tells him that this must be wrong — that this must be a bad note; on the other hand, if he attempts to sing lovely sounds, he quickly becomes breathless.

The freedom of the instrument which we call the "voice" demands great skill in controlling the breath. When we control the breath, as in breathing out slowly or warming with the breath

GIUSEPPE TARTINI

some object held in the hand, the voice refuses for a time to adjust itself and to speak with fulness and sonority. So there is a balance of forces. If we hold rigidly the instrument in the throat, we demand more breath than we should do if we breathed out slowly, as indicated above. It is comparatively easy to breathe out slowly and gradually without singing, yet how difficult it is to produce a full sound while thus retaining control over the breath pressure!

The master may begin with either of these two factors, which in the end should balance each other and cooperate in the creation of the "art of singing."

One master may say, "I will have the student produce a natural tone and this will compel him to study his breath control;" or the other will say, "No! I will first teach my student how to control his breath; and if he does this, he must perforce unconsciously place his instrument so that it responds in fulness." All this I have explained in my *Art of Singing*, Part I.

The agreement or balance or simultaneous cooperation between the freedom of the throat and the breath control is so exactly parallel with the production of tone on the violin that I quote the *precious advice* of Tartini which has already been presented to the readers of THE MUSICIAN, and I make no apology for repeating it *in extenso*.

TARTINI'S ADVICE ON BOW PRACTICE

Your first study should be the true manner of holding, balancing, and pressing the bow lightly and steadily upon the strings, in such a manner that it seems to breathe the first note it gives, which must proceed from the friction of the string, and not from percussion, as by a blow given with a hammer upon it. This depends on laying the bow lightly upon the strings, at the first contact, and on gently pressing it afterwards, which, if done gradually, can scarce have too much force given to it, because, if the tone is begun with delicacy, there is little danger of afterwards rendering it either coarse or harsh.

Of this first contact, and delicate manner of beginning a tone, you should make yourself a perfect master, in every situation and part of the bow; as well in the middle as at the extreme ends; in the up and in the down bow. Exercise yourself also in a swell upon an open string, observing that you begin pianissimo and increase the tone by slow degrees to fortissimo. This study should be made equally with the up and down bow, in which you should spend one hour each day at different times, having constantly in mind that this practice is, of all others, the most difficult and the most important in good violin playing. When you are perfect master of this part of a good performance, a swell will be very easy to you, beginning with the most minute softness, increasing the tone to its loudest degree, and diminishing it to the same point of softness with which you began, and all this in one stroke of the bow.

Every degree of pressure upon the string, which the expression of a note or passage may require, will, by this means, be at your command, and you will be able to execute with your bow whatever you desire.

OPERAS AND SINGERS

The City Theatre at Hamburg will produce thirty-four operas during the season. The list includes Gluck's *Orpheus*, Handel's *Almira*, Méhul's *Joseph*, Smetana's *Dalibor*, Halévy's *Jewess*, and Rubinstein's *Maccabees*.

* *

The Bayreuth Festival of 1906 will extend from July 22 to August 20. There will be seven performances of *Parsifal*, five of *Tristan*, and two of *The Ring*. The dates of the last named are July 25 to 28 and August 14 to 17.

* *

Massenet's latest opera, *Ariane*, text by Catulle Mendès, will be given at the Paris Opéra.

* *

Carl Goldmark, though seventy-five years old, is said to be writing a new opera. The text is derived from Shakespeare's *Winter's Tale*.

* *

The Leeds Festival Chorus, with the London Symphony Orchestra, will give two concerts in Paris some time in January. Dr. C. V. Stanford will direct. Sir Hubert Parry's *Blest Pair of Sirens* and Beethoven's choral symphony will be the chief works to be played.

* *

Madame Gadski's American tour this season will include about seventy-five concerts.

* *

Madame Wittich of the Dresden Opera will appear as Isolde at the Bayreuth performances next summer.

* *

It is said that Ruggiero Leoncavallo, the composer of *I Pagliacci*, will make an American tour, beginning in October, 1906. Signor Leoncavallo will conduct *I Pagliacci* and excerpts from his latest opera, *Roland von Berlin*, as well as his *Bohème*, *Zaza*, and *Chatterton*.

CORRESPONDENCE

MRS. M. G. R., BELMA.

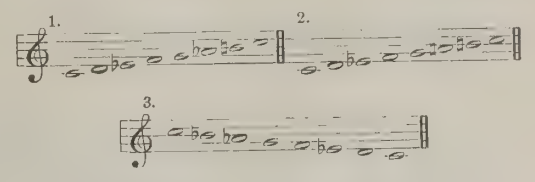
Desirable qualities to be considered in the purchase of a new pianoforte are: a tone that is strong and resonant, but sweet, and of a certain even quality throughout the keyboard; and an action that is neither stiff nor loose, so that pressing down the keys is just enough of an effort to be felt, without actual weight. If you purchase from some maker whose reputation is established, you will avoid disappointment in regard to some vital internal details which we cannot explain here.

C. F. H., ORR'S ISLAND, ME.

There can be but two reasons for the fact that the muscles of your forearm get tired: it is either because you practice too steadily and allow the arm to become exhausted, or because the position of the arm, while practicing, is unnatural and stiff. Watch your arm closely, with these two causes in mind, and try to discover the real reason; the remedy is then easy. You might consult a surgeon, and ascertain if some physical defect is not impairing the endurance of any one muscle. It is most likely that your position is not loose enough.

I. B., ST. JOHN, N. B.

The three forms of the minor scale of which you speak are written and named as follows (using C minor for example): —



No. 1 is the *harmonic* minor form, and is written thus both ascending and descending: No. 2 is the *ascending melodic* form; No. 3 the *descending melodic* form. You can locate the half steps yourself. The harmonic form is quickly and easily found by observing that it is the result of lowering the 3rd and 6th scale-steps of the corresponding major scale (in this case, C major). The melodic forms are used to avoid the awkward interval — difficult to sing — between steps 6 and 7.

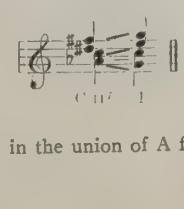
MRS. S. F., CUBA, N. Y.

Dots and slurs are frequently used together to indicate what is sometimes called "demi-staccato," or sustained staccato. One sign, of course, neutralizes the other, so that it is neither completely legato nor staccato. A passage so marked is therefore to be played nearly, but not quite, legato; about as one would play the scale as legato as possible with one and the same finger. Such marking also implies a slight pressure of the tones; and is rarely, if ever, applied to rapid passages.

A. L., MADISON, IA.

1. The diminished 3rd of G flat is B triple flat. This may seem peculiar; you say you have never seen it; but that does not alter the fact. The diminished 3rd is a very rare interval; that must be admitted. But it surely exists; and G flat surely exists; therefore B triple flat is at least possible; and, in fact, if composers were more accustomed to using the keys of nine, ten, or more flats, B triple flat would be nearly as common an occurrence as G flat.

2. Yes, there is an interval called the double augmented fourth (and its inversion, the double diminished 5th). It occurs in such mixed chords as this one in C major: —



and consists (here) in the union of A flat and D sharp.

WALTHER VON DER VOGELWEIDE*

Club Programs from all Nations

VIII. CLASSICAL GERMANY

ARTHUR ELSON

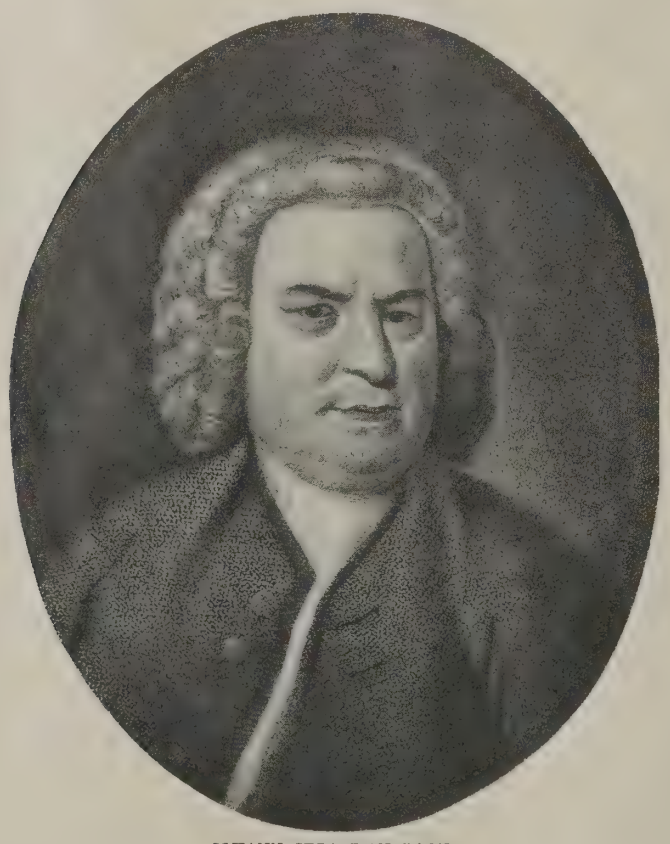
In every issue of THE MUSICIAN this department will present an elaborate study of a national school. The purpose will be to give a correct chronologic summary of the school, its principal representatives, to indicate a practical club program, and to review the presentation of the subject by means of a list of queries.

Clubs planning to use this material may address correspondence concerning any feature of the work to the EDITOR OF THE MUSICIAN.

Every assistance will be given to clubs, classes, and private students. The editor will be glad to lend help to those desiring to secure speakers on topics relating to music.

TANNHÄUSER

In the dark ages music flourished but little in Germany; yet in the time of Charlemagne the art received royal patronage, and the Christian chants must have been heard among the savage races that he baptized by the might of his sword. At a later time, we find the monk, Franco of Cologne, inventing measured notation, possibly in Germany; but the first popular impetus given to music came from the Minnesingers.



JOHANN SEBASTIAN BACH

These minstrel knights, like the Troubadours of France, were of gentle birth, and cherished the art of song as one of their greatest accomplishments. While they indulged in less fantastic exuberance and extravagant display than their French brothers, their deeper sincerity had its influence on the poetry of the time. Wolfram von Eschenbach's *Parzifal* and the lyrics of Walther von der Vogelweide date from this period, which finds a modern echo in Wagner's *Tannhäuser*. Another notable figure was Henry of Meissen, whose songs in praise of womanhood won him the title of "Frauenlob" and the homage of the fair sex. At his funeral the women cast a flower each into his grave, and made it overflow with their fragrant tribute.

The close of the Middle Ages found German music kept alive chiefly by the Mastersingers. These guilds of prosaic but worthy burghers reduced the art to a formal basis that could not atone for a lack of real inspiration, but at rare intervals a genius appeared among them. Such a leader was Hans Sachs, whose many *Fassnachtspiele* show a humor that is telling, if somewhat broad. Unlike the old hero of Wagner's opera, Sachs succeeded in making a second marriage late in life, and his young bride was extremely proud of his fame.

The contrapuntal schools exerted their influence in Germany, but left fewer famous names to be recorded in that country than in Italy or the Netherlands. Yet in the latter part of the fifteenth century we find such men as Adam of Fulda, Stephan Mahu, Henry Finck, and above all, Henry Isaac.

The time of the Reformation brought about the development of Protestant church music. Luther and his friend Franck were largely responsible for this, and their musical taste led the way to something more melodic than the involved vagaries of the early contrapuntists. Another pioneer in the same field was Johann Walther, a singing master at the Saxon court. Ludwig Senfl, a Swiss by birth, was known through settings of the odes of Horace, as well as chorals that are reckoned the best of their time. In those days the tenor part held the melody, the word coming from the Latin verb *teneo* (hold). The first to take the important step of placing the tune in the highest part was Lucas Osiander, who strove to unite contrapuntal and melodic effects. Calvisius, Praetorius, Scheidemann, Hassler, and others followed this lead, while Johann Eccard became the most prominent figure in this field. Michael Praetorius followed the Italian movement toward recitative and solo work, while Samuel Scheidt and Johann Pachelbel became renowned as organ composers.

The rise of opera in Italy, beginning in 1601, found no counterpart in Germany until 1678. In that year Hamburg attained the glory of founding the school of German opera, and began its season with *Adam and Eve*, by Johann Theile. Chaos, the four elements, Lucifer cast from heaven, the creation of Adam and Eve, the temptation, and the casting out from Eden gave ample opportunity for gorgeous scenic and mechanical effects.

Germany found her first great opera composer in Reinhard Keiser, who soon became the leader of the Hamburg school. Not a deep musician, he charmed his audiences by his melodic grace and fertility of invention, and wrote no less than one hundred and twenty works for the stage. His works supplanted the Italian operas in Germany, and even penetrated as far as Paris. Other native composers entered the field, — Mattheson, Telemann, Strungk, Kusser, — but Keiser held his own for many years. One day, however, he was forced to flee from his creditors, and a young man named Handel took his place as leader at the harpsichord. Keiser returned, but soon found himself unable to obscure the glory of the younger and greater genius.

Bach and Handel were born in the same year, — 1685. These two masters are sometimes spoken of as the Siamese twins of music, but in many respects they show a contrast rather than a resemblance. Both left great religious works to the world, and raised German sacred music to the highest plane. But Bach represents the culmination of the older style of counterpoint, while Handel foreshadowed the newer school of dramatic and harmonic expression. It is also a mistake to give these composers equal rank, for Handel's fame rests chiefly upon his

*This, and the portraits of other Minnesingers, are taken from the so-called Manesse manuscript (fourteenth century) in the University Library at Heidelberg.

Messiah, while Bach's renown is secured by many other forms of composition besides oratorio.

John Sebastian Bach (1685–1750) came of a long line of distinguished musicians, dating from Veit Bach, who was born in the middle of the sixteenth century. Undoubtedly heredity played its part in the great composer's genius, but probably a musical environment was of still more importance. Left an orphan in early childhood, Bach received musical instruction from an elder brother, the organist, John Christopher Bach. A fine soprano voice soon brought him a choir position, and when his voice changed he became violinist in the ducal orchestra at Weimar. In 1704 he gained a more important post as organist at Arnstadt. It was his wonderful improvisations on the organ that first brought Bach to the notice of the musical world, for on this instrument he displayed fully his marvelous faculty of weaving and interweaving simple melodic figures into the most exquisite musical tracery. He became by all odds the greatest master of counterpoint that the world has ever seen.

Almost all his life was passed as organist. In 1714 he became director of the court concerts in Weimar, but with so small a salary that he was soon forced to seek a better post. When we consider that he had no less than twenty children, — six by his first wife and fourteen by his second, — it is not surprising that poverty sometimes pressed him hard. Often he was forced to see lesser musicians chosen before him, as at Hamburg or Halle; yet his long career in the Thomas-Schule at Leipsic brought him honors, if not riches, among them being the homage of Frederick the Great. That monarch gave Bach a hearty reception in his palace, and sent him a sum of money; but the money was embezzled on the way, and the fatigue of the event may have laid the foundation of Bach's last illness. After his death, his widow and others of his family suffered the direst poverty.

Bach has given the world a sublime work in his *Passion Music according to St. Matthew*. His other oratorios are scarcely less notable. He has left the most perfect organ compositions that the world possesses to-day. His wonderful collection of fugues, *The Well-tempered Clavichord*, remains a monument of tonal greatness, besides having rendered free modulation possible by dividing the scale into twelve equal semitones.

In the older days, counterpoint, or the art of melodic part-writing, brought about a dry and pedantic style. This was gradually altered, until in the time of Palestrina and Di Lasso we find those masters using all the devices of their predecessors, but adding a degree of feeling and emotion that made their music higher in quality. Nearly two centuries later, Bach, on a greater scale, achieved the same happy blending of intellect and emotion. His counterpoint, intricate as it may be, is far more than an arid puzzle, to be merely solved by following the parts; it is the quintessence of musical architecture, as delicate in its beauty as the richly traced ornaments on some of the old cathedrals that have resounded so often to his music. And back of it all is emotional power, — more subdued in its expression than that of the modern colorists, but no less deep and sincere.

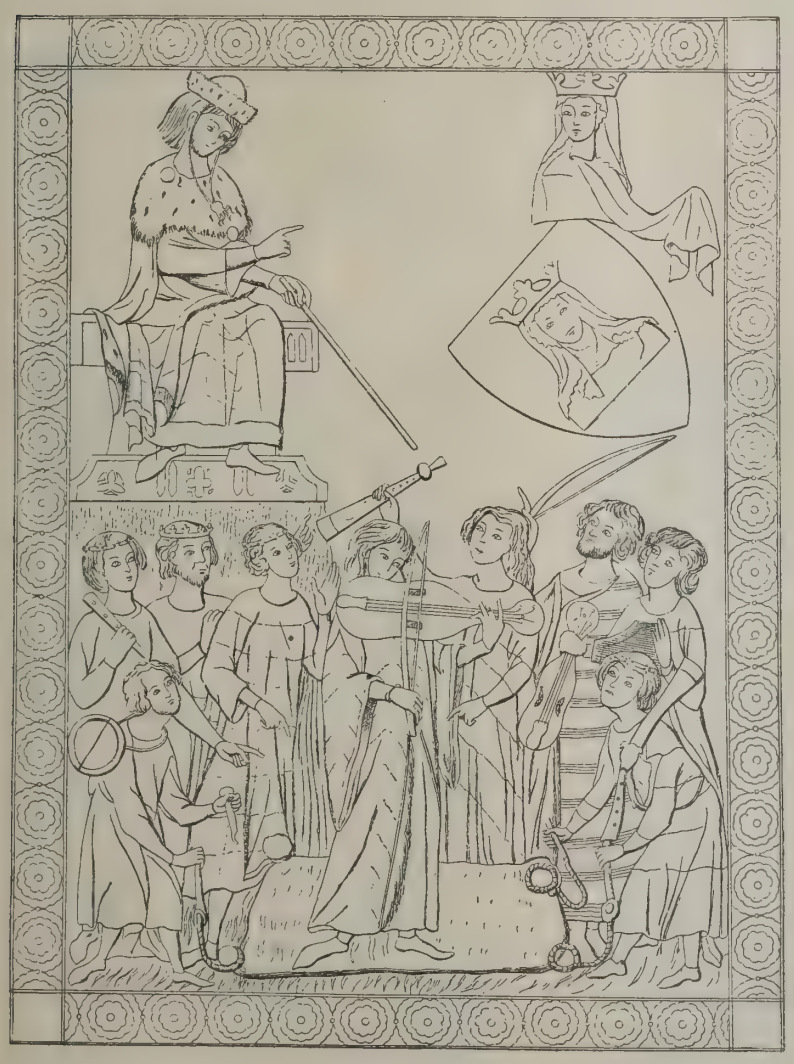
George Frederic Handel, or Händel (1685–1759), was born and brought up in Halle. Applying himself secretly to spinet playing, he soon became proficient on that instrument, so that when the chance came he was able to step instantly from his post of second violinist in the Hamburg orchestra into Keiser's place as director at the harpsichord. It was not long before Handel became permanent director and chief of the German operatic composers. He was a somewhat irascible leader, for he refused to allow Mattheson to conduct a part of his own work, and thus caused a duel that would have been fatal but for a fortunate button on Handel's coat.

After an Italian trip, which included a harpsichord contest with Domenico Scarlatti, Handel entered the service of George, Elector of Hanover. Visiting England on a furlough, he met with such success that he decided to stay there. Great was the composer's dismay when George was called to the English throne; but an ingenious friend brought about a reconciliation. At a royal fête on the Thames, the king's barge was approached by another boat, from which issued strains of the most entrancing beauty. When the king inquired, he learned that it was the work of his former composer, and the so-called *Water-Music* brought Handel into favor again.

Handel's operas belong to a school now obsolete, but their success in their day was tremendous. *Almira* in Hamburg, *Rodrigo* and *Agrippina* in Italy, were names to conjure with. *Rinaldo*, his first London work, was written hastily in a fortnight, yet it surpassed everything that had gone before. In London Handel brought forth piece after piece, during thirty years; managing theatres, disputing with prima donnas, braving the dandies by composing in his own way, triumphing over his rival Buononcini, making fortunes and losing them, until at last he retired from the stage, only to begin a new career in oratorio and win undying fame with the *Messiah*.

Handel's music still wins favor by its dramatic qualities, its direct and forceful utterance. He worked with the utmost speed, and when his genius did not supply inspiration he would remodel his own early themes, or steal boldly from others. Yet it must be confessed that he improved what he plagiarized; and once, when reproached with taking a melody from another composer, he replied, "That pig doesn't know what to do with such a tune." In orchestral work Handel was certainly original; and many effects of tone color often credited to more modern writers are to be found in his works.

Though born in Bohemia, and passing his later years in Paris, Christoph Willibald Gluck (1714–1787) may fairly be classed with the German school. After study at Prague, Milan, and London, he wrote an opera that



HENRY OF MEISSEN

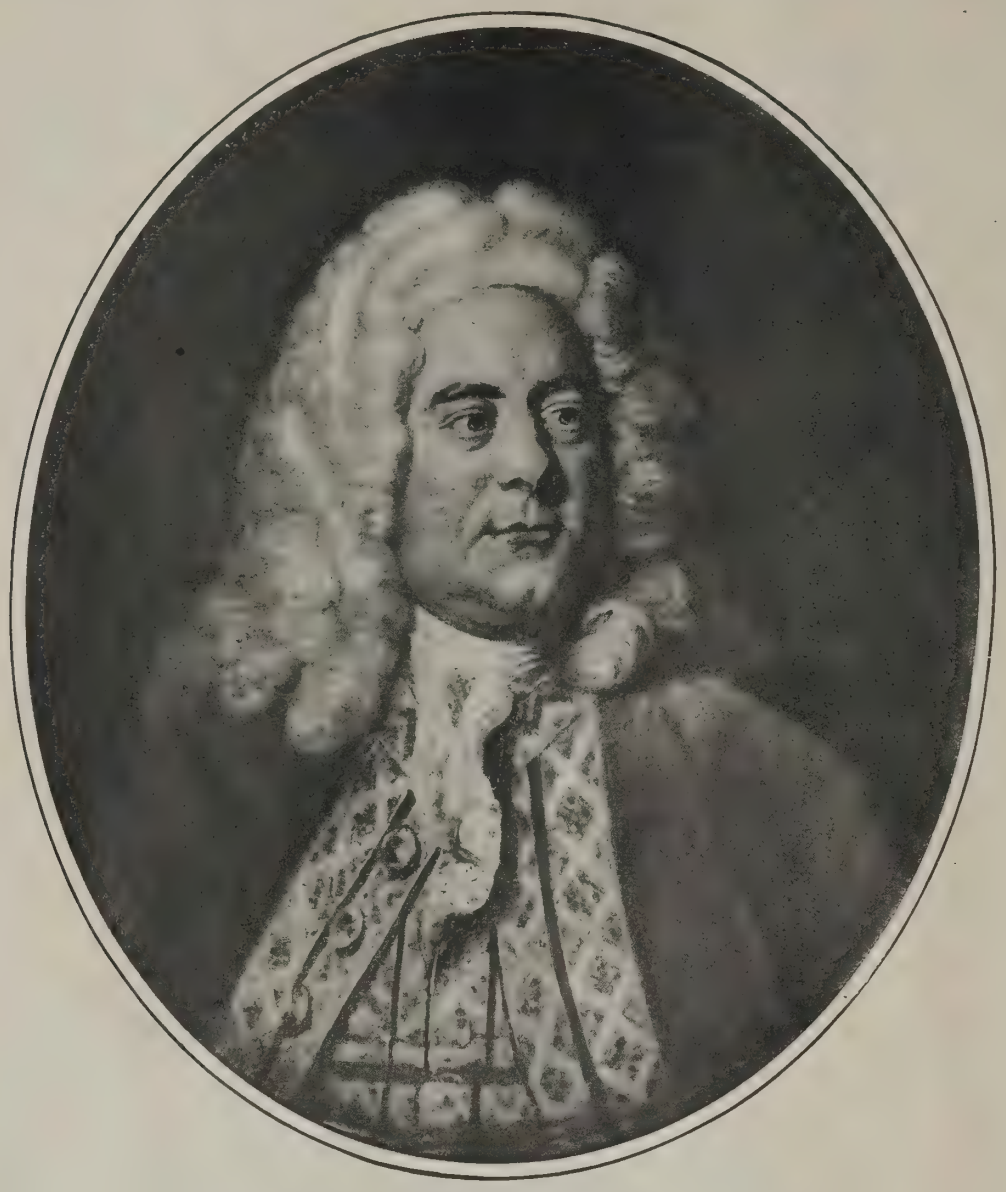
THE SINGING CONTEST AT THE WARTBURG

Above: The Landgrave Hermann of Thuringia, and his wife Sofia

Below: The contesting Minnesingers, as follows:

Biterolf. Wolfram of Eschenbach. Henry of Ofterdingen. Klingsor. Reinmar the Elder. Walther von der Vogelweide. Henry of Rispach.



GEORGE FREDERIC HANDEL
(From a portrait painted in 1742 by Francis Kyte, and now owned by Wm. H. Cummings, Esq.)

made Handel remark, "He knows no more of counterpoint than my cook." Later operas by Gluck were conventional in style, and it was not until he met the poet Calzabigi, at Vienna, that he began to work toward something higher.

The opera of Handel and the Italian composers had become wholly arbitrary. The number of characters was prescribed, each demanded his share of display in every act, and the airs they sang were duly classified into set vocal forms, — *aria cantabile*, *aria parlante*, *aria di bravura*, and so on. All this led to a well-contrasted vocal concert, and prevented any real unity.

Gluck's later operas, though all but extinct now, formed a school of dramatic force and real expressive power that have made them landmarks in musical history. From the inception of *Orfeo* to the final triumph of *Iphigenia in Tauris* over Piccini's rival work on the same subject, they represent living reality as opposed to dead conventions. *Paris and Helen*, *Armida*, *Alceste*, and *Iphigenia in Aulis*, with the two already named, brought opera back to the path on which Peri had started it, and to which Wagner recalled it in later days.

The chief instrumental form of classical times was the sonata. In its earliest form, the sonata was merely a display piece, or "sounding piece," according to the meaning of the word. It has been customary to speak of Corelli as the father of the sonata, but his works seem rather a set of experiments in different shapes than one definite form. Purcell, in England, seemed really ahead of his time, for his twelve violin sonatas show a balance and symmetry that were far beyond Corelli.

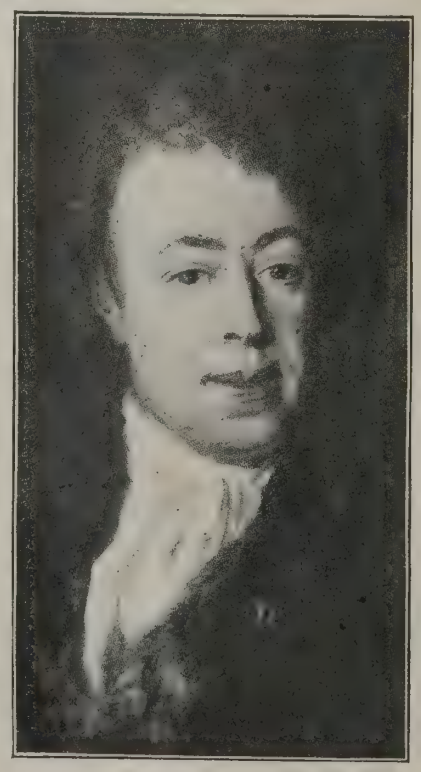
The development of the suite from the old dances gave added impetus to the progress of the new form. The suite finally became a somewhat regular succession of Prelude, Allemande, Courante, Sarabande, Gavotte or Minuet, and Gigue, — a fairly close approximation, in contrast of style, to the movements of the sonata or symphony.

The sonatas of Domenico Scarlatti represent a distinct advance, especially in the first movement. Kuhnau is credited with establishing the three-movement form. Paradisi, Galuppi, Wagenseil, and others wrote sonatas, but the man who did most for the early sonata was Carl Philipp Emanuel Bach, a son of the great Bach. His sonatas, though lacking development, show a contrast of themes and a brilliancy of modulation that have caused him to be called the "father of modern pianoforte playing."

The real founder of the sonata as we know it to-day was Joseph Haydn (1732–1809), often called "The father of instrumental form." Son of poor people, he received some training from a cousin, and joined the choir of St. Stephen's, in Vienna. But his voice broke, and the empress said that "Young Haydn sang like a crow," so he was cast on his own resources. A few pupils, an unexpected loan, and a position as servant to Porpora tided over some very evil times, until at last relief came with an engagement from Count Morzin. As leader of the count's orchestra, Haydn could at last compose to his heart's content, and in 1759, after many string quartets, came his first symphony.

Two years later Haydn became second Kapellmeister (and afterwards director) under Prince Esterhazy. The contract, still in existence, shows that a musician was then little better than an upper servant. Haydn was ordered to be strictly temperate, and to abstain from coarseness in eating, dress, or manners, and he was addressed in the contemptuous third person, as "Er." Still, his salary was good, and he increased it by the sale of his works, then growing famous. Later in life, when the orchestra was disbanded by the successor of Prince Nicholas, Haydn gained honor and wealth in a trip to England, where the manager, Salomon, ordered six symphonies from him. Six more, on a later trip, completed the "Salomon" symphonies (or "English" symphonies), which were among the composer's greatest works. The pinnacle of his fame, however, was reached with his oratorio, *The Creation*, and his cantata, *The Seasons*. The exertion of writing the latter probably hastened his death.

The music of Haydn is fully in the modern vein, though at present it often seems tame beside the thunder of more modern composers. His string quartets wear best, for in



CHRISTOPH WILLIBALD RITTER VON GLUCK
(From an unfamiliar painting)

symphony and oratorio modern writers have gone beyond him. Yet the graphic tone-pictures of *The Creation* must have seemed wonderful a century ago, while his symphonies, which we regard as merely melodic and graceful, must have been revelations of power when they first appeared. His piano sonatas are delightfully fresh, but not so advanced in style as his symphonies; because the old piano, or harpsichord, was still a rather primitive instrument.

Wolfgang Amadeus Mozart (1756–1791) was one of the most naturally gifted of composers. With ears of phenomenal delicacy, he could appreciate his sister's playing when he was only three years old. He began to compose at four, appeared in public before ten, and wrote an opera at twelve. Italian trips and studies brought him more triumphs, and on his return he electrified Munich with his *Finta Giardiniera*. But the Archbishop of Salzburg, whom Mozart served, declined to give him a respectable salary, and all through life the composer had to struggle with poverty. The success of *Idomeneo* at Munich brought no relief from his degrading position, and he left the archbishop's service at Vienna. Even in the latter city he won little imperial favor, and his three great operas (*The Marriage of Figaro*, *Don Giovanni*, and *The Magic Flute*) barely sufficed to keep the wolf from the door. His death, just after composing his great requiem for an unknown stranger, took him from the sordid wretchedness of life into a nameless grave.

Of his stage works, *Die Entführung aus dem Serail* revived the school of purely German opera, which *The Magic Flute* continued. The bright, sparkling freshness of *Figaro* and the serene beauty of *Don Giovanni* still hold the stage. If anything, their music is less modern in effect than some of Haydn's works; but the inimitable grace of Mozart's compositions makes them stand as models of the simpler melodic style in opera.

Mozart wrote forty-nine symphonies, but the last three, composed in 1788, are by far the greatest. The one in Eb was the first to introduce a clarinet into the symphonic orchestra; that in C is known as the great *Jupiter* symphony; while the third, in G minor, shows a tenderness of feeling that makes it Mozart's daintiest work. Haydn's symphonies are at times broader and more virile, but those of Mozart show a far more exquisite delicacy of emotion. The same qualities show in his sonatas, in less degree. He was the first to use the sonata form in overtures.

If one were to ask, "Who is the greatest of the composers?" many would answer "Beethoven." Yet this would not be entirely true. Bach surpassed him in intellect, Chopin in emotional expression; yet in his music we find both of these qualities, and so well balanced and blended that he remains the foremost exponent of classical music.

Ludwig van Beethoven (1770–1827) was the son of one of the Elector's musicians at Bonn. His father had heard of Mozart's fame, and decided to make Ludwig a boy prodigy also. He gave the boy lessons with the utmost rigor and severity, and with a wretched boon companion named Pfeiffer would often make him sit at the piano till midnight. It was a wonder that Ludwig did not grow to hate music altogether under this treatment.

Beethoven's first real teacher was Neefe, who gave the youth a solid training in Bach. In Vienna he met Mozart, who was amazed at his power of improvisation. Called home by the death of his mother, he bore all the family cares, receiving his drunken father's salary direct from the Elector, until the death of the elder Beethoven, — an event officially reported as "a great loss to the tax on liquors."

It is surprising to find a man of Beethoven's uncouth ways and limited education making so many friends among people of position and refinement. Yet almost from the first this was the case. Count Waldstein, Prince Lobkowitz, Prince Lichnowsky, and many other nobles became his faithful adherents. Many women, too, were objects of an ideal affection which was deep and sincere with him, if not always lasting. All the way from Eleonora von Breuning to Amalia Sebald, their influence is evident in his works, and his letters to Giulietta Guicciardi were of the most impassioned character.

In 1792 Beethoven settled in Vienna. He took lessons from Haydn at twenty cents an hour, but that master, at the height of his fame, neglected the young pupil, and called him the "Great Mogul," because of his arrogant independence. Albrechtsberger, too, denounced Beethoven, and warned his other pupils against him as a dangerous radical.

Beethoven's works paid him well, even at first, because of noble patronage; but it was not until his *Heroic Symphony* appeared that his genius was fully manifested. With that work he entered upon what is called his second period, — a time of mature originality. After exploiting all the resources of symphony and sonata, he came to a time when the form itself seemed a restriction on his great thoughts, and in his final period he discarded its strict rules.

JOHANN KUHNAU
(Cantor of Leipsic)

His symphonies, not all equal in value, have lost none of their lustre even when compared with the richest modern tone pictures. There is a story that a teacher, on asking a student how many symphonies Beethoven wrote, received the reply of "Three." "What were they?" asked the astonished teacher. "The *Heroic*, the fifth, and the ninth," was the answer. These are, in truth, the best of the nine; but the cheerfulness of the *Pastoral*, and the sunny gaiety of the seventh and eighth are still a perennial pleasure to latter-day audiences.

The sonatas show the division into periods, but even in the earliest of them we feel the forceful touches of a young giant. The *Waldstein* and *Appassionata* are the best representatives of the middle period, while the last and greatest five may well receive the term of "veiled symphonies."

The great piano concertos, the noble violin concerto, and the dramatic overtures give further evidence that

JOHANN GEORG ALBRECHTSBERGER

Beethoven was an orchestral composer *par excellence*. He thought in orchestral form, just as Schumann thought for the piano and Schubert for the voice. He brought out the full capacity of each instrument, not even sparing the human voice in his demands.

Where books have been written on Beethoven, a few paragraphs can hardly do more than give a general estimate of his music. Polished with the utmost care, it shows a vigor, a forcible directness of utterance, a profound depth of emotion, and a striving after a lofty ideal of humanity that make it still a revelation to its auditors.

Franz Peter Schubert (1797–1828) illustrated by his whole life the saying that, —

> "The anguish of the singer
> Makes the beauty of the strain."

Poor, bashful, unattractive, near-sighted, he had yet in him the spark of real genius. "Whatever I try to teach him, he seems to know already," said his teacher, Holzer. This natural gift impaired the strictness of his training, and in later life he made a manful effort to remedy the error by studying counterpoint.

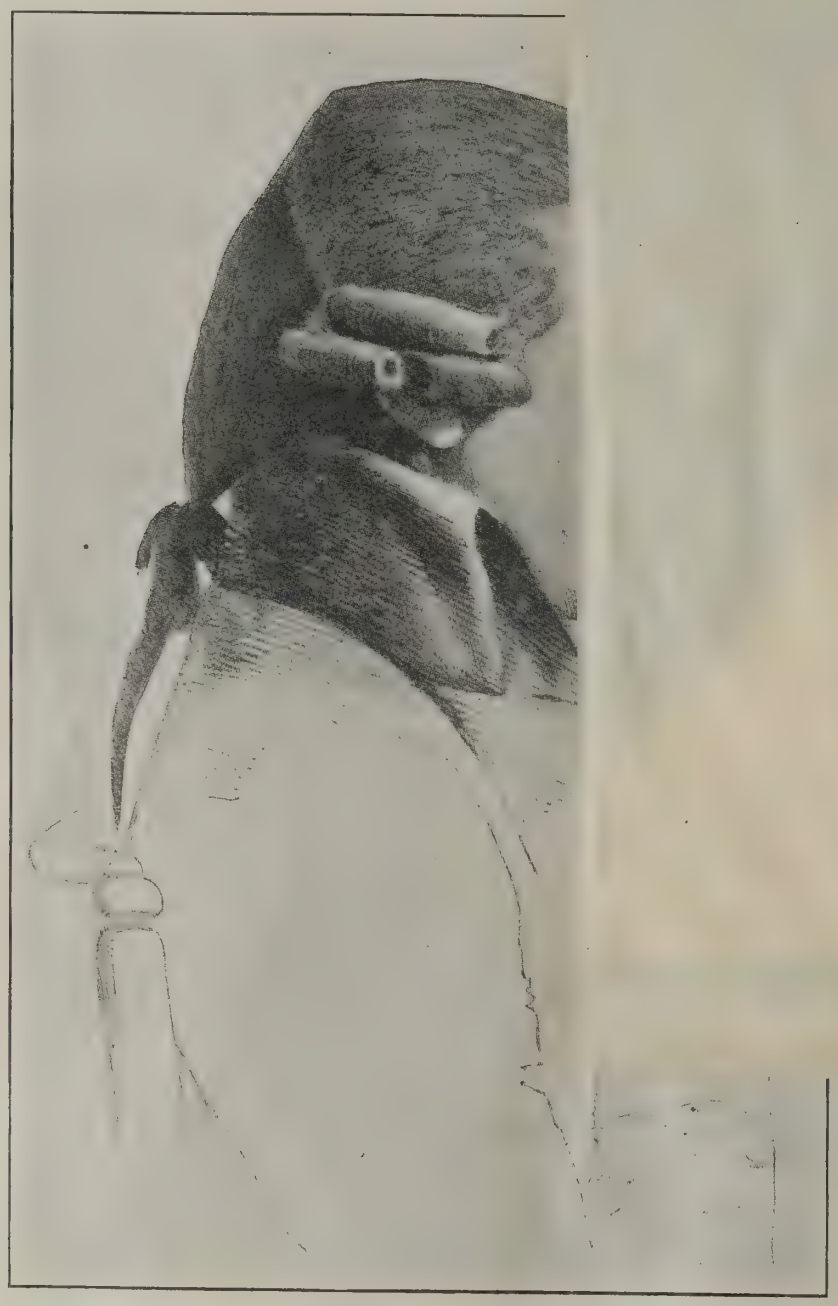
At the Imperial Chapel, in Vienna, he received little food, and his enthusiasm for composition was checked by the fact that he was too poor to buy music paper. Later on, his artistic comrades aided him, but many of his manuscripts were lost, and are still being sought for.

At eighteen he wrote the *Erl-king*, producing this great ballad in a single day. *Hark, Hark, the Lark* is another instance of his speed in composition, for he read the poem while waiting for his breakfast in a restaurant, and wrote the music on the back of a bill of fare in twenty minutes. Yet he realized little cash from his amazing gifts. *The Wanderer* alone brought its publisher twenty-seven thousand florins, while the composer had sold it, with seventy others, for only eight hundred.

Schubert's genius is evident in all his songs in which his lyrical power had free range. His symphonies are the perfection of melodic expression, but they are lacking in the figure development that some critics consider necessary in that form. His piano works show the same emotional utterance as his songs, though the sonatas fail because of their length and lack of form. Yet if his music shows flaws to the critic, its perennial beauty and tender pathos lend it a charm that marks Schubert as the greatest lyrical genius the world has ever seen.

Questions

1. Who were the Minnesingers, and what was their music like?
2. Describe the Mastersingers, and name the most famous poet-composer among them.
3. Name some early composers of Protestant church music.
4. What are the qualities that make Bach's music so great?
5. What is the *Well-tempered Clavichord*, and what



FRANZ JOSEPH HAYDN
(From a pencil drawing by George Dance)

LETTERS TO YOUNG MUSIC TEACHERS

J. KATHERINE MACDONALD

TONE AND TECHNIQUE

So far we have been considering the subject of music teaching. We now approach the narrower subject of the teaching of pianoforte playing, which contains far more difficult problems. Although we agreed in the beginning to consider music teaching as our real aim, if we are to use the piano as our medium we must teach our pupils to play it musically. This cannot be done without an understanding of piano technique. It is just here that our main difficulty lies.

Before beginning to discuss difficulties, let us understand thoroughly that tone and technique are not two opposing elements in piano playing. On the contrary, tone is dependent upon technique almost as much as it is upon the finer sensibilities of hearing. Granted an equal command of technical resources, the more musical and emotional of any two people will of course produce the better tone. But it often happens that a truly musical person is so hampered by clumsy finger movements and stiff wrists that he cannot express what he feels. He is accused of having a hard, unmusical tone, when the fact is simply that he does not know how to use his fingers. As it is ten times harder to unlearn than to learn, let us be sure that we give our pupils at the very outset the principles of a good technique. This does not mean that we must aim at brilliant or *bravura* playing, for technique in its proper sense is as necessary in interpreting the simplest melody as in performing the most difficult concert piece.

There are several rules that, carefully observed, will give any child the foundation of a good technique. The first is: —

USE THE FINGERS AND NOT THE HAND

It is strange how few people understand this idea of absolute freedom of finger movement. They talk about independence of finger, but do not realize the necessity of making each finger independent of the hand as well as of the other fingers. The keys are attacked with a hand impetus that is fatal to variety of tone. This hand movement also makes the smooth rendering of quick passages quite impossible.

Much of this bad technical habit is due to the use of dumb pianos and to the idea that the fingers must be forcibly strengthened. Pupils are taught to whack at the silent keys with a stiff wrist and a monotonous touch. They do not know what frightful sounds they would be producing if the keys could speak, and imagine they are accomplishing wonders by making their fingers strong. They may be doing that, but at the sacrifice of much better things. Let strength grow with constant use, and cultivate independence of finger by means of mental control. Not the least physical force is necessary.

The second rule is: —

KEEP THE HAND AND ARM ABSOLUTELY QUIET

I have known pupils who had very good independent finger movement, but moved the arm up and down in a manner that was not only ungainly but prevented a firm, decisive touch. I absolutely forbid all hand and arm movement in the beginning.

The third rule is that of

RELAXATION

Preserve absolute relaxation in all joints from the palm knuckles up. It is difficult to make children relax at will if they have the habit of stiffening. If you draw their attention away from the stiff wrist or elbow, and try to concentrate it on the idea of lifting each finger freely, you will find that they will drop the habit of stiffening.

As soon as possible draw the pupil's attention to the triceps muscle in the upper arm. Dr. Mason explains in his *Touch and Technique* how invaluable the consciousness of this muscle is in keeping the whole arm relaxed.

This fourth rule will help also: —

TEACH THE IDEA OF PRESSING AND FEELING, NOT OF STRIKING THE KEYS

This brings the stiffness where it is needed, in the two first joints of the fingers. At first the children are likely to make a stiff hand pressure. That, of course, must not be allowed. The movement of pressing an electric button is a good one to suggest; it is just the touch that is needed.

The fingers must be lifted high, for exercise, but the downward movement should be conceived of as a combination of drop and pressure, not of striking or throwing.

Here you can point out to your pupils the connection between technique and tone. Throw your own finger on

FRANZ SCHUBERT

the key without depressing it. Call their attention to the tapping of the skin against the ivory, which they will easily recognize to be noise and not tone. Impress upon them the fact that this slight extraneous sound will help to spoil the general effect of the tone. Many piano teachers have purposely utilized this throwing touch in scale and arpeggio work. They imagine that it adds brilliancy, and reserve the pressure touch for melody playing. Leschetizky, whose pupils are famous for their purling scale passages, absolutely forbids it, except, perhaps, where some special effect of sharpness may be desired in advanced work. It has no place in his foundation of technique.

The fifth rule,

BE SURE TO KEEP THE FINGERS WELL ROUNDED

is so well understood that there is no need to dwell on it. We do not so well recognize that the thumb, too, should be round, drawn away from the hand at the base, with the tip pointing towards the fingers and downwards.

Having enumerated these rules for technique, we come to our real difficulty, — that of presenting them to children in an interesting and intelligible way. This practical side of our subject deserves so much attention that we shall keep it for a separate letter.

Isidor Seiss, a well-known piano professor at Cologne Conservatory, died recently in that city. Born at Dresden in 1840, he studied with Friedrich Wieck, the father of Madame Schumann, and lived at Cologne for more than a quarter century. He bequeathed over $100,000 for charitable purposes.

* *

Paris has developed the new idea of a "Salon of Music." Compositions will be played by an orchestra. A jury will examine all pieces sent in, and select the best. Works will be performed in rotation. When the list is exhausted, the series will recommence. During the hours of the exhibition, music, unpublished and hitherto unheard, will be rendered continuously.

The Musician

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY

OLIVER DITSON COMPANY
Boston, Mass.
U. S. A.

VINCENT MUSIC COMPANY, Ltd.
60 Berners St.
London, W. England

WE HAVE DECIDED TO ADOPT THE FOLLOWING FORM

Illustrious brother of the sun and moon! Look upon the slave who rolls at thy feet, who kisses the earth before thee, and demands of thy charity permission to speak and live. We have read thy manuscript with delight. By the bones of our ancestors we swear that never before have we encountered such a masterpiece. Should we print it, his Majesty the Publisher would order us to take it as a criterion, and never again print anything which was not equal to it. As that would not be possible before 10,000 years, all tremblingly we return thy manuscript and beg thee 10,000 pardons. See — my head is at thy feet and I am the slave of thy servant.

A PROBLEM IN TRANSPORTATION

I

Never before has the world known greater music activity. The moment an artist arises, the telegraph, the steamer, the railway, and by no means least, the photographer, make him a universally familiar object. He gives his concert in Boston, in London, or Bombay; is met (let us hope) by enthusiastic audiences; he comes and he goes with so little noise and trouble that he seems to belong to every community in which he appears. But, no. He is not of Boston, nor of London, nor of Bombay. At the end of the season he quietly counts his money, thanks fate — or his manager — for the balance in his favor, and goes home to San Francisco.

When music historians speak of the troubadour, of the wandering minstrel as a factor of the past, they are not alive to the situation. In the early days, these people (with the instinctive tolerance of those who know that present conditions are only temporary) trudged the highways, song on lips, pack on back, knowing with prescience born of long meditation that the world would soon supply the Pullman car and the express steamer. The world did not fail; and now his pack is no longer on his back but in the baggage-car or the luggage-van (according to the local idiom), but his song is still on the lips, ever ready for the elect; a bright, happy song of the road!

Let him sing — who has sung so long.

II

In these days, as it did in those, the crowd flocks to him, stands in a semicircle at the booth he erects, anxious for him to appear.

And he appears, bows, tosses his flowing mane, and begins the program. After an encore the crowd disappears. The troubadour makes off whither his friend is — his friend whose part it is to ring the bell and have another semicircle ready when he, the chief magician, comes up.

It is a merry picture (if the semicircle be not too thin), and it presents many aspects of interest. Here is one, which we shall not attempt to discuss and decide, but which we place before you for *your* opinion: —

Does the modern troubadour permanently improve the music of local communities or does he merely create a ripple of pleasurable excitement?

III

It is true, even to the superficial observer, that everywhere in England and America there is increasing interest in music. What creates this? Do the innumerable concerts of a New York and a London season stimulate the crowds who flock to them to study music that they may thereby derive greater enjoyment? Or, is all this but a circumstance attendant upon easy money-markets and comparatively ready means of transportation?

We must not forget that the very speech of New York and of London will become a close-knit unit as the express-steamers multiply. So is it true that the five-hour train between Boston and New York is fast erasing the individual dialects of these two communities.

If transportation may thus modify speech, may it not contribute to make a community musical, by bringing the artist, who creates interest, which becomes active, and in turn establishes local music life?

Is this so?

IV

Never before has the music student enjoyed so rich an opportunity; not long since he *had* to go to Paris, Berlin, Leipsic, Vienna, Florence, and other stop-overs on the *Rundreise* if he would hear the great artists. Now he has only to wait, and one by one they pass his very door. From some of them he can secure instruction. Certainly transportation has opened the markets of the word *to him.*

Has it, through him, opened the world of art to his community?

CLUB FORMING: A SUGGESTION

To the Editor of THE MUSICIAN: —

In the November number of THE MUSICIAN I notice a letter requesting a plan for the organization of a musical club in a small town. In answer to this inquiry, I herewith hand you a plan I have tried. About a year and a half ago I organized a club among my musical pupils, to which we gave the name of "The Young Musicians' Perseverance Club." The members elected officers, who were to serve for a term of one year, a president, a vice-president, a secretary and treasurer, a corresponding secretary, a librarian, and a musical director. Our motto is, "Never give up the good begun, however hard, till it is done." Our colors are black and gold.

The club meets the second Saturday in each month. Last January we began studying the lives of the great composers in the order of the months in which they were born: January, Mozart, Schubert; February, Mendelssohn, Handel; March, Bach, Haydn. Now we are learning about Beethoven. This does not mean that we have finished the work assigned, but this has been one year's work. I have offered a prize for the best composition written about each composer.

We keep a musical Journal, in which we reserve a certain number of pages for each of the following subjects: Musical Terms, Table of Musicians, Biographical Facts to Remember, Historical Memoranda, Musical Instruments, and General Information.

Club work certainly creates great interest among musical pupils, and they seem to enjoy the club meetings. Should these few suggestions prove of any value to others who desire to organize musical clubs, it will be a satisfaction to us.

Very respectfully,
EDNA B. JACKSON.

Richard Strauss's third opera, *Salomé*, was produced at the Royal Opera, Dresden, in December. The censor had prevented its performance at Vienna, and it seemed for a while as if Dresden also was not to be allowed to hear it. Orchestral splendor, — to which the newly invented heckelphone contributes, — brilliant melodies, and the blessed quality of brevity characterize the new opera. Undoubtedly it will be heard in all the German cities, and it is already preparing at Turin. When is our turn to be?

LETTERS TO TEACHERS

SUBSCRIBER. — It seemed logical to me to present the pedal markings of many authorities in the *Graded Piano Course.* While there are many distinct advantages in a specific scheme of marks, whether applied to Phrasing, Pedal, or Fingering, it is nevertheless true that the general output of piano music as we receive it from the great publishing houses is not uniformly edited in any respect; it is, however, illustrative of many excellent editorial ideas applied to the needs of teacher and student. I have there shown the pedal marking of several distinguished authorities, because in this very variety of authoritative expression the teacher of to-day discovers one of the problems of piano instruction.

C. C. C. — (1) I should not consider it necessary to give an entire Sonatine. You undoubtedly find certain movements of actual use, others of little or no use. Select them freely, take them in any order you find essential *to your pupil.*

(2) Look over the Sonatines of Carl Reinecke. Do not make the usual error about "worn-out Sonatines," as you call them. To the pupil who has not heard it the oldest tune is a new tune.

SUBSCRIBER, EASTON, PA. — In THE MUSICIAN for 1906 there will be found such biographies as you ask for in your letter. The next issue will inaugurate this series with a sketch, portrait, and autograph of Loeschhorn.

PIANO. — Do not overdo sight reading in Grades I and II. The first steps carefully taken will simplify the problem, say in the third grade. Further, you may have any theory you like about the principle of sight reading (applied to piano), but the fact remains that a child knows nothing of the value of theories and remains wholly dependent upon practice for his progress. The action must be performed again and again until habit has not only become established, but has taken its place in the subconscious.

1905–6. — This question of the consistent use of terms in music is forever with us. May I refer you to the preceding issue of THE MUSICIAN where, under "Letters to Teachers," you will find a reply touching this subject? All we can rightly claim from a writer on music is that he avoid ambiguous use of terms, secure a clear picture, *and remain consistent.* Our English music terminology cannot safely set up a "separate-kingdom" claim.

CRESCENDO. — Do *not* finger every note! Make it a rule for the First Grade to have finger signs indicate position; when the position changes, change the fingering. As in all other studies, the pupil should begin to infer and to deduce.

SCALE-TONES. — "How shall we teach a child correct musical terms?" Nothing can be simpler. He will learn correct musical terms just as he learns the correct use of knife and fork and spoon, by sitting frequently at a cultured table. Use musical terms correctly yourself and his correct use of them is assured. I cannot understand why a ceremony need attend teaching children this or that word. When they have use for the thing or fact for which the word stands, its addition to their vocabulary is natural and easy.

T. W. NASON. — I should not give a child a book of technics for home practice. Assuming the pupil has frequent lessons, give a single technical exercise when needed, explain the figure in which it is written, have the pupil memorize it *and write it in his music note-book* under your direction. He can get so much out of a single technical group by repetition, sequence, and transposition that he needs no book of technics. Further, let him learn as soon as he can how to use note-groups.

THOMAS TAPPER.

For the Young People

Conducted by THOMAS TAPPER

The Musical Man. By RACHEL FRANCES SHARPLESS.

I

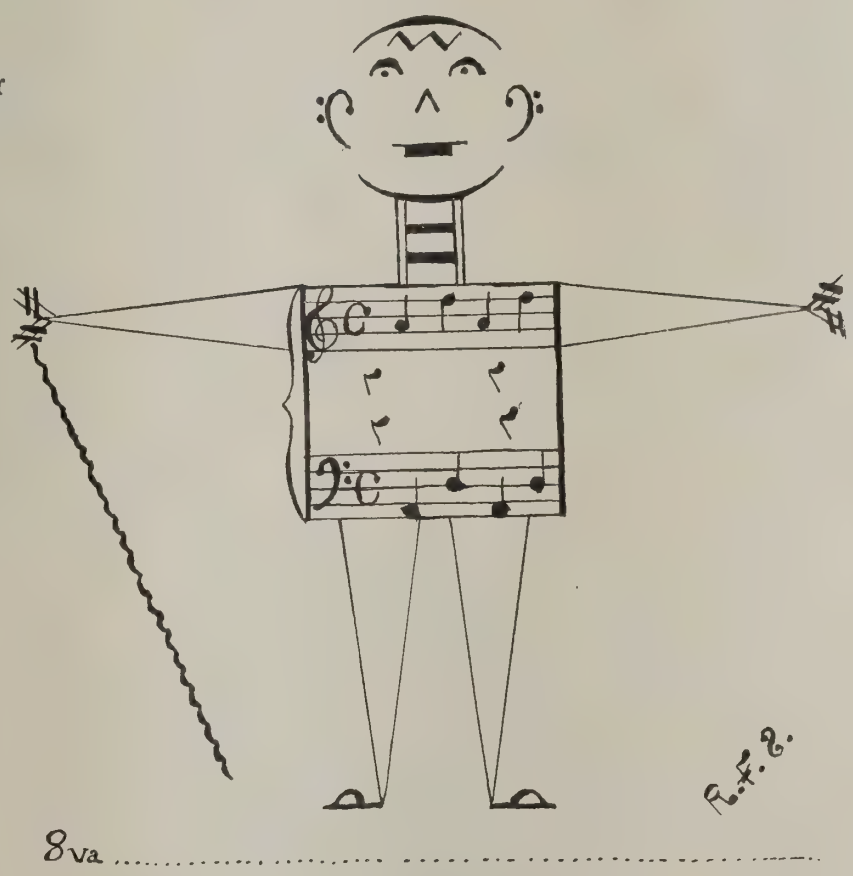
A music-maker, in times remote,
Had the hairy body and hoofs of a goat;
He had horns on his head, which was that of a man;
He piped on reeds, and his name was Pan.

II

But the queer looking mister
you see pictured here,
Has a shell-like *bass clef*
for each ear;
Bass clef dots are his
freckles fair,
A *mordent* forms his wavy
hair.

III

His upturned nose is an
accent mark,
And, not for a *slur* but just
for a lark,
He wears his *tie* around
head and chin,
While his mouth shows a
whole rest, silent grin.



IV

Each steadily staring eye is a *pause,*
His be-ringed fingers are *sharp* like claws;
An *arpeggio* cane he twirls in his hand,
He sports a high collar, the *C clef* brand.

V

Staves and *clefs* adorn his
vest,
Each button's crest is a
quarter rest;
A graceful *brace* supports
his side,
His *time-piece* and *notes*
denote his pride.

VI

His arms are *crescendo—*
decrescendo,
(LOUDER, STILL LOUDER—
not loud, no, no!)
Simply *decrescendo* are his
legs,
Which should make him tip-
toe as if on eggs.

VII

But he walks quite flat-footed down the street,
Because he has two *flats* for feet;
The level street, you see near by,
Is known, far and wide, as the *Octave High.*

VIII

Now do you prefer the old god Pan,
Or this modern little Musical Man?

RICHARD WAGNER

MUSICAL TAG
(Wagner taken unawares)

IMPEDIMENTS TO MUSICAL FLUENCY

ELEANOR P. SHERWOOD

If there is one thing indispensable above all others in piano playing, it is to "keep the swing" of accented progression, as determined by meter and *tempo*. The leading of tone from accent to accent — *a tempo* — *crescendo*, *diminuendo*, *sostenuto*, — as the case may be,— in accordance with requirements in spirit, style, and phrasing, without breaking the sense or thread of melodic or harmonic connection, is to hold the attention of the listener and to maintain interest in the unity of the "Altogether."

This demand of rhythm for an unobstructed flow is so imperative that a gifted player obeys irresistibly, on impulse.

If Rhythm were all! But Melody and Harmony put in their claims and there is war of the elements. The tyrant, Rhythm, threatens destruction. False notes and confused and jangling sounds, generally, lie scattered in his path. His cry is ever, "Up, move on, march, run, *get there* at all hazards!" Things are at a pretty pass. Something must be done. Melody and Harmony form an alliance. In self-defense they have to strike. They declare they will not move another *half-step* without a reasonable amount of preparation. There is but one hope of peace. This is in an appeal to Technique — of the committee on ways and means. He, alone, may be competent to restore harmony through arbitration.

Considerations of conditions necessary to ensure accuracy as to notes, clarity, quality, variety, and duration of tone, are submitted by the Allies.

Rhythm protests, "I cannot see what all this fuss is about. To keep *going* is the thing. Where would *they* be but for my motive power, especially in successive discords and polyphonic combinations which cannot afford to hold still long enough for one to catch the notes they are made of — much less, to bring into play all this physical culture with regard to control of tone. The movement to 'resolution' is most imperative."

Harmony retorts, "Without my modern tonal fabric and Melody's pitch variety, you would be nothing but a primeval tum-tumte-tum-tum midway savage-in-monotone, with not so much as an orbit for your boasted accented progression. We bring you the entire keyboard of over seven octaves. Yet you insist upon driving us about, whether we are ready or not. You are grateful, to say the least!"

It is certainly time for arbitration. The court admits the claim of the Allies to a reasonable amount of preparation, but only on condition that they make, thereafter, complete surrender to Rhythmic movement. Rhythm is also granted precedence in accent, although Melody and Harmony win some concessions for their notes of especial *contrast*, as dependent upon suspension and resolution, syncopation, modulation, and the terminal points in runs and arpeggios.

As to balancing voices in Harmony — while soprano and bass are apt to predominate, it is a matter dependent upon relative thematic importance and a nice tonal distinction between stationary parts and those of continuous progression.

The mass of obviously important detail is wearisome to contemplate — or would be, to one less efficient than Technique in arranging and classifying. However, after having gained a full appreciation of the relative merits of every demand, he finally succeeds in finding adequate resources of adjustment. From impregnable positions, through various courses of action, together with pedal assistance, he manages, at last, to reconcile the three Powers and to promote peace; insuring, as a result, a rhythmic fluency richly endowed with melodic and harmonic content.

This, only, deserves the name of *Musical* Fluency. With the best of talent and intention, it remains an impossibility until — first, there has been much forethought as to the technical disposition of impediments to progress, and then, entire abandon to the spirit and *tempo* of the work.

Having done all to "clear the track," the performer must *let go*, regardless of consequences along the route; regardless, even, of a too literal accuracy, but rather relying upon his conception of the whole to secure the desired artistic impression.

ROLAND OF BERLIN

Treating of the Composer of the Opera, the Opera Itself, and the Historical and Mythical Roland

LOUISE ANNA WACHTER

I. Leoncavallo and His Engagement by Emperor William to compose the Opera

In the year 1899, after hearing a performance of *I Medici* in Berlin, the emperor of Germany commissioned Ruggiero Leoncavallo, the Italian composer, to write the opera *Roland of Berlin*, and he created quite a stir in Germany for having selected a foreigner to compose a work which was to be distinctively German. However, *Regis*

EMPEROR WILLIAM

voluntas suprema lex. It took Leoncavallo two years to translate from German into Italian Willibald Alexis' novel, *Roland of Berlin*, which so strongly suggested itself to the emperor's mind as to fill His Majesty with the idea of an opera bearing the name. Once the work was translated into Italian, the libretto worked out, and the score completed, it was necessary to translate Leoncavallo's text into German again. Many envious ones declaimed against Leoncavallo, asserting that the opera was the work of another. Despite the base charge, he testified as to the genuineness of the work. Furthermore, a Milan newspaper made charges against the composer, which resulted in Leoncavallo's suing the paper for a large sum.

HOFFMANN
Who sang the part of Rathenow at the original performances in Berlin

After completing the opera the composer presented the score to Emperor William with the words: "The name of Your Majesty gives this work its greatest and only fame."

The emperor expressed a wish that the opera close like the novel; namely, that Henning be wounded and brought on the stage; that the Elector make him a knight and pardon the Mayor on the condition that Alba and Henning be allowed to marry. Leoncavallo declared that to make the Elector unite the lovers would in its suddenness appear too daring, and tend to rob the final situation of its strength. In the opera, a soldier runs Henning through with his sword just as he, Henning, forces his way through the gates of Berlin, and this dramatic movement the composer declared to be more in keeping with the story, as it not only lends a greater power to the musical climax, but also offers a stronger dramatic effect. Moreover, the composer argued that in a novel such a *finale* as the emperor desired is more easily obtained, for the reason that the author works out a number of chapters which gradually prepare the reader for the union of Henning and Elsbeth.

II. The Story of the Opera "Roland of Berlin"

In the novel of Willibald Alexis, upon which Leoncavallo's opera is founded, Roland, the Saxon paladin, is used as a text for portraying the constant quarrels then existing between the guilds and junkers of the sister-cities Berlin and Coelln, on the Spree. The principal characters in the opera are the Elector Frederick, Margrave of Brandenburg; Johann von Rathenow, Mayor of Berlin; Alba, his daughter; Henning Moeller, a weaver's son; Wuentz, a senator of Berlin; Schum, a senator of Coelln; Eva and Melchior, his children; Makensprung, a tradesman; Gertrud, Rathenow's sister; Baruch, a money-lender, and Hans Ferbiert, a barber.

The first act takes place on the square, near the large bridge connecting Berlin and Coelln. In front of the church is seen a Roland column. The Margrave Frederick has come to Berlin in disguise in order to observe and learn for himself the general trend of public sentiment. An opportunity is soon afforded him. The populace gathered in front of the Town Hall are angered because

the tradesman, Makensprung, who had entered a complaint against the encroachments of the junkers, has not been allowed to have a hearing by the Town Council. The generally respected Henning incites them to defend themselves against the aggressive conduct of the junkers and to protest against the Council's cowardice.

Evening approaches, and an idyllic scene ensues between Henning and the Mayor's young daughter, Alba, who has just come from church. Alba gives Henning her prayer-book, which he is to bring to her father's house so that he may have the opportunity of seeing her again. In the meantime, another crowd appears on the square, following a rather grotesque-looking jack-pudding or buffoon (German *Hanswurst*, literally, John Sausage), who mocks or makes sport of the Council of Berlin and Coelln and performs all manner of tricks with the arms of the sister-cities. Johann von Rathenow, Mayor of Berlin, suddenly comes upon the scene and turns in anger against the people who are offering insult to the city-arms. The tumult grows worse, and Henning is just in time to save the Mayor by hurrying him into the church. After the attention of the populace is again diverted by

RUGGIERO LEONCAVALLO

the public whipping of a girl, the Margrave finds himself alone with Henning, whose courage and nobleness of mind he has admired in silence. He reveals his true person and says, "Should you ever be in need, I will help you."

The second act takes us into the home of Rathenow, the Mayor. In a scene between Rathenow and the money-lender, Baruch, who lends the Mayor a large sum of money, the Mayor falls on his knees and, between sobs, prays that God keep his daughter pure and good. Henning, who has been in the Elector's court for over two months, enters, but withdraws discreetly, for stern Johann von Rathenow would never forgive one who had taken him by surprise in a moment of weakness. Schum and Wuentz enter, having come to invite the Mayor to attend the banquet to be given the following day. On this occasion the engagement of Alba and Melchior Schum is to be announced.

After all have gone out, Henning comes out of his place of concealment, and is soon joined by Alba, to whom he speaks of this new fortune and his love. After the usual love-duet, Henning hurries away through the window in order to avoid meeting the servants of the household. He disappears with the words, "Until to-morrow — and then forever."

The third act takes place in the Town Hall. The banquet which is to celebrate the engagement of the young couple is nearing its end. Father Schum whispers anecdotes concerning Alba, his future daughter-in-law, and Henning. The intoxicated guests become hotter; the old hatred between Berlin and Coelln makes itself apparent. Finally, old Schum reproaches the Mayor's daughter with being the sweetheart of Henning. At this juncture Johann von Rathenow jumps up, clasps his daughter in his arms, and cries that Alba and he tower above low-mindedness and slander.

The last act is composed of two scenes connected by vivid orchestral coloring. The first scene takes us again into the Mayor's house. Elector Frederick is in front of the gates of Berlin. Henning, who is soon to have the honor of knighthood conferred upon him, appears. Since the engagement between Alba and Melchior Schum has been rendered impossible, he sues openly for Alba's hand. However, Alba's pride is still too great, and she haughtily rejects the weaver's son. Johann von Rathenow then comes in, repeats his daughter's words, and adds that not until the Roland column before the church shall fall from its pedestal will he give his consent to Henning's marriage with his daughter. Henning takes his departure.

The stage becomes dark; the orchestra announces the approach of the Margrave. Then the stage becomes light again and we are brought back to the square in front of the Roland column. The Margrave summons the city to open its gates. As the Mayor proudly refuses, the city gates are stormed and Henning is first to force his way in. Johann von Rathenow bares his head before the Margrave. He had not allowed the gates to be opened, as it was his duty to preserve the rights of the free city. The Margrave reminds him of *his*, the Elector's rights, and declares he has come to make an end of the old quarrel between Berlin and Coelln. As a sign that the sister-cities are henceforth one city, under one administration, he orders the Roland column to be torn down. Then he asks for Henning, but a deep silence follows his inquiry. At the storming of Berlin Henning fell a hero; life had no more charm for him.

III. The Historical and Mythical Roland

Roland, the symbol of honor and chivalry, a giant in stature, a hero in war, the Christian Theseus, the Achilles of the West, has been preserved in history, legend, picture, and stone. The old statues on the market-places, — the Roland columns, — are true signs of German power and justice.

The first mention of a Roland column was in Hamburg in 1342. Then followed the Bremen Roland. Some of my readers may have noticed, while on a visit to the city of Bremen, the huge figure called the "Roland," which rises in front of the Stadhaus adjoining the Rathaus. This Roland is historically of the highest interest, as it marks the time of the freedom of the city. On the same spot stood, in the fourteenth century, a similar statue in wood, which was burned by the archiepiscopal party during a fray in 1366. Fifty years later the present stone Roland was raised. His left arm supports a shield, with the imperial eagle and a low-German inscription referring to the city's freedom, as follows: —

"Vryheit do ick ju openbar
De Carl und mennich Vorst vorwar
Desser Stede gegeven hat
Das danket Gode, is min radt."*

After Bremen, a Roland was placed in the market-place at Zerbst; that of Berlin was made in the fourteenth century. The fifteenth century added greatly to the list, and stone column Rolands were known to exist in Brandenburg a. H. (Neustadt), Elbing, Nordhausen, Riga, Magdeburg, Neuhaldensleben, Angermuende, Calbe, a. S., Halle, Halberstadt, Quedlinburg, Prenzlau, and other places. It will be seen by these names that the Roland column had its home mostly in Saxon cities. Of all these, it is said that not more than six — namely, those at Bremen, Zerbst, Halberstadt, Quedlinburg, Prenzlau, and Brandenburg — have been preserved in their original state. The others have undergone more or less restoration. These columns, with which Charlemagne's nephew, Roland, was honored, as a rule represent an armored, youthful, beardless, bareheaded man with uplifted sword.

Chroniclers tell us that Roland, Count of Mans and Knight of Blaives, was the son of Duke Milo of Aiglant his mother being Bertha, the sister of Charlemagne. He was eight feet high and had an open countenance which invited confidence and inspired respect. Moreover, he is represented as having been loyal and simple-minded. Equipped with his sword, Durandal, and his horse, Viellantiff, Roland went forth to war as the paladin of his uncle, Charlemagne, the monarch of the Franks. Many and fierce were the battles in which they engaged. The Saracens, the Huns, the Bulgarians, and the Saxons were successfully encountered. It was after the capture of Pamplona, upon the return march from Saragossa where they had been beaten back, that Roland, who commanded the rear-guard of Charlemagne's army, fell into an ambuscade with the Gascons at Roncevalles, a defile in the Pyrenees, and perished with all the flower of French chivalry in 778.

This battle of Roncevalles gave rise to many romantic stories and formed the subject of the most popular epic poem of the Middle Ages, the famous Anglo-Norman *Chanson de Roland* (*Song of Roland*), the work of a Norman *trouvère*. The *Song of Roland* was sung by Taillefer at the head of the troops of William of Normandy when he came to invade England. It was transmitted to the Germans by the Monk (Pfaffe) Konrad who translated it. It is an epic of great strength and immense popularity. Roland is also the hero of Theroulde's *Chanson de Roland*, the romance called *Chroniq de Turpin*, Boiardo's epic, *Orlando in Love* (Italian), Aristo's epic, *Orlando Mad*, a poem by Victor Hugo entitled *Le Mariage de Roland*, and has been immortalized by Schiller in his ballad, *Ritter Toggenburg*.

THE ROLAND COLUMN AT ERFURT

* "I unto you make freedom known,
Which Carl and other princes have in truth,
Unto the city given;
Thank God for it, that is my advice."

MAHLER, REGER, PFITZNER & CO.

BERLIN LETTER

ARTHUR BIRD

This bouquet is purveyor to a certain class of enthusiastic criers, consisting partly of the profession but mostly of outsiders, who are always to be found idling about the concert halls, longing and seeking something new; waiting for an opportunity to gush; throwing themselves into the arms of any momentary reigning party; in short, the careless, thoughtless, worthless loungers. Gustav Mahler, the director, conductor, and composer is by far the most interesting of this group of moderners. If he is not in any sense of the word a genius, he knows how to paint skilfully other people's ideas in glowing, original, and perfectly toned colors. His orchestration is the ideal of tonal gluttony; it is fascinating, magnetic, seductive. As to orchestral coloring and euphony, I can safely say his scores are unequaled by any living composer.

All this would for a moment seem to be sufficient to place him among the few elected; but unfortunately this

GUSTAV MAHLER

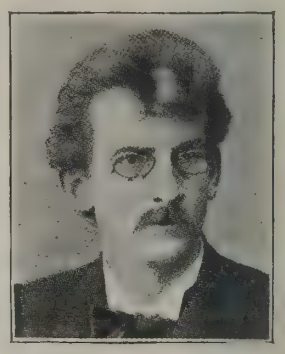
splendid orchestral talent, this gigantic knowledge of all classical combinations, with his constant invention of innumerable new and original ones, overwhelms finally most of his hearers and worse than that hurls him headlong into those narrow and inviting lanes which have long since been paved and trodden by the greatest of the great and numberless modern minor lights. The result is that the gorgeous and pretentious coloring has no relation whatsoever to the subject treated. Thus Mahler can take as a motto any idiotic rubbish and write a symphonic poem about it, or out of a silly song make a dramatic ballad; in short, take any kind of words and make any kind of music.

To know Mahler is to hear his symphony in C minor for grand orchestra, chorus, and solo. In this he has betrayed his real self and thus it is a perfect compendium, — in words, short; in notes very lengthy (one hour and a quarter) — of this certainly talented man. This pretentious *opus* positively proves that astoundingly fine workmanship and weak material bring forth but a sorry structure; for in a short time it crumbles together, leaving cleverness as a well-appointed, gay-colored, but sadly naked scaffolding. It shows his masterly command of orchestra, harmony, counterpoint, thematical development, climax building; but likewise his want of discretion, individuality, self-criticism, creative power. I personally enjoy him from a professional and sometimes from a musical point of view, but the effect of such heaps of wisely selected and artfully arranged notes is entertaining, not elevating; a passing, not a lasting one.

Max Reger is a musical riddle as yet. With every new composition it is invariably a question, Will it be something worth hearing or will it be a ragged, haggard, deformed monstrosity? The latter seems almost to be a specialty of his; for I scarcely know a piano or organ composition which is not overloaded with ugly combinations, unfathomable harmonic progressions, and undissolved discords. After having heard last week his latest *opus*, a *Sinfonietta* for orchestra, I must acknowledge he is to me more than ever before an interrogation point.

Firstly, its diminutive name is in no proportion to its length (three quarters of an hour); secondly, it is dry and tiresome; and finally, it is clothed in an orchestral robe worthy of a fresh graduate of the Royal High School of Music in Berlin. It is unnecessary to add that it was a complete failure.

Intoxicated Regerites invariably declare, when everything else fails, "But the polyphonic work is masterly." This reminds me of the celebrated surgeon who, after having performed a difficult operation, said triumphantly, "The operation was a complete and brilliant success"; but forgot to add, the patient died during it. So it is often with Reger. His score on paper is a brilliant mathematical wonder, but it kills the audience. If really good music hath charms to soothe the savage, such kind of music hath charms to make one savage.



HANS PFITZNER

Hans Pfitzner comes under the head of what the Germans call "super-modern"; which means one who constantly scores eight and twenty lines; is played here and there; feels himself predestinated for something especial. Pfitzner composes difficult operas, and sets music to things and persons which nobody else can or cares to. The most unsympathetic subject is not safe in his neighborhood. Of him one might say, he does those things he should better leave undone and leaves undone those with which he might successfully grapple.

I hope, Mr. Editor, you will never be condemned to hear his lachrymose opera *Der arme Heinrich*. For fear you may, however, I beg you to excuse me from going into details, which would not only awake in me the most painful reminiscences, but might possibly influence your verdict. Suffice it to say that the very thought of those three long hours of wailing and groaning, which I was obliged to sit through at the first performance last winter, makes me shudder even to-day.

Of his new opera *Die Rose vom Liebesgarten* I know but little. The fragments, however, which I have lately heard, only prove that my opinion of him is right and just. As he is a man not without ability, and still young, he may yet gain a healthy harbor. At present he is hopelessly drifting.

To sum up: —

Mahler. — Tone painter, elegant, well informed.

Reger. — (?) Intellectual. Dislocated chords, discords, and harmonic progressions characteristic.

Pfitzner. — Drifting. Rescue questionable.

The Co. part of my subject to-day is too extensive to be treated this time. Here are a few of the names—Max Schillings, Georg Schumann, Ernest Boehe, von Hausegger, and numerous others, all members of and patronized by the Allgemeiner deutscher Musikverein. I shall return to these later on, as occasion requires.

The Russian composer, Arensky, has finished an opera based upon Shakespeare's *Tempest*. The composer is threatened with tuberculosis, and is now enduring the rigors of open-air treatment at a sanatorium in Finland.

* *

Carl Goldmark, the veteran Viennese composer, has also tried his hand at an opera on a Shakespearian subject, the one selected being *The Winter's Tale*.

THE RATIONALE OF MASON'S "TECHNICS"

W. S. B. MATHEWS

At first sight nothing could appear more singular than the fact that a system of pianoforte technics, first published in part in 1868, by an American teacher who then and for a quarter of a century later remained the very first of American piano teachers, himself an artist, with a modern education of the highest possible class (having studied with Liszt at Weimar) should have remained unknown to the large majority of American teachers of the piano, even until now. This curious difficulty of an American master in gaining recognition upon his own ground is very striking; but it is easily accounted for in the almost universal foreign study of nearly all our leading teachers. These young men come back (and the women, too) with the idea that "no American need apply"; that is to say, that all musical knowledge rises in Europe, and that it has to be sought and gained there, if anywhere. This idea is passed along to the pupils who in turn become teachers, and so this singular omission has arisen. The most striking case of this European preoccupation of mind has again and again been illustrated among the assistants of Dr. Mason himself, — women who after having had a few years in Europe come back and engage as his assistants with not the slightest care to comprehend or teach his system in its many-sided foresightedness.

When the first edition of the complete *Technics* was made in 1878, I supposed that it would have taken a commanding position, for these reasons among others: —

First, because it supplied a finger training for volubility, strength, and tone quality which was incomparably superior to anything offered elsewhere at that time or afterwards.

Second, because the rhythmic training put in operation certain mental parts of piano technique, for which no other system made the slightest preparation, namely, those unconscious mental computations of measure and motion; which underly all good rhythmic playing, and which all other systems neglect entirely.

Third, because Mason's most ingenious series of keyboard modifications of the diminished chords (by moving one or more fingers one way or the other) gave rise to a very elaborate four-note arpeggio apparatus, which had the merit of educating the fingers automatically, and at the same time of concentrating the attention upon slight harmonic changes, thus conducing wonderfully to accurate and easy memorizing.

Fourth, because in this system he displayed two methods of coming at velocity earlier and quicker than anybody had elsewhere found out a way of doing.

When I added the foregoing points together, and thought farther of the manifold variety of educational forms of scale practice, it seemed to me that such a system would be taken up at once by all live teachers of piano who meant to get first-class pianistic results in the shortest way. But I was mistaken.

This omission was all the more remarkable when we remember that Mason's system, then, as now, covered many more points of the standard mechanism of good piano playing than any system elsewhere. At the moment of complete publication, the Lebert and Stark system had a great vogue. This was not a system of technique and no pianist was ever formed under it. Yet very few of those who taught from the books knew this. I remember how surprised I was twenty years ago when that most excellent musician and composer, Mr. Edgar Stillman Kelly, came to me after graduating at Stuttgart, to get the points of Mason's system. He stated in effect that nobody would ever get the Stuttgart system from him; that he had had three years of it, and that they were more than enough.

So far as I can see, the field is as clear for Mason now as it was forty years ago. Despite the intervening time, and the great advance in what might be called the official standards of piano playing, no other system has yet undertaken to cover all of the Mason ground. I do not think I am betraying secrets when I say that the popular impression now is that at this moment there are two great leading systems of piano teaching in competition with this of Mason. Mr. Virgil has invented a form of toneless keyboard which is capable of many facilitations in finger work, upon the purely mechanical side. Then we have three forms of what is called the Leschetizky groundwork, or that part of elementary piano playing which he entrusts to assistants.

I am personally a great admirer of Leschetizky; not so much for his saint-like disposition as for his success in turning out many fine players and assisting many others. In fact, Leschetizky stands for a new epoch in the pedagogy of the piano. Coming himself from Beethoven by way of that very gifted master, Carl Czerny, Leschetizky came into prominence through the fascinating female pianist, Annette Essipoff, who after failing to reform her irrepressible playing under Rubinstein and reduce it to the demands of art, found her master in this still living pedagogue.

Leschetizky's teaching differs from that of all before him in two points: first, he teaches tone production and tone control with a persistence, refinement, and completeness which no master of concert pianists before him has ever shown; and, second, he is the first master who has taught the piano, the concert piano, in the modern spirit, — *i.e.*, as the musical exponent of the tone poetry of the whole world. Breadth of *répertoire*, refinement, and finish of interpretation, brilliancy of *bravura*, — the whole art of the pianist has been taught by Leschetizky; and he is actually the very first master who has ever managed to cover the whole ground. He has proved his mastership by turning out a more brilliant succession of great pianists than any teacher before him did. Even Czerny turned out, in fact, but two or three great pianists, although many more took lessons of him at times. Liszt, Thalberg, and Leschetizky himself were three strong figures; the two former as epoch-making *virtuosi*, the latter as a pedagogue covering like ground of interpretation and of knowing precisely how the piano could be played to secure the musical results desired.

Anybody who turns over the three different versions of the Leschetizky groundwork will see that what all his pupils tell us is true; that this great master has no system of technique. His art consists in teaching tone production under conditions amounting to the most severe handicap that a performing artist can experience; and in showing how to use traditional forms for getting better results. Beyond this, his art is that of teaching how the *répertoire* ought to be played, and in walking the floor in grief, anger, and objurgation until the desired improvements begin to come. In other words, he is in his way a great artist, whose intensity fires up the most sluggish and refines the pure gold from all its alloy, until we get the pianists who bear the Leschetizky stamp.

Another point to be observed of the great Vienna master is that as yet he has nowhere unfolded his theory of a very important part of tone production, — which, nevertheless, he teaches continually, — namely, the office of the arm and the general vitalization of the entire playing apparatus, as distinguished from the Lebert and Stark and Plaidy effort to reduce everything to finger work. All his virtuoso pianists employ the arm in a thoroughly modern manner, but at what point he sets to work to secure this vitalization of the arm as well as of the hand and fingers, he has given no sign. Evidently the *Vorbereiter* have not as yet been permitted to touch this part of the sacred ark. If the arm relations had been included, with certain training in chords and octaves and pedal, the Leschetizky system would have included those parts of piano playing which the master has to use every day; since his material consists of those who are already, as they suppose, pretty good pianists. Whatever may have been taught them, unless by Mason, or by some great modern pianist like Godowsky, the term "tone production" is not mentioned, nor its meaning unfolded. Some even go as far as a friend of mine, of well-known name, who takes the ground that touch is the last thing to teach in piano playing, — an idea which is as absurd as any idea could possibly be.

The revised edition of the Mason *Technics* divides into two parts: Tone Production and Passage Practice. The former includes Mason's Two Finger Exercises in very complete form, his octave school, the pedal and chords. Now this part of the Mason system does not come into competition with any other system whatever. It contains the one tone-producing exercise (in several forms) upon which Leschetizky relies, — an exercise so difficult that talented young pianists are thought to do admirably well if they master its three lines in two years. All the rest is Mason's own, saving the Chord Exercises, which are quoted.

The growth of this part of Mason's system has been very curious. When I first took a few lessons of Dr. Mason in 1870 he used already his two-finger exercise with elastic touch upon the second tone; also the light and fast form. He had not then, nor twelve years later, any theory as to with what mechanism the hand was to arrive upon the strong first tone of the elastic touch exercise. I found when the question had to be settled with a view to octave teaching, that he invariably came upon it with the arm. He had discovered two simple forms of exercise, which, if used daily, would give depth and fluency, with nobility of tone. They had in them also the rudiments of an octave school and of chord playing, — two subjects which he disposes of in a manner as simple as it is masterly.

The later applications of the two-finger exercise were worked out one by one as faults in pupils suggested them. Mason never had the idea of making his touch apparatus a complete school of tone production. Perhaps he had not seen that the subject could be reduced to a few simple principles. He had passed far beyond his early training, in which the quiet hand and flexible fingers purled away in *salon* compositions, Mozart concertos, and the like. While he himself had mastered the Chopin and Liszt school, and had added to them that of Schumann—of Liszt and Schumann Mason was the first American exponent— he had not theorized concerning the principles involved. Nobody had. We now see — at least we ought to see — that tone production is reducible to a few elementary methods of attacking the keys. I have tried to include all these primary types of touch in what I have taken the liberty of naming a "standard combination for daily practice," in which all tone-producing hand types, as I believe, are employed. In this I have but slightly cleared up points in Mason's work which he was already applying practically when I first knew him.

Mason's octave school is singularly short and contains very few exercises. The reason of this is that the principles of octave and chord attack are already very thoroughly covered in the two-finger exercises in thirds and sixths. It is curious that even as late as about 1892 Mason thought it would be impossible to teach the pedal in a book of technique. He said that if a player was musical, he would "get on to it"; if he was not musical, he never would, nor could it be taught to him. I called his attention to the fact that in forty years of teaching he had taught about every pupil he had had the same things concerning the pedal, which we both recognized as an indispensable part of the tone-controlling apparatus of the piano. This he saw, and so managed to invent two or three innocent little exercises, which, following after the scale exercise proposed by some French pedal master, gave a clue to the whole thing.

Another case of slow growth occurred in relation to chord playing. Although as an examiner in the American College of Musicians, Mason had had occasion to observe what could be done with Mr. Edward Morris Bowman's chord exercises, Mason went little farther than to include them in one of his books. We now see that chords have to be taught, and that the pedal precedes chords, since in modern pianism the pedal is practically indispensable for playing chords with adequate harmonic unity, — the one inmost quality which a chord cannot do without and still be a musical quantity. To this we add the trick of voicing chords, according to the color meant and the location of the melodic line within the chord, and we have the chief strategic points involved in controlling piano tone for interpretative purposes.

The revised Mason *Technics* is, in fact, a restudy of the objects and methods of tone control for pianistic purposes. While this point or the other may presently give place to a clearer presentation of the same, or a discovery of some still deeper principle, I think that in this phase the new book will afford to some a great deal of light where without it very little light exists.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

THE MAGIC PEDAL, THE SOUL OF THE PIANOFORTE

MARY VENABLE

INTRODUCTION

Rubinstein with doubtful rhetoric but very deep significance calls the pedal the "soul of the pianoforte." He says: "I consider the art of properly using the pedal as the most difficult problem of higher piano playing. If we have not yet heard the piano at its best, the fault possibly lies in the fact that it has not been fully understood how to exhaust the capabilities of the pedal." "The more I play, the more thoroughly I am convinced that the pedal is the soul of the piano; there are cases where the pedal is everything."

Owing to the ever increasing sonority of the modern pianoforte, the possibilities inherent in the pedals have been rapidly developed during the last half century, and especially in the last generation. It is due to the augmented tone power of the piano that the pedal mechanism for controlling the quantity, quality, and duration of sound is continually being improved by the best piano makers. Many patents hitherto owned exclusively by a great piano house have recently expired. The number of medium-priced pianos with powers of artistic performance hitherto found only in those of the most expensive makes, is growing steadily. These instruments demand of the performer not only manual dexterity, but also a highly developed pedal-technique.

Accurate knowledge of the purposes of the pedals, and of the means employed by artists to achieve those purposes, is necessary to the twentieth-century pianist. While artistic use of the pedals is a gift, the correct use of them can and must be acquired by every pianist. When we take into consideration the enormous mass of exercises and studies for the education of the fingers in piano playing, it seems a little remarkable that so few are devoted to the training of the student in a correct use of the pedals.

"The art of properly using the pedal is the most difficult problem of higher piano playing." This fact must in the near future call forth the supply, as it has already brought the demand, for systematized studies in the use of the pianoforte pedals. Teachers are beginning to appreciate the fact embodied in this statement of Rubinstein: "Of all the elements of a correct performance upon the piano I consider the proper use of the pedal the most difficult to acquire. It pertains strictly to the higher art of piano playing. The best of us have room for improvement in that direction. If, as I believe, we have not yet heard the best of which the pedal is capable, it is because the artistic possibilities which lie in the pedal have not as yet been fully understood by either pianists or composers for the piano." Yet as late as 1903, there were not, including those written in foreign languages, a dozen works in print upon the subject. Of these but one is written for students, or contains progressively arranged musical material for practice.

BIBLIOGRAPHY OF THE PEDALS

The authorities of the first half of the preceding century, Mozart's pupil, Hummel, and Beethoven's pupil, Czerny, each in his *Grand School for the Pianoforte*, devote chapters to the use of the pedal of the day. These books are now of but little practical value as guides to the student of piano playing, although historically they are of great interest.

The first and the only comprehensive *theoretical* treatise on the uses and effects of the modern

pianoforte pedals was that of Hans Schmitt, of Vienna, published in the German language in 1875. It was translated into English eighteen years later under the title *The Pedals of the Pianoforte*. It was to Hans Schmitt that Rubinstein uttered the memorable words quoted at the beginning of this article. Schmitt's book is a masterly scientific treatise which clearly explains the mechanism of the pianoforte action and the theory of vibration in so far as it applies to pianoforte playing. The book contains original examples of various uses of the pedals, including the utilization of harmonics, and many short illustrative extracts from classical music. It covers the entire field of theoretical pedal study and will probably remain the standard work on the subject for many years to come.

Nothing new has been added to this branch of pedal literature. Several books have appeared. Although some of them are excellent, none have added materially to what is to be found in Schmitt's great work.

The next author to deal with this subject was a Frenchman, Alfred Quidant, whose monograph I have been unable to obtain. It was followed in 1882 by Louis Köhler's interesting *Pedalzug*. Neither of these pamphlets has been translated into English. An Italian, Albert F. Venino, a pupil of Leschetizky, is the author of the next book, *A Pedal Method*, published in 1893. A number of books, similar in scope and treatment, followed; namely, *A Guide to the Proper Use of the Pianoforte Pedals, with Examples from the Historical Concerts of Anton Rubinstein*, translated from the German by John A. Preston; *The Pedals*, two books by Hugh A. Kelso; and Kunkel's *Piano Pedal Method*, from which are taken Rubinstein's words quoted above. Besides these, there are a dozen admirable pages concerning the pedals in Adolph Kullak's *Æsthetics of Pianoforte Playing*, and some good suggestions in his *Art of Touch*. These books are all interesting to read, and are of value to the experienced musician. They are not, however, systematized manuals of instruction, with material for practice.

The most exhaustive and practically helpful work published on the subject is that of Albino Gorno, one of the profoundest musical scholars in America. His work, entitled *Material for the Study of the Pianoforte Pedals*, might be called the practical counterpart of Schmitt's theoretical treatise. These pedal studies of Signor Gorno's are published in three parts. Part I deals exclusively with the damper pedal. Part II introduces the soft pedal, alone, and in combination with the damper pedal. Part III adds to these the use of the *sostenuto* pedal, and besides original studies of great interest, gives, as examples, classic and modern compositions in their entirety. These illustrate all the possible effects which may be produced by the pedals, used singly, together, and in connection with touches of different kinds.

The first studies are simple but musical. They instruct in connecting chords by means of the pedal, the use of which is indicated by precise notation. By natural gradations the pupil is

exercised in all uses of the pedals, even those little known to pianists in general Hans von Bülow expressed much interest in these studies, especially those written for the *sostenuto* pedal. The great musician-virtuoso, Rosenthal while examining this work in manuscript, in 1888, smilingly exclaimed, "Why, you have here noted down for the use of pupils many effects which I had thought were secrets of my own!"

The Action and Functions of Keys, Hammers and Dampers

The modern player who is ambitious of commendable art must not be content with a haphazard use of the pedal, or with clever imitation. The study of the pedals is exacting. It requires an accurate knowledge of the action of the piano, a thorough understanding of the music played, and a definite conception of the effect to be produced. It is indeed surprising how little the average student of piano playing concerns himself with the mechanism of his instrument. Yet some knowledge of the action and functions of the keys, hammers, and dampers is essential before he attempts to employ the pedals. He should observe that each key is a lever, with a small and rather hard felt hammer attached to it. This, when the key is struck, comes in contact with a string, causing it to vibrate and produce a musical tone. At the same time a little cushion of softer felt, called a damper, is raised from the string, leaving it free to vibrate as long as the finger remains upon the key, the sound dying away gradually. If the finger is removed from the key before the vibration has ceased, the damper falls upon the string, stopping the sound instantly.

The illustration of the grand-piano action, kindly loaned by Mr. Ernest Urchs of the Steinway Company, portrays a small section of a piano. There are three keys, and very short lengths of their corresponding copper-wound bass strings, which project between the oval hammers below and the wire-supported dampers above. Besides these, all the mechanism necessary to move the keys, hammers, and dampers is shown.*

The hammers do not necessarily always strike at the same distance from the strings, nor, while the fingers press upon the keys, do they fall back to the place from which they started. This movement is due to a complicated mechanism of action. The finger does not press upon the key shown in the foreground of the photograph. Consequently the damper remains at rest upon its string, and the hammer is at its lowest point. The other two keys are pressed quite down by the fingers, and their corresponding dampers are raised therefore to the highest point above the string. The middle key was struck with great force by a rapidly falling finger, and its hammer therefore fell back quickly and with some force, although not to its original position. The third key is held down by the finger in the same manner as the middle key, but the hammer was brought in contact with the string by means of a softer stroke. As the impact was less violent, the rebound of the hammer from the string was less hasty, gentler, and in consequence did not fall so far. Much can be learned in regard to the production of various qualities of tone by studying the action of the piano.

(*To be continued*)

* The supporting black framework below and to the left of the action is not found in the piano. It is used here merely to hold this small section of the action together and to form a place of attachment for the few inches of string included, in order to illustrate the action of the hammers and dampers.

METHODS OR METHOD?

A. D. JEWETT

Within the past quarter century the pedagogy of piano playing has undergone a radical change. Few of the prominent piano teachers use any one "method," according to the old usage of the term. In some cases — into such disrepute has the word "method" come, — teachers have shut their eyes to many of the good points that have crept into methods; in other words, have refused to reap from the other man's experience.

One of the most successful piano teachers of the present day disclaims any intention of publishing a method. It is reported that he has emphatically stated that the two or three books published, purporting to represent his method, do not in any large sense comprehend it.

What is the reason for this getting away from methods? Is it a step forward, and is there any danger in the step? A comparative definition, given by one of the leading educators of the present day, which suggests an answer to the first question, is this: Order — the relationship of one thing after another; Method — the relationship of one thing *through* another. Most of the methods, so called, will be found upon examination to be simply more or less orderly arrangements of exercises — musical and unmusical — based largely upon A's, B's, or C's experience. Consequently the teacher's independent refusal to accept as a guide the other man's experience, or the culmination of his experiences, makes it a step forward, provided there is an intelligent understanding of the true idea of Method. If not, it is practically "jumping from the frying pan into the fire," for then the individual teacher has to gain his experience by teaching, and may have learned not one small part of what the man ahead of him learned. Moreover, he has got his tuition at the expense of the pupil. With the recognition that Method is indispensable, that there are fundamental principles in the art of piano playing, as in every other art or science, and that success implies step-by-step progress, "one thing through another," the pedagogy of piano playing promises much. We hope at least to suggest in the following articles of this series what these underlying principles are and why each one in turn is, in itself, a step through which to reach the next. We also intend to show that that set of exercises which does not recognize that the tenth lesson is not only arrived at through, but also utilizes everything that has been learned in, the preceding nine, has no right to the name "Method."

Can you conceive of a teacher of mathematics who made his pupils learn addition, subtraction, multiplication, and division, and did not know that they were actually using these daily in each lesson's work? Fundamental principles are not fundamental unless they support the superstructure. Before one is ready to teach, it is necessary to understand clearly the relation of the art of piano playing to the science of music; recognizing piano playing as one of the many forms of expressing music, perhaps both the most popular and the most abused. This implies having some tangible concept of music. As piano playing did not appear in the history of music until after much rich life in music, — vocal and instrumental, — so is it better with the individual that there should be some familiarity with other forms of musical expression. The improvement in the teaching of music in the public schools, and in kindergarten music, is supplying this to some extent. Nevertheless, the "singing skewl" and the Sunday afternoon "sings" in the home circle, possibly with its improvised orchestra of flute, fiddle, or melodeon, cannot be given up without regret, although they seem to be ruled out by our present strenuous life.

Piano playing includes at least five specific elements — (1) the ability to hear the quality and properties as well as the relationship of tones = ear training; (2) the ability to read easily written music = sight reading; (3) the ability to feel the life and form in music = time and rhythm study; (4) the knowledge of the instrument, especially the keyboard, and the demands made by its mechanical construction on the player; (5) last, but not least, that bugaboo which has made timid the heart of many a promising pupil = technique — or the ability to control one's own fingers, hands, arms, and body, and the gaining of these willing servants.

Have we any right to set the poor pupil down to the piano, and expect him to try to do five specific things at once? Is it any wonder that confusion follows? In no other line of instruction would this be tolerated long. While each subject may be taken up in the same lesson, they should be presented singly. "One thing at a time, and that done well, is a very good rule, as many can tell." To say which of these five essential subjects is most important is not possible. In the Kingdom of Good (perfection) each has its place. If you should ask any master of the art of piano playing which of these divisions would require the most time, what do you think he would say? The first subject to be taken up in the following series will be — The Fundamental Principles of Piano Technique.

Hugo Kaun, of Milwaukee, Wis., is the composer of a piano concerto that Arthur Nikisch produced recently with much success at a Gewandhaus concert in Leipsic. The pianist of the occasion was Vera Maurina.

* *

Saint-Saëns, as well as Dubois, has resigned from the position he held in connection with the Paris Conservatory. His action is said to be owing to friction between him and the new director, Gabriel Fauré.

* *

The new Bach Society of Germany has raised the 26,000 marks necessary to preserve the house in which the composer was born at Eisenach. An equal sum is needed to convert it into a Bach Museum.

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"Much of our envy and much of our pity is wasted; we are continually comparing ourselves with people whose contentment we overrate, or with those whose contentment we underrate. We set our expectations too high. We look for perfect happiness in a world where there is no such thing, and we are sensitive to every thorn, as if there were ever a rose without one. There is no music in nature, we are told, but there is also no discord. There is neither perfect harmony of sound, nor perfect dissonance."— WM. H. LYON, D. D., *Compensation.*

THE ELEMENTS OF COUNTERPOINT

PERCY GOETSCHIUS, MUS. DOC.

LESSON X

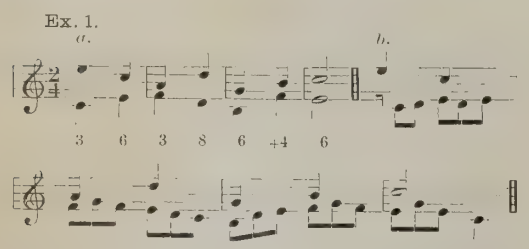
If the student who has conscientiously worked out the foregoing exercises has at last become somewhat oppressed with their monotonous character, and has tired of them, it is no reflection upon his own good taste, or upon the technical correctness of this particular species of tone association. The defect lies in the absence of rhythmic interest, which must necessarily attend exercises of this kind, with their humdrum pace of two, three, or four uniform notes to each uniform beat, in one of the two melody parts. So important is the element of rhythm, so indispensable is a certain amount of rhythmic diversity, that no musical sentence is complete and effective without it. A contrapuntal phrase may be perfect in every harmonic and melodic respect, and yet fail to excite interest or real enjoyment, because of a lack of rhythmic variety.

Consequently, no union of contrapuntal parts may be called wholly acceptable, if it does not exhibit more or less diversity of time-values in either, or both, of the parts; it must bear witness to a life within, pulsing with the varying stress of human emotion.

In order to define the bounds of this rhythmic diversity, and prevent any extravagance of rhythmic effect, it is customary to preserve a *general uniformity* of time-value (a certain constant fundamental movement), and limit the diversity of rhythm to the *alternating* interaction of the parts. That is: instead of giving all of the more rapid tones to either one of the contrapuntal parts alone (as in the preceding exercises), they should be distributed alternately between the parts, — not in such regular intervals as to incur again monotony of another kind, but so as to impart a more definite melodic character to each separate part, without disturbing the evenness of the whole.

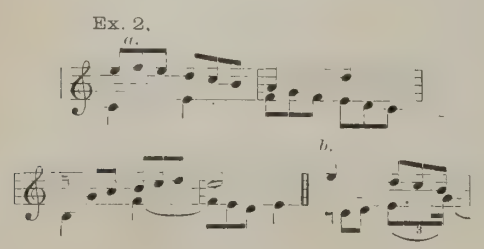
For illustration, an example like the following, with constant uniform rhythm in the added part, —

Ex. 1.



may be made far more vital and significant in *both* parts, by some such alternation of the given rhythm (three notes to each beat) as this: —

Ex. 2.



In both of these diversified versions it will be observed that the original intervals (Ex. 1, *a*) are retained without essential change. At *a* (Ex. 2), the rapid tones are assigned first to one, and then to the other, of the two parts, in regular alternation, — from measure to measure. At *b* the effect is greatly improved by a more irregular distribution of the shorter tones; first of all, it will be seen that they are not confined to any one part at a time, but appear occasionally in *both parts at once* (on the second beat of the first and second measures); further, the movement in each part is more animated than at *a*, — the upper part quickens at every second beat, and the lower part has nearly constant rapid rhythm, interrupted just often enough to prevent monotony. A clear impression of the increased melodic vitality and beauty of these versions can be best obtained by singing each part alone. Do this thoughtfully, first with the separate parts of Ex. 1, and then with those of Ex. 2. Also invert both examples, as usual, copying them out and placing the upper part an octave lower, and the lower part an octave higher, than here written.

Further, in a rhythm of four notes to each original beat (basis of Ex. 1, *a*): —

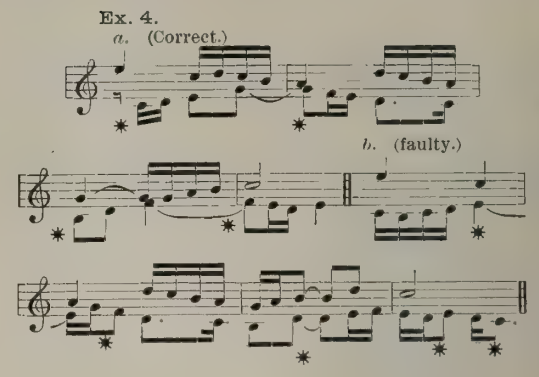
Ex. 3.

Examine these two versions carefully, and invert them, as usual.

Rule 1. — The effect of *uniform* rhythmic movement should be preserved, the general rhythm (two, three, or four notes to a beat, as the case may be) should be maintained in one part or the other (possibly in both together, as has been seen); rare exceptions may be made, at *accented* points, — this is shown in the next example.

In Ex. 2 there is no beat which has less or more than the adopted rhythm of three; and in Ex. 3 every beat has its four tones, in one or the other of the parts. An occasional interruption (slackening) is shown in the following, — applied correctly at *a*, incorrectly at *b*: —

Ex. 4.



(The * indicates where an interruption of the fundamental movement takes place. First study the following rule.)

Rule 2. — In case of any diversity of time-value, — in the collective effect of the sentence, — *heavier (longer) tones should generally occur at accented points.* The * in Ex. 4, *a*, stands each time at the strongest point in the measure; at *b* it stands at weaker points, — generally between beats.

The deduction is so obvious that further explanation seems needless — longer notes are "heavier" notes, and belong to comparatively "heavy" points of the measure or of the beat; shorter notes are "lighter," and should occur at comparatively "light" points.

The correct application of this rule is perfectly natural and easy for the student who understands the rhythmic arrangement of a phrase, — the location of "accented points."

Examine Ex. 4 very minutely, with reference to this important rule.

It must be understood that this does not apply, necessarily, to each *separate* part, but to the combined effect of both together; to those points where both have longer notes at the same moment. If either part maintains the fundamental movement, the effect will probably be good. At the same time, it is usually necessary to avoid striking irregularities *in the upper part*, because of its superior prominence. For instance: —

Ex. 5.

This version, as it stands here, is not quite as smooth as Ex. 4, *a*. In the latter, the lighter tones (16ths), in the upper part, occupied the lighter (second) beat of each measure; here, the heavy (first) beat is subdivided, in the upper part, while the heavier quarter notes stand on comparatively lighter beats. Sing each of these upper parts alone, and note the effect. And observe, also, that Ex. 5, *when inverted*, sounds perfectly well.

This warning applies chiefly to the quicker rhythms. It is seldom necessary in rhythms of only two notes to a beat; more so for three, and still more for four. In *slower* rhythms, even the fundamental rule may often be disregarded. For example: —

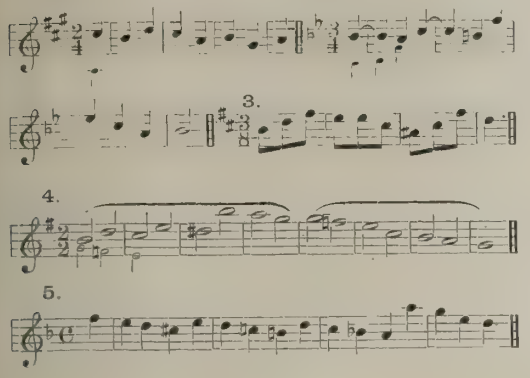
Ex. 6.

Here, the "stops" are all made at light rhythmic points in the measures, but the effect is not bad.

EXERCISE. — Add a contrapuntal part to each of the following given melodies, "note against note," as in Ex. 1, *a*; avoid all irregularities; use good intervals only; the counterpoint must be perfect. Then amplify each into a rhythm of first two, then three, and then four notes to each beat, as illustrated in Ex. 1 *b*, 2, 3, and 4, *a*. *Use two staves* (the G and F clefs) as a rule: —

Besides these, experiment with former melodies. And invent original sentences *of four or eight measures*,— like Ex. 1, *a*, — elaborated as above.

Ex. 1. 2.



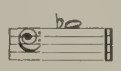
PRACTICAL ACOUSTICS

DR. SMITH N. PENFIELD

In this article let us consider the very important matter of consonance and dissonance. Let two violins be tuned carefully together, and the two players sound the open D string. To the ear it is practically one instrument. Then, while one player retains this tone, let the second gradually push his finger along the D string. We are immediately horrified by a frightful discord. Soon the tones do not swear so strongly at each other. When the second has arrived at the tone E, the discord is decidedly lessened; and when F is reached, giving an interval of a minor third, we have a consonance. Passing a point of more discordance, we come to F♯ (major third), and the consonance is more pleasing. Ascending to G (perfect fourth) the effect is purer yet. A frightful discord is encountered at G♯. When we reach A, which may be taken on the next open string (perfect fifth), the consonance seems perfect. At B♭ (minor sixth) the blending is nearly perfect. Then the tone is discordant again, but at B natural (major sixth) we have a consonance; not really satisfactory, yet good. At C it is bad, and at C♯ unbearable. When D (octave) is reached, we are instantly conscious of a perfect blending of the tones. If we go beyond this octave, we hear again an awful discord.

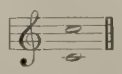
The experiment described here shows that the degree of concordance is in this order of excellence, — unison, perfect fifth, perfect fourth, major third, and minor sixth, minor third and major sixth, minor seventh and major second. The major seventh, augmented fourth, diminished fifth, augmented octave and minor second are very bad.

We can reach a similar result by testing with two trombones. Let the two be sounded together, with the slides closed, giving a unison tone on B♭



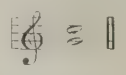
Then, while the first player retains this tone, let the second gradually open his slide, which will lower the tone. Proceeding till F is reached, let him close the slide, taking the same tone F by blowing differently. Gradually opening the slide again, let him descend to B natural; then again closing the slide, go still farther down. In whatever key we try our experiments, we find the same effects.

Turning now back to our table of comparative vibrations, we find that two voices which sound a unison tone become in effect one voice; that the octave (ratio 2 to 1) blends perfectly; that the fifth (3 to 2) gives nearly as perfect an effect, etc. We deduce that the blending or the effect of consonance to the ear is in proportion to the frequency with which the vibrations coincide. To put it in another form, it is in inverse proportion to the size of the figures representing the fractional ratio in its lowest terms. Take the C's,



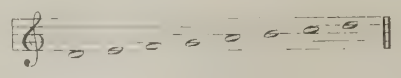
each vibration of the lower will synchronize with every second vibration of the upper. Take a fifth,

each second vibration of the lower, will synchronize with each third of the upper. So in a fourth,



each third vibration of the lower coincides with each fourth of the upper, etc. In the case of the furious discords, *e.g.*, the minor second or augmented fourth, — with ratios respectively of $\frac{16}{15}$ and $\frac{45}{32}$, — the synchronous period is far apart.

The so-called major scale in final form, founded upon the Ionian scale of the Greeks, was not arbitrarily selected, but was derived from nature's harmonic series. A common but erroneous impression is that our modern scales, major and minor (the latter founded on the Greek Æolian scale), go back to antiquity. Such is not the case. These two Greek scales took shape in the sixteenth century. All the music of antiquity, down to about the tenth century, A. D., was monophonic. Instrumental accompaniment, if any existed, was in unison or octaves. The scales used in this music corresponded to nothing that is now in use, and the intervals were not precisely the step and half step of to-day. The nearest approach to anything modern was the old Dorian scale (approximately this),

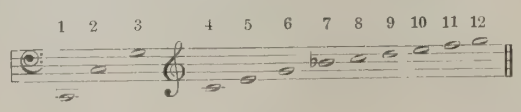


which resembled a little our minor scale.

From about the tenth century second voices began to be added, and counterpoint commenced to develop. Even with music in three parts no attention was paid to the harmonic relation or blending of voices. Nearly coincident with the growth of the harmonic sense, about the sixteenth century, came the addition of the Ionian and Æolian to the list of Greek scales. These were nearly the same as our major and natural minor. It was the survival of the fittest, and the old scales went out of use. Gradually harmonic relations and the discovery of the overtone system determined the location of the major scale, and with it the minor, as far as it can be said to be located at all.

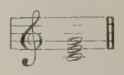
The chromatic scale was an offshoot of the diatonic. Nothing like it was known or attempted in ancient times. Nevertheless, voices would stray by accident or design from the diatonic tones and give shades of effect or coloring impossible with only the scale tones then at command. Hence arose the name "chromatic," derived from the Greek word "chroma" (color). The necessities of harmony and the requirements of modulation have in more recent ages called for a division of the octave into thirteen tones instead of eight.

We can discover nature's harmonic series most readily from the open tones of any brass instrument. Let us consider one in C, — for example, a tenor horn with a C tuning shank. Using no valves, an experienced player can give us, by various methods of blowing, the following list of tones,

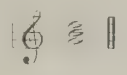


etc. With the use of a valve he can produce the same series of tones in another key.. We have numbered the tones for convenience of reference. Number 7 will sound a little flatter than the B♭ represented here, and Number 11 a little sharper than the F. These tones, therefore, we neglect as not belonging to the scale. The others furnish us the following tones of the major scale of C, C–D–E–G and upper C.

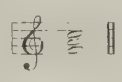
Take now the numbers 4, 5, and 6 of the series, and we have what we recognize as the major chord of our tonic with ratios of vibration $1 : \frac{5}{4} : \frac{3}{2}$,



As, in the preceding article, the vibration ratio $\frac{9}{8}$ was given to D in the scale, it would in the octave above have the ratio $\frac{18}{8}$. Therefore numbers 6 and 9 of the series bear to each other the ratios $\frac{3}{2} : \frac{18}{8} = 1 : \frac{3}{2}$. Putting in a middle tone with a ratio to the others of $\frac{5}{4}$, we have now the seventh note of our scale, giving us the major chord G–B–D with proper ratios,

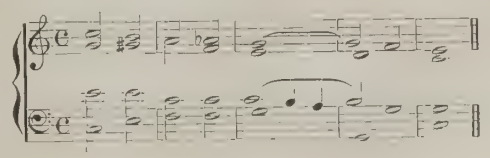


Taking the 8th tone, C, of our harmonic list and supposing this to be the upper tone (fifth) of a triad, and its ratio of vibrations to be $\frac{3}{2}$, we may find the respective lower and middle tones, first and third of this new triad, with ratios respectively of 1 and $\frac{5}{4}$, to be F and A of our scale.



The French horn in F will also give us the F and A as tones 4 and 5, or tones 8 and 10, of its series. Thus, we have the major scale, consecrated by the recognition and usage of three and a half centuries. Notwithstanding the developments of modern days in the matter of temperament, it is a scale which is ideal in itself, because it is based on purity of consonance, and has within its limits three perfect major and three perfect minor chords. It is justly called the *pure* major scale.

If singing and playing stringed instruments and trombones comprised all music making, our pure scale would be universally satisfactory. Singers, violinists, 'cellists trombonists, etc., will push any tone, diatonic or chromatic, a trifle up or down, till the ear says that it properly fits other tones in the neighborhood. Let singers, for instance, perform the following phrase in four parts without accompaniment,



The G♯ will be sung as a slightly lower pitch than the following A♭, the E major chord requiring a lower pitch for its third than the F minor for its enharmonic equivalent.

Unfortunately this scale will not serve for the piano, organ, or solo wind instruments. With them, one key or one fingering must answer for G♯ and A♭, etc. When these instruments are perfectly tuned for the key of C, they will be seriously out of tune in the key of F♯.

A tuner tunes a piano or organ by fifths (or fourths, which are the inversions of fifths) and octaves from C onward to G, D, A, E, B, F♯, D♭, A♭, E♭, B♭, F, and C. Having tuned all these perfect fifths or fourths, he finds that his last fifth, from F up to C, brings him too high for his starting note. He has, in fact, landed on a tone $\frac{4692}{10000}$ of a whole step higher than he looked for.*

As a result of this discrepancy, since the time of John Sebastian Bach (1685–1750) the "well-tempered" scale has been in use. This scale divides the chromatic scale into twelve perfectly equal parts, with the result that no interval is quite correct except the octave. In theory this ought not to work at all, for an awful discord is supposed to result the instant we stray from a perfect consonance. The fact that our ears are not shivered to atoms with the sounding of every major chord on the piano, that, on the contrary, we sit entranced listening to the bewitching sweetness of De Pachmann's harmonies on a well-tempered instrument, proves that our ears are not over-critical. In fact, we may stray a trifle from perfect harmony, — singers continually do so, — and our ears do not take serious exception.

The well-tempered scale differs a trifle at every point from the old or so-called "pure" scale. Yet the only points at which the discrepancy is really observable are in the perfect fifth, which in the well-tempered scale is a trifle, — about $\frac{1}{100}$ of a step — too flat, and the major third, which is somewhat — about $\frac{1}{14}$ of a step — too

* On authority of R. H. M. Bosanquet, M. A. (*Dictionary of Musical Terms*, Stainer and Barret).

sharp. The minor third is also somewhat too flat, but this fault is not very noticeable. Unless the instrument is carefully tuned, the major thirds in some keys are sure to set our ears on edge. A major triad (*e.g.*, C–E–G) is made up of a fundamental, major third (two steps) and a perfect fifth (3½ steps). A minor triad (*e.g.*, A–C–E) consists of a fundamental minor third (1½ steps) and a perfect fifth (3½ steps). Such a chord, major or minor, in some position or inversion, in close position, or open (spread out like a fan), with perhaps the addition of a seventh or a ninth, is at the basis of almost all harmonic structure.

A perfect fourth (*e.g.*, G up to C) is only a perfect fifth inverted (C up to G). A major third (*e.g.*, C to E) is only a minor sixth inverted (E up to C). A minor third (*e.g.*, A to C) is only a major sixth inverted (C up to A). As these are the most consonant of intervals and the most noticeable for purity or impurity, less difference is made to our ears by what the other intervals — the seconds, sevenths, ninths, etc. — say to us. The well-tempered fifth, and consequently the fourth, are so slightly out of the way that the average ear does not notice the discrepancy. Hence the major thirds and the minor sixths are practically the only intervals to annoy us.

Moreover, the trend of modern composition is ever more and more to the free use of discords, even harsh ones, which properly (but not always) resolve into accords. For this reason our ears grow necessarily a little callous to discordance. It is a noticeable fact, too, that singers who work continually at their pianos and violinists who play entirely with piano accompaniment become so perfectly attuned to the well-tempered scale that they frequently sing or play their major thirds in accordance with it when away from the instrument. Nevertheless, Remenyi, the famous violinist, says that when he is not accompanied by a keyed instrument, he instinctively plays in pure intonation, and that he feels the difference between such notes as D♯ and E♭, of which equal temperament can take no account. The charm of string quartet playing is largely attributable to the absolute purity in chords that the players acquire.

The well-tempered scale has undoubtedly come to stay. Its advantages far outweigh its disadvantages. The following quotation from a modern writer,* reads a little queerly. "Equal temperament, or what tuners give us for it, a very different thing generally, has indeed become a temporary necessity. But the discoveries of Helmholtz have sounded the knell of equal temperament, which must henceforth be regarded as a theoretical mistake and a practical makeshift, a good servant dismissed for becoming a bad master, and now merely retaining office until a successor is installed."

ANSWERS TO QUERIES

A. B., Canada.

A course of training in piano tuning is given at the New England Conservatory in Boston, which is open to women. Information may be obtained by writing for the prospectus.

J. D., Phil., Pa.

The short air which you forwarded for criticism is not without merit; it shows that you have been in touch with music, and that you have not remained unsusceptible to some of the meaning of tones, and their relations. At the same time, there is little evidence of original melodic thought, and the accompaniment is extremely faulty and helpless. This is explained by your statement that you "know nothing about harmony and counterpoint." That no one can compose really good, sensible music without knowing a great deal (almost all there is to know) about harmony and counterpoint, you yourself are no doubt willing to admit. If you feel strongly impelled to write music, you can probably learn to do so, by long, thorough, patient study. Any standard text-book on harmony will serve your purpose, but you should, if possible, have a conscientious and able teacher.

* A. J. Ellis, F. R. S., 1814–1890.

ELEMENTARY GERMAN

A. RHEINGAUER

LESSON XXXIII

The accusative is used to express definite time. Ex.: *jedes Jahr*, each year.

The preposition *nach* (to) is used before names of countries and cities. Ex.: *nach Deutschland*, to Germany; *nach Berlin*, to Berlin.

An adverb modifying a personal verb is put after it when the verb itself follows the subject of the sentence. Ex.: —

Er bleibt nie . . . He never stays . . .

Read and translate

Herr Hill kommt von Chicago. Er bleibt nie lange hier. Er geht jedes Jahr auf einige Monate nach Europa. Woher kommt Herr Hill? Wohin geht er jedes Jahr? Wie lange bleibt er da?

Vocabulary

To be committed to memory

Kommen, to come; *bleiben*, to remain; *gehen*, to go; *von*, from; *nie*, never; *lange*, a long time, long; *auf einige Monate*, for some months; *nach*, to; *woher?* whence? *wohin?* to what place? where? *wo?* at what place? where? *wie lange?* how long?

How does the above exercise read if you replace the subject of every sentence (1) by *Frau Hill* (or *sie*), (2) by *ich*, (3) by *wir?*

LESSON XXXIV

Abreisen (to depart, to leave) is one of the verbs compounded with a separable prefix. It is made up of the prefix *ab* and the verb *reisen*. The prefix is separated from the verb in the present indicative and put at the end of the sentence. Thus: —

Ich reise heute ab, I leave to-day.

Besuchen (to go to see), *erzählen* (to tell, to relate), *versprechen* (to promise) are also compounds, but they are always written as one word. The past participles *besucht*, *erzählt*, and *versprochen* omit the *ge*.

The dative is the case of the indirect object. Ex.: —

Ich erzähle ihm (dative) *viel*, I tell (relate) him much.

The infinitive with *zu* is often the direct object of a verb. Ex.: —

Ich verspreche zu kommen, I promise to come.

Nominative	*Dative*	*Accusative*
ich, I	*mir*, (to) me	*mich*, me
er, he	*ihm*, (to) him	*ihn*, him
wir, we	*uns*, (to) us	*uns*, us

Read and translate

Herr Hill reist heute ab. Er hat uns gestern Abend besucht und uns viel von seinen Reisen erzählt. Wir haben ihm versprochen, ihn im nächsten Sommer in Bremen zu treffen.

Vocabulary

To be committed to memory

Abreisen, to depart, to leave; *gestern Abend*, last night; *die Reise*, the journey, (by water) the voyage; *erzählen*, to tell, to relate; *von* (with dat.), of, about; *versprechen*, to promise; *nächst*, next; *treffen*, to meet.

Translate

1. I am going to leave (*tr.* I leave) to-day. 2. I called on Mr. Hill last night. 3. I told him much about my travels. 4. I promised him a letter. 5. He promised to meet me in Berlin.

LESSON XXXV

The future tense of a German verb is formed by adding its present infinitive to the present indicative of *werden*. Thus: —

Ich werde sein (*haben*), I shall be (have).
Sie werden sein (*haben*), you will be (have).
Er, *Sie*, *Es* } *wird sein* (*haben*) he, she, it } will be (have).
Wir werden sein (*haben*), we shall be (have).
Sie werden sein (*haben*), they will be (have).

Note the position of the infinitives in the following exercise.

Read and translate

Im nächsten Sommer werden wir nach Europa gehen. Wir werden am ersten Juni von New-York abreisen und am neunten oder zehnten Juni in Bremen landen. Herr Hill wird uns am Landungsplatz abholen.

Vocabulary

To be committed to memory

Landen, to land; *der Landungsplatz*, the wharf; *am* (= *an dem*) L., at the wharf; *abholen*, to go, to come for, to meet; *Sie* (nom. and acc.), you.

Translate

1. Where will you be next summer? 2. Are you going (*tr.* will you go) to Europe? 3. Where will you land? 4. Who will meet you at the wharf? 5. Will Mr. Hill be there?

LESSON XXXVI

Feminine nouns of countries take the definite article. Ex.: *die Schweiz*, Switzerland.

The preposition *von* governs the dative. Ex.: —

Von (*dem*) *Herrn Hill*, from Mr. Hill.
Von ihm, from him.

Nom. *Dieser Monat*, this month.
Gen. *Dieses Monats*, of this month.

Nom. *Der erste Brief*, the first letter.
Acc. *Den ersten Brief*, the first letter.

The infinitive and the past participle of some verbs are alike. Ex.: —

Erhalten, to receive; *erhalten*, received.

The *ge* of the past participle of verbs compounded with separable prefixes goes between the prefix and the verb. Ex.: —

Infinitive	*Past Participle*
abfahren, to depart	*abgefahren*, departed
ankommen, to arrive	*angekommen*, arrived

Both *abfahren* and *ankommen* form their perfect tense with *sein*.

Conjugate: —

Ich bin gestern abgefahren, I departed yesterday.
Ich bin heute angekommen, I arrived to-day.

Read and translate

Herr Hill ist jetzt in der Schweiz. Gestern habe ich den ersten Brief von ihm erhalten. Er ist am achten dieses Monats von New-York abgefahren und am sechzehnten in Bremen angekommen.

Vocabulary

To be committed to memory

Die Schweiz, Switzerland; *von* (with dative), from; *erhalten*, to receive; *abfahren*, to depart; *ankommen*, to arrive.

Translate

1. I have received a letter from Mr. Hill. 2. Where is he now? He is in Switzerland. 3. When did he arrive there? 4. When did you arrive here? 5. On what day did you depart from New York?

UNDER THE CHESTNUT TREE

"Where is Charlie Blower, the cornet player?"

"Studying abroad."

"Who advised him to go so far to study?"

"All his neighbors."—*Cleveland Plain Dealer.*

* *

"That will be a popular song," commented the composer's friend.

"Is it as bad as that?" groaned the composer. — *Detroit Free Press.*

* *

Perhaps this is as good a receipt for happiness as one needs: —.

"What does you do w'en you sees trouble comin'?"

"Well, suh, I meets him half ways, sets down in de san' wid him, an' teaches him ter pick de banjo!" —*Atlanta Constitution.*

* *

The famous composer sat in the orchestra chair and listened to the comic opera of his rival. As the chorus roared out a swinging, familiar air, the tears started to the great musician's eyes. "Ah," said he, sadly, "I would not have believed it, but he has stolen a march on me!"

To those familiar with his works, the truth of this remark would have been apparent. — *Princeton Tiger.*

* *

"Pa," said Tommy Twaddles, "this mythology book says that Orpheus was such a fine musician th't he made trees an' stones move."

"Your sister Theresa has beaten Orpheus a city block," grumbled Pa Twaddles. "Her piano playing has made twenty families move out of this flat building in the last two months." — *Cleveland Leader.*

PIPES AND BAG–PIPES
(After J. Jordaens)

Fiddling Lawyer

The trial was over and the red-faced man had lost his case.

"You know," said the kind judge, "if a man dances he must pay the fiddler."

"I know that, judge," replied the man with the florid complexion, as he pointed straight at the lawyer; "but it's pretty hard to have to pay a fiddler like that!" — *Yonkers Statesman.*

* *

A musician, brought to despair by the poor playing of a lady in a room above his own, meets her one day in the hall with her three-year-old child, and says in a most friendly manner: "Your little one plays quite well for her age. I hear her practice every day." — *Tit-bits.*

* *

"Charlie, I was very much shocked to hear you singing *Pop goes the Weasel* in church."

"Well, mamma, I saw everybody was singing, and it was the only tune I knew." — *Exchange.*

Distinguished Foreigner. — "Ach! Meess! I gon-cratulade you vrom de Pottom of my Harrt! You have Blayed and Zung kvite — kvite —"

Fair Performer. — "Quite *execrably?*"

Distinguished Foreigner. — "Ach! yes! Dass is de Vort! — kvite exekraply!"

* *

"Why do you call it a French opera?"

"Why not?"

"Well, every one of them sang in Italian."

"On the stage, yes; but what does that amount to? All the gowns in the boxes were from Paris." — *St. George's Journal.*

Wife. — "The girl in the next flat tells me she is practicing Wagner's 'Simple Life.'"

Husband. — "I hope it is so simple that she won't have to practice it four hours every night, as she does his Tannhäuser." — *Exchange.*

* *

Three Pieces

Manager. — "How many pieces in your orchestra?"

Prof. Hammers. — "Three."

Manager. — "What are they?"

Prof. Hammers. — "Piano, stool, and cover."

* *

Miss Mewsickle. — "Don't you love Bach?"

Mr. Knottso. — "Well, yes — in the springtime; but as a general thing I prefer Pilsener." — *Cleveland Leader.*

* *

Tommy. — "Say, Jimmie, what is classical music?"

Jimmie. — "It's the kind you can't understand unless you wear long hair." — *Tid-bits.*

* *

She. — "I really don't care for these musicales."

He. — "Neither do I; one is interrupted so often by somebody singing." — *Puck.*

* *

Fond mother (who is sure the visitor would like to hear her infant prodigy on the violin). — "Johnnie is so far advanced that now we can almost tell whether he is tuning or playing." — *Punch.*

* *

Grand Opera. — An annual exhibition of evening clothes. — *News Letter.*

HOW TO RESIGN

"Going to resign, are you?" asked Assistant Postmaster-General Wynne of an indignant person, who had been pouring his grief into his ears. "Can't stand it another minute, eh? Put up with it as long as you could, and now you're going to throw up your job and tell your chief what you think of him? Yes, I know. Last straw and all that sort of thing? Uh-huh.

"Did you ever see my set of rules for resigning? framed them up years ago when I was in the newspaper business, and I have used them ever since. I have resigned often since then, always in the way prescribed in these rules. Perhaps they will be of service to you. Here they are: —

"Rule 1. After receiving the last straw don't do anything for two hours. Above all, don't write anything.

"Rule 2. At the expiration of two hours, write your resignation and make it as hot as you can. Relieve your feelings and say everything you have been penning up in your breast. Scorch the scoundrel.

"Rule 3. Then go home.

"Rule 4. The next morning, immediately upon arising, read over your resignation and tear it up.

"Rule 5. Go to work at the usual hour.

"Take a copy of them," concluded Mr. Wynne, "and you will find that they are absolutely essential to any man who expects to resign frequently and still continue to rise in the world." — *New York Times.*

VIOLIN AND ORCHESTRA

LESSONS BY MAIL

EDITH LYNWOOD WINN

Lessons by mail to absolute beginners are usually impractical. Tone cannot be taught by any system of mail correspondence. One can tell the pupil how to hold the bow, draw the bow on the strings, how to hold the left hand, etc., and a bright pupil, who is musical, will be able to do something by himself. Most great artists studied many things pertaining to violin playing, by themselves, but with all their keen intuition even the gifted need to hear a model tone. Very few students practice absolutely in tune. Pitch is not taught by mail.

Now, to whom are mail lessons an advantage? We will suppose that I have studied Rode's eighth Concerto, but not the seventh. I wish to study the latter work with a view to teaching it. A celebrated teacher marks the bowing and fingering, writes a few suggestions, and I begin the study of the work. I learn it practically by heart, practice each movement with a pianist, write to my teacher as to points of bowing not understood, and then in the summer I go to him and play the work. None but fairly advanced pupils whose bowing and technique are established can safely work without a teacher.

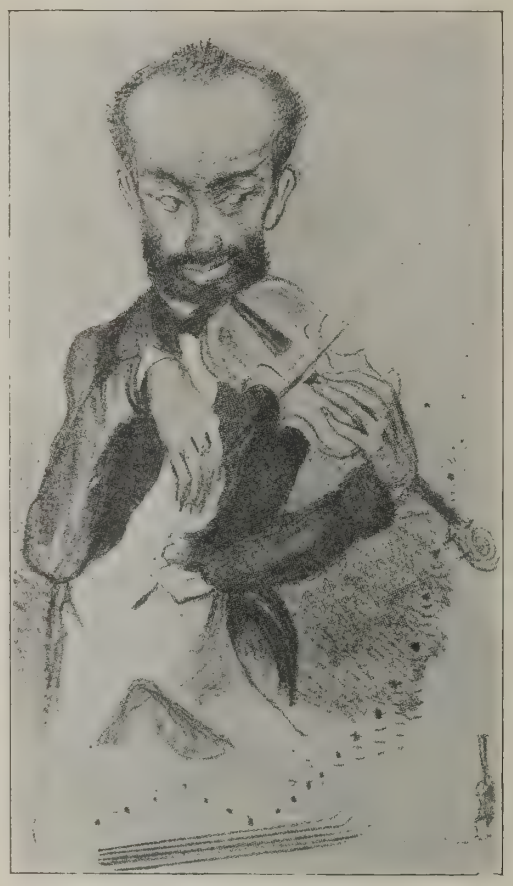
I prefer to call the suggestions which it is possible to give by mail *advice*, rather than lessons. One can mark the bowing of exercise-books like those of Kayser and Dont. Indeed, by carefully going over details, a teacher may plan for the study of Kreutzer, but cases are rare in which pupils can study Kreutzer entirely without supervision. One must *hear* them played and *see* how the bowing is actually performed to be able to study these *études* profitably.

Advice by mail may guide the young teacher who does not know what to select for a teaching *répertoire*. One writes to me, "I have a pupil who is studying Kayser II. I wish her to develop tone, and have given her the Godard *Berceuse*, the *Andante Religioso* by Thomé, and *Canzonetta* by Bohm." These works are too difficult for the pupil. The *Meditation* by Fauconier, the *Adoration* by Borowski, the *Slumber Song* by Hauser, and other works of this grade, are more practical.

An old orchestra man tells the following story of Hauser: "He played with our orchestra once in Vienna, as the solo violinist. I do not think he made a great sensation except in his *Hungarian Airs* and in his *Slumber Song*. To hear him play his own *Slumber Song* was a great opportunity. His tone was wonderfully pure and sympathetic. The whole audience rose and demanded the work again and again. The simplest works, in the hands of a great artist, become great. To have heard Joachim at thirty, playing the Handel *Largo*, was a thing long to be remembered. Such classic beauty! Such tone!"

Returning to the subject of advice by mail, a young teacher writes, "I went from Kayser II to Kreutzer's *Etudes*. What should one study between? I feel that I was not prepared for Kreutzer."

I do not take up Kayser II. After going through Kayser I to fix tone and forearm bowing, I use



HENRI VIEUXTEMPS

Sitt's exercises and Sevcik, Book I; after Sitt comes Dont, Op. 37 and 38, if necessary. Dancla's *School of Mechanism* is excellent, as well as Hille's *Wrist Studies*, Casorti's *Bowings*, and other works.

Some pupils need technique, some bowing, some tonal work. You cannot treat two students alike, any more than you can discipline two children of your own home in exactly the same way. Pupils from country villages come to large cities and say they have finished Kreutzer. It is very difficult to convince them that they should have studied other works more thoroughly before beginning Kreutzer. The first twelve Kreutzer *études* require one entire year of study, if one uses Massart's bowings. I believe that it is possible to give directions on paper, for the study of Kreutzer, if one has gone over the work previously with a teacher. There is always more to learn from these very excellent studies.

One can suggest pieces both for teachers and pupils, mark the fingering, and outline a plan of practice. A teacher writes, "My pupil plays with a good bow arm, but she does not play a melody in a smooth, flowing manner." Let the pupil play cradle songs and reveries, like that charming one by Fauconier. Let her also discontinue *staccato* playing with a forearm stroke. It would be well for her to play Casorti's exercise for string transfers with all the notes in one measure on one bow. Select studies for the *legato* from Dont's *Etudes*.

Another teacher writes, "What shall I do with a pupil who has a faulty ear and a poor tone?" Scales, scales, scales, major and minor, from memory! The half-tone work of Sevcik, Book I, is very helpful.

Another teacher writes, "I have changed my method of bowing four times. I am advised to go to Mr. X——, who teaches the most advanced and modern system, according to my friends' report. I dislike to change my bowing again." Mr. X—— is an artist and not a pedant. He is undoubtedly a better teacher than any whom you have had. Do what he tells you. Change your bowing a hundred times if by any change you are advancing in violin art.

CLASS WORK

FRANCES C. ROBINSON

It is advisable to include elementary harmony in class work with pupils. Begin at the very beginning. It is surprising how many teachers fail to do this: they frequently omit what should be taught in the first ten lessons. When I say, "begin at the beginning," I mean, begin with the two kinds of half tones, and then proceed, step by step, until the children have learned all that is of real practical use in helping them to read quickly and to analyze intelligently what they are playing. I do not, as a rule, advocate more than about twenty lessons in harmony for the ordinary piano student. The study of composition is for more advanced students.

Children really enjoy copying music. There is much to be learned from simple copying if it is correctly done. For instance: we learn why the stems of certain notes point upward and those of others downward. We observe that when a note is on a line, the line passes directly through the middle of the note, and that when the note is in a space, the upper and lower edges are just touched by the lines. The same is true in regard to sharps and flats. Pupils are apt to excuse themselves for sharping a wrong note by saying they were not sure for which note the sharp was intended. A little work in careful copying removes all such uncertainty.

It is impossible to introduce into regular lessons instruction in a number of the things that go to make pupils intelligent musicians. The teacher's only hope for a light study of musical literature (history, biography, etc.), harmony, analysis, and notation, lies in class work. The teacher will find also that this class work, if successfully done, has money value as a good advertisement. If he can train not only pleasing players, but intelligent, interesting, young musicians, he will find parents eager to patronize him.

THE ORCHESTRA

AUGUSTUS C. METZ

How to Work

Concentration of thought and energy upon the work in hand is the all-important duty of each and every member of that grand instrument called the "Orchestra."

What does this mean? It means that, if you really wish to perform your part well, you should not think of the notes you are to play before you have considered your duty morally.

If your director expresses dissatisfaction — is displeased with your work — turn to him at an opportune moment and cheerfully, but frankly, inquire of him as to your shortcomings. If he is a student of life and art, if he is a man possessed of true feeling and mental generosity, he will meet you with a happy smile. Mark me: Whatever he then suggests you would better frame with purple and gold and keep it before your mind, for he will remember the incident and think more highly of you than you can of him. But if, under such circumstances, your director refuses to aid you — why, it were better to rid the orchestra of him at the earliest opportunity. On the other hand, if the performer utterly disregards the kindness and help of the director, he must expect to be severely dealt with at the hands of the music committee (which is usually composed of one or more members of each choir of the orchestra).

At rehearsals do not expect your director to go into detail with individual performers. *Ensemble* rehearsals are intended for tone massing and blending, for balancing the tone mass of the three choirs, and for developing a keener and deeper sense of the melodic rhythm of the principal themes, which must float above the general rise and fall of the tone mass. They also serve for the study of comparative quantities of tone massing, for the *piano* periods and *forte* periods of a composition, not to speak of exact and comparative *tempi* which are all important.

Rather expect your director to help broaden your mind by calling attention to a general fault which you will overcome if you persist in your desire to do good work. If your director is a man of profound learning and thought, he will strengthen your weakest points in a much simpler manner than you could think of.

Perhaps your bow moves clumsily, and slides over the strings from bridge to fingerboard without your knowledge, indicating a stiff wrist.

Perhaps your sense of rhythm is undeveloped.

Perhaps (even to your own knowledge) your intonation is bad, because your left hand and fingers have not been trained properly.

Perhaps you do not know how to preserve or retain a good *embouchure*. Do you know how to breathe easily? and have you studied your throat, jaw, tongue, and lips?

VIII. THE VIOLIN FAMILY
(See page 13)

Perhaps the study of sensation or vibration, in connection with your technique, has not been mentioned.

Perhaps your home, or individual, work is not scientifically arranged.

For all these things your director will have a ready remedy. Ask him for it, but not for details.

Whether you are a string or wind player, you must make of your instrument a sacred plaything and honestly study its peculiarities. Learn to favor and nurse it. In other words, learn to master it completely.

Then, too, when your director recites or describes the character of a selection you are about to study, think again of your moral duty.

If, for instance, your director tells you that you are about to study a selection characterizing some phase of Oriental life, do not consider the technical difficulties until you have grasped at least the general meaning of the tone picture. Think of some Oriental story or scene. Recall the looks, speech, and actions, or other characteristics, of Oriental people you have seen or heard about. Become interested in the life of the work. Be enthusiastic over the whole tone mass, and feel your own particular part and duty.

Each player may have a slightly different conception. No harm is done. So long as all the members agree upon the essentials, —the character, temperament, and atmosphere of a composition — many difficulties will vanish. Always remember that the person who is thrown under the same spell when performing classical music as when doing "ragtime," is a hopeless case.

Even the sight of a great composer's name should be enough to stimulate and excite you. While at work (even though you are simply listening to other parts of the orchestra), keep your interest acute. Forget everything but the work before you. Relax during the recess only. This is the sort of concentration that will lift your orchestra above others in a very short time.

NOTES

The Vienna Philharmonic Orchestra is directed this season by Felix Mottl and Karl Muck.

* *

Arthur Hartmann and Ernesto Consolo are touring Scandinavia.

* *

Mahler's fourth symphony is unusually "heavenly" in its length. It was heard in England for the first time at one of the closing Promenade Concerts at Queen's Hall, London.

* *

Felix Weingartner will direct the coming performance of his symphony in G, Op. 23, by the London Philharmonic Society. This will be the first hearing of the work in England.

* *

Mischa Elman, the violin wonder, has again excited London with a performance of a new concerto by Glazounoff.

* *

The Norwegian composer, Halfdan Cleve, gave a concert of his own works, recently, in Berlin. The orchestra was directed by Xaver Scharwenka.

HARMONY

Morality is the harmony between the act and circumstance. It is the melody of conduct. A wonderful statue is the melody of proportion. A great picture is the melody of form and color. A great statue does not suggest labor; it seems to have been created as a joy. A great painting suggests no weariness and no effort; the greater, the easier it seems. So a great and splendid life seems to be without effort. There is in it no idea of obligation, no idea of responsibility or of duty. The idea of duty changes to a kind of drudgery that which should be, in the perfect man, a perfect pleasure. — ROBERT G. INGERSOLL.

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

THE SCIENTIFIC EDUCATION OF ORGANISTS

P. N.

An organist should have a deep insight into his profession, and should be able to do more than play the written notes. He should establish his work on a foundation of scientific fact and law, for organ music means more than the interpretation of musical compositions and the combination of stops. It is something more than the sensuous effect which the tones of Diapasons, Flutes, Viols, and Reeds produce on the organs of hearing. Deeper than these external vibrations is the science of sound, and yet deeper is the science of mind. A thorough understanding of the modern organ and its contemporary music requires the understanding of the cognate sciences of acoustics, physics, mechanics, electricity, hydraulics, etc., as well as the ability to play the manuals and pedals.

The art of harmony is grounded in the science of acoustics, the art of composition rests on the laws of esthetics, the art of the organist depends on the sciences of physiology and psychology, and the art of interpretation is conditioned in the science of musical forms. If these requisites of a thorough education are neglected, there cannot be the highest development in the professional organist. These are the roots of the stately tree, from which the trunk, branches, leaves, and usefulness develop; or the firm foundation, on which the building rests and rises into completeness.

WIDTH OF MOUTHS OF ORGAN PIPES

L. A. R.

For many years I have been a careful student of the tone from organ pipes. I have had free access to a friend who is an organ builder, and who has given me, in my scientific investigation of the philosophy of, that organ builders generally welcome suggestions, encourage experiments when they find that a man possesses actual knowledge, is practical, and that his enthusiasm is controlled by common sense. It is the organ "crank" with ideas who bars himself out of their favor.

In my opinion the best way of obtaining the richest tone from an Open Diapason is to have a wide mouth and low pressure, the pressure being governed somewhat by the scale of the pipe. I do not think that any pressure higher than three and one half inches is needed. The use of too large a scale is not productive of the best results, since there is a limit beyond which the tone loses its characteristic quality. With a very large scale on the ordinary pressure, the tone becomes somewhat fluty if the mouth is cut the usual height, but this may be obviated by an increase of pressure. Such a stop is best in a Solo Organ where the Reeds are on a high pressure. The leathered Diapason needs this, and does not give the mellow tone produced by one with a wide mouth and ordinary pressure.

I would have also the 4 ft. Octaves and 2 ft. Superoctaves made with wide mouths. I think that the result would produce a fine, blending quality. Will voicers and organ builders express their opinions on this subject in your columns?

CORRESPONDENCE

DIAPHONE PRESSURE

O. M. — "Will you please indicate the wind pressure which gives the best effect with the leathered lip Diaphone? Can it be introduced in small organs? Is there any difference in metallic composition between this stop and the Open Diapason?"

Comments. — The wind pressure depends upon the scale of pipe used, the height of the mouth, and the capacity of the organ in which it is placed. It is always upon a higher than 3 inch pressure, and has been found to give the best results on one of not less than 10 inches. This precludes its use in small organs, where the expense must be limited, because all the stops are winded at the same pressure. Where there is more than 4 inch wind, the touch is too heavy for tracker action.

With pneumatic action, the key touch does not change with any pressure, the mechanism working better on a heavy one. The Diaphone pressure can be introduced into small organs only where the valves are operated by means of pneumatic action. The expense of this adds fully as much to the cost of a small instrument as to that of a large one.

The only difference in the metal of this stop, as compared with that of the open Diapason, is in the thickness of the sheets from which the pipes are made. They should be twice as thick as the Open Diapason is usually made, in order that the vibrations may be firmly held and no tremulousness imparted to the body of the pipe.

STRING TONES

H. R. — "In a small two-manual organ having six through stops in both the Great and Swell, which would be more useful in the Great, an ordinary German Gamba, or the small scale Viole d'Orchestre? In the Swell, would a Reed Oboe or an Oboe Gamba be preferable? What would you suggest for a specification of this size?"

Comments. — In the Great section it would be best to have a German Gamba, and in the Swell, an Oboe Gamba, or a Viole d'Orchestre. A well-balanced scheme, with six stops in each manual, is as follows: —

GREAT. 8, Open Diapason; 8, Gamba; 8, Dulciana; 8, Melodia; 4, Octave; 4, Flute d'Amour.

SWELL. 16, Bourdon, Open Diapason; 8, Salicional; 8, St. Diapason; 8, Oboe Gamba; 8, Flute Harmonique.

PEDAL. 16, Open Diapason; 16, Bourdon; 16, Stopped Flute; 8, Violoncello.

In an organ of any size, the Open Diapason quality should always predominate in each section. The string tones should not be too assertive. They are essential in giving a crisp incisiveness to combinations and to the full organ, but the dignity of the organ is founded upon the Open Diapason *timbre*. The introduction of the string tones gives an orchestral coloring, and adds much to the variety of the combinations. They should not be used alone to such an extent as to produce a wearisome effect. The organist should give a well-balanced registration, and should not run to excess with any class of stops. It is most insipid to use a Swell reed stop in chords, without a variety of combinations. The use of stops proper to the musical thought is one of the chief matters for an organist to learn.

A SOFT SWELL STOP NEEDED

G. O. — "I play on an old organ which has no very soft stop in the Swell. It has an Open Diapason, St. Diapason Bass, St. Diapason Treble, Principal, Fifteenth, Mixture, and an Hautboy. The last-named is so sandy that it is never used. All the stops are complete, except the Open Diapason and Hautboy, which go down to Tenor C. Can you suggest any change which will make the Swell more serviceable, and the probable cost of it? Would the old pipes have any value?"

Comments. — It was an unlucky oversight on the part of the builder, who certainly was not an organist, to omit a soft open metal stop. If the organ is worth the expense, two new stops might be introduced to good advantage. In the place of the Mixture, you could have a soft Salicional, running to Tenor C. A simple veneer, pierced with a single rank of holes, and a new rack-board, could be fitted to the top-board. In place of the useless Hautboy you could have an Oboe Gamba, with a new rack-board.

The expense would depend upon your distance from an organ builder. If there is one near at hand, the change would cost about $100.

A Flute Harmonique in place of the Fifteenth would make the Swell capable of more expressive effects. It would necessitate enlarging the holes in the top-board, slide, and veneer, and would require a new rack-board.

The old pipes would be valuable only according to their weight as old lead. If you are a teacher, you might keep a few to give away to pupils as specimen pipes of an organ built more than fifty years ago.

PREPARATORY STUDY IN ORGAN PLAYING

C. S. — "I am about to take up the profession of an organist. I write to learn if you will give me some essential points in regard to the preparatory work. I intend to start at the very beginning of musical education. Seventeen years of age, I have a piano, and mean to devote five or six hours a day to practicing. Ought I to go at once to the church organ for manual and pedal practice? How soon should I be able to take a good position as an organist?"

Comments. — You have asked questions which can be answered here only in a very condensed form. The first requisite is a natural musical talent, without which you would better devote your time to something else. Organ playing is not like bookkeeping or typewriting.

If you have this inherent talent, put yourself under the best piano teacher within reach, for a thorough grounding in manual practice, reading music at sight, and harmony, — a teacher who will from the outset lead you to think musically and hear music mentally.

As soon as you can play ordinary music at sight, purchase a good single-manual reed organ with two sets of reeds for use in acquiring the organ *legato* touch. When you can readily play organ music which is written on two staves, and the accompaniments to anthems and oratorio choruses, purchase a pedalier which can be used in connection with your pianoforte.

Then go to work on legitimate organ music under the instruction of the best organ teacher you can procure. You will then be prepared to go to the church organ to finish your preliminary studies. You might be able to take a good position in five years. In the meantime, there will be many opportunities of playing in small churches and for religious meetings as a voluntary offer-

THE ORGAN IN THE COMMUNION SERVICE

W. B. — "I have recently taken a position as organist of a Presbyterian church where there is yet a lingering prejudice among the oldest members in regard to the use of the organ. According to my custom, at the first communion service I played the organ very softly during the ceremonies. To my great surprise the officers of the church came to me at the close of the service and reproached me for introducing the organ on such a solemn occasion. They requested that I never make a similar attempt. I was much irritated by the narrow prejudice expressed, and was on the point of resigning. I had not the least intention of giving offense, and only thought that I was

adding to the impressiveness of the service. Fortunately, I was able to control my temper. I was not aware beforehand of their feelings in regard to the matter, and am only sorry that I added to their prejudice."

Comments. — You were wise in controlling your irritation. We have to deal very gently with the set opinions of others. We should not demonstrate our own ideas until they are ready to accept them. This applies especially in the presentation of organ music. When any custom has become the fixed rule among those with whom we associate, it is always wise to adhere to that rule, unless it calls upon us to do something that is actually wrong. It is hard to hold our cherished ideas in abeyance, but we accomplish more by cultivating a tolerant spirit.

What is the Remedy?

F. M. W. — "I am a retired organist and now serve as one of the officers on the church board in an enterprising city of 150,000 inhabitants. I am doing my best to make the organist and choir stop trying to entertain us, and help us to worship by giving us devotional music. They are not inclined to accede to this effort on my part.

"There is scarcely an organist in the city who has any idea of the use of the organ as an aid to, and a part of, the worship of God. I recently heard one of the finest players, at the Sunday evening service in a fashionable Presbyterian church, give as a prelude twenty minutes of variations on *Old Black Joe*. This was to introduce a performance of Handel's *Messiah*.

"Oh, that our organists had reverence for their instrument, and for a class of music which would lead our thoughts upward, instead of seeking to entertain the worshipers with sensational trash! How can a better standard be introduced?"

Comments. — We must be patient until the taste for true organ music shall be more highly educated. The country is passing through a whirl of intense superficialism. In many places church services are being brought under sensational influences which entertain rather than lead to profound thought. By means of Organ Recitals, devoid of flippant compositions and given by players of reputation, a standard will be established which organists will be led to imitate. It will be of slow growth in certain regions, as in that section where you live.

A Standard Open Diapason

N. C. — "If organ builders should adopt a fixed standard of scale measurement for an Open Diapason, with a given pressure, would not this fundamental stop have similar tone characteristics in all organs? What would be a standard of measurement for the middle C of an Open Diapason, made for a two-manual instrument?"

Comments. — If different builders were to unite on a standard of measurement, there would be a general similarity of tone quality. It would vary somewhat, however, according to the adjustment of the language and flue in giving direction to the wind current. One voicer would produce a mellow tone, and another a more brusque quality, according to the taste and experience of each.

Many small builders who do not make their own pipes have them made to order and voiced, in readiness to be placed in their organs. This saves the expense of a pipe manufacturing department, and the employment of a high-salaried voicer. The pipe manufacturer usually employs the best flue and reed voicers to be obtained. In such a case, the Open Diapasons would be of the same general quality with builders who purchase their pipes ready voiced from the same source.

An English organ expert, T. C. Lewis, gives the following dimensions and conditions as a standard. He says, "My standard of an ideal Diapason Tone for a good-sized, representative organ for the middle C pipe, is, $2\frac{3}{8}$ inches in diameter, having a mouth in width one quarter of the circumference, cut three eighths and three thirty-seconds high, with the foot wind-hole three eighths and a sixteenth of an inch in diameter, the wind pressure $3\frac{1}{2}$ inches, and the pitch $267\frac{1}{2}$ vibrations at 60 degrees Fahrenheit temperature. This pipe is to be voiced to sound its note firmly, without flying off to its octave."

BOOK SHELF

WITH COMMENTS ON NEW BOOKS, NEW MUSIC, AND MUSICAL PUBLICATIONS

BRIEF BOOK NOTES

Vocalism: Its Structure and Culture. From an English Standpoint. W. H. Breare. pp. 147. G. P. Putnam's Sons, Publishers, New York and London.

A brief treatise on English as "she is sung." The author says: "I am actuated, firstly, how our language may assert its emotional beauty; secondly, to obviate some of the difficulties which beset the paths of teachers and pupils; thirdly, to assist the general student to that intelligent discrimination by which the standard of all vocalism may be benefited."

This interesting and inspiring purpose is admirably developed in a series of chapters, thirty-nine in number, each one brief, clear, and thoroughly to the point. The following titles show the wide range covered by the writer. Breath Management, Tone Qualities, Attack, The Legato, High Notes, The Open E, Chorus Methods, etc.

A Student's Outline of the History of Music. Annie Logan Buell.

This little volume, intended by the author to be used in connection with the lecture course in Music History at the Conservatory of Music at Troy, N. Y., presents an outline of sixteen lectures. Considerable note-taking space is arranged for in the volume, so that it is practical for actual choir-room work. In its present form the book is not for reading; rather it is a helpful and suggestive topical outline.

Beethoven — the Man and the Artist — as revealed in His Own Words. Compiled by Friedrich Kerst. Translated into English and edited by H. E. Krehbiel. pp. 110. Published by B. W. Huebsch, New York.

A lover of Beethoven has gathered together in this volume what he regards as distinctive utterances of the master. For convenience these are grouped under captions like the following: Concerning Art, On Composing, On Education, On God, etc., — thirteen groups in all. To each quotation is appended a note as to its written or oral source. Mr. Krehbiel also adds notes here and there. Lovers of Beethoven in his broad human relations will undoubtedly find a tone of intimacy in this book which will delight them.

An exactly similar volume, compiled and edited by Messrs. Kerst and Krehbiel, is devoted to Mozart. Each $1.00 net (12mo cloth, gilt top).

Complete Method for Rhythmical Articulation. By Pasquale Bona. White-Smith Music Publishing Co., Boston.

A new and improved edition of a well-known Italian work, with English text by Ambrose Davenport, this *Method* is in three parts. Its object is to furnish the means for acquiring a complete knowledge of notation in all clefs, as well as of the relations which naturally exist between the notes of a musical beat. It induces an appreciation of their individual character, and enables the student to grasp time values, especially those of peculiarly grouped notes that are not easily distinguished at first sight. It takes up different forms of *tempo*, and changes in rhythm. In short, it teaches one to read music in any key, clef, or rhythm, at a glance, — a knowledge that most singers, and many instrumentalists, find hard to acquire.

Professor Bona's ideas are embodied mainly in some 120 exercises. These are classed in three parts, all of which are to be studied by instrumentalists and the first two by vocalists.

The first part offers scales in all clefs, including the practically obsolete soprano, mezzo-soprano, and baritone clefs. The chief series of exercises are in the G clef and include every key, tonality, rhythm (simple and compound), odd groups of notes, and irregular rhythmical figures. If the student can read the various exercises easily at sight, expressing the proper accents, he will find no difficulty in understanding anything that may come before him. The work is attractively printed and bound in paper covers.

Turkish March. Op. 250. Bernhard Wolff. Arthur P. Schmidt, Boston.

This is a pleasing little study in sixths, in march rhythm. It is not difficult, and will be found useful by many young students. Besides the special study in sixths, the light *staccato* is a feature that will add to its usefulness as a teaching piece.

Helter Skelter. Op. 59, No. 2. Staccato study. Max Francke. Arthur P. Schmidt, Boston.

Like the preceding, this is well adapted for study in *staccato* and the development of an elastic wrist and finger movement. In somewhat conventional lines, it is melodic, and offers only medium difficulties.

A Country Dance. Op. 215, No. 3. N. von Wilm. Arthur P. Schmidt, Boston.

Not difficult, this piece has a rhythmic swing that should please many who are seeking for novelties. It may be used also as a study in phrasing.

Impetuosity. Stepán Esipoff. Arthur P. Schmidt, Boston.

Another in the set of descriptive studies by this prolific composer of teaching pieces. It offers scale study for both hands, as well as chord passages. There is well-marked rhythm and pleasing melody, and while not especially original in thought, it will be found useful as well as interesting to piano students who have passed beyond the elementary stage of technical study.

THE YOUNG WOMAN IN MUSIC

EMILIE FRANCES BAUER

I

In the present day, when so many avenues are open for women, it is no longer necessary to turn to music as the profession best fitted to furnish occupation and income for such women as have to fight their own battles in the world.

Aside from the benefit which women derive from a broader scope, we may rejoice that music is relieved from so many mediocrities, who have always retarded the growth of this noble art, simply because it has had to serve these people as a vehicle to carry them along the road which leads to financial success. At the outset, therefore, it may be seen that unless a woman is specially qualified for this profession she were far better out of it than in it. Daily the struggle of the incompetent is becoming more difficult, in so far as it is necessary to meet the competition of such as are able to show results. The question naturally arises: What are the qualifications necessary to insure success? That this is a very difficult question to answer may also be readily understood, as success in music depends upon many things other than musical talent *per se*. In the first place it is folly to expect to accomplish everything that belongs to the art. There are a few people born with genius. That these are very few will be realized simply by a glance around. There is a large number who would come under the head of great talents. Some of these have health conditions against them and others have to fight against home surroundings. There are also those who for financial reasons cannot hope to master the musical situation, and beyond all these there are those who have talent, money, and everything except stability of character. There is a class which includes those who are fond of melody, jingle, and rhythm, but who under no circumstances could ever achieve anything really serious. The sooner people learn in which direction certain phases of musical talent could develop satisfactorily, the sooner people will escape the awful disappointments which so many claim that the study of music holds. It is true that there is no art in the world which has been the cause of so many disappointments as music. We are all too familiar with the stories of mental wrecks, suicides, and ruined lives, which arise from disappointment and failure in musical careers; but indeed it is not music or the study of music which brings these disappointments about. It is rather the determination to follow this line in the face of obstacles which are absolutely insurmountable.

We should be able to place the responsibility somewhere, and of course the person to assume this should be the teacher, who should know that some people can perform who under no circumstances could ever teach; that some may become fine teachers who will never be able to play; that some can enjoy and patronize music who will never be able to teach or play. In vocal music it is wicked for a teacher to encourage pupils to hope for grand opera careers on the strength of a beautiful voice, when all other equipments, both mental and physical, are lacking.

II

From the foregoing it may be seen that all who contemplate a musical career should by the time they are old enough to judge know what to expect, what not to expect, what sacrifice and what reward music offers before making the final decision, which is sure to end disastrously unless understood from all sides.

That the readers may be able to get some insight of conditions as they most frequently are, I will quote one from hundreds of cases which come under my observation constantly.

A young woman comes to New York because she feels the desire to expand, believing that she is not getting in her own city all the advantages which the larger centre offers. There is no certainty that she has the proper musical foundation upon which to build, and it is more than probable that it will take the new teacher longer to correct the faults she brings with her than it would take the same teacher to build up a new voice. She is full of enthusiasm, and feels that she can economize in living and that she may be able to get a little teaching or a little accompanying to help herself out. It is more than probable that she believes her talent of such importance that most of the best teachers would be pleased to give her lessons gratis. This she believes because many people who do not know real conditions believe that free instruction is given to great talents; also because she believes her talent to be exceptional. Not knowing anything of the teachers and their ways she has some idea, before she comes, of certain teachers, because some one told her of prominent pupils, and of social standing, and of church positions which these teachers have to lavish upon their pupils. After coming she is more convinced than ever that there are one or two good teachers, and nobody else counts. After a few weeks with one teacher, she finds that she is not accomplishing what she expected to, and she hears acquaintances discuss the merits of another teacher; it does not take her long to decide that other people knowing better than she does herself are probably more qualified to pass opinions on the subject of teachers; therefore she changes, and this goes on *ad infinitum*. After a while she becomes cynical, loses her faith in all teachers, makes up her mind that she knows her own wants and her own needs. By this time she has everybody's ideas of tone production, everybody's ideas of breath control — in short, she does not know the right from the wrong, and has lost the power to trust to any teacher. She becomes egotistic, works out her own ideas, takes a few lessons from everybody with any sort of reputation, never goes to a concert — because she cannot afford it perhaps, but if she does, it is only to pick flaws in the voices of the greatest artists in whom she can see nothing but the imperfections. The study of music she is not dealing with; she only recognizes the voice as a wonderful avenue to the grand opera stage. She works upon her own emotions until she throws herself into a frenzy which she mistakes for will power and the determination to be great. It is unnecessary to follow her farther, as every day finds her farther from the path which might lead to the goal.

III

I wish to call the attention of the reader to the fact that the example just quoted belongs to the serious-minded class and not to those where it is frivolity that blocks the path. With these one has no patience, but with the former one cannot refrain from a feeling of pity. Just a word, however, of the frivolous student, as she forms a large proportion of those who have music as their aim in life. This young lady has an overdevelopment of nervous energy; she cannot enjoy the limitations of a home life; she wants glitter and excitement, and nowhere does she see the same opportunity as in the study of music, particularly vocal music. Her line of reasoning makes her believe that it is the open sesame to admirers, the comic opera stage or the grand opera, it does not make very much difference, or drawing-room singing — in fact, anything which bring her into touch with people, many people, all kinds of people. The probability is that instead of giving all her thought to study she is already laying the ropes for a "pull" with society or with the managers. Her idea of development is the opportunity to sing in public and to get her name in the papers. She belongs to the class of which I spoke early, and is fond of melody, jingle, and rhythm, all of which make her believe that she is distinctly musical and the happy possessor of a great talent.

It is not impossible that she is talented, and if she follows the course for which she is by nature equipped, she may in her particular line reach some distinction, but there is always the fact that she cannot, and her teacher will not define the limits, in consequence of which she has stepped out of her possibilities into a path in which she can achieve nothing.

IV

To turn from the mistaken ideas, and it would be impossible in a volume to touch upon all the fallacies which are accepted as facts and which are really fatal in the study of music, we shall attempt to throw some light upon things as they are and as they must be regarded by those who would be really successful in this great art.

First and foremost be it understood at the outset, beautiful voices are the rule and not the exception; but these beautiful voices have no bearing in the slightest degree upon the possibility that some day they may develop, or rather that their possessors may become great artists. To be a great artist requires as much intelligence as voice and, in addition to voice and intelligence, there must be an unlimited amount of patience, of perseverance, of comprehension of how to study, of immolation of one's own ideas into the broader and better ones of people who have had great experience, and above and beyond all there must be a determination on the part of the possessor of a fine voice to keep away from the public until something has really been accomplished. There is also great danger in talking too much about one's hopes, plans, and intentions to people in general, who have always new ideas to present, to the utter destruction of a peaceful resignation to study. Every one thinks his own or his teacher's ideas the only ones that could possibly be correct. Consequently, a girl with a beautiful voice and the desire to become a great singer who has an ear for everybody's remarks and suggestions may regard her chances for success as impossible. Success can only come from great concentration, not only upon the technical side of music, but upon all that which bears upon mental development, as the mind must act with the mechanical side of the art or it never becomes an art. Let no one be under the impression that a great art can be mastered without innumerable, untold sacrifices. One who aims at greatness must be prepared to meet all obstacles calmly, but firmly. She must not be put out of her course if she must sacrifice friends, pleasures, comforts, and self-indulgences of all sorts. Everything must be made to conform to one's study; that is singleness of purpose; it is determination to succeed; it is abnegation of self in the pursuit of a magnificent ideal, and it is the only way to attain mastery of it.

V

There are two things to be considered in the study of music, especially if one goes to a large city to pursue this study. The one is money, the other is health. To accomplish good, hard study, the kind of study for which a person makes all sorts of sacrifices, the health must be kept in a perfect condition. There must be enough to eat, the right things to eat, a quiet, clean home where one's sensibilities are not undergoing continual shocks, for the study of music in itself makes enough demand upon the nervous system without that wear and tear which the sensitive nature gets in a cheap boarding house. Nor is the "so much per week" all the living will cost, as enough money should be included in figuring the cost of studying in New York to admit of two or three concerts or operas during the week. This may seem an extravagance to those who regard it in the light of a pleasure, but there is nothing in the study of music that is more important than systematic attendance of concerts; it is a broad education in itself without which it is not possible to round out a musical education.

To refer again to the matter of health; this is of utmost importance, and it must not be forgotten that any study which draws steadily upon the emotions and upon the nerve centres is likely to break down the health of the student unless the life is one of greatest abstemiousness. Just so much exercise and so much fresh air are absolutely necessary, for it must always be remembered that in the future lies the harvest which the music student hopes to reap, and there will be nothing to reap if the health be broken in the pursuit.

But let no one think that the game is not worth the candle, for to be really successful in music brings rewards which can hardly be described. Not only are the pleasures manifold, not only is a great and inexhaustible field open for constant enjoyment, but those who are really well equipped in their own branches can always command recognition, both financial and artistic. Teaching is daily coming to such a pass that there will be practically no chance for any but skilled musicians. Thus it may be seen that labor brings its own reward.

LONDON LETTER

ORTON BRADLEY

"Now is the winter of our discontent" indeed in London. Fogs and the presence of unusual cold in the air do not add to the enjoyment of a musical public who are already beginning to suffer from the customary congestion of concerts. That we have too many there is no doubt. Every week are announced more than twenty musical events in London, in addition to the large number of Sunday concerts. One series of the latter class has already been suspended owing to lack of patronage, but there still remain three orchestral concerts every Sunday afternoon and the many evening entertainments of the National Sunday League. It was a pity, indeed, that owing to the congestion Victor Maurel's only recital should have clashed with one of Plunket Greene's programs. The former was announced by Mr. Landon Ronald, whose busy season has not prevented his finishing a new overture (*A Birthday*), which has just been given under his *bâton* by the London Symphony Orchestra.

The opera season at reduced prices has just come to a successful close. The most interesting new production was Giordano's *Andrea Chenier*, and several artists little known in England have made friends with the London audiences. Among them the most successful were Zenatello, a tenor, who, like De Reszke, has graduated from the ranks of the baritones, and Battistini, who sang at Drury Lane in 1887 and reappeared this season as *Rigoletto*. By far the greater number of concerts are given by soloists to introduce themselves. Three American violinists and one American pianist have in this way made successful appearances. Karl Klein, the son of Bruno Oscar Klein, was by far the best of the three, and Richard Buhlig, the pianist, attracted great attention by his virtuosity.

Mischa Elman has gone to the Continent till March, when he is booked to return to London. His Continental tour begins at Berlin December 7, and Nikisch has engaged him to play at the Leipsic Gewandhaus.

Kubelik, whose American tour has just begun, made great friends with little Franz Vecsey a few days before he sailed, when he heard him play at Edinburgh.

The winter lectures of the Incorporated Society of Musicians (London section) began in November with a paper entitled "Some Thoughts on Tschaikowsky" by Dr. E. Markham Lee. The lecture in February will be on "Music in America," and will be illustrated by songs and concerted pieces of American composers. The lecturer will be one who is intimately connected with these columns.

It is a remarkable sign of the tendency of popular taste that Tschaikowsky's "1812" has been performed frequently with the greatest success at the Palace Music Hall, and that the manager of the Coliseum intends shortly to produce an "operatic episode" in two scenes, entitled "'93." The music is by Alberto Randegger, Jr., and the libretto, which relates a chapter from the Reign of Terror, is by H. Chance Newton. Alice Esty, who has for some months been singing extracts from various operas at this theatre, will create the part of the heroine.

The *entente cordiale* is responsible for a scheme which Sir Charles Stanford is about to carry into effect during January. He will give two concerts in Paris with the Leeds chorus and the London Symphony Orchestra. The second program, January 12, will include the Beethoven Choral Symphony. Miss Perceval Allen has been engaged to sing the soprano part.

Much curiosity has been aroused as to the real object of the gift of £25,000 ($120,000) which the Duke of Norfolk has presented to Cardinal Mery del Val for the purpose of supplying the Palatine Guard's band with new instruments. They will, of course, be made of silver, but how will the rest of the money be spent?

In all the English provincial cities a very busy musical season is reported this winter, but not to the same extent as in the cities of Europe, where every town of any importance maintains an orchestra. Many cities have permanent operatic organizations, especially throughout France, where Brest, Bordeaux, Lyons, Marseilles, Nantes, Nice, Rouen, and Toulouse are only a few of the centres which support a municipal opera. Occasionally at some of these novelties are produced. More generally they follow the lead of Paris and produce each season some of last year's Parisian successes. For example, *Miarka*, music by Alexandre Georges, the poem by Jean Richepin, has been produced recently at the Paris Opéra-Comique with such complete success that we shall probably have a crop of Miarkas in the provinces in 1906. The next production at the Opéra-Comique, which is already in rehearsal, is the *Pêcheurs de Saint-Jean*, from the pen of Widor.

The Opéra, by way of resting on its laurels after the production of *Freischütz* and the musical picture, the *Judgment of Paris*, is about to replace the latter by a new ballet, a *Ronde des Saisons* in three acts. It will be remembered that the *Judgment of Paris* is an orchestral composition by Edmond Malherbe and won the recent competition at the Conservatoire. It is not at all popular.

The "Société des Soirées d'Art," under M. Barrau's direction, will give chamber music concerts every Thursday till Feb. 22, 1906. Its programs will include the seventeen Beethoven quartets and two performances of the Septet. The programs of the Colonne concerts are also very full of Beethoven for this season, in commemoration of the centenary of the production of *Fidelio*, which was first performed at Vienna Nov. 20, 1805.

It would have been more appropriate if the Viennese themselves had celebrated this centenary, but they have been very busy recently with *in memoriam* performances of Offenbach, and, besides, there has been the trouble over *Salomé* to keep them occupied. It now appears that Richard Strauss' opera will be produced not at Vienna but at Dresden. In despair over the censor's criticisms at the former place, the composer has taken away his music. At the Royal Theatre, Turin, it will also see the footlights. If for nothing else, the production will attract the curious, because they will hear the "heckelphone," which the composer has introduced into his score.

The success of Gluck's *Armide* in Paris last season has prompted the directors of *La Monnaie* at Brussels to produce the work. Litvinne, who is to-day one of the most successful singers in Europe, sang the title-part, and the whole work was performed to perfection. Needless to say, the Paris success was repeated at Brussels.

Genoa is able to record the production of a new opera, *Mademoiselle de Belle-Isle*, by Spiro Samara. It has met with a most enthusiastic reception and the critics promise a great future for the work. Massenet's *Thaïs* has also been produced at Genoa this season, as well as two other novelties, *Albatro*, by Pacchierotti, and *Jana*, by Virgilio. At Monte Carlo this winter Saint-Saëns' latest opera, *L'Ancêtre*, is to be produced, and at the Scala, Milan, will be given Catalani's *Loreley* and Alfano's *Resurrezione*.

Next summer will see Munich in rivalry with Bayreuth, and Wagner festivals at both places. In the meantime Felix Mottl has achieved a most interesting production of Friedrich Klose's *Ilsebill*, which, we are told, is a composition on Wagnerian lines, but not in any sense an imitation of the master of music-drama. Amsterdam also is again to have performances of *Parsifal* next May, with Litvinne in the *rôle* of Kundry. During November two performances of *Tristan und Isolde* were given at the Municipal Theatre under the auspices of the "Association Néerlandaise Richard Wagner."

Next autumn Leoncavallo will visit America under the management of Rudolf Aronson and will conduct a series of "opera concerts." The leading artists will be imported, but the chorus and orchestra will be American. The programs will include the whole of *Pagliacci* and extracts from the imperial opera, *Roland*. It would add to their interest if some numbers could also be included from the trilogy upon which the composer is at present engaged. He is writing three tragic operas as well as the music to Sardou's *La Jeunesse de Figaro*, which no doubt will be useful to dispel the gloom of the former works.

Among other composers who are occupied with new works are Max Vogrich, whose music to the *Songs of Euripides*, a romantic drama by Ernest von Wildenbruch, will shortly be produced at Weimar, and Mascheroni, who has just finished an opera in four acts, *Perugina* (libretto by Luigi Illica), for production this winter at the Teatro Costanzi, Rome.

In all Continental cities the winter musical campaign is well advanced. In many of them new operatic productions are promised. Lyons, for example, will see the first performance of three new works — *Amor*, by Silvio Lazzari, *Tiphaine*, by Neuville, and *Le Bonheur des Vieux*, by Marcel Samuel-Rousseau. Milan has the honor of the first performance in Italy of the *Jongleur de Notre-Dame*, by Massenet, which has been produced at the Lyric Theatre in that city. The same theatre was to have produced *Dolores*, by Thomas Breton, the Spanish composer, during the season just passed; but the difficulties of the work made its proper production impossible. It has been postponed till the Carnival season at the Teatro dal Verme. It appears also that Mascagni's new work, *La Vestilia*, cannot be produced this year, and that he is already engaged in another, the subject of which is Euripides' *Alcestis*.

The formation of a new society is now being much discussed among Italian musicians. It would have for its object the protection of composers and the production of works by them which, in spite of their ability and talent, are still neglected. Probably a Manuscript Society would be of assistance in each great city, if it could itself be protected from professional jealousy.

The musical world has been very interested to hear of the large fortune which Tamagno left to his daughter. It is not often that musicians have the ability to hold what they have earned. It appears that the lady will inherit property worth nine million francs. Of course, the amount looks less in dollars, but even when translated, it is an unusual sum for a musician to leave.

The Swiss Federal Chamber has been recently discussing a motion which suggests replacing the tune of the national anthem by another. At present it is the same air as *God save the King*, or *Heil dir im Siegerkranz*, and the Swiss want an air of their very own. It would seem as if, with their wealth of national music, there should be no hesitation in finding the right song. The great difficulty lies in the three languages of the country, and the fact that different national tunes obtain in the three different sections. The question is not like that in America, where the national anthem has yet to grow — and some day will grow — out of the hearts of the music-loving people. When the song comes at last, it will stay and be a fitting hymn for the nation.

BIG BARGAIN LIST OF PIANOS FREE

A list that is the biggest that has ever been compiled, comprising fine pianos, has just been issued by Lyon & Healy. This list contains many Steinways, Webers, Krakauers, Washburns, Sterlings, Huntingtons, and other well-known pianos. Moreover, the particulars of each instrument are given, so that the buyer may judge for himself whether or not the piano is a bargain.

This list will interest persons who want a very good piano, for the reason that many of these instruments are slightly used in name only; that is, they have had exhibition use in show windows or have been used for brief periods in artists' studios.

The prices quoted are phenomenally low. Lyon & Healy are making a determined effort to close out several hundred instruments of this description within the next 30 days, and the prices have been reduced very materially.

Send for a copy of this list. If you do not wish to pay all cash for a piano, you can arrange for monthly payments on a portion of the price. The only difference on the cost would be 6 per cent on deferred payments. Address Lyon & Healy, 28 Adams Street, Chicago.

Lyon & Healy exhibit the largest and most varied stock of pianos in the world — over 1000 instruments.

Public School Music

THEORY OF MUSIC

F. H. RIPLEY

The word "theory" comes from a Greek word which means "to see." It is defined by Webster as (1) "A doctrine or scheme of things which terminates in speculation without a view to practice." (2) "An exposition of the general or abstract principles of any science; as, the theory of music." The words "theory" and "theatre" come from the same root.

Sir William Hamilton says, "the terms *theory* and *theoretical* are properly used in opposition to the terms *practice* and *practical*."

It is evident from the definition that the *Theory* of *music* is not a proper subject for children in elementary schools, and that the term is misapplied when we use it in connection with our work.

If we teach theory at all in our schools it is when we investigate the construction of sentences and the forms of words under the head of Grammar, and this work even is deferred till the last years of the course are reached, and then pursued in a very elementary manner.

The oft-repeated statement that children learn by doing is made as a protest against the custom of giving the theory of things before giving practice in them. The true order of development is first the thing, and then the theory of it.

We use the term *theory* in our work to express what is done in the way of explanation of the terms and characters used in music, and in reality have little or nothing to do with the true theory of music.

The question for us to decide really is, how far our explanation of things shall extend. We find our reply in the necessities, 1st, arising in practice, and 2d, for a means of communication between teacher and pupil.

Under the first head is included a knowledge of the characters used in music as a guide to action — and under the second a knowledge of the names of the characters as a means of intercourse or communication. Thus a phrase may be interpreted in tones without a knowledge of the fact that the characters are notes written on the staff, but it is a great convenience to be able to speak of notes and staff without being obliged to explain to what we refer.

It will be noted at once that Definition forms no part of our work in theory, for we simply wish the pupil to be able to interpret signs and to know to what we refer when we mention them by name.

With this in mind we perceive what our work in this field is, both in extent and in content, for it is to extend no farther than the necessities of our practice demand, and it is to contain those things only which practice makes familiar.

To the question "When do you teach this or that point?" our reply is, "When we are obliged to in order to proceed with our work intelligently; and if our work is proceeding nicely, and the children interpret the characters, and a proper, that is correct, means of communication is established between teacher and pupils, all matters beyond or in advance may be omitted." If later, in higher work, new explanations and new terms are required, then will be the time for presenting them. If your class is doing well day by day, advancing in the work as it is presented, do not divert attention and dissipate energy by bringing in something which *may* be needed some time, or which belongs in the rubbish heap, which old methods have piled so high.

There is a bit of so-called "theory" which has been the cause of much anxiety among teachers, and which will serve to illustrate the general principles just announced. I refer to the theory of the transposition of the scale. Can you imagine any circumstances under which this bit of information would be necessary, or even useful to a pupil in school? I know very well that you cannot, for if a composition were to be written again in a new key (and I cannot imagine why a pupil should be required to do even this), he would simply copy it over, placing each note so many degrees higher or lower without any reference whatever to the *theory* of transposition.

Take the theory of the key-signature which is closely allied to the previous example. Of what possible use to young pupils is a knowledge of the conditions which require more or less sharps or flats for some signatures than for others — knowledge based upon a study of the succession of major and minor seconds in the scale? With the child two things are necessary: first, to know where the key-note is on the staff as revealed by the key-signature *as a whole;* and second, power to get the pitch of the key-note from the means at hand, — that is, from a pitch pipe or from an instrument as the case may be. In the matter of keys there is no objection to the arbitrary and unexplained announcement that the composition is in the key of A, B, or C, as shown by the key-signature, and I encourage the teachers to place the various signatures, with the statement of the indicated key, upon the blackboard so that it is constantly in view, and when a new signature appears those who have forgotten the name of the key indicated may refer to the board and get the information desired. In this line of work, however, some difficulty arises in the lower grades because of the relative minors; but the difficulty is not serious, nor permanent.

It remains now to state how the *so-called* theory which is required should be presented. The word *incidental* probably expresses the method fairly well. By incidental I mean that terms are used as occasion demands, that the things to which the terms refer are already under observation and by constant use and observation the child becomes familiar with all of the terms and signs used. The words indicating tempo and those used for expression, as well as the less frequently used signs, require a remark when they appear. This remark, however, is not in the line of theory or of explanation even, but simply states briefly what the word or sign is and what it indicates. The test of the pupil's knowledge of these words and signs lies in the regard which he has for them in the rendering of the music. Thus a child in the third grade who prolongs the tone at a hold needs no definition of that sign. This brings us back to our starting-point, and we close as we began by saying that in elementary work a knowledge of theory is best shown by the child's *action* when the symbols are presented.

At a meeting of the Providence Round Table on November 14, a debate was held upon this resolution: That it would benefit teachers and pupils to have private instruction in piano playing included in the high school curriculum

* *

An intelligent and courageous effort is being made by a number of young women of Des Moines, Iowa, to suppress ragtime in their part of the country. They have banded themselves together under the title of the Enna Amateurs, and hold weekly meetings at which creditable and uplifting music is a feature. The action of these young people is popularly encouraged in Iowa, and the chances of bettering musical conditions there are becoming very favorable.

* *

Theodore Spiering, the Chicago violinist, will make his first appearance in Berlin with the Philharmonic Orchestra, February 2.

HAMLIN E. COGSWELL

Hamlin E. Cogswell was for many years an active figure in the development of music in the public schools, and is a native of Pennsylvania. He received his first musical instruction from local teachers. In his early studies he was much inspired and encouraged by the results attained in music by Lowell, Luther and William Mason, George James Webb, and George F. Root. He spent some time in Boston, where he received much valuable instruction from the late Charles R. Adams, Mme. Edna Hall, Leandro Campanari, and Hugh A. Clark.

Mr. Cogswell early in his career became interested in the educational interests of music, especially in regard to its teaching in the public school. His life work has been mainly in this field, where he has achieved remarkable

HAMLIN E. COGSWELL

success. But he has also been active musically in other directions. He has taught successfully in New York City, Scranton, Pa., Binghamton, Elmira, and Syracuse, and has directed many large choruses, presenting standard oratorios and choral works. He has conducted orchestras and military bands.

It is undoubtedly in his institutional work that Mr. Cogswell has most impressed his peculiar, forceful individuality. He was for several years director and instructor in the Normal Conservatory and Training School at Mansfield, Pa. At the present time he holds a similar position at Edinboro', in northwestern Pennsylvania. "The Public School Music Course" is a prominent and popular feature of his work, comprising as it does a course of study which combines theory and practice in all the grades of school music. Mr. Cogswell's success is apparent when one realizes that the institution over which he has charge has an average attendance of over five hundred.

Mr. Cogswell has lectured frequently to large numbers of teachers in many of the annual city and county institutes. He is now president of the music section of the National Educational Association. He has received the honorary degree of Mus. M. from Syracuse University.

Finally, it may be said, in the language of one well qualified to give appreciation, that Mr. Cogswell in his public capacity "is tactful, discreet, well poised, of broad vision and practical ability. He is possessed of native gifts and musicianly acquirements. Behind him is a life judiciously spent in learning and imparting; before him lie possibilities coming of earnest years that have brought him discipline, experience, enthusiasm, breadth of purpose, and wise insight. In every place where he has lived, he has raised the standard of music and awakened the ambitions of those associated with him."

THE NEW YORK MACDOWELL CLUB

A new MacDowell Club has been formed in New York, for the purpose of compelling greater interest in the works of the eminent composer whose condition of health is at present most precarious. No feature of American musical life is a greater credit to our country than the genius of MacDowell. The society announces that it intends "to study, faithfully interpret, and promulgate the tendencies and ideals embodied in his compositions and known esthetic convictions." It purposes also to discuss the "generic principles and vital motives of the correlated arts,—Music, Literature, Painting, Sculpture, Architecture, and Criticism: a correlation felt, declared, and championed by Mr. MacDowell."

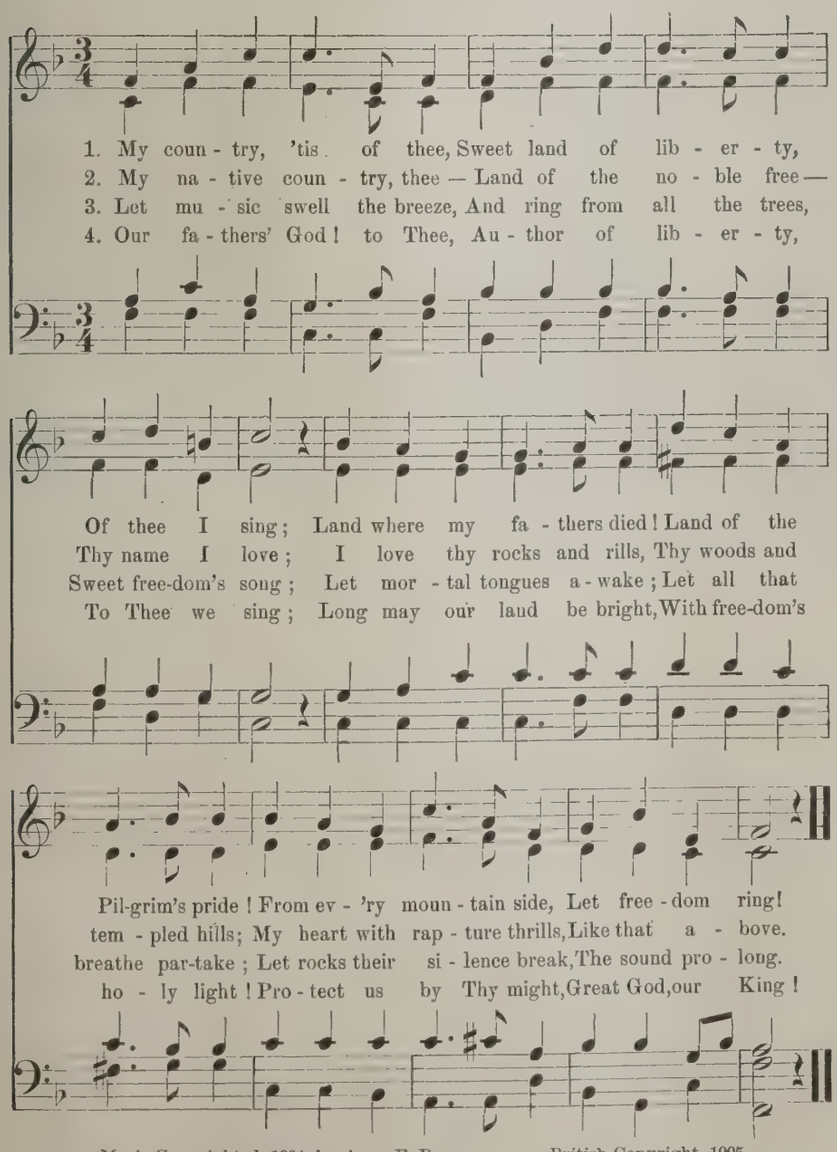
It would seem that these intentions are too broad. To champion the music of MacDowell is to do for our greatest composer what the Viennese of past generations failed to do for Mozart and Schubert, thereby shortening the lives of two men with whom the composer of the *Sea Pieces* is not unworthy to rank as a third. But why disturb his "tendencies, ideals, and esthetic convictions"? Why investigate the "generic principles and vital motives of the correlated arts" when it is a question of doing mere justice to one whose name should be preeminent on concert programs throughout the country; one whose career is but half finished and whose disposition has been shadowed by neglect, in the face of his universally acclaimed talent? The point at issue seems to be the music of MacDowell, and we hope that the new society will refrain from wasting its strength in minor literary and philosophical efforts on the *subject* of MacDowell. To hear his music, to cause it to be heard, is that which the art of music requires of it.

Many distinguished names are included in the "advisory committee" of the new enterprise. Those professionally connected with music are as follows: Henry T. Finck, Philip Hale, Lawrence Gilman, William Mason, Emil Paur, and Wassily Safonoff.

Leo Schulz, the 'cellist, has organized a quartet bearing his name. The other members will include Maurice Kaufman, first violin, David Robinson, second violin, and Fritz Schaefer, viola. Two concerts will be given in New York on January 8 and March 19. The programs will be exclusively of modern works. This is one of the rare instances in which the leader of a quartet has played a part other than that of first violin.

The accompanying setting of the words by Rev. S. F. Smith has attracted much attention. It will be of interest to readers of THE MUSICIAN to examine this music.

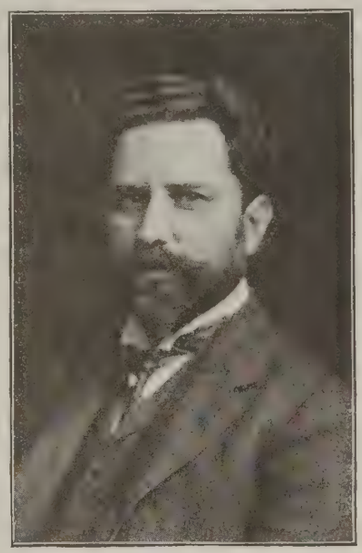
The New America



Music Copyrighted, 1904, by Anna F. Parry. British Copyright, 1905.

THE CHICAGO MADRIGAL CLUB COMPETITION

The prize competition for the W. W. Kimball Co. prize of $100.00, offered by the Chicago Madrigal Club, is closed. A large number of manuscripts were



JOHN HYATT BREWER

submitted, many of them by men of national reputation. The prize was awarded to Mr. John Hyatt Brewer, of Brooklyn, N. Y. The poem was Bayard Taylor's *Bedouin Love Song.*

* *

It is rumored that Wilhelmj, after many years of retirement, is planning to tour America during the season of 1906–1907.

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round.

IF YOU ARE RECEIVING LESS, WE CAN DOUBLE YOUR EARNING POWER.

THE TUNE-A-PHONE IN USE.

We teach **Piano Tuning, Action Regulating, Voicing and Fine Repairing,** all in one practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life.**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. Many professional tuners study with us to perfect themselves in their art. SCORES OF MUSICIANS take the course that they may be able to care for their own instruments. More take our course as a **sure means to money-making.** We fit our students to command splendid profits in the pleasantest of professions.

Read what some of Our Graduates Say about It.

NILES BRYANT, DIRECTOR

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos."—Joseph Gribler, Astoria, Oregon.

"I average $9 a day."—Simpson Thomas, Aquebogue, N. Y.

"I easily make an average of $5 to $6 a day."—John T. Haunam, Galt, Ont.

"I made $100.00 fixing two old pianos."—Mrs. S. A. Albertus, Los Angeles, Cal.

"I made $31.50 the first two weeks, and $5 to $12 per day thereafter."—Carey F. Hall, Coffeyville, Kan.

"I am earning good money since I began tuning, repairing, etc. Last week I took in $27.50, and next week I am sure I can raise that."—Ray J. Magnan, Manistee, Mich.

"This profession, I find, is one that is surely not over-crowded. At a place where there are several older tuners, I get more work than I can easily dispose of, from which I realize from $2.50 to $3 per instrument."—J. W. Unser, Tiffin, Ohio.

THE ACTION MODEL.

INSTITUTE OF MUSICAL ART
OF THE CITY OF NEW YORK

53 Fifth Avenue, New York **FRANK DAMROSH, Director**

Established and endowed for the education of serious students of music. Offers all advantages of a European musical education. Faculty composed of the most eminent teachers of Europe and America.

Prospectus on application to the Registrar.

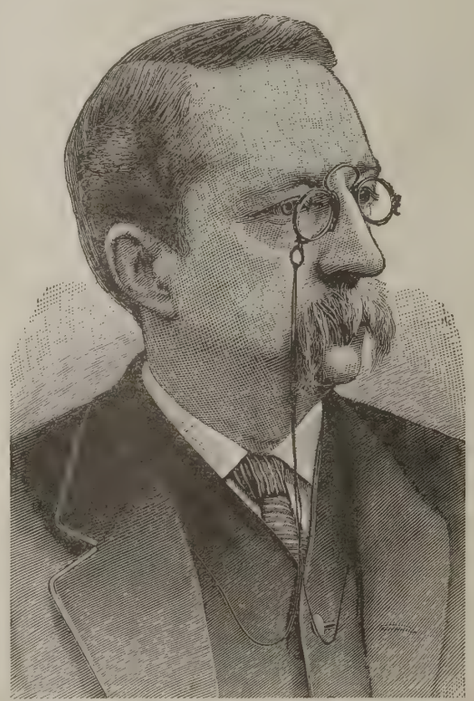
MASON & HAMLIN AND THE ARTISTIC PIANO

Over fifty years ago Henry Mason, son of the late Dr. Lowell Mason, — who was the first man in America to devote his life to music, to receive the degree of Doctor of Music, and who was called the Father of Music in America, — together with a brilliant mechanic named Emmons Hamlin, started in business under the name of Mason & Hamlin. Their shibboleth from the very beginning was *palmam qui meruit ferat* — "let him who deserves it bear the palm." Their ideal was the highest, and from it they never for a moment swerved. As a result, the Mason & Hamlin Organ (for they began with the manufacture of organs only) was soon recognized at home and abroad as without a peer. From that time to the present day, it has maintained its position in the world as a standard of the highest artistic excellence.

Some years later the Mason & Hamlin Co. began the manufacture of pianos, under the same banner and with the same ideals with which the Company was launched originally. The result has been that the Mason & Hamlin piano is today heralded throughout the world as a leader in its class. The world's most eminent musical authorities, including such rare names as those of Harold Bauer, Vincent d'Indy, Arthur Nikisch, Emil Paur, Fritz Kreisler, Moritz Moskowski, and many others are bearing witness to this fact, not only in verbal and written expression, but by their selection of these instruments as a means of expressing to the world their most intimate musical thoughts. At the Kneisel Quartet Concerts in New York City this season, in which only the greatest artists are chosen to assist, the Mason & Hamlin Piano is to be heard at four out of the five performances. The great artists who are to play the Mason & Hamlin Piano with the Kneisel Quartet have voluntarily chosen this instrument, not because of monetary or any other consideration, but for the sole reason that they prefer it. It gives the artist the most complete freedom and aid in expressing himself, his nature, and his being. It is safe to say that not one day of the musical season passes on which the Mason & Hamlin Piano is not played by several great pianists in different cities throughout the world.

A remarkable quality of this instrument is its adaptability and power of sympathetic combination with the human voice. Singers at once recognize this, and find in its tone quality a comradeship, so to speak, which is both helpful and satisfying.

We have pointed out that one of the founders of the Mason & Hamlin Co. came of stock which was musical to its very core. This characteristic has prevailed in the *personnel* of the Mason & Hamlin Co. to the present day. The makers of these instruments are themselves of fine musical fibre; they *know* what musical tone is, and in producing a tone which appeals to themselves, they are producing one which will appeal to the artistic nature in general.



HENRY MASON

In the Mason & Hamlin factories are many men who have been there over twenty-five years. They have worked under the same traditions, for the same ideal, and have devoted their life to their trade. Several hundred men are thus unified, as it were, in their labors. One becomes an inspiration to another, and the whole to each one.

During the past twenty-five years but little has been done to advance the artistic grand pianoforte, which had arrived at a high state of development over a generation ago. One important step, however, — the most important made during the past twenty-five years in the construction of the instrument, — is due to the present mechanical head of the Mason & Hamlin Co. His invention is known as the Tension Rod Resonator, a device simple in construction and applied to the grand pianoforte for the purpose of maintaining the crown, or arch, of the sounding-board. Since it is this crown of the sounding-board which vitalizes the vibrations and hence the tone, it will be seen that this invention is of great importance. Before its introduction there was no means of securing and maintaining permanently the desired arching of the sounding-board.

MUSICAL NOTES

At a song recital given before the Peabody Institute, of Peabody, Mass., Mr. Ralph Osborne introduced two songs by the gifted young musician, Charles Fonteyn Manney. Their titles are *Orpheus with His Lute*, from *Henry VIII*, and *The Blue Hills Far Away*. Mr. Manney kindly assisted by playing the accompaniments.

* *

The Schubert Club of Providence, R. I., listened on November 7 to papers discussing the subject, "How to Train Abnormal Hands."

* *

The Chaminade Musical Club of Jacksonville, Ill., has planned fourteen musical meetings for the season. A number of vitally interesting subjects are being taken up in the course of the series.

* *

The striking photographs which illustrate Mr. Marling's article on old instruments (see pages 11-13) are the work of Mr. C. Balliard, of New York.

* *

The prize offered by the Schubert Glee Club of Jersey City, was won by John Hyatt Brewer, of Brooklyn. His work is entitled: *The Lord of the Dunderberg*, and is written for male chorus with orchestral accompaniment.

* *

Frederick W. Ranken, comic opera librettist, author of the *Ameer*, *Jewel of Asia*, *Happyland*, and other works, died recently in New York City.

* *

An imperial German musical library is to be founded in Berlin. It probably will be opened by April 1, and will be called the "German Musical Collection." The various German publishing houses are interested in the movement.

* *

Daniel Mayer, proprietor of the London house of S. & P. Erard, Paris, retired from the pianoforte trade January 1. He will take up managerial work, having as his leading artist the youthful violin prodigy, Elman.

* *

Three Brahms manuscripts (those of the songs, Op. 63), have just been added, through the generosity of Georg Henschel, to the libraries of the endowed Institute of Musical Art, New York.

* *

Johann Strauss, nephew of the composer of the *Blue Danube* waltz, may visit America this season with an orchestra. He has traveled extensively in Austria and Germany for some years.

* *

Wilhelm Backhaus, who won the Rubinstein prize at Paris last summer, played all of the test compositions in London not long ago.

* *

Nicholas Mannskopf, proprietor of the historical musical collection at Frankfort, means to hold a Mozart exhibition in honor of the composer's one hundred and fiftieth birthday, Jan. 27, 1906. Mannskopf possesses fifteen thousand relics of famous musicians, among which are Mozart manuscripts, portraits, and letters. He has material, therefore, to give a satisfactory picture of the life and development of the great master.

* *

Joachim Andersen, the Danish conductor, received recently from the king of Denmark the knight's cross of the Dannebrog order.

A SYSTEM OF FUNDAMENTAL TECHNICS

FOR MODERN PIANO PLAYING.

By WILLIAM MASON, MUS. DOC. REVISED and ENLARGED by W. S. B. MATHEWS.

PART ONE.—Tone Production,
Including Two-finger Exercises with Octaves, Bravura, Chords, and the Use of the Pedals.

PART TWO.—Principles and Material for Passage Practice,
Containing Dr. Mason's Celebrated Method of Scales and Arpeggios, the Application of Rhythm and Metre, and the Principles for Developing Velocity.

DR. WILLIAM MASON'S "System of Fundamental Piano Technics" comprises the net results of a century of evolution in the art of piano playing and piano pedagogy. It is founded upon the advances made by the older technicians, such as Clementi, Tomaschek, Dreyschock, and others. Taking the operative part of their innovations, Dr. Mason, during fifty years of active work as artist and teacher, has superimposed upon their material and processes the various missing elements for completing the command of the piano in all the directions of modern playing. He is the inventor of an easy method of diversifying all kinds of passage practice and of imparting to this usually dry part of piano study many of the qualities of musical creation. His rhythmic devices educate the player as well as improve the playing. His two methods of velocity are radical and never failing. His method of octaves, when superimposed upon the education of the hand in the manifold forms of the two-finger exercise, reduces this part of the technic to easy dimensions without sacrificing completeness. The most important feature of the Mason System is the emphasis placed upon Tone Production, the mechanism of producing and Vitalizing Piano tones for every possible demand in artistic playing.

This revised edition of the "Mason Fundamental Piano Technics," contains all the practical exercises which were in the first edition, together with the following additions:

A Complete Restatement of Tone Production, for Melody, Passages, Chords, Octaves, Bravura, and the Artistic Uses of the Pedal.

In short, a complete apparatus for piano expression. The subject of Chords, previously neglected by technicians, although of the utmost artistic importance, is here taken up anew and so handled that the teacher, by following directions, will be able to impart to pupils a rich, melodious, and beautiful control of chords and harmonic coloring. Any student who will build up the tone production through the various single-finger forms, through double touches to chords and octaves, will arrive at an elastic, full, and commanding tonal control of the instrument. The object of the present arrangement of the material and subjects has been to bring out more clearly the interdependence of parts in the system, and to prepare a more progressive order of arriving at maturity in this division of technics.

The Work Contains Thirty-eight Illustrations Showing Every Position of the Hand in Playing.

Price of Parts I. and II., Each, in Paper, $1.00; Complete in Cloth, $2.00, Post-paid.

COPIES SENT FOR EXAMINATION.

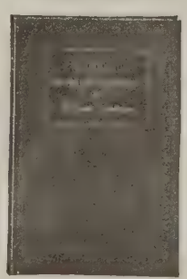
A GUIDE TO
THE RING OF THE NIBELUNG

—— BY ——

RICHARD ALDRICH.



DESPITE the existence of several handbooks to Wagner's great musical trilogy, Mr. Aldrich's new GUIDE TO THE RING OF THE NIBELUNG will commend itself to opera lovers as the most readable and compact work on the subject which has yet appeared. While it covers the ground in the most thorough manner, it avoids the unnecessary diffuseness, and awkward, involved construction which has made the authoritative foreign treatises in translation so unattractive. The student who wishes to make a close study of the score will find Mr. Aldrich a helpful and trustworthy guide; the average music lover who desires to enhance his pleasure by a knowledge of Wagner's aims, method of working, and achievement will delight in the author's entertaining manner of presenting the subject; and to the general reader the work is of value as an entertaining sketch of a colossal genius in relation to his greatest undertaking.

To the happy faculty of treating his subject in the most concise and lucid fashion, Mr. Aldrich adds a charm of style, at once easy and elegant, which holds the reader's attention from cover to cover. His presentation of his material is comprehensive and logically planned. The book is divided into three parts:

PART I.—The Composition and Sources of the Trilogy.
PART II.—Wagner's Musical and Dramatic System.
PART III.—The Music and the Story.

Part I. touches upon Wagner, the man and composer, and the circumstances which led to the composition of the Nibelung Trilogy; and gives also a brief résumé of the various legendary sources from which Wagner drew his dramatic material, transforming and elevating it for his great purpose. Part II. is a sympathetic and authoritative essay upon the novel musico-dramatic system which Wagner created, and to the perfecting of which he devoted all his genius and energy. Part III. is devoted to a careful analysis of the story and music of each of the dramas composing the trilogy,—THE VALKYRIE, SIEGFRIED, and THE DUSK OF THE GODS,—and the introductory drama, THE RHINEGOLD. This part of the book is illustrated by reproductions in musical notation of all the leading motives or themes, with reference to their appearance in the dramas; and is happily free from technical terms.

For those who wish to read further along general lines concerning Wagner and his works, a bibliography is appended of interesting or instructive books, selected with care from the mass of literature which has grown up about this engrossing subject.

Price, $1.25 Post-paid.

DITSON EDITION

The DITSON EDITION is a new library of approved works, chiefly technical, for the piano, organ, violin, and other instruments and for the voice. It addresses itself to music teachers and music students of discrimination—to those who value quality, who want the best.

In its Editing and Editors

the DITSON EDITION claims superiority over every other edition.

Each volume has been carefully prepared on practical lines by a specialist; in other words, each number has been truly *edited*. While the editorial work is modern in spirit and progressive in character, the aim has been to avoid the pitfall of over-editing. There are editions so crowded with footnotes, explanations, and markings of various sorts as to confuse the pupil, fatigue the eye, and hide the music. This is not true of the DITSON EDITION, the volumes of which contain all practical hints and helps necessary while avoiding everything needless, burdensome, or extreme. A marked feature is the Editorial Preface to all or nearly all of the volumes. This introduction tells something of the composer or author, giving in many cases his portrait, followed by practical hints for teacher and pupil which greatly increase the working value of each book. This is a special feature of the edition.

The DITSON EDITION claims superiority not only in its matter—the music and its editing—but in the manner in which it is presented. First,

The Typography of the Music

The music is engraved with steel dies, "stamped" or struck note by note, character by character, on a metal plate. For each music character there is a separate die. The appearance of the music depends upon the shape and size of these dies. After a careful study we decided upon a form of notehead a trifle larger than that in common use—a notehead that facilitates reading and gives the eye a minimum of strain. This is an important feature in these days of nervous tension, and will be appreciated by the thoughtful. At a large expense we had these music dies made for us by the finest die cutter in Europe. Every music page of the DITSON EDITION is printed from new plates engraved with these new, special dies. Bearing directly upon the eye-pull is the "lay-out" of each music page. Inferior editions are crowded with music for the sake of reducing the book to a minimum number of pages, and therefore of cost. The DITSON EDITION does not for commercial reasons sacrifice the eyesight of the thousands who use it in their formative period, but carefully avoids crowding the pages by ample spacing and generous "lay-out." A second point of superiority is in

The Printing

of the DITSON EDITION. While the music is engraved on metal plates, it is not printed directly from them but indirectly by the "transfer" or lithographic process. To the highly polished surface of a lithographic stone is transferred an impression taken from the metal music plates. By the action of acid this transfer is solidified upon the stone. The stone is then placed on the bed of a printing press designed for the purpose. This press is equipped with two sets of rollers—one for water and one for ink. The water rollers, having no affinity for the grease contained in the transfer, first cover the stone with a minute film of water, while the ink rollers, having no affinity for the water, next deposit the necessary quantity of ink on the "transfer." The paper is then fed in and pressure applied. Under this pressure the paper absorbs the film of water and takes upon its surface the ink in exact reproduction of the "transfer." This brief description of the modern method of music printing makes apparent the necessity of using for the best results a paper exactly adapted in texture and finish. This paper, made by a special process, is known as "Velvet finish," and yields a clear and beautiful impression. This best paper costs more than the spongy paper used in inferior editions, but the DITSON EDITION is not reducing its cost of manufacture at the expense of your eyesight. It is printed with the greatest care and the best black ink, on the highest grade, highest priced music paper made in this country. A third point of superiority is in

The Binding

of the DITSON EDITION. The cover paper of dark *Café-au-lait* is soft in texture, yet tough in fibre, and will wear better, look well longer than the thinner and paler colored smooth papers used on other editions. The artistic cover design printed, not as commonly in one color, but in two,—a sympathetic reddish brown and harmonious olive green,—gives the edition a distinguished appearance.

While the DITSON EDITION is in every detail superior to all others, it costs no more than other editions.

Finally, the DITSON EDITION, notwithstanding the keenest commercial rivalry and competition, has not sacrificed quality—intrinsic worth—to cheapness at any point. It is built and will continue to be built on the principle of

"Not—how cheap; but—how good."

A complete catalogue of the DITSON EDITION will be sent free to any address.

Handel SONGS and AIRS

Vol. I., High Voice — Vol. II., Low Voice

Edited by EBENEZER PROUT

OF all the great composers it is probable that not one has written so many songs as Handel; it is certain that few have composed so many which have become universal favorites among English-speaking people. Out of this rich legacy Dr. Prout has selected, with rare discrimination, the eighty numbers which make up this collection, and which may safely be said to represent the best and most enduring examples of Handel's genius.

Vol. I. contains forty songs for soprano and tenor in the original keys and with the original texts; Vol. II. contains forty songs for contralto and bass. These are chosen both from the numerous operas which made Handel the foremost dramatic composer of his time, and from the great oratorios on which his fame now chiefly rests. The songs in each volume are arranged in chronological order. Those from the operas have singable English versions in addition to the original Italian texts. The piano accompaniments have in every case been especially arranged for this collection from the composer's full scores.

The introductory matter is very complete, and includes a biographical and critical preface and a short description of each song. Each volume also contains an authentic portrait of the great master of the eighteenth century.

Published in the Musicians Library. Price, in heavy paper, cloth back, $1.50; in cloth, gilt, $2.50 post-paid.

FOLIO EDITION—SHEET MUSIC

Compass shown by letters in brackets [ ]. First letter is lowest note; notes below the staff indicated by small letters; on staff by CAPITAL letters; above staff by *italic* letters.

Sacred Song

LOW VOICE

WIEGAND, JOHN — PRICE

Cradle Song of the Soul. [F] [c to D]..... 60
A quiet, prayerful number, with attractive words, somewhat different from the usual sacred song.

Sacred Duet

HEINRICH, C. W.

My Soul doth Yearn. (Soprano and Tenor.) [A♭].. 75
Melodious and singable, the "leads" easy, and giving to both voices an equally favorable opportunity.

Piano Solos

MARTIN, T. J.

General Siegel's March. [A] [III]..... 40
In the rhythm of a "grand march," with well-marked melodies.

OEHMLER, LEO

Recreation March. Op. 54. [B♭] [III]..... 60
A swinging 4-4 march, easy, yet exceedingly spirited and effective.

WACHS, PAUL

Capricante. (Marche de Concert.) [A♭] [IV-V]..... 60
A bravura piece in march rhythm, containing showy octave-work and scale-passages.

WILLIAMS, FREDERICK A.

Jubilee March. Op. 55. [E♭] [III-IV]..... 60
Stirring, yet stately movement, suitable for school use, etc.

Popular Piano Music

DELLAFIELD, HENRY

Dance of the Flowers. (Intermezzo.) [G] [III].... 60
A merry, dashing piece, in light style, and easy figures.

Organ Compositions

FOERSTER, ADOLPH M.

In Memoriam. (Prelude in F minor.) Op. 62, No. 1. [F min.]..... 60
Serious, dignified number in measured, march-like rhythm.

Prelude in A♭. Op. 62, No. 2. [A♭]..... 50
Tranquil and meditative in style, melodious and effectively registrated.

Violin and Piano

OEHMLER, LEO

Three Little Pieces for Beginners. Op. 55.

No. 1. **Forget-me-not** (Vergissmeinnicht). (For A and E Strings)..... 60

No. 2. **Marcia Energico** (Kleiner Marsch). (For D and A Strings)..... 50

No. 3. **Barchetta** (Gondellied). (For G and D Strings)..... 60
Three attractive teaching pieces, melodious, varied, and instructive; yet offering a minimum of technical problems.

Two Violins and Piano

SCHUMANN, ROBERT — PRICE

Traumerei and Romance. (Arr. by Benjamin Cutter.) [F]..... 50
Very lovely in this excellent arrangement are the two well-known Schumann piano pieces, here joined as one number.

Mandolin Orchestra Music

ROLLINSON, T. H.

Uncle Rufe's Jubilee. (Characteristic Two-Step.) (Arr. by H. F. Odell.)
Brisk and lively number, with vigorous rhythm.

OCTAVO EDITION

(PLEASE ORDER BY NUMBER)

Anthems for Mixed Voices

BRACKETT, FRANK H.

No. 11,438. **Abide with Me.** (Hymn-Anthem; Soprano and Bass Solos)..... 12
Quiet, devotional anthem, simple in form, and easily rendered.

EMERSON, L. O.

No. 11,484. **O be Joyful in the Lord.** (Festival Chorus)..... 08
Spirited, march-like number, largely in unisons.

MORSE, CHARLES H.

No. 11,477. **Bow down Thine Ear**..... 10
A simple, sincere number for four parts throughout, without solos.

NOVELLO, VINCENT

No. 11,455. **Like as the Hart desireth the Water-Brooks** (Jesu, Word of God Incarnate). Wolfgang A. Mozart..... 05
An edition with English text only of two favorite numbers, available for any service.

OWST, W. G.

No. 11,420. **O Lord, We beseech Thee!**..... 10
A short anthem in quiet style, ably written, and suitable for a second service.

WILLIAMS, CHARLES LEE

No. 11,478. **Oh, Blessed is That Land.** (With Soprano Solo)..... 10
Short anthem, in dignified, churchly spirit.

WOODWARD, H. H.

No. 11,459. **The Splendors of Thy Glory, Lord.** (For Advent or General Use)..... 05
Full anthem of moderate difficulty, suitable for boy choirs.

KNIGHT, J. S.

No. 11,456. **O for the Wings of a Dove.** (With Soprano Solo, and Soprano and Alto Duet)..... 12
A lyric and tuneful number, especially adapted for quartet work.

WOOLER, ALFRED

No. 11,454. **With Thee, O Master.** (Hymn-Anthem; with Tenor and Alto Solos)..... 10
Melodious, in simple style, and, like the above, adapted for quartet use.

Part-Song for Women's Voices

MANNEY, CHARLES FONTEYN

No. 11,483. **Snowflakes.** (Three-part Song)..... 12
In light, happy vein, the part-writing free and melodious, and with rippling piano accompaniment. Not difficult.

NEW BOOKS

The Musicians Library

PRICE

Seventy Scottish Songs. (For Low Voice.) (Edited with Accompaniments by Helen Hopekirk.) Price, in paper..... 1 50
Price, in cloth..... 2 50
A collection of Northern folk-melodies, whose beauty is enhanced by the musicianly and sympathetic accompaniments. Contains portrait of Madame Hopekirk.

Ditson Edition

AUSTIN, ROBERT E.

No. 25. **Six Easy Piano Pieces.** (Grades I and II.) (Edited by W. S. B. Mathews)..... 75
Among the best of easy pieces for pedagogical use. Musical, varied, and refined.

ESIPOFF, STEPAN

No. 27. **Six Pieces for the Piano.** (Grade II.) (Edited by W. S. B. Mathews)..... 75
Modern in melody and harmony, and useful for inculcating a refined musical sense.

KAYSER, HEINRICH ERNST

No. 21. **Thirty-six Elementary and Progressive Studies for the Violin.** Op. 20. (Edited by Benjamin Cutter.) Complete..... 1 25
Ably edited and thoroughly revised new edition of useful studies.

MAZAS, JACQUES FERREOL

No. 20. **Short Method for the Violin** (Kurze Methode für die Violine). (Revised, augmented, and translated by Benjamin Cutter)..... 75
A standard method for the violin in a revised and greatly improved edition.

The Half Dollar Music Series

Popular Solos for Trombone or Baritone. (With Piano Accompaniments)..... 50
Effective and popular melodies collected in a handsome, convenient volume.

CHORAL WORKS

The Half Dollar Choral Series

Fifty Responses for Choirs. (Compiled by James L. Gilbert. Revised and edited by Hans Lichter)... 50
This popular collection of responses will meet with new favor in its enlarged, revised form.

Popular Anthems for General Use. (Compiled by Hans Lichter)..... 50
A collection of simple, yet good anthems, suited to the needs of the average mixed choir.

Twenty Part-songs for Mixed Voices. (Secular.) (Compiled by H. Clough-Leighter)..... 50
Original compositions and effective arrangements selected with care for use by singing societies, etc.

Twenty Trios. (For Women's Voices.) (Secular.) (Compiled by H. Clough-Leighter)..... 50
Comprises popular compositions and arrangements by Czibulka, Delibes, Gounod, Grondahl, and others.

Regarding Church Organs

And the Value of a Guaranty

THE WORTH OF A GUARANTY DEPENDS ON THE MAKERS

Financial Standing

If he is new to the business, but has plenty of money, perhaps you can make him give your money back if his guaranteed organ goes wrong.

Business Life

Some manufacturers are in business to stay; others move on after a few months. If your organ maker stops making and selling organs during the term of the guaranty, his promises will not do you much good.

Reputation

If your organ maker has been in business a long time and has always kept his promises to others, you have a right to rely upon his dealing fairly and honorably with you.

WITHOUT THESE HIS GUARANTY IS WORTHLESS

THE WORTH OF THE ESTEY ORGAN COMPANY'S GUARANTY IS KNOWN

By their well-known financial ability.
By their sixty years of past business life and growth.
By the fourth generation of Esteys now growing up to continue the business.
By their unbroken record for doing the square thing.

No matter how small or how large an organ purchase is contemplated, don't fail to write

THE ESTEY ORGAN COMPANY
BRATTLEBORO, VERMONT

MUSIC BOOKS AT REASONABLE PRICES
CELEBRATED 50 CENT BOOKS

Chaminade Album

Of all composers of piano music of the French school, Chaminade is pre-eminently the favorite of the present day. This book contains sixteen pieces, including "Scarf Dance," "Pas des Amphores," "Pierrette," "Callirhoe," etc.

Flowers of Melody
From Favorite Operas. Vol. I.
By D. Krug

Contains eighteen instructive Rondinos from Op. 114, 123, and 170 by Krug. None of these pieces contain octaves, making them very effective for teachers. Each piece is published also in sheet form. Vol. II is a continuation of the same opuses.

Modern Composers
Vol. I

A collection of melodic piano pieces by the celebrated composers Paul Wachs and Carl Heins.

Contents include—

"Valse Entrainante," Wachs, and "Goldfischen" and "The Silver Nymph" by Heins.

Modern Composers
Vol. II

A supplement to Vol. I. In this book we have added another composer (Carl Ganschals) to Wachs and Heins.

The two volumes make a complete collection of the very best compositions of these writers.

PUBLISHERS' NOTES

EASTER MUSIC — Although Easter is more than ten weeks away, it is not too early to begin planning the musical part of the program. Easter is the most important festival of the Church year, and its celebration should enlist the best efforts of choir leaders and choirs in the performance of appropriate music. On page 59 of this magazine are given short descriptions of several of the most successful cantatas published in the last few years. A list of new anthems and choruses will be found on page 55. Louis R. Dressler's *Christ is Risen* is an effective Easter song.

Our complete catalog of Easter music will be sent to any address on request. Music published by us will be sent for examination. For those not familiar with our publications we will make selections ourselves of such numbers as we can especially recommend.

LENTEN MUSIC — The Lenten season also offers occasion for impressive musical services. *The Seven Last Words of Christ*, by Theodore Dubois, and *The Story of Calvary*, by P. A. Schnecker, are two excellent cantatas. The former is a dramatic work suitable for a large chorus with soloists. The latter is effective for performance by singers of average proficiency.

CHOIR AND CHORAL MAGAZINE — The February *Choir and Choral* magazine contains three new Lenten anthems. The price of the magazine is 10 cents. The yearly subscription price for the twelve issues of the year is 50 cents. Those wishing to take advantage of the reduction in price to order the *Choir and Choral* magazine for the year may have their subscriptions begin with the January number, providing they are received before the edition is exhausted.

SHAKSPERE SONGS — *Shakspere Songs*, compiled and edited by Dr. Charles Vincent, is a collection that will prove of exceptional interest to vocalists, to musical and Shakspere Clubs, and to all who are familiar with the works of the great playwright.

The contents of this volume have been drawn from many sources. It is divided into four parts, as follows: — I. Songs mentioned by Shakspere in his plays. II. Songs possibly sung in the original performances. III. Settings composed since Shakspere's time to the middle of the nineteenth century. IV. Recent settings. The adaptations to the piano of the accompaniments of the older numbers have been made to correspond as nearly as possible with the originals.

Part I contains: *Heart's Ease*, mentioned in *Romeo and Juliet; Heigh-ho for a Husband*, in *Much Ado about Nothing; Green Sleeves*, in *The Merry Wives; Light o' Love*, in *Two Gentlemen of Verona;* and *Farewell, Dear Love, Peg o' Ramsay*, and *Three Merry Men*, mentioned in *Twelfth Night.* The second part contains settings by Byrd, Robert Johnson, Dr. John Wilson, Thomas Dallis, and Thomas Morley. The examples given in this part prove that the music written for and performed in the plays of Shakspere's period was refined and artistic in character. The third part includes songs by Purcell, Dr. Arne, Haydn, Linley, Bishop, Schubert, and Rossini. It will be a matter of interest to many to learn that Rossini composed a song to Shakspere's words which can be rendered as effectively in English as in Italian. It was written for the opera *Otello*, and is characteristic of the composer. It is also interesting to find that Schumann has set to music one of Shakspere's songs. This is included among the "Recent Settings." Most of the numbers in this section are by contemporary composers. Among the number is a new song by Samuel Coleridge-Taylor.

The volume will be one of the Musicians Library, and will be issued at an early date. There will be two editions, one for high voice and one for low voice, and they will be obtainable in both paper and cloth bindings.

EARLY ITALIAN PIANO MUSIC — In the sixteenth century Italy was first in all the arts, — in sculpture, in painting, in literature, and in music. Palestrina was called upon to reform church music, and he composed masses of a beauty that has never been equaled. Luca Marenzio composed his madrigals and Monteverde invented the opera. The example of these geniuses was followed by a host of lesser composers; schools for music were founded; the French, Belgian, and Spanish musicians who one hundred years before had gone to Italy to teach now came to learn and to admire. Though a great deal of the music written in Italy in the sixteenth century was vocal — all Palestrina's masses, in fact all religious music, was unaccompanied — instrumental composition was not neglected. At the beginning of the seventeenth century Frescobaldi produced his works for *Organo e Cembalo*, and later on Corelli and Viotti wrote for the violin.

That the musical inspiration which arose in Italy in the sixteenth century should have been continued far into the eighteenth shows how strongly the instinct must have been and how excellent the musical tradition. The learning of these masters of the olden time and their knowledge of music will astonish those who are not familiar with their compositions.

Early Italian Music, edited by M. Esposito, includes the best instrumental works of the old Italian writers. Such composers as Frescobaldi, Alessandro and Domenico Scarlatti, Durante, Porpora, and Martini are represented. The collection includes ten Toccatas by Alessandro Scarlatti which have never been published before. In view of the strides made by modern composers, one can hardly realize that such music was written at a time when Bach and Handel were still boys and one hundred years before Beethoven.

The volume is one of the Musicians Library and will probably appear next month.

TWO SONGS BY COLERIDGE-TAYLOR — *Once Only* and *She rested by the Broken Brook*, two poems by Robert Louis Stevenson, have been recently set to music for low voice by Samuel Coleridge-Taylor. Both songs are well suited to the voice and have effective accompaniments. They are of moderate length and will make excellent recital numbers.

TONE PICTURES BY JOSEF LÖW — In his *Tone Pictures*, Op. 191, Josef Löw has performed a feat of skill in confining the primo part to five keys without dulness or monotony. An agreeable variety is found in these twenty-three pieces. They also have the not too common trait of corresponding in spirit to their titles. The teaching value of these progressive numbers is twofold: first, in developing the sense of rhythm; second, in awakening the purely musical perception of the young player. In his aim to arouse musical feeling — delight in music — to awaken the artist and to attain a relatively artistic performance in even the simplest music, the teacher will find this collection invaluable.

A new edition of the work, edited by Heinrich Kiehl, is now in preparation and will appear at an early date. The price of the book will be $1.00. In advance of publication, however, we offer it for 40 cents, including postage, when orders are accompanied by cash.

A NEW GREGORIAN MASS — We are about to issue an easy Mass in Gregorian style, by Arthur F. M. Custance, entitled *Missa Immaculatae Conceptionis*. In this work all the conditions of the Motu Proprio have been complied with. There are no extended introductions or interludes for the organ nor repetitions in the text. In the *Gloria* and *Credo* the choir begins with the words "Et in terra" and "Patrem omnipotentem," instead of repeating the words sung by the priest. The work is for mixed voices, and can be sung by the ordinary boy choir if desired.

The price will be 50 cents, post-paid.

CASORTI'S TECHNICS — In August Casorti's *Technics of the Bow* can be traced the influence of Meerts. The work of Casorti surpasses that of Meerts in its brevity and its directness, its closeness of form, and its practical statements of the essentials of bowing. In the application of the bow to the strings Casorti insists on the bow being held loosely in the fingers and with wrist higher than the bridge so that the weight of the arm may not fall upon the string. The pressure of the bow will then be conscious and not the result of the weight of the arm. Casorti's work is particularly helpful on the following points: the carriage of the hand in the *grand detaché*, the unaccented *grand detaché* on one and on two strings, and the bouncing bow (*sautillé*). Great importance is also attached to the retention of the bow. Casorti advises practicing one-minute strokes every day.

We are about to issue a new edition of this work edited by Benjamin Cutter. An English text has been provided and English terms have been employed in addition to the foreign bow names found in the original edition.

The price of the book will be $1.00, but in advance of publication we offer it for 40 cents, which includes postage, when cash accompanies order.

BIOGRAPHIES OF THE GREAT COMPOSERS — The study of the lives of the great composers is a most effective method of acquiring a keener appreciation of their works. In the course of our career of seventy-one years as publishers, we have issued a number of authoritative biographies, many of which are translations which have been authorized by the original writers. These works will make a valuable addition to any music library. Of some of the composers they are the only biographies available in English. The following list comprises the more important ones: —

Life of Beethoven, Schindler, edited by Moscheles...	$1.50
Life of Liszt, De Beaufort.....	1.25
Life of Gottschalk, Hensel.....	1.25
Life of Handel, Schoelcher.....	2.00
Life of Rossini, Edwards.....	1.50
Life of von Weber, by his son, Vol. I.....	1.25
Life of von Weber, by his son, Vol. II.....	1.25
Life of Mendelssohn, Lampadius.....	1.50
Life of Chopin, Liszt.....	1.25
Life of Schumann, Wasielewski.....	1.25

The price against each volume includes the cost of postage to any address. The cost of the ten books is $14.00. We have on hand a few complete sets, some numbers of which are slightly shop-worn. These sets, while they last, are offered at a special discount of fifty per cent, making the total cost of the ten volumes $7.00. This price includes express charges. The offer is open

to all music teachers and students, music schools, clubs, and private and public libraries. It will enable those who are familiar with the masterpieces of music to learn the incidents which led to their creation. The volumes will also furnish material for musical lectures and for biographical program notes. To all who prepare and attend concerts and to teachers and students of music these biographies will serve as an inspiration and a guide. Copies of any or all will be sent for examination. The special discount of fifty per cent, however, applies only when a complete set is ordered.

A NEW EDITION OF "COLLEGE SONGS"

This collection, of which four hundred thousand copies have already been sold, has done more to scatter smiles, to brighten dull hours, and enliven happy ones, than any song book ever published.

From East to West and North to South, even in islands far away, wherever youth and good fellowship meet together, its songs are sung.

Here are jolly songs, nonsense songs, convivial songs, plantation melodies, serenades, songs of rollicking swagger, and song of tender sentiment touched with the rosy tint of youth.

The book belongs on every piano, in every house, wherever "good fellows get together." Without raising the price, low as it is, or taking out one number, twenty-eight favorites, including the famous *Stein Song, Bohunkus, The Pope, Bring the Wagon Home, John, Little Old Red Shawl, She's Gone Let Her Go, Landlord, fill the Flowing Bowl, The Yale Boola Song*, and the five best of Foster's melodies, have been added in the new edition, making an unrivaled collection of one hundred and thirteen songs.

Until March 1, 1906, we make the price, for a wide and instantaneous introduction of the new edition, 25 cents, post-paid, for cash with order. If a charge is made on our books, the postage will be extra. The regular price is 50 cents.

GRAND RENEWAL OFFERS

THE MUSICIAN and the *Choir and Choral Magazine* for one year, $1.60.

THE MUSICIAN, the *Choir and Choral Magazine*, and *The Organ Loft* for one year, $3.10.

The *Choir and Choral Magazine* and *The Organ Loft* for one year, $2.00.

THE MUSICIAN for one year and the new edition of *College Songs*, $1.60.

THE MUSICIAN for one year and *Twenty Songs* by Stephen C. Foster, $1.60.

GIRLS! GIRLS!

This means you. Do you want to make a little pocket money? Listen. Send us your name and address, and we will send you five copies of the latest number of THE MUSICIAN. You can sell these copies for 15 cents each to your friends or neighbors who own pianos or organs. This will give you a capital with which to do business.

Keep 25 cents for yourself and send us 50 cents for five additional copies of THE MUSICIAN, and repeat as often as possible. Every time you sell a copy you make five cents. THE MUSICIAN is easy to sell, and you can with little trouble get customers who will buy of you every month.

It costs you nothing to begin. We run all the risk and furnish capital in the form of five copies to help you get a start.

Don't delay.
Do it now.
Girls, this means you.

The Symphony Since Beethoven

By FELIX WEINGARTNER

A TREATISE on the highest form of musical art by one of the world's foremost orchestral conductors. The opinions here recorded are of intrinsic value, fearless in conviction and pithy in expression, by a critic who is at once scholarly, unbiassed in his judgments, and unconventional. It is a book not only for music students, but for all who listen to orchestral music, inspiring as it does a keener and more discriminating appreciation of the works of the masters who have wrought in this form.

"It is seldom so much sane criticism is condensed into so few pages. It is a masterly review of the symphony."—*Philadelphia Inquirer.*

"His book is a small one, but it is pithy, and may be accepted as the summary of the beliefs of a man who has passed his years of maturity in close scrutiny of the scores of the masters."—*New York Sun.*

"The translation has been sympathetically done. Weingartner says that no reader of this edition will suffer from the false impression which was read into his first edition,—that he considers further development of the symphony impossible. The book gives a concise and interesting comment on the composers."—*Boston Journal.*

"Musicians and students should read this little book carefully and thoughtfully. It is a veritable oasis in the midst of the multitude of technical books pouring from the press."—*Carl G. Schmidt.*

"In this book Weingartner has done something to clear the musical atmosphere, though some will not like the way their favorites have been treated, however just that treatment may be. The great musicians since Beethoven pass in review, and the reader will gladly acknowledge his obligations for such expert help in learning to know them better."—*Lutheran Observer.*

The book is of convenient size, neatly bound, and printed in large, clear type. An excellent portrait of the author serves as a frontispiece. Price $1.00.

Choir and Choral Magazine

A monthly publication devoted to the music of the church.

The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

Published Monthly
Subscription price, 50 cents per year
Single copy, 10 cents

TEACHERS

There is always something better than the best you have ever seen

IF you are looking for the BEST, ask your dealer to procure and send you on examination a sample line of The B. F. Wood Music Company's publications.

They cost you no more than the cheaper prints. We make a specialty of practical teaching music of the musical kind. We spare no expense in making our editions the best.

Send us your name and address and we will send you, free, our complete catalog and Thematic Catalogs of Easy Teaching Music for the Pianoforte. They will interest you.

Our Edition Wood is the best and the most carefully prepared edition of the Standard Studies, Recreations and Classics, containing many important volumes not to be had in any other edition.

MUSIC LESSONS FREE

IN YOUR OWN HOME.

A wonderful offer to every lover of music, whether a beginner or an advanced player.

Ninety-six lessons (or a less number if you desire) for either Piano, Organ, Violin, Guitar, Banjo, Cornet or Mandolin will be given free to make our home study courses for these instruments known in your locality. You will get one lesson weekly, and your only expense during the time you take the lessons will be the cost of postage and the music you use, which is small. Write at once. It will mean much to you to get our free booklet. It will place you under no obligation whatever to us if you never write again. You and your friends should know of this work. Hundreds of our pupils write:—

"Wish I had known of your school before." "Have learned more in one term in my home with your weekly lessons than in three terms with private teachers, and at a great deal less expense." "Everything is so thorough and complete." "The lessons are marvels of simplicity, and my 11-year-old boy has not had the least trouble to learn." One minister writes: "As each succeeding lesson comes I am more and more fully persuaded I made no mistake in becoming your pupil."

We have been established seven years—have hundreds of pupils from eight years of age to seventy. Don't say you cannot learn music till you send for our free booklet and tuition offer. It will be sent by return mail free. Address

U. S. SCHOOL OF MUSIC
Box 77 A, 19 Union Sq., New York City.

EASTER CANTATAS

Christ Triumphant
By H. CLOUGH-LEIGHTER

A significant work with scriptural text. There are solos for the four voices. The time required for performance is thirty minutes.

Price, post-paid, 60 cents

The orchestration in manuscript may be had on rental.

Easter Eve and Morn
By FREDERICK STEVENSON

A dramatic work for four solo voices and chorus. The time required for performance is thirty minutes.

Price, post-paid, 50 cents

Easter-Tide
By GASTON BORCH

An effective work in which several leading motives are introduced. There are solos in melodic recitative for soprano, tenor, and baritone, also impressive choral interludes. Requires twenty-five minutes for performance.

Price, post-paid, 50 cents

The orchestration in manuscript may be had on rental.

From Death to Life
By J. C. BARTLETT

Contains solos for the four voices, also chorals which may be sung unaccompanied. The time required for performance is forty minutes.

Price, post-paid, 50 cents

The New Life
By JAMES H. ROGERS

A musicianly and melodious work with scriptural text. The solo voices are soprano, tenor, and bass. The time required for performance is twenty-five minutes.

Price, post-paid, 50 cents

The Resurrection
By CHARLES FONTEYN MANNEY

The text of this cantata is largely scriptural. The narrative portions are in melodic recitative for baritone, and there are solos for soprano, alto, and tenor, also an unaccompanied quartet and a trio for women's voices. Requires twenty-five minutes for performance.

Price, post-paid, 40 cents

The Risen King
By P. A. SCHNECKER

An easy and melodious work. Contains no extended solos. The time required for performance is twenty minutes.

Price, post-paid, 40 cents

Victory
By H. J. STEWART

A short cantata containing solos for baritone or mezzo soprano, and for soprano or tenor, also an unaccompanied quartet. The time required for performance is twelve minutes.

Price, post-paid, 30 cents

All the above may be sung with accompaniment of piano or organ

Copies will be sent for examination on request

GRADED EDITION FOR THE PIANO

The Teachers' Edition

Your labors will be reduced while the pleasures of teaching increase, if you adopt the

L.F. GRADED EDITION

of MERITORIOUS STANDARD COMPOSITIONS consisting of one hundred carefully selected compositions in all grades, representing the best productions of successful and intellectual writers. Standard prices prevail.

FIVE HUNDRED BUSY TEACHERS used the edition last season with complete satisfaction, and will repeat the action this year. 50% of them have written that they recommended the edition to other members of the guild and have caused many dealers to handle the line entirely of their own accord, unsolicited by us.

L.F. GRADED EDITION

was built to suit the requirements of the greatest number of teachers by eminent instructors who selected the numbers which comprise the edition.

What Kreisler and Kubelik say:

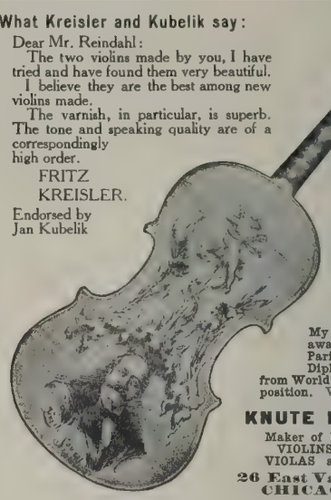
Dear Mr. Reindahl:

The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.

The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.

FRITZ KREISLER.

Endorsed by Jan Kubelik



This is the reproduction of a special Violin ordered by the famous Emile Sauret.

Elson's Music Dictionary

By LOUIS C. ELSON

Professor of Theory of Music at the New England Conservatory of Music

OVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation.* By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rackh-*mahn*-nee-noff.

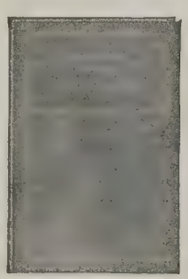
In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music, are the following:

Rules for pronouncing Italian, German, and French.

A list of popular errors and doubtful terms in music.

A list of prominent foreign composers, artists, etc., with their chief works, the pronunciation of their names, and the date of their birth and death.

A short vocabulary of English musical terms with their Italian equivalents.



The rules for pronunciation will enable the student to pronounce not only the musical terms but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.

The book comprises 306 pages and is bound in serviceable cloth covers.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

Announcement

THE School of Music of Northwestern University, located at Evanston-Chicago, on the shore of Lake Michigan, has inaugurated a Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

P. C. LUTKIN, Dean.

The American Institute of Applied Music

(The Metropolitan College of Music.)

EDGAR O. SILVER, President. 212 West 59th St., NEW YORK CITY.

The Faculty and Examiners: William Mason, Albert Ross Parsons, Harry Rowe Shelley, Kate S. Chittenden, Paul Savage, Paul Ambrose, H. Rawlins Baker, Herwegh von Ende, William F. Sherman, Geo. Coleman Gow, McCall Lanham, Mme. Adrienne Remenyi von Ende, Felix Boucher, Fannie Greene, Margaret Goetz, and others.

The advantages are unequaled in America. Send for circulars and Catalog.

KATE S. CHITTENDEN, Dean of the Faculty. **20th year begins Monday, September 25th.**

New York College of Music

128-130 East 58th Street

(Formerly ALEX. LAMBERT.)

Directors: Carl Hein, August Fraemcke.

Private instruction in Piano, Singing, Violin, 'Cello and all branches of music, by a faculty unsurpassed for its excellence.

Special Department for Beginners

All instrumental and vocal students receive free instruction in harmony, counterpoint, vocal sight reading, ensemble playing and free admission to concerts, lectures, etc., etc.

STUDENTS RECEIVED DAILY

Catalog sent on application

THE STUDENT'S MUSIC BOOK

WITH THE RUDIMENTS OF HARMONY, *By HANS LICHTER*

A blank book of forty-eight pages, good quality paper with flexible cover and cloth back. Each leaf perforated so as to be easily detached. Price, 15 cents. Discount for quantities.

Compositions for the Pianoforte

By G. A. Grant-Schaefer

On the Water. (2a) 50
Twilight. (2c) 40
South Winds. (2c) 50
On Guard. (2b) 50
Valsette Gracieuse. (3b) 50
At Evening. (3c) 40
Butterflies. (3c) 50

The pieces comprised in the accompanying list of recent publications have already brought the name of the composer into prominence as a musician of original and graceful, fancy and artistic taste, with a congenial appreciation of the peculiarities and special capacities of the pianoforte. The pieces rank from second to third grade — most of them third grade — and none of them contain any rigid technical demands.

A romantic spirit pervades them all and gives them a decided charm. "On the Water" and "Twilight" are quite easy of execution, and are simple melodies of a meditative description, gracefully and quietly harmonized. "On Guard" is an effective march, also easy and simple. The other pieces are distinguished by piquant, ornamental, and striking figuration.

Four Compositions for the Pianoforte

By Theodore Lack

Op. 176. Song of the Nymphs. (3c) . . .60
Op. 178. Sonnet. Song without Words. (3b) .50
Op. 179. The Sylphid. (3b) 50
Op. 230. Waltz at Twilight. (3b) 60

The quartet of piano compositions under the titles "Song of the Nymphs," "Sonnet," "The Sylphid," and "Waltz at Twilight" serve to confirm their author, Theodore Lack, in the position which he has won in the front rank of composers of recital pieces of the best class.

They may be ranked as third-grade pieces; but all of them, and especially the first and third, are well worthy of the attention of fourth-grade players.

New Musical Stories

Eight Piano Pieces

By Ludvig Schytte

Op. 139

No. 1. At the Village Forge. (3a) 50
No. 2. In the Ball Room. (2b) 50
No. 3. Agitation. (2c) 50
No. 4. The Æolian Harp. (3a) 50
No. 5. Dragonflies. (2c) 50
No. 6. Madrilena. Spanish Dance. (2c) . .50
No. 7. The Troubadour. (3a) 50
No. 8. Shooting Stars. (3a) 50

The name of this composer is a sufficient guaranty for good, solid, musicianly work in whatever department he undertakes.

These eight new piano compositions are ideal teaching pieces; the first four are advanced second grade, and the last four for third-grade pupils. Especially valuable are they for their great variety of legato five-finger work, including contraction, extension, substitution, crossing, etc. Artistically, they will evoke admiration, no less than for their technical merits, and all bear the stamp of originality and virility.

The titles are happily chosen and give a clew to the character of the contents.

Twelve Album Leaves

Piano Compositions

By Hans Harthan

Op. 75

No. 1. Allegro Moderato in C major. (3b) . .30
No. 2. Allegretto Grazioso in B major. (4b) .40
No. 3a. Moderato in G minor. } (3b) . . .30
No. 3b. Moderato in D minor. }
No. 4. Andantino in F major. (3a) . . .30
No. 5. Lento in E♭ minor. (3c) 30
No. 6. Allegro Vivace in G♯ minor. (4c) . .40
No. 7. Allegretto Grazioso in G♭ major. (4a) 40
No. 8. Allegretto in F minor. (3c) . . .30
No. 9. Con Moto in A♭ major. (4a) . . .40
No. 10. Allegretto in A major. (3b) . . .30
No. 11. Poco Allegretto in B minor. (3b) . .30
No. 12. Vivace in E♭ major. (3c) 30

A noteworthy group of piano compositions, characterized by intrinsic musical beauty as well as technical merit. Very valuable for teaching purposes; still they are by no means mere etudes, but, in effect, short recital pieces of a graceful and poetical nature.

As to difficulty, they vary from second to third grade, Nos. 1, 3, 8, 9, 10, 11, and 12 being easier than Nos. 2, 4, 5, 6, and 7. The difficulties are largely of interpretation rather than of mere digital execution.

Much attention is given to phrasing and to modulation, and much desirable opportunity for reading and playing in keys that are generally neglected. There is an abundance of independent left-hand work of many kinds and also of pedal practice.

Twelve Recreations for Violin and Piano

By Carl Bohm

Op. 366

No. 1. Adagio Religioso 50
No. 2. Rococco. Gavotte Gracieuse . . .50
No. 3. Slavonian Dance 50
No. 4. Espagnola. Spanish Dance 50
No. 5. Scène de Ballet. Mazurka Elegante . .50
No. 6. At the Spinning Wheel 50

The first six of this set of elegant *morceaux* for the violin have been recently published. They will prove welcome additions to the *répertoires* of violinists. They are essentially violin solos, and most of them are fully up to the level of concert display. They all involve third-position work, but the composer has been careful to avoid impracticability, and ordinarily skilful players will find them very effective. They are to be highly recommended also for their teaching purposes. Purity of intonation, sureness of attack, precision in rapid passages and double stopping, delicacy, sonority, lightness, breadth, and many desirable graces of style are to be learned from their pages. The piano accompaniments are not difficult.

Eight Hand Piano Arrangements

L'Ensemble, Morceaux Favoris

Arranged for Two Pianos and Eight Hands

By Edmund Parlow

BOHM, C. Op. 357, No. 4. Rosetta. Fantasie-Mazurka. (3c) 1.25
FINK, W. Op. 355. Sounds from the Ebro. Bolero. (3c) 1.25
GURLITT, CORN. Op. 178, No. 19. Viennese Waltz 1.25
HACKH, OTTO. Op. 336, No. 1. Sevillana. Morceau de genre. (3b) . . . 1.25
ORTH, L. E. Op. 29, No. 5. In Uniform. (2c) 1.25
SARTORIO, A. Op. 174, No. 5. The Victor's Return. March. (2c) 1.25

There is hardly anything more entertaining to piano students of the earlier grades than participation in the performance of arrangements for eight hands on two pianos. In the case of many such students, it is the nearest approach to orchestral or concerted playing that they ever make. All the details of their practice together, and the effects produced by their combined execution, invariably prove delightful to the participants.

Aside from the pleasure which such pieces give to the ear, they are of great educational value in teaching the performer to keep strict time, and to keep his wits about him and preserve his calmness and self-possession under all circumstances.

This collection of eight-hand arrangements by Edmund Parlow are capitally constructed adaptation of six selected and brilliant recital pieces.

The list includes two marches, a waltz, a mazurka, a bolero, and a Sevillana.

Little Recreations

Six Easy Pieces for Violin and Piano

By Edmund Parlow

Op. 89

No. 1. Cradle Song 40
No. 2. Valsette 40
No. 3. In Dauntless Mood 40
No. 4. A Cosey Chat 40
No. 5. Sweet Dreams 40
No. 6. Little Heroes 40

This set of little violin and piano pieces will be of great service to young violin students in more ways than one. Technically, the violin parts afford abundant illustrations of elementary first-position work in bowing, fingering, phrasing, staccato, legato, crescendo, decrescendo, simple double stopping, etc.

The themes are pleasing to the ear and effectively harmonized and contrasted. But, more than that, the compositions have a positive artistic value, because they are constructed in the true chamber music style, and will therefore serve to educate the young violinist in that important branch of the art, and to set him fairly on the road toward correct *ensemble* playing.

In other words, these pieces are not mere violin solos with a colorless, vapid piano accompaniment. They are genuine duets, both instruments carrying an equally important part, and the motives being interlaced and exchanged between the two in the true classic manner. Still, both parts are quite easy and simple, and both are carefully fingered.

Vol. XI, No. 2 BOSTON, MASS., FEBRUARY, 1906 Yearly Subscription $1.50 Single Copy, 15 Cents

THE PARIS CONSERVATORY

Translated from Mr. Philipp's manuscript by F. C. Burkart

ISIDOR PHILIPP

I have received numerous letters asking for information about our conservatory. The following lines will tell how admission may be obtained. The instruction given at the Conservatory is free of charge. All students live outside. The lessons are given in the Conservatory itself from 9 A.M to 4 P.M. three times a week, and last two hours each. Classes studying musical composition meet but twice a week.

Admission is obtained only by way of an "examination" (for classes studying solfeggio, harmony, composition, and organ) or a "competitive examination" (for classes studying singing, elocution, and instrumental music).

The "examinations," as well as the "competitive examinations" for admission, take place every year from the 15th of October to the 15th of November. There is only one competitive examination for each department: singing, pianoforte, violin, etc. Each of these competitive examinations takes place within seven days after the registration list has been closed.

The applicants are expected to appear at the secretary's office on or after the first of October, within at least five days before the date named for the competitive examination, in order to make application for registration on a special formula and deposit a verified copy of their certificate of birth and a certificate of vaccination. In addition to their certificate of birth applicants of foreign nationality are expected to present a translation of said document made by an expert translator. There cannot be more than two students of foreign nationality in each class, and they are not allowed to compete for the prizes before their second-year course at the Conservatory.

When registering for the pianoforte and violin classes, each applicant must indicate on his application formula a list of pieces which he offers to play as a test. Three pieces are required, both for the pianoforte and the violin.

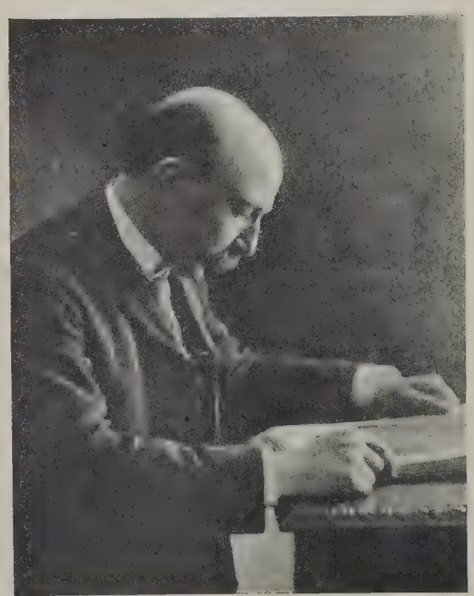
The tests for admission by way of competitive examination consist: —

(1) For the classes studying instrumental music (except pianoforte and violin), in the execution of a piece, the choice of which is left to the applicant; and the playing at sight of a manuscript piece.

(2) For classes studying vocal music, pianoforte and elocution in two tests. As a first test the applicant will be heard —

(*a*) For classes studying vocal music, in a piece of his own choice, and in reading at sight a manuscript selection given for that purpose.

(*b*) For classes studying pianoforte and violin, in one of the three pieces of his own choice designated when registering and a manuscript piece given as a test to be read at sight.



ISIDOR PHILIPP

(*c*) For classes studying elocution, in one scene of his own choice — or in two, if he appear as a tragedian and a comedian — contained in the list presented at the time of his registration.

The applicants named by the jury will be the only ones to be called for the second test. On that occasion the jury will decide according to the list presented by them in what piece applicants for classes studying pianoforte will be heard again. Applicants for the singing classes will be heard by the jury either in the piece used at the first test or another one chosen by the applicant himself; also in very simple exercises on the emission of the voice.

The classes for the study of solfeggio, harmony, and composition are reserved for students who are members of other classes of the Conservatory. Nevertheless, outsiders may be admitted, while the seats hold out, by the director or on a recommendation given by one of the special teachers (to whom the students have applied previously), after the candidates have proven that their knowledge and capacity are sufficient to warrant making an exception. Students cannot be members of the solfeggio and harmony classes at the same time, nor belong to the harmony as well as to the composition class. No applicant can be admitted unless he fulfils the conditions of the minimum or maximum age stated below. No exceptions are made to this rule.

The maximum number of students in the different classes and the maximum length of time that may be devoted to the studies are given in the accompanying table.

Each applicant should, on registering, prove that he had not passed the age limit on the first of January of the year in which he presents himself for the competitive examination.

Classes.	Age for Admission.		Number.		Maximum Length of Time for Studies.
	Minimum on Oct. 1.	Maximum on Jan. 1.	Of Classes.	Maximum of students in a class.	
	Years	Years			Years
Solfeggio (instrumental performers). (Men and Women)	9	13	12	11	4
Harmony. (Men and Women)		22	6	12	5
Piano Accompaniment. (Men and Women)		22	1	12	5
Organ and Improvisation		22	1	12	5
Singing — Men	18	26	8	10	4
Singing — Women	17	23			
Piano. (Men and Women)		18	5	12	5
Piano (preparatory classes). (Men and Women)		14	4	12	3
Harp. (Men and Women)		18	1	12	
Viola		18	5	12	
Violoncello		20	2	12	5
Bass Viol		22	1	12	
Violin (preparatory classes)	9	14	2	10	
Flute, hautboy, clarinet		18	1 for each instr.	10	3
Bassoon, French horn, key-horn, trumpet, trombone		23	1 for each instr.	10	5
Elocution — Men	16	24	6	10	3
Elocution — Women	15	20			

Gabriel Fauré is director of the Conservatory.

The best-known professors are: Ch. M. Widor, Lenepven (composition); Guilmant (organ); Delaborde, I. Philipp, L. Diémer (pianoforte); Lassalle, Duvernoy, Lhérie, Madame Caron (singing); Loëb (violoncello); Berthelier (violin); Taffanel (flute); Gillet (hautboy); Leroux, Nidal, Marty (harmony); Hasselmans (harp).

A MUSICAL TOUCH

MADAME A. PUPIN

Every one has observed how differently the same piece will sound when played by different pianists. One will glide lightly with facile fingers through the piece as if it were a mere nothing. A second will execute the piece with all the confidence of a thoroughly mastered technique. A third will ignore technique entirely and make exaggerated

ANNETTE ESSIPOFF

contrasts in dynamics, in a futile effort to play with expression. The playing of the fourth will be marked by extreme simplicity: there is no display of technique, but you soon become aware that a lovely tone poem is singing out from the keys of the piano: a heart history is interwoven with the thrilling phrases. Something the other players did not find in the piece is being revealed to you. It is the content of the piece, which this player alone has found, and has been able to translate into feeling.

On thinking it over afterwards you find that the last player had as much ease as the first, had the same mastery of technique as the second, and a fuller comprehension of the means of expression than the third, yet you were only conscious of the effect of the whole, and not of the details of the effect.

There are some persons who say that the piano is not a musical instrument, that you cannot get expression out of cold ivory. This is true for the persons who say it. *They* cannot play the piano with expression, for they seem not to understand that the expression must come from within the player.

There are others that think, or at least act, as if the piano were an instrument only for the display of digital dexterity. They aim at a dazzling exhibition of technique, tremendous *tours de force*, and never think of a piece as being a picture of varied hues which conveys its message to the soul through the ear.

A good grand piano is the most satisfactory instrument we have. All others, with the exception of the organ, require an accompaniment. A grand piano is a miniature orchestra, and all who would play the piano well should know the orchestra from frequent hearing, and be familiar with the tone colors of the different instruments.

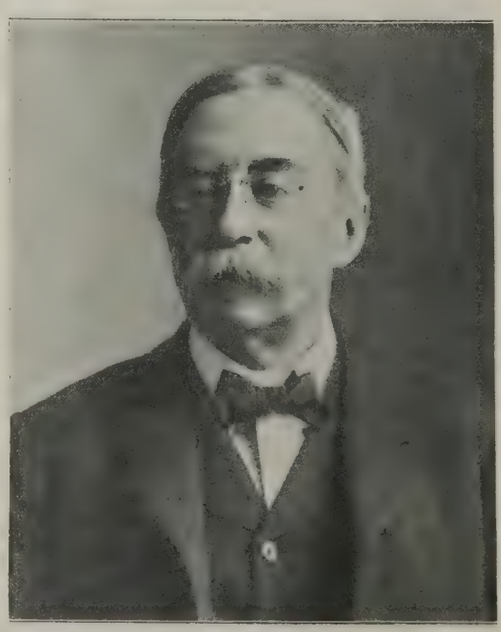
Technique is indispensable, but technique is a ladder to an inaccessible height. When we have reached the height we forget the ladder. That is, technique is not the aim and end of piano playing, but the means to the end.

The players who charm you most, do so by their musical touch, their command over all shades of tone, from *pianissimo* to *fortissimo* and their power of translating the poetic images in their minds into tone. Such a player was Madame Annette Essipoff. The idea of her technical equipment did not occur to you while listening to her playing.

Now what is a musical touch? Do all players have it? If not, can it be acquired, and how?

Dr. William Mason says that hardly one player in a hundred listens to his own playing, and that is why so few have a musical touch. He has invented a little study, on the familiar air of *Home, Sweet Home*, which he calls a pedal study. To play it one must have a musical touch and use the pedal properly. Otherwise the study will be a dismal failure. But played according to the intention of the composer, it is one of the most unique pieces ever written for the piano.

I know that this statement is true that people do not listen to their own playing. How many know what kind of a tone they are going to get, when they strike a key? How many are there who conceive the tone in the mind first, and get the tone they have conceived? There are some persons who can fix their attention on only one thing at a time. If the mind is concentrated on the execution, they cannot listen to the tone. They do not try



DR. WM. MASON

different ways of striking a key in order to get different qualities of tone. Perhaps they sing while practicing. Those who do so will never get a musical touch, because they do not listen. Perhaps they make too much use of the metronome. A metronome is intended to hold you back to a tempo slower than that at which you wish to play, or to lead you gradually up to a tempo faster than that at which you are able to play at present. A metronome should never be used in practicing a melody: such a habit will generally drive all expression out of a melody.

Above all things, do not think it necessary to keep strict time. A piece played in strict time sounds like a hand-organ, or like a school boy reading his composition and disregarding commas, colons, and periods. Remember that music, like speech, has its periods, phrases, inflections, ejaculations, etc., and if these are disregarded, the music will be flat and meaningless.

Louis Plaidy says, "Counting aloud with a sharp accent both in counting and playing, has an undeniable influence upon the even development of the fingers." How many count in the way Plaidy meant? Many students count as they play, instead of playing as they count; so their counting is aimless. Counting should be done in a monotone, with voice pitched nearly at middle C. Some young and thoughtless teachers sing their counts. They do not realize how they are defrauding their pupils, by preventing them from listening to the tones they make. Counting should be sharp, quick, and decisive, to impel the fingers to quick action. Singing counts cannot be sharp, quick, and decisive. Better no counts at all, than singing the count.

Everything we do while practicing must be towards an end or, in other words, have a decided aim. If our habits of practice lead us away from that end, we must abandon those habits. One of the highest aims we can have is to acquire a musical touch, and that we cannot have without listening. Therefore listen, and you may find twenty shades of tone, where you only knew of one before.

THE INSTITUTE OF MUSICAL ART

Four hundred and fifteen is the present enrollment of students in the endowed Institute of Musical Art, New York City, of which Frank Damrosch is director. This is the school for which James Loeb gave $500,000. Of this total of 415 students — surprisingly large for the first year of such an institution — 350 are enrolled in the regular courses, and the others are attending special lecture courses, or taking post-graduate work. So many additions to the faculty have been made that it now numbers 51. Of these 8 are in the department of voice culture and repertory, 16 in the pianoforte department, and 7 in the course for stringed instruments.

The Institute students, in the last fortnight, have listened to two important recitals. At the first of these Mr. Sigismund Stojowski played three Beethoven Sonatas, Op. 111, Op. 57, and Op. 53. At the other recital the Kneisel Quartet played two movements from the *Terzetto* of Dvorák; the Beethoven Quartet, Op. 18, in G major; and the Quintet by Schumann, the piano part of which was played by Mrs. Thomas Tapper. The students were also privileged to attend the rehearsals of the New York Symphony Orchestra, of the Symphony Concerts for Young People, and of the Oratorio Society. They were thus enabled to hear several times such works as Brahms' Symphony No. 3, Beethoven's Seventh and Second symphonies, Debussy's Prelude to *L'Après Midi d'un Faune*, Goldmark's *Sakuntala* overture, and Beethoven's grand *Missa Solemnis*. Such influences upon the musical development of young students cannot but tend toward producing lasting and valuable impressions.

HANS ENGELMANN

When we open some work on musical compositions we find record of the work of men whose labors were almost wholly confined to the higher forms of music; rarely do we find mention of certain men whose names are household words in families that are musical. In a well-known *Dictionary of Musicians*, for example, the name of Carl Bohm, a composer of music for the masses, does not have the honor of mention; yet his many compositions have given pleasure and musical food for thousands of children and adults the world over. Franz Behr, who, under his own name and several pseudonyms, has written a great number of pleasing compositions, is not mentioned in the same work.

A composer, resident in the United States, who has a reputation not limited to this country, who has written more than one thousand different pieces, most of them educational in character, is certainly deserving of mention in the roster of workers in music. The mere fact that a man has elected to confine his efforts to the easier grade of composition should not debar him from recognition; the test should not be grade of difficulty, but how *well* he has done the work. In that light Mr. Hans Engelmann, of Philadelphia, has a record that many a composer, who has worked in more ambitious lines, may well envy. The readers of THE MUSICIAN will be interested to know about Mr. Engelmann and some of his pieces.

It is seldom that a man shows marked power in any one direction without there being some hereditary disposition toward that line. Mr. Engelmann is not an exception to this principle. His family has been musical for generations. He was born in Berlin, Germany, in 1872, his father being in the household of Emperor William I; when in the army a first cornetist. Another member of the family, Mr. Engelmann's uncle, was formerly a first violinist and concertmaster of the Berlin Philharmonic Orchestra. Therefore he enjoyed, as a boy, a thoroughly musical and artistic atmosphere. He commenced the study of music at seven years of age, in Berlin, continuing it later in Leipsic. His general education was carried up to the Gymnasium (High School). At one time he intended to enter the medical profession, but did not carry his studies very far. The family idea was that the boy should be trained for a business career in spite of his evident inclination for a musical life. His parents felt that the profession of music was a precarious one, and strongly opposed his entering it, but to no avail.

Before these matters were finally settled, in 1891, Mr. Engelmann left Germany for a trip to the United States. He was so much impressed that he determined not to go back, but to make his home here. His first efforts at earning a livelihood were not in music, but within a year from the time he arrived in Philadelphia he had definitely turned to a musical career, publishing his first composition in 1892. Since then he has written about 1100 compositions, instrumental and vocal, many of them being arranged for band and orchestra, a line of work very congenial to Mr. Engelmann. At present he devotes his time to private teaching, conducting an orchestra of thirty men, and composition. His pieces have been brought out by the leading publishers of this country, a number of them being reprinted in Europe.

When we look through Mr. Engelmann's compositions, barring a few of his largest and most difficult pieces, we find certain marked characteristics. Among these are a pronounced faculty for effective melody, strong rhythms, and a clear harmonic basis. By far the best of his pieces are in the dance rhythms, his marches, of which he has written about fifty, being equal to any others of the same style and grade. In sets of waltzes, or short waltzes with two or three connected themes, he is very happy, owing to his fine sense of rhythm and suave melodic style. One of the most successful of his late compositions, *Melody of Love*, shows him at his best in pieces of the popular type. In his compositions for teaching purposes Mr. Engelmann is the equal of any other American composer, and his works are ranked, by competent judges, with those of European composers like Lange, Bohm, Behr, Lichner, and Krug, whom he also resembles in the productiveness of his muse.

THE TRAINING OF CHILDREN IN SYSTEMATIC WORK

OCTAVIA HUDSON

I have been teacher of piano for six years, always having from fifteen to twenty children under my instruction. The first two years I spent a great part of my time in trying to impress upon the children the great importance of careful, systematic practice. Something I found must be done; talking was of little good. So I set to work thinking. (How much more one can do when he *thinks*.) To tell my pupils to practice well and have a good lesson, but with no other instruction save the illustrations at the lesson, which were all too soon forgotten, was not all that was required if I would be successful. I have been rewarded for four years, by carefully prepared lessons, systematic practice, and rapid advancement on the part of my pupils, which is due largely to "Practice Records," "Practice Guides," "Report Cards," and "Metronome Record of Scale Practice" which I have printed by the thousand.

SOUSA IN ACTION
(From the Boston *Herald*)

The "Practice Record" is divided into three daily practice periods (sections); this is brought once a week. Every minute having been recorded by the pupil, each record is printed for five weeks.

The "Practice Guide" is a three-page folder. Each page is given to one practice period. On each page is printed various forms of technical work, such as "Finger Exercises," "Wrist and Arm Touches," "Thumb Exercises," "Scale Exercises," "Scales, Chords, and Arpeggios." Below is a list of various studies used. Bach, Heller, Czerny, Streabbog, and a number of others. Last on the page is the word "Pieces." Opposite the studies and pieces is printed the various forms of practice, "Meas. Marked E. H.," "Meas. Marked H. T.," "Each Period R. H.," "L. H.," "H. T.," "All E. H.," "All H. T." Opposite each of these terms is the words "minutes" for technical work, and "Times" for studies and pieces, to be filled at lesson with the *number.*

The "Report Card" has twenty-one sections. One for each lesson and one for the average. On the card are printed the following: "General Improvement," "Position," "Finger Action," "Wrist and Arm Action," "Time," "Phrasing," "Connecting Tones," "Scales and Arpeggios," "Fingering," "Quiet Hands," "Expression," "Melody and Accompaniment," "Pedal," "Musical Terms."

Each term is marked as follows: 4 (Poor), 7 (Fair), 9 (Good), 8 (Improved), 10 (Excellent).

The "Metronome Record of Scale Practice" is a two-page folder upon which are printed the names of all major and minor scales and arpeggios, with all forms of practice (different touches, etc.), "E. H.," "H. T.," "Thirds," "Sixths," "Tenths," "Double Thirds," etc.

My pupils spend fifteen minutes of the hour and a half daily practice on scales and arpeggios. Ten minutes are given to other technical work. A part of one lesson each week is devoted to scales, arpeggios, and chords; when speed is recorded on "Metronome Record." How hard the children work to go a few notches farther each week! But speed is not the only important thing. A pure, clear tone, a perfect legato, a crisp staccato, delicate, and sparkling, which the children know is to be gained only by a good finger action, flexible wrists and correct use of first, third, and fourth fingers. Other technical work is taken at next lesson; the two days being known among the children as "scale day" and "exercise day."

All practice, scale records, and report of each term on card, which averages one hundred as the highest, is recorded in the year-book, and all reports read at the yearly recital.

Does all this pay a busy teacher? What would not any earnest teacher do for the advancement of her pupils? It takes only a few moments at each lesson to mark measures for special practice, divide studies and pieces into motives (,), phrases (;), or periods (.). Write metronome number for practice, fill the blank practice guide, record scale practice, the number of hours practiced during the week, and write a report of the lesson.

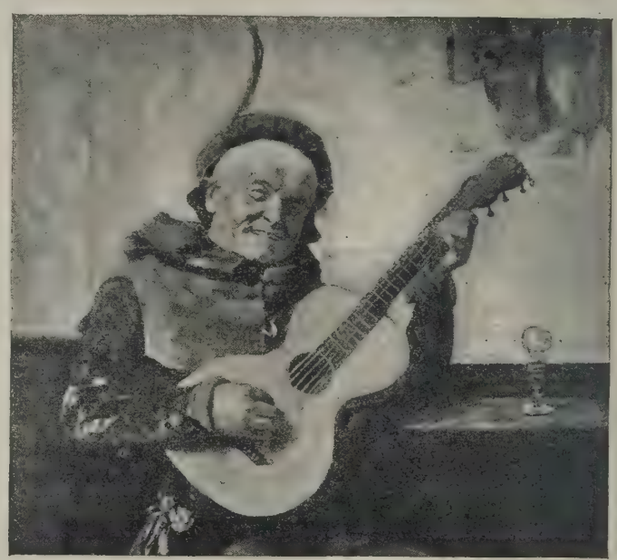
By this means the pupil is stimulated to thorough, systematic work, and the practice hour becomes a pleasure instead of drudgery.

IDEALS

E. R. KROEGER

Does the average teacher of pianoforte playing or singing do any more for a student than listen to a lesson and criticize the work in hand? Is the student's labor other than merely accomplishing technical results, with possibly the addition of a little superficial polish to cover them? In other words, do most music teachers or students have ideals?

Judging from general results, the answer seems to be in the negative. At pianoforte recitals, pupils seem to play their selections with the sole aim of reaping personal applause, and the teachers seem to be content. Music as an art seems to be lost sight of. Gymnastics or exaggerated interpretations have taken its place. Is it not a degradation of music?



Here we have an art full of the sublimest beauty. Great masters, gifted by God, have created works sufficient for the soul's adoration. The gamut of human emotion and human experience has been sounded in these master compositions. The ordinary individual of taste and sentiment should feel humbled in spirit when hearing or playing them. But it is a truth that vanity causes the majority of pianists to overlook the God-given beauty of these works, and seek personal adulation.

Great was Salvini, who so acted Othello, that he seemed to be in truth the jealous Moor. Great also was Booth, who appeared to be the melancholy Dane himself. Great was Liszt, when he so interpreted Beethoven's Sonatas that Wagner said, "This is not mere reproduction, but real production." True artists sink themselves as much as possible in trying to bring forth the author's or the composer's ideals. Should the teacher not constantly strive to hold an ideal up to the pupil's eyes?

Yes, the lesson should not resolve itself into commercial exchange. The teacher should not say to himself, "This lesson means so much money to me"; nor should the student say, "Thank Heaven, this lesson is over; no more of Professor Smith until next Monday." The teacher should rather say, "I am glad to have awakened in the boy an appreciation of the beauty and artistic worth of that movement by Beethoven"; and the student should say, "What a delightful lesson! Surely that Beethoven Andante is full of loveliness."

Then, again, the materialistic musician reveals himself in his work. At his recitals he seems to be influenced by the box-office receipts. His playing is cold and calculating. The idea of his being an humble interpreter of Beethoven and Schumann does not occur to him. No, these composers simply wrote music in order that he might have an opportunity to display his ability before a public.

How can such a pianist awaken ideals or stir the imagination of his audience? The mark of the dollar is on all he does. Commercialism is the spirit which animates him. True and sympathetic interpretation will never come until this position is abandoned. A love for truth and beauty for their own sakes must be instilled.

The performer should endeavor to eliminate eccentricities and mannerisms, and to assume an objective standpoint. He must reverence his art as a medium of communication between his creator and himself. As a result, his listeners will feel touched and inspired by his playing, and will be convinced that he has been drinking deeply of the divine essence which flows through all art.

WHY WE SHOULD STUDY ABROAD

J. W. JEUDWINE

From time to time we see in musical journals articles urging young musicians to study in America, rather than to go to Europe.

I believe that the arguments by which this position is supported are fallacious, and, as the question is a very important one, I should like to show the other side of the shield, and give the reasons why, in my opinion, every young American who can afford it should go to Europe to study.

The arguments invariably used are: That the subjects of study can be mastered as well at home, our teachers being in fact superior to foreign teachers; that the young musician is inclined to idle away his life in the foreign city in the company of his people; that the difficulty of language is sufficient to offset any advantage that may accrue, and that the "atmosphere" is no more musical than it is on this side.

It goes without saying that every one of these advocates for home products have themselves enjoyed and have profited by the advantage of European education in music. It will be patent to any one who reads their opinions that they are piano teachers.

Whether foreign teachers are inferior or superior to home talent is a matter of opinion which can only be judged of by results. Results show this, that the very large majority of eminent teachers of piano now teaching in this country, including those who are so urgent that we should all study at home, have received a great part of their training in European schools. That does not prevent them apparently from being perfectly capable of transmitting to others what they were taught over there. According to them, there are no teachers left on the other side worth knowing, the race of good teachers having died out with their instructors. Still, the argument cuts both ways. It argues in favor of the capacity of the foreign teachers who made them what they are.

The question of language, also, has two sides. The pupil may be put back in his studies for a while by his want of knowledge of the teacher's language. But he is an indolent student, who would never have succeeded anywhere, if he does not make it the opportunity to learn another language, perhaps two, which will not only make his musical life more full, but will open to him a world of literature, and broaden his general sense of beauty and possibly of morality. The best musicians everywhere are men with this double knowledge.

So there again the balance seems fairly even.

It is said that students waste their time with men of their own country, in pleasure. This is an argument hardly worth controverting; the man who would do this in Dresden would do it in New York, and he would have equal or greater opportunity for playing the fool. There is, at any rate, one advantage about foreign travel; mere national vanity brings out all the rivalry that a man has in him. An American in Europe, among a number of British, French, and Germans, is not half as likely to be indolent and careless as he would be if subjected to the temptations of New York or Boston.

There remains the musical "atmosphere," and on this practically the whole question rests.

I notice that all these writers who recommend home study advise the student *eventually* to go to Europe to obtain breadth of view. This admission that there is something to be learnt in Europe begs the whole question. It is this very enlargement of musical horizon that we lack in this country, and which from our present material conditions we cannot yet attain.

If we survey the past history of music, we see the centre of musical life shifting from one part of Europe to the other, from England to Holland, to France, to Italy, to Germany, Venice learning from the Flemings and Vienna from the Italians. There is no national school which has not in its making blended the ripe maturity of the older thought with the more audacious vigor of its youth.

SERGEI VASSILIEVITCH RACHMANINOFF
(Who visits the United States this season for the first time)

If the centre of music is to shift to us, and there seems no reason why it should not do so, it will be accomplished by engrafting the many-sided completeness of European fruitfulness on to the rushing sap of our young musical life

The defect of our musical opportunities is the lack of choral and orchestral music, and it is in these that the musical "atmosphere" consists. The teacher who looks to the piano first and last as the sole exponent of music, knows no music, any more than a man who buries himself in scientific books or novels, and has no acquaintance with the theatre, the pulpit, the debate, or conversation, can be said to know language.

All the greatest works written have been vocal, orchestral, or chamber music, and they are practically unheard in this country outside of the very large towns. How little opportunity there is for any music except the piano outside of the *very* few big towns is not realized by the men who cry after home manufacture, and who invariably live in the big towns themselves and are piano players. Because they hear from time to time a good deal of the last fashions in choral and orchestral music, they are apt to imagine that every one hears not only that, but the older classics as well. They do not realize how absolutely destitute of music, apart from the piano, the smaller towns are, or that the great majority of people live in the small towns, or that the musicians who teach in the small towns have, as a rule, heard almost as little as their pupils.

The music in Europe may or may not be good; that is often a matter of good or bad digestion, or of national vanity; but it is going on all the time. With us it is intermittent, confined to great centres and obtained at considerable expense. That is a very sufficient reason why the student should, if he can afford it, study in Europe.

Those men who have changed the centre of gravity of the musical world, Mozart and Handel, for instance, who carried the supremacy from Italy to Germany and England, did so by combining the better seasoned, better balanced productions of the older school with their own freedom from the hampering influences of tradition. In both instances there was new departure in their work after they had studied Italian methods.

This cry for home consumption ignores the best interests of the country. Foreign travel benefits the publisher by creating a wider demand; the man who has been educated in Europe and has heard variety is far more awake to the use of a variety of music. He will use more new publications than the one who has stayed in one place at home. It benefits the concert company. The traveled man will use every opportunity to hear the music which, from his experience and from the force of contrast, he will more keenly feel the want of. It benefits the pupil, to whom is given a choice of work, and it benefits the American composer, who is far more likely to be appreciated by the man who has heard both old and new music in Europe, than by the man who stays at home and steeps himself in Wagner and Strauss because it is the fashion, and who is innocent of those who went before except as they appear on the piano. And it helps the vocal soloist and the orchestral player, who will get ten times the number of engagements that they would otherwise find.

If language is a difficulty, there is London, with four times the advantages for hearing music of New York, and with special advantages for choral music and church music. Whatever the country visited, do not let us stunt our magnificently growing school now by building a wall of exclusion round our students.

We have good teachers of piano and violin who have learned in Germany; but that is not all. Do not let us deprive the young generation of hearing all the music of all kinds. That will create a demand for more of the same kind; and, better, it will stimulate production and publication, and give to music in every form a stimulus which we shall surely lack if our young teachers and pupils are persuaded to stay at home.

One can understand a tailor objecting to an American bringing home a foreign-made coat, to the injury of the tailors of New York. Surely we musicians ought to be on a somewhat higher level than that, and not try to raise the price of our work by advocating a doctrine of musical protection.

MUSICAL COMPOSITION

DR. PERCY GOETSCHIUS

In a former issue of THE MUSICIAN I laid great stress, in my *Sober Definition of Music*, upon the dignity of music as a science. And I beg the present reader to bear this in mind; for all that here follows emanates from the point of view that music, taken seriously, is one of the greatest of the sciences, and that the musician who would excel in his art, and do it justice, must be as profound a student as the master of Greek or higher mathematics.

TECHNICALLY

Composition is the manipulation of tones.

The composer of music does with tones what the sculptor does with marble, the poet with words, the mathematician with numbers. Sound in general, and tone in particular (localized sound), are the music writer's art-material; and the medium upon which he depends, in himself and in his auditor, is the sense of hearing. As with the sculptor and poet, the calibre of the composer is gauged, primarily, by his skill and ingenuity in manipulating his material. There can be no reasonable doubt about this; for the composer is no uncommon mortal, subject to special laws of life. Historically, he has never been known to differ in any marked respect from his fellows; he is precisely as noble and as ignoble, as sane and as eccentric, as benevolent and as splenetic as the sculptors, poets, mathematicians, and cobblers, whose command of their profession and success in it (all things being equal) depend upon the skill they have acquired. It is not even reasonable to make a distinction between the great geniuses and the smaller talents; that, in the former, the knowledge which begets ingenuity was inherent in mysterious antenatal processes, while in the latter this knowledge had to be gained by hard and long study, has nothing to do with the fundamental proposition that it is *knowledge*, skill, ingenuity, which gives the man his standing in his profession.

Soberly stated, then, the successful composer is a skilful manipulator of tones.

Let us examine into the nature and resources of his material: —

The *Tone* itself, though intangible, is a material phenomenon, resulting, like color, from the rapid vibratory action of some form of matter. The degree of rapidity peculiar to each separate tone provides a standard for the degrees of relationship (or its absence) between different tones. Upon this scientific principle of relationship are based those two groups of closely allied tones called the *Chord*, and the *Key* (or scale, — which is merely one of an infinite number of dispositions of the seven tones which constitute a key). Chords are fairly numerous, and, in their many different embellished and figurated forms, comprise a wide range of possibilities.

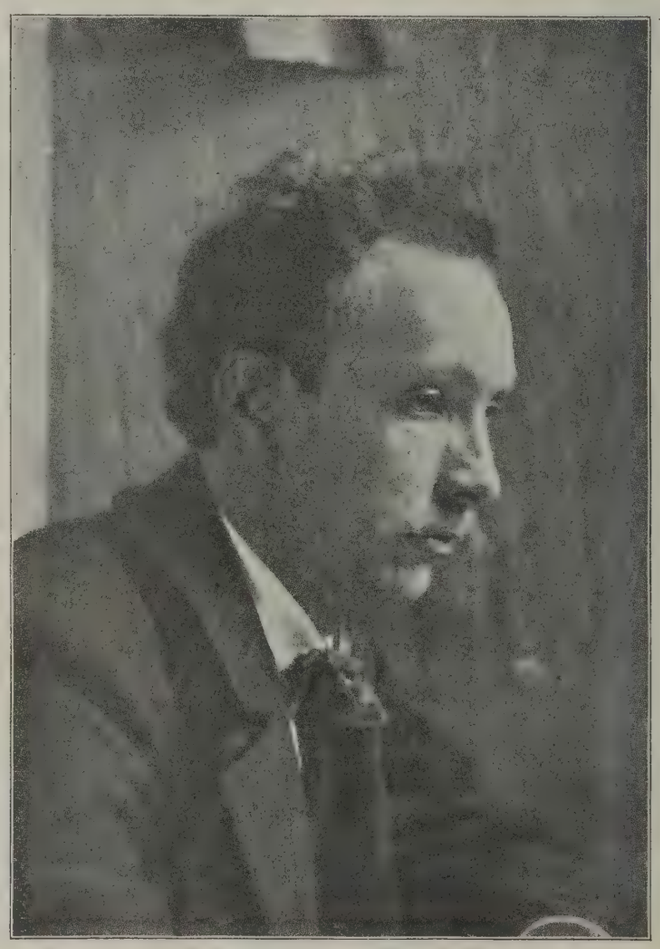
Perhaps the first test of the composer's "skill" is his ability to recognize not only the sensation of tone (as distinctly as he would feel the prick of a needle), but to define every grade of relationship, near and remote, between any two or more tones, whether in the same chord and key, or not.

The same principle of relation determines the conditions known as *Consonance* and *Dissonance*. These, — which, for brevity, I shall call opposing conditions, — are of the utmost importance to the composer. Consonance, or an agreeable blending of the tone-sensations, is the condition upon which acceptable music must necessarily be grounded, and which should largely predominate over that of dissonance (antagonism of tone-sensation); for music is acknowledged by all sane judges to be a discourse of sweet (agreeably blending) sounds, with just sufficient intermixture of discord to accentuate the beauty and normality of the prevailing concord. The "skill" of the composer is therefore attested, further, by his judgment in so balancing concord and discord as to prevent excess of either.

To the distinction of tone location is added that of tone duration. Whatever relative quality a tone possesses is surely emphasized by increasing its length, and weakened by shortening it. Therefrom has issued a purely mathematical system of measurement and division, called the principle of *Rhythm*, simple at its roots, but ramifying into such a complex of results as it has taken centuries to develop and regulate, and such an infinitude of possibilities as no mind can yet encompass.

This same rhythmic or metric system, applied in wider proportions, determines, finally, the conditions of *Form* or structural arrangement in music, without which the composer would be as powerless before the stupendous array of his resources as would a general be before a mutinous regiment, — or a builder, surrounded by every particle of his building material, but without an architect's plan.

Every thoughtful musician knows that this account of the material of the tone-art is not exaggerated; that still other resources might be enumerated. Does any reader suppose that this opulent and intricate system was developed in a day? Or can our would-be composer master it in a day or two, think you? Well for him if he sensibly systematize his studies, and quietly gain one step after another until the eminence is achieved, no matter how long it takes.



RICHARD STRAUSS
(From a recent photograph)

Many composers do, it is true, win a certain kind and degree of success without much study. This is so well known that I am careful not to omit reference to the fact, and an explanation of it. Such, known as "popular composers," owe what success they enjoy to two circumstances: First, to their wit in limiting themselves to a few fundamental resources; they either cannot or will not venture out into phases of intricacy that would obviously overtax their powers, and betray their ignorance. And, secondly, to the formidably general ignorance of the great body of the music-loving public, to whom anything beyond these fundamental resources is so very apt to be unintelligible. The popular composer's stock in trade consists of two or three familiar keys, five or six chords (including one that has a striking dissonant character), a few primary rhythmic figures, and one invariable structural design. Out of these, by consulting his *memory* chiefly, he can "compose" a whole opera, or a score of operas,— and the mass of the public is with him. There are even degrees of "skill" among these popular writers; some of the recent rag-time ditties challenge my admiration, — so great is the elemental power of the simple fundamental resources of tone-association, vitalized by quaint rhythmic pulses.

But no one honestly respects the mariner who dallies along the coast, while the whole ocean lies invitingly before him. It may be safer for him; but the wider interests of humanity honor the Columbuses who discover new territory. Originality is, I believe, the offspring of Ingenuity, — the kind that comes from exhaustive knowledge of all the resources at hand.

Artistically

Of this side of composition it is not easy to give a sober definition; for the qualities which transfigure the technically equipped composer into the prophet who has a message to render, are spiritual and emotional. Their operation is exhilarating, inspiriting; their very mention so stirring that it is apt to put sober reflections to rout.

And that is precisely where the great difficulty lies, and where the most defeats are experienced, in the work of the composer. He is so liable either to give free rein to the emotional impulses, to the injury of the technical vessel that *must* shape and hold them; or to congeal the real spiritual content, in his cautious guarding of technical propriety.

The point of contact, where the transition from the technical to the emotional plane may be made, is found, I think, in the faculty of *Imagination*. Of this the composer should possess a great deal, for it is the magic essence that endows material with life. Technical study without imagination, though possible, remains comparatively barren. But this quality need not be lacking; fancy may be infused even into technical discipline; and musical material is so replete with teeming suggestion as to arouse and stimulate, perhaps even create, the imaginative faculty, in an enthusiastic student.

To this faculty, he who would become a great composer must add a keen dramatic sense, a great soul, and an expansive nature, fraught with some message he is destined to deliver. That is, he must have something to impart, broadly, grandly, lovingly, with dramatic eloquence and effectiveness.

He must achieve his end solely through the medium of legitimate tone-association. Surely he must know the power and significance of every resource of his material, as well as the poet knows every shade of meaning in every word of his language. His success will be measured by his command of the medium through which he speaks. No amount of genius can atone for faulty, unintelligible utterance; but skill and ingenuity of expression are *almost* equivalent to a real message. In all ages the tone critic has attached far less weight to what was said, than to the way it was said.

MAN'S BUSY-NESS

"Isn't a man as good as a dollar? You who have a little more means than you need for your living expenses, put a sum into a legitimate venture. You go away and say, 'Now for the dividend.' What about the dollars? Is it idle? From the cashier's hands it goes into the market. It thunders along the steel rails. It thrusts its prow into the surf. It makes its circuit around the factory band. It is rolled out of the mill in barrels. It is folded off the looms. Or it lies in the capitalist's pile of mortgages, greedily counting months and years, crying out, 'O time, give me your interest.' By and by it will come back to you in magnificent income.

FRITZ ERLER'S PORTRAIT OF STRAUSS

BRAIN AND BODY

The trouble with the average American who earns his bread by the sweat of his brain is that he does not sufficiently exercise his body. He gives himself little or no time in which to get out of the rut of his especial calling. His mind frequently becomes narrow, and his body oftentimes becomes diseased. He should, every day, when his work ceases, give his attention to some form of bodily exercise, entering into it heartily and continuing it steadily. He will then enjoy his food and rest, and will be able to begin another day's work with his mind clear and his body alert. For those who engage in college athletics no physical recreation is, of course, necessary; but for those who forego athletics, exercise, either in the gymnasium or elsewhere, must be provided. Habits of exercise early acquired are easily continued, and as the mind becomes more vigorous, so will the body; for if the body be weak or diseased it will lessen the faculties of the mind, and will, as a rule, prevent the accomplishment of the desires of ambition. — *St. Nicholas.*

"Everything else is on the move. Should your faith in yourselves, in your convictions, in the governing laws of God's providence, and in the promised return for every invested effort and God-given impulse, remain stagnant and unproductive? Do not these thoughts stimulate us? Can we not see that we have within us a power that some of us have only half used? Let us, even in these lower and material matters, throw aside every false measure, and in our abounding faith see the only limit of our blessing."

A SUCCESSFUL BOY'S ADVICE TO BOYS

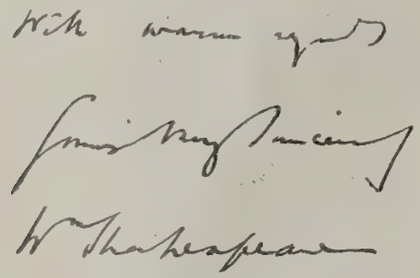
Be friendly, not bold. Give attention to business. Show a clean face, neatness, politeness. Attract attention by modesty. Don't be "fresh." Be a boy among men, and a man among boys. Watch out for opportunities. Men are always looking for boys willing to work. They don't want players.

THE VOICE

Conducted by WILLIAM SHAKESPEARE

All communications regarding the Voice Department of THE MUSICIAN should be sent directly to the Editor-in-Chief. Students who follow the work which is outlined in this Department may write freely regarding any further helps and hints that they need. If there is any point in your study or teaching which you desire to have discussed here, please communicate with us about it.

In acting for a time as Editor of the Voice Department of THE MUSICIAN, *I feel that I must first express my admiration of the earnestness of purpose and high standard of this journal, in which I have read with the deepest interest many valuable articles.*



BREATH CONTROL

Tartini's description that the bow should be balanced and lightly pressed on the strings of the violin in such a manner that it seems to breathe the first note it gives must be of the greatest interest to the singer, for the master evidently had the art of singing in his mind's eye. The balancing or poising or pressing lightly concerns the breathing of a singer as much as it concerns the bowing of the violinist.

The first thought of the vocal student is how to take and where to hold his breath so as to enable him to press it out slowly, and then how to make all the tones of the voice respond in fulness to this held-back pressure.

The two principal factors in the art of singing will be found to be (1) the control of the breath, and (2) the "placing of the voice" or poising of the vocal instrument in such freedom that we become unconscious of its existence, as in the most natural talking.

Imperceptible and inaudible breathing has always been considered one of the signs of a great singer. He attains perfection in his art when he is able to conceal the means of its accomplishment. Towards this goal let the student constantly aspire.

Lablache was asked, "How does Rubini breathe?" The celebrated bass replied, "Although I held Rubini's hand for several minutes whilst he was singing in a duet, I was unable to discover how or where he breathed."

The poet says, "My bosom heaved with many a sigh." Now, the raising of the chest requires the use of muscles which fix rigidly the points of the shoulders; and this generally involves the raising of the shoulders also, and invariably causes a contraction of the throat and tongue. The result is the sighing and gasping which is too often heard during singing, and which may well be called a distortion of natural breathing. It may be observed in sufferers from asthma or bronchitis, but this labored respiration was evidently not that adopted by Rubini.

A master could scarcely put the matter more concisely, or, as we may say, more in a nutshell, than by advising the pupil to breathe in any way, so long as he avoids all use of the points of the shoulders to raise his chest in front. The student *must* then make use of the diaphragm and the powerful rib-raising muscles of the back under the shoulder-blades, for there are no other muscles to use.

On page 17 in Part I of my *Art of Singing* I have suggested an exercise for acquiring a right control of the breath. If we had merely to warm with our breath some object for, say, half a minute in silence, we could after very little study attain this right control, but a skilful use of the voice requires something more than the breath control, and what this is we will now consider.

GIOVANNI BATTISTA RUBINI

A student may have been speaking, perhaps for eighteen years, a language consisting chiefly, not of sustained vowel sounds, like Italian or French, but rather of rigidly pronounced consonants. She may have fallen into the habit of stiffening the vocal instrument whilst talking (perhaps through the harshness of the language itself, perhaps through imitation of those around her), and this habit will distort the sound of her voice still more when she endeavors to *sing*. Probably the greatest factor in the training of a singer is the practice of resting on open vowel sounds, thereby insuring freedom in pronunciation and the sonority which is sure to follow. Indeed, the manner of using the voice, or as it is termed the "production of the voice," is often a matter of serious concern to those who have been speaking rigidly all their lives. The Italian would not have the same difficulty as one of the English speaking races. The sensitive ear would remedy the production of an unmusical sound more rapidly than one unaccustomed to hear music. So most students have to pass through some drudgery and preparation with regard to this troublesome business, "voice production." They seem to require some preliminary preparation apparently unnecessary to the gifted few who naturally speak with freedom and sonority. The student asks: What is voice production? How can I acquire it? How did the old masters teach it?

By voice production is meant the art of producing the most beautiful and resonant sounds of which the voice is capable, associating these with speech and expression. To acquire this art it is necessary that the singer should have some knowledge of the vocal apparatus.

In order to balance or sustain the larynx in position, certain powerful muscles, running from the tongue bone (near the Adam's apple) to the jaw and to the back of the throat, are brought into action. These form the floor of the mouth. On feeling under the chin with the finger and thumb whilst singing an ascending scale, we observe a change in their action with every change of note. Whenever the note is louder or bigger, a greater support about this spot seems to be necessary.

It is of vital importance that the student should poise or balance the larynx by a natural use of the muscles supporting it. Yet it is but human nature that he should be tempted to take a short cut and sing at too early a period grand and big notes.

Now, in playing the pianoforte or the violin, stiffening the arm is apt to give the student the idea that he is able to produce powerful effects. Later on he discovers his error, for his rigid manner prevents his playing with expression and in reality he has lost command over his instrument.

So it is in singing. By stiffening the muscles under the chin, which support the larynx, the singer is enabled to sing loudly but wrongly. He will find that his jaw, which should be floating and unconscious, is rigidly held; that his tongue and throat and lips, which should lend themselves to the most perfect pronunciation and tone, are fixed and unnatural. The upper lip and the eyes, which are the "mirror of the soul," are incapable of expression, unless we are satisfied with that of embarrassment and despair. In Part I, page 24, I have suggested an experiment for proving that it is the placing muscles which interfere with the muscles of pronunciation, and *not* the muscles of pronunciation which impede the placing muscles.

The great sign of faulty production is that the jaw has become fixed and rigid, and every note and every movement of the tongue is accompanied by a movement of the jaw. Now, all masters agree that the jaw, tongue, and throat should act independently of each other; that the pupil should

sing with the jaw floating, as in yawning, with the throat open and unconscious, with an easy facial expression, and with the upper lip raised (as in smiling) whenever the upper, medium, and the head notes are produced.

I am aware that some masters assert that as we ascend the scale we must "cover the tone," — in other words, that as it is impossible to sing *ah* on the ascending passage with a rigid production, it is well to distort the pronunciation towards the vowel *oh* and evade the difficulty of a right *production* by altering the *pronunciation*. With this I cannot agree.

With the unconsciousness of the jaw, throat, tongue, and lips, together with a right control of the breath, the different changes of register in time reveal themselves, without affecting the *ah* in the least. This was the practice of the old Italian school, which held that "he who cannot pronounce and hold the breath, cannot sing."

Other teachers have found it helpful to practice the pupil in the conscious raising or lowering of the soft palate. Others again have insisted on the holding down of the tongue so as to prevent its being raised and hunched back as often happens when we are rigidly placing or rather displacing the voice.

Personally I have found that freedom of the tongue comes with the freedom of the throat and jaw, and that the soft palate then unconsciously acts rightly and with similar ease.

Apparently the old Italian masters acquired a perfect production not only by avoiding all distortions, but by inculcating the most serious study as to whether every note could sound fully to the least possible breath, discarding as wrong such notes as demanded a greater pressure than the student was able to control.

By insistence on the note speaking to a measured breath control, faulty rigidities *must* eventually disappear, and freedom of jaw, tongue, lips, and face, coincident with the right production, take their place.

In order to bring about this balance of voice, freedom, and controlled breath the old singers practiced before a mirror which disclosed every rigid facial expression, and revealed how much breath the singer was using by the glass becoming more or less dimmed. Their art was either to loosen the instrument until no other way was left to control the breath except the use of the breathing muscles; or on the other hand, first to prepare the breath pressure and *then* seek for the looseness of the instrument, which must not only *speak* to this right breath control, but must indeed *demand* it.

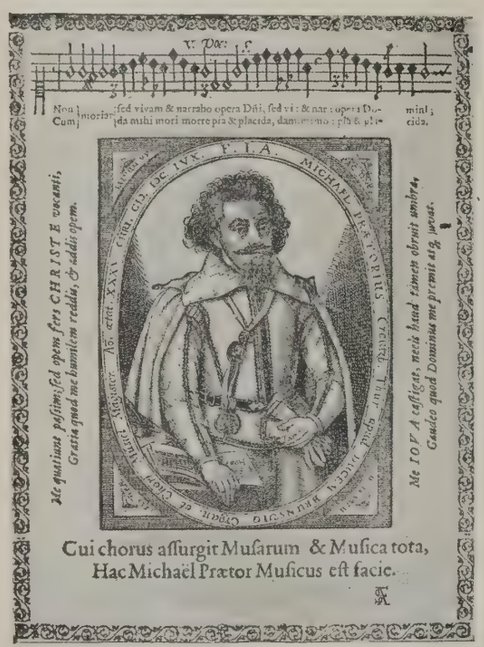
LETTERS TO YOUNG MUSIC TEACHERS

Teaching Children How to Practice

J. KATHERINE MACDONALD

"You may lead a horse to the water, but you cannot make him drink." This proverb expresses exactly what constitutes our chief stumbling-block in the teaching of the piano; for though we may have the most admirable system as far as leading our unwilling little horses is concerned, we have accomplished nothing till we have found a way to make them absorb what we give them.

There is the danger, in modern methods, that we lose sight of the truth that there is no royal road to learning. Perhaps the study of the piano has one great advantage over most other studies just in that respect — it is impossible to make it altogether easy and pleasant. Some sacrifice must be made. Self control and moral discipline are absolutely necessary in order to learn the management of any musical instrument. A really wise teacher will try to make pupils understand this as early as possible. We all thoroughly realize that the first hold we have on the pupil's mind is that of interest, but we must not suppose that making things interesting is tantamount to making them easy, nor should we let our pupils themselves run away with that idea. There is nothing more



MICHAEL PRAETORIUS
(1571 – 1621)

salutary than the habit of conscious effort — a habit that teachers seem to be in danger of neglecting in the pleasant modern style of education. But as the effect of a true and vital interest is to stimulate the pupil to make this conscious mental effort, we find that the awakening of interest must still be our first, though not our final aim.

In the case of very little children who have lessons nearly every day and who have as yet no "practicing" to do, the difficulty is not so great. Still, it helps matters very much to devise games and rhymes to fit the exercises, and to compare the fingers to soldiers or to troublesome children. While they are still at the kindergarten stage this make-believe instinct, so strong in children, can be appealed to with very helpful results. This baby treatment should not, however, be kept up too long, nor should fantastic nursery names be given to things that have their own legitimate music names. And as soon as the child is seven years old three lessons a week should be enough, and in the intervening days he should prepare his lesson by himself.

It was just at this point that the lack of understanding on the part of the teacher used to put such stumbling-blocks in the way of the poor little pupil. Children must have a definite mark to aim at, and very often the unwillingness to practice is caused by a helpless bewilderment on the part of the little pupil as to what he must do. In order to make things clear to him we should go through the lesson, occasionally, exactly as if he were practicing.

The objectionable exercise should be repeated a definite (rhythmical) number of times and when done should be marked down in his practice book. He should be taught from the very first to listen to every tone he produces, as, apart from the inestimable importance of this habit — from the musical and artistic point of view — it pleases and arouses interest in the child's mind.

At first the exercises should be played in one strength of tone and the conscious effort to make the tones "match" will always be made willingly. Later on accent and shading can be introduced.

But during the first few months exercises should be reduced to a minimum and most of the work done on the little pieces. There are many cleverly written little tunes nowadays within the comprehension of small minds and the compass of small fingers that could almost be called miniature works of art. Such are the Margaret Martin melodies and the easy little pieces by Newton Swift. Before beginning to teach a piece I would play it once or twice to give the child an idea of its general meaning, after which the form should be explained and the different phrases compared and contrasted. Then the pupil should be taught to practice it phrase by phrase, or measure by measure, according to the difficulties met with — first with each hand alone, then with both together.

As soon as possible each phrase should be played at the keyboard, for this accustoms the child to memorize and helps him both in understanding and in fingering. Sight reading, which should be begun soon, must be reserved as a separate study.

While the exercises should be played in one strength of tone, we should introduce accent and shading as soon as possible. Although the first thing to be aimed at is correctness as regards tempo, notes, and fingering, we want, of course, to do more than that, and have the little pieces played with intelligence and taste; so the more variety of tone one can introduce, the better. Changes of tempo, however, are more difficult to introduce, except in the case of a particularly clever child; for the original beat is apt to be entirely lost. So I should never mention such a thing as an *accelerando* — accidental ones being only too common — and would rarely introduce a *rallentando*, and then only at the end of a piece.

The aim of education should be twofold — to arouse admiration for all that is high and beautiful and to teach self-control. In the piano lesson there is ample opportunity to follow this dual aim. We can train the little one to love symmetry and design in rhythm, sensuous beauty in tone, as well as to admire the works of the great masters as soon as they can grasp them — and short bits of melody from the classics can be taught to children at a very early age. If we succeed in awakening sentiments and energies such as these in the young mind committed to our care, the hours spent at the piano will by no means be lost.

CLUB PROGRAMS FROM ALL NATIONS

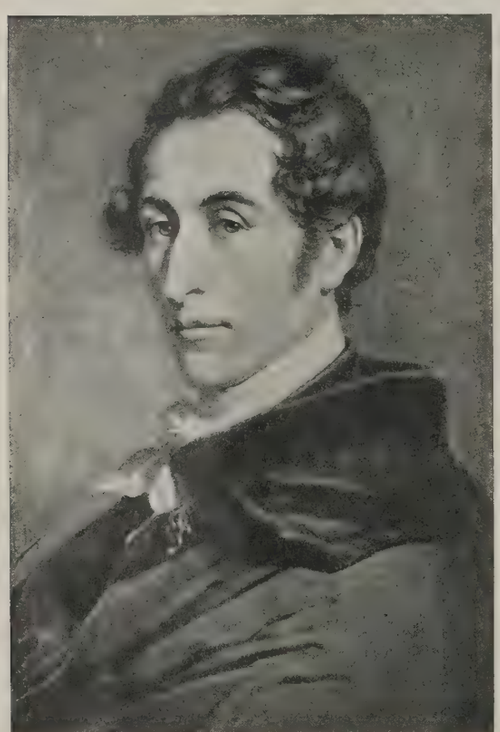
IX. ROMANTIC AND MODERN GERMANY

ARTHUR ELSON

In every issue of THE MUSICIAN this department will present an elaborate study of a national school. The purpose will be to give a correct chronologic summary of the school, its principal representatives, to indicate a practical club program, and to review the presentation of the subject by means of a list of queries.

Clubs planning to use this material may address correspondence concerning any feature of the work to the EDITOR OF THE MUSICIAN. Every assistance will be given to clubs, classes, and private students. The editor will be glad to lend help to those desiring to secure speakers on topics relating to music.

The so-called romantic school of Germany found its first expression in opera, and its greatest popular triumph in the works of Carl Maria von Weber (1786–1826). The scope of this school was large; it dealt with opera in strong and original fashion, and based much of its force on the employment and treatment of legendary lore familiar to every one. The camps and courts of chivalry, the humble peasant life, the many supernatural traditions of the Fatherland, — all added their lustre to its brightness. In music, too, the appealing beauty of the folk song lent its charm, and went directly to the hearts of its hearers. The success of the school was attained in an instant. "Greater glory there cannot be," said Weber, when *Der*



CARL MARIA VON WEBER

Freischütz aroused all Germany to frenzied enthusiasm; adding then, with his usual modesty, "To God alone the praise."

Destined to be a child prodigy and rival the young Mozart, Weber did not fulfil his father's desire in this direction. The wandering life of theatrical people, to which his father was forced to subject him, threatened to injure his constitution and character, but gave him the facility of expression that told so well in his later works. The comic opera *Abu Hassan* was well received, but *Der Freischütz* (1821), with its popular flavor and legendary interest, was the epoch-making work of his career. *Preciosa* was of slightly earlier date, but *Euryanthe* and *Oberon* belong with the new school, the small success of the former being due to a weak libretto.

The world thinks of Weber as an opera composer, but he was active in nearly all great musical forms. His two symphonies are not important; but the *Concertstücke* and the *Jubel* overture remain favorites, as also the well-known *Invitation to the Dance*. There are many pieces for solo or concerted instruments, four piano sonatas, and a number of lesser works. His vocal compositions include two masses, several cantatas, some good part-songs, and many solos remarkable for their fire and brilliancy.

Ludwig Spohr (1784–1859) is regarded by some as the real founder of the romantic school. It is true that some of his operas antedated those of Weber, but they never achieved anything like the same degree of success. *Alruna*, *Faust*, and *Zemire and Azor* all preceded *Der Freischütz*, but failed to awaken any truly national enthusiasm. *Jessonda*, *Der Berggeist*, *The Alchemist*, and *The Crusaders* won later triumphs, but their music was too involved, too chromatic in character, to reach the popular heart as that of Weber did.

Spohr, too, won fame in other fields. *The Last Judgment* and *Calvary* are worthy oratorios, while *The Consecration of Tones*, one of his nine symphonies, was for many years a concert favorite. His noble sentiment and warmth of expression made him seem the peer of Weber and Mendelssohn, at least in former years, and would hold their own now but for his deliberate excess of modulation. In speaking of this quality, Naumann writes, "If, as Salieri says, some composers are like men who jump through the window when the door is open, we may well say of Spohr that he passes the open door at least six times before he decides upon entering."

A composer of later date, now also relegated to a second rank because of his fatal facility, was Joseph Joachim Raff (1822–1882). Raff's rare melodic genius was not wholly restrained by artistic discretion, and at times his amazing fertility of invention invests his work with an artificial flavor. His fondness for program music, too, was another quality that prevented him from achieving the very highest artistic success. Yet his *Lenore* and *Im Walde* symphonies are still heard, and his violin music, from concertos to cavatina, shows the utmost melodic charm.

Next to Weber and Spohr Heinrich Marschner (1795–1861) was the chief operatic figure of the new romantic school. His place is less important than theirs, however, for he was in some degree a follower, an imitator. Of his works, three still survive in Germany — *Hans Heiling*, the most important; *The Vampire*, a weird, supernatural tale; and *Templar and Jewess*, based on Scott's *Ivanhoe*. Schumann's criticism of the last is a good estimate of Marschner: "The music occasionally restless; the instrumentation not entirely lucid; a wealth of admirable and expressive melody. Considerable dramatic talent; occasional echoes of Weber. A gem not entirely freed from its rough covering."

With Marschner are often classed Lindpaintner and Reissiger, but neither showed any real inspiration. Both wrote what is called *Kapellmeister-Musik*, and both are nearly forgotten now. In a lighter style, half romantic, half comic, and wholly enjoyable in their vivacious sweetness, are the works of Kreutzer and Lortzing. The former's best work is the *Nachtlager vor Granada*, while the latter's *Czar und Zimmermann* is a tuneful portrait of the adventures of Peter the Great in the Saardam shipyard. With these two should be classed Nicolai, whose *Merry Wives of Windsor* contains much melodious music.

Meyerbeer (1791–1864) won his triumphs in France, and wrote in a more cosmopolitan vein. *Robert le Diable*, *Les Huguenots*, *Le Prophète*, and *L'Africaine* form a renowned quartet of grand operas, while *Dinorah*, *L'Etoile du Nord*, and the music to *Struensee* win further laurels. But Meyerbeer was not animated by high ideals and even in his most dramatic moments he wrote to please rather than to educate.

Seldom has any man received such different estimates. His great biographer, Mendel, quotes the old saying that Germany excels in harmony and part writing, Italy in vocal melody, and France in choral work and instrumentation, and then adds that Meyerbeer sums up all these excellences. *Per contra*, Wagner, at first his admirer, became unsparing in attacks on his blatant vulgarity, and even the gentle Schumann accused him of "going over to the circus" in his effects.

Mendelssohn and Schumann are in different ways exponents of what may be termed the romantic movement in instrumental music. Felix Mendelssohn-Bartholdy (1809–1847) shows in all his music the elegance and grace of a nature sensitive to beauty and working out its career in happy surroundings. The note of deep emotion, born of struggle and adversity, is lacking in his works; he could no more be expected to portray this phase of music than an artist could paint a storm at sea without having

ROBERT SCHUMANN

seen the ocean. His least successful works are those in which he attempts dramatic power, such as the *Ruy Blas* overture. Yet if he could not present strong passions, he showed absolute genius in the lighter and more dainty side of musical expression. Over-admired during his lifetime, especially in England, Wagner's attacks have caused him to be rated too low. The modern radicals are apt to mistake simplicity for weakness, and few of them could equal the exquisite clearness and delicacy of Mendelssohn's instrumental pictures. He has well been called *Le grand paysagiste*.

His *Midsummer Night's Dream* overture remains a perennial delight, and a wonderful achievement of youthful genius, for he wrote it when only seventeen. From this epoch dates also his great octet for strings.

In piano music, he has enriched the *répertoire* with the great *Variations Serieuses*, the six preludes and fugues, Op. 35, and the brilliant E minor fugue. With orchestral accompaniment, the Capriccio and the E-flat Rondo are still favorites, while the two concertos hold their own. For the solo instrument, the *Songs without Words* form a set of delightful musical miniatures. For violin the great concerto ranks with the best works in this form, while the two 'cello sonatas are also noteworthy among the chamber works.

In the songs there is an artless sweetness that makes a direct appeal to the heart. "In more ambitious choral form, the music to *Antigone* and *Œdipus* are masterworks of their kind, while *St. Paul* and *Elijah* remain the most popular oratorios except Handel's *Messiah*. The orchestral works, however, show the composer at his best. Among the overtures, the finest is the inimitable *Hebrides*, catching the faint, mysterious rhythm of the ocean in truly marvelous fashion. The Scotch Symphony, too, gives further tone-pictures of that solemn Northern land, Ossianic in their majesty. Robert Schumann (1809–1856) was in many respects the reverse of Mendelssohn. Schumann represents the deeper and more emotional side of the art, an earnest romanticism of thought and intellect. Lacking the exquisite grace that Mendelssohn often shows, he presents a more fundamental and more reflective style in his music. Where Mendelssohn makes us admire and

enjoy, Schumann makes us think and feel, often with the utmost intensity of heartfelt sympathy.

Schumann was *par excellence* a composer of piano music. Even his orchestral works seem like glorified piano passages, and in the solo works he is almost always at his best. A noble and notable list they form, the *Papillons*, the *Carnival*, the *Phantasiestücke*, the *Kreisleriana*, the *Noveletten*,

HEINRICH MARSCHNER

the *Faschingsschwank*, the great *Etudes Symphoniques*, and the rest. Each new generation is in turn amazed at their depth of sentiment, their rich imagination, their inexhaustible wealth of musical ideas.

In his songs, too, Schumann has sounded a note of deeper emotion than almost any other vocal composer. Franz has more of delicacy, Schubert shows a more artless pathos, Strauss and the modern writers strive for a more complex utterance of feeling, but the world has yet to see a more perfect emotional expression than that of the cyclus *Frauenliebe und Leben* and the *Dichterliebe*, the former written to celebrate the composer's happy union with Clara Wieck.

Passing over the opera *Genoveva*, the *Faust* cantata, the *Manfred* music, the chamber works, and the piano concerto, we come to the symphonies, and must pause again in admiration of their warm richness of imaginative beauty. They sum up in their happy measures the roseate dreams of humanity in the enthusiasm of youth; they transport us to the Fortunate Isles, where we may while away long afternoons of golden sunshine; and they reflect truly the noble words that Browning has put into the mouth of Abt Vogler, —

"All we have willed or hoped or dreamed of good shall exist;
Not its semblance, but itself; no beauty, nor good, nor power,
Whose voice has gone forth, but each survives for the melodist
When eternity affirms the conception of an hour."

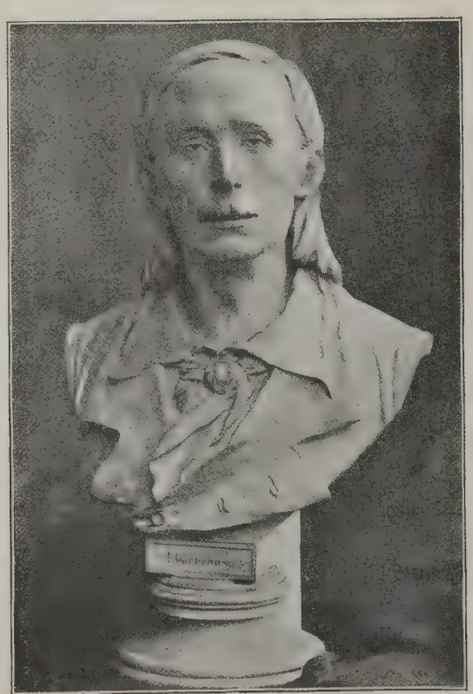
The chief apostle of strict symphonic form in later days has been Johannes Brahms (1833–1897). Schumann's famous description of their meeting, where Brahms played his own works, is well worth citing. "There were sonatas, or rather veiled symphonies," says the critic; "songs whose poetry might be understood without words; piano pieces, both of a passionate nature and a most graceful form; sonatas for violin and piano, each so unlike the others that they seemed to flow from many different springs." Also, in later years, came the great *German Requiem*, the *Ode of Destiny*, the bright *Academic Overture*, and the four noble symphonies.

It is the consummate mastery of form and figure treatment in the sonatas and symphonies that made von Bülow speak of the three great B's in music as Bach, Beethoven, and Brahms. The lesson of the symphonies is one that we need to-day. The examples of Liszt, Wagner, and Strauss have led nearly every composer into the freer style of rhapsodical utterance, but Brahms has shown us that form need not be a fetter, and need not impede the expression of great musical thoughts any more than in Beethoven's day.

Two men deserve mention in the operatic field. Hermann Goetz (1840–1876) died while still a young man, but not before he had composed *Der Widerspänstigen Zähmung*, a delicious comedy based on Shakespeare's *Taming of the Shrew*. He is also credited with a worthy symphony. Peter Cornelius (1824–1874), one of Liszt's renowned disciples at Weimar, won his chief fame with the *Barber of Bagdad*. This Oriental comedy has a rather weak plot, but its music is marked by rare taste and feeling, united with many happy touches of humorous orchestration. It is said that many excellent scenes in the *Meistersinger* were suggested by this work. Two later operas, *Der Cid* and *Gunlöd*, were little more than an echo of Wagner's later style.

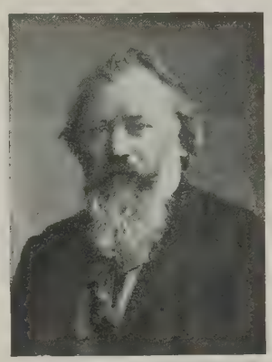
Richard Wagner (1813–1883) has long been the world's acknowledged master in opera; and it seems strange now to think of the time when his works were assailed as radical, noisy, and altogether without meaning. But every great musical advance has been received thus. In Benjamin Franklin's autobiography he laments that music is no longer the simple affair of his childhood, but has become complex and abstruse. Beethoven's works were attacked in similar fashion, and in our own day it may be that our dread of the later Strauss will turn to admiration in the next generation.

Wagner's theories, briefly rehearsed, were not absolutely new. The libretto, best written by the composer, should be worthy; the music should always reflect the spirit of the words, Wagner's own expression being that "Music is Truth"; the music should not break the work into separate vocal numbers, which he likened to a string of single pearls, but should form a complete whole. Thus far the earlier operas accord with his ideas, — *The Flying Dutchman*, *Tannhäuser*, and *Lohengrin*, at least. But in the later music-dramas the *Ring*, *Tristan*, and to some extent *Parsifal* and the *Meistersingers*, he adopts definitely the use of *Melos*, or endless melodic recitative, and the device of *Leil-Motiven*, or guiding motives to depict each character or event.



PETER CORNELIUS

Wagner's reforms in the interest of dramatic truth came at a time when they were needed to offset the baleful influence of Rossini's meaningless tunes. But the greatness of his works lies in their own innate beauty. His librettos are great dramas in themselves, moving with stately majesty and affording scenes of epic grandeur. His marvelous orchestration opened an entire new world of tone to the ear, a richly woven texture of color undreamed of before his day. His themes, pregnant with impressive meaning, are built up into orchestral passages of unequaled power. His music cannot be described; it must be heard. Elsa's dream, the flowing Rhine, the



JOHANNES BRAHMS

glories of Walhalla, the wild ride of the Valkyries, the exquisite Magic Fire music, the enchanting Waldesweben, the magnificent *finale* of the *Ring*, are but a few of the many Titanic achievements that have made Wagner one of the immortals in the art of all ages.

Carl Goldmark (1830–) is of Hungarian birth, but has identified himself wholly with Germany. His first decided success was the *Sakuntala* overture, but he achieved his greatest renown with the *Queen of Sheba*, in 1875. This opera, delayed by jealousy, won deserved triumph in nearly all civilized countries, for Goldmark's sumptuous genius was at its best in portraying Oriental subjects. In *Merlin*, too, the music shows the most luscious charm, although the work is handicapped by a confused libretto. *Heimchen am Herd* is in the simpler style introduced by Humperdinck, and sets Dickens' *Cricket on the Hearth* to music of appealing and sympathetic fervor. *Die Kriegsgefangene*, *Götz von Berlichingen*, and *Der Fremdling* are later works.

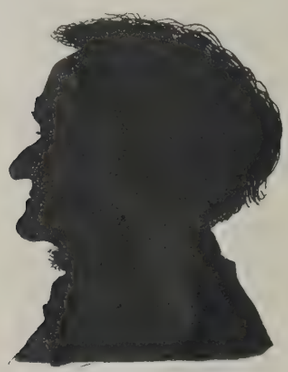
In the instrumental field, Goldmark shows the same rich profusion of glowing harmonies. The *Rustic Wedding* pictures are less striking than the tonal canvases of the modern radicals, and the E♭ symphony is seldom heard, but the overtures hold their own well, — *Penthesilea*, *Spring*, and the dignified *Prometheus*, as well as the earlier *Sakuntala*.

Engelbert Humperdinck (1854–) is known chiefly by his *Hänsel and Gretel*, which brought him fame at one stroke. This setting of the old fairy tale of Grimm, altogether delightful in itself, has almost founded a new school of fairy opera. The reasons for its success were twofold: first, its own beauty; second, the fact that it came at a time when Germany had been bombarded with grandiose, but unsuccessful music-dramas, and craved something simpler. Humperdinck's later operas, *Dornröschen*, *Die Königskinder*, *Saint-Cyr*, and *Die Sieben Geislein*, show much beauty, but arouse less enthusiasm than their great predecessor; and *Das Wunder von Köln* is not likely to reverse the verdict.

Among the later German opera composers, Wilhelm Kienzl has aroused great interest with *Der Evangelimann*, a true story of crime and forgiveness between brothers. Max Schillings has produced the Viking opera, *Ingwelde*, and the medieval *Pfeifertag*, but neither is more than a weak imitation of Wagner. Cyril Kistler, after many attempts at music-dramas, has drifted into a simpler and more pleasing style. August Bungert has attempted a Hexalogy on Homeric subjects, but without popular success. Siegfried Wagner has written four operas and

scored four failures. Eugen D'Albert's works, if not planned on the largest scale, present much delightful music: *The Ruby, Gernot, Ghismonda, Cain, Die Abreise, Der Improvisator,* and *Tiefland* have all won more or less success. Hugo Wolf's bright *Corregidor* wins him less fame than his remarkable songs, while Ludwig Thuille's *Gugeline* is another fairy opera. Strauss' *Guntram* and *Feuersnoth* do not hold the boards, in spite of much glorious music; and now comes *Salomé,* more involved and more vehement than either. But the name of Strauss brings up other questions.

Richard Strauss (1864–) started out in an orthodox path, and his symphony in F minor is a worthy work,



RICHARD WAGNER

showing the influence of Brahms. But the sea-change he suffered at the hands of Alexander Ritter soon became evident. *Aus Italien,* the set of free tone pictures of that historic country, once appeared involved, but is simplicity itself when compared with the later tonal rhapsodies. Each of the great symphonic poems that followed arouses our amazement at the composer's mastery of the orchestra, and sooner or later compels our admiration. A grand series they form, — the powerful *Macbeth;* the passionate *Don Juan; Tod und Verklärung,* grandly triumphant; *Till Eulenspiegel,* with its inimitable humor and irony; *Also Sprach Zarathustra,* sublime in its mysticism; *Don Quixote,* a bold attempt at the most definite sort of program-music; *Ein Heldenleben,* strange and repellent in some of its themes, but colossal in their development; and now the tangled *Sinfonia Domestica,* which the London critics have shown themselves ready to

"First endure, then pity, then embrace."

The technical mastery of Strauss is beyond all praise. He wields the forces of the largest modern orchestra with absolute ease and entire unconcern. He throws gigantic thoughts upon his musical canvases, and clothes them in vivid colors. But the thoughts themselves, the themes of which they are built, are not always beautiful, and sometimes decidedly ugly. Is Strauss playing with us, and trying to see how far he can impose on our credulity? Ernest Newman, once his most ardent champion, now inclines to this belief; but even granting it, we must still pay tribute of homage to the glorious revelation of beauty in the earlier symphonic poems.

In his songs, too, Strauss has shown that he can produce the most entrancing melodies when he desires. Chromatic in character, sometimes vague at first, they grow into musical gems of the most perfect unity. Their modulations, strange at the outset, become clear on repeated hearing, and seem natural, correct, inevitable. They have almost founded a new lyric school.

The symphonic poems of Strauss have formed a text for endless discussions on program-music. It is not the highest function of music to tell a story; the Bach fugues and the Schubert symphonies tell none. But the fashion of giving titles to instrumental works, especially symphonic poems, must of course suggest certain moods to be reflected in the piece. Where these are merely general, such as *Tasso; Lamento e Trionfo,* they are eminently fitting; but the wind-machine and the bleating sheep in *Don Quixote* must surely make us pause. Music is meant to paint emotions, and not definite objects or events.

Germany boasts other orchestral composers, — Hausegger (1872–), whose *Dionysiac Fantasie, Barbarossa,* and *Wieland der Schmied* show a gorgeous richness of melodic beauty; Mahler (1860–), whose efforts to broaden the symphonic form have been interesting if not always successful; Weingartner, famed also as a conductor; and Nicodé, less important, but once a leader in the program style. In the field of song, too, Mahler has won eminence, nor should we forget, among older vocal works, the lyrics of Jensen and the ballads of Loewe. In organ music, as well as in ultra-modern songs, Max Reger has recently won eminence. Max Bruch, famed for his violin concertos, has made a name for himself in the field of epic cantata, with *Frithjof, Odysseus,* and others, and still holds a place of activity. All these names show that Germany is still a musical leader among nations, and retains a firm grasp upon the sceptre of supremacy.

Questions

1. What are Weber's chief operas, which won the greatest success, and why?
2. What are Spohr's great works, and what is their most noticeable defect?
3. What can you say of Meyerbeer's style of composition?
4. What is the difference between Mendelssohn and Schubert?
5. What are Mendelssohn's chief orchestral works?
6. Name as many of Schumann's piano works as you can.
7. How do Schumann's songs compare with the *Lieder* of other composers?
8. Why is the orchestral work of Brahms so valuable?
9. What are the main points of Wagner's operatic theories?
10. Which of Wagner's works are called music-dramas, and how do they differ from the earlier operas?
11. What are the chief qualities of Goldmark's music?
12. In what field did Humperdinck become famous?

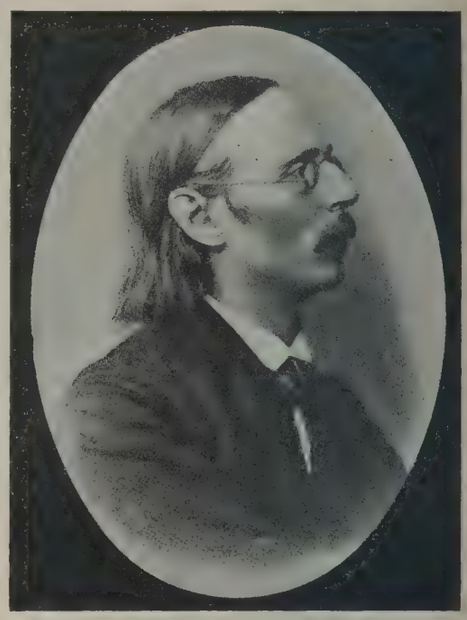
CARL GOLDMARK

13. Name as many of the later German opera-composers as you can.
14. What are the chief symphonic poems of Strauss?
15. Describe the songs of Strauss.
16. What do you think are the limitations of program-music?
17. Name some modern German orchestral composers.

Programs

I. Easy

1. Selection from "Kinderalbum"..... *Schumann*
2. Songs. (*a*) Morgengruss..... *Mendelssohn*
   (*b*) Auf Wiedersehn..... *Mendelssohn*
3. Songs without Words, Nos. 9 and 22.... *Mendelssohn*



PETER CORNELIUS (MUNICH PERIOD)

4. Songs. (*a*) Seit ich ihn gesehen..... *Schumann*
   (*b*) Der Grüne Hut..... *Schumann*
5. Träumerei. Arranged for Violin..... *Schumann*
6. Songs. (*a*) Widmung..... *Franz*
   (*b*) Schwertlied..... *Weber*
7. Arrangement from "Der Freischütz," Cramer.. *Weber*

II. Medium

1. Fablian..... *Raff*
2. Songs. (*a*) Im Walde..... *Schumann*
   (*b*) Schlummerlied..... *Franz*
3. Selection from Stimmungsbilder, Op. 9..... *Strauss*
4. Songs. (*a*) Sapphic Ode..... *Brahms*
   (*b*) Und schläfst du, mein Mädchen.. *Jensen*
5. Cavatina. For Violin and Piano..... *Raff*
6. Songs. (*a*) Penelope Weaving. From "Odysseus"..... *Bruch*
   (*b*) Traum durch die Dämmerung... *Strauss*
7. Allegro and Scherzo from Scotch Symphony. Arranged for Piano..... *Mendelssohn*

III. Difficult

1. Grillen..... *Schumann*
2. Songs. (*a*) Lied vom Winde..... *Wolf*
   (*b*) Am Ufer des Manzanares..... *Jensen*
3. Prelude and Fugue in E minor..... *Mendelssohn*
4. Ballad. Archibald Douglas..... *Loewe*
5. Selection from Violin Sonata..... *Thuille*
6. Songs. (*a*) Nachtgang..... *Strauss*

THE FOREIGN MAGAZINES

ARTHUR ELSON

Guide Musical, Nov. 12, 1905. *Les Droits de Musiciens.* Julien Torchet.

Newspaper enterprise is evidently not unknown in France. When the director of the Folies-Dramatiques was forbidden to give Carré's *Volcan d'Amour,* because he had incurred the displeasure of the Society of Authors and Composers, the journal *Le Matin* took the theatre

into its own hands and gave the piece. There are in France two societies for the prevention of cruelty to authors, — the one mentioned above, dealing with dramatic works, and the so-called "Little Sister," or Society of Authors, Composers, and Editors of Music. Where the "editors" (*i. e.*, publishers) need protection is hard to see, as they are generally able to take care of themselves.

The first society was founded by Scribe, who, of course, profited enormously by the resulting royalties. The second arose in a restaurant. Paul Henrion, a composer of popular *chansons*, entered, ordered some light refreshment, and was charmed to hear the café musicians perform a number of his works, which the audience applauded and encored. Rising to go, he was confronted by the waiter, demanding pay. "I am Paul Henrion," he replied. "Pay me first for my music." A lively argument with the proprietor followed, to the delight of the customers, but Henrion finally carried his point, and soon afterward founded the society.

After reciting this much of history, M. Torchet advances excellent arguments to show that not even now does the composer receive adequate return for his work. The librettist, usually a broken-down writer, draws his material from the dramas of others, trims it here and there for musical purposes, perhaps throws in a few rhymes, and is then ready to enjoy his royalties. He can produce dozens of librettos each year, if need be. The composer, however, labors long and earnestly over hundreds of pages of orchestral score, is met with derision if his work shows even faint resemblances to that of other composers, and is lucky if he can produce a dozen operas in a lifetime. Yet the royalties must be equally divided between composer and librettist! More than this; if the music is performed on the concert stage, apart from all text, the librettist must still receive an equal share. M. Torchet suggests that composers pay a fixed sum for librettos, publishers be satisfied with their regular profits, and the royalty go where it belongs, — to the composer. Meanwhile, who would not be a librettist in France?

Journal of the International Musical Society, November, 1905. Gabriel Fauré. Julien Tiersot.

The installation of Fauré as director of the Paris Conservatoire has been the occasion of many deserved tributes to that modest but gifted composer. Unlike most Frenchmen, he has not attempted opera; and if he has any symphonies in concealment, the public has heard no more than a few fragments of them. His field is essentially what is called *la musique intime*, — including two quartets, a sonata, numerous piano works, some sacred compositions, and the many songs that have made him known on both sides of the Atlantic. Born in a town near the Pyrenees, he showed such musical aptitude that he was sent to Paris, where he became a favorite pupil of Saint-Saëns at the Ecole Niedermeyer. After five years as organist at Rennes, he settled permanently in the capital. His life has been one of unassuming activity, — at first in connection with the National Society of Music, the progressive element; then as organist, in which capacity he succeeded his great teacher at the Madeleine; also as teacher of composition in the Conservatoire, and for some years critic of the *Figaro*.

His works are numerous, a recent harp impromptu bearing the Opus number of 86. From the first, his songs showed a rare and delicate fragrance in their melody, — such lyrics as *Les Matelots*, *Barcarolle*, *Lydia*, *Au Bord de l'Eau*, and others. Verlaine's *Fêtes Galantes* also furnished inspiration for his muse, while *La Bonne Chanson* formed the subject of an admirable cycle, Opus 61. Fauré entered the domain of violin music with a charming *Berceuse* (Opus 16), following it by the two quartets and a piano quintet. The *Elegie* for 'cello (Opus 24) is another favorite work. For piano, his *Valses*, *Caprices*, *Mazurkas*, *Ballades*, and *Impromptus* show an appreciation of Chopin and Schumann. In larger form are the orchestral suite for *Pelleas et Mélisande*, the incidental music for *Caligula* and *Shylock* (strange subjects for his gentle genius), the *Requiem*, the cantata *La Naissance de Venus*, and the lyric tragedy *Prometheus*, given in 1900 at the Beziers amphitheatre.

SIEGMUND VON HAUSEGGER

Musical Standard, Dec. 16, 1905. First performance of *Salome*. Paul Colberg.

When Strauss desired to get *Salome* performed, he had first of all to find a manager. Many were eager until they had seen the score. At last Count Seebach, Intendant of the Dresden Royal Opera House, nerved himself for the task, and Von Schuch, as conductor, struggled with the orchestral part. A foreign stage manager was needed to superintend alterations, and two new instruments were manufactured, — the celesta, a keyboard affair, and the heckelphone, something between the bassoon and the English horn. Then Strauss himself came to pacify the singers and musicians, and on December 9 the great event occurred.

The play is an almost literal translation of Oscar Wilde's drama, and the acting and scenery were admirable. As to the music, let the critic speak for himself: "The extraordinary and daring style in which Richard Strauss composes is well known. Triads connecting themselves in proper part progression are very rare occurrences. All rules and experiences in harmony seem to be turned upside down. Strauss does not, for instance, mind when the chord of C major is sounded, providing the situation may justify it, letting a trombone play an A♭ or a D♯ with *fortissimo*. With very few exceptions, like the love song of Salome or the preaching of Johannes, the music in this drama would not sound at all if played on the piano. Strauss, though, would only answer to this statement by saying: '*Salome* is not written for the piano; it is written for the orchestra.' But it is not only in harmony that Strauss is a revolutionist, as he even mostly denies all what we perceive as periodical structure, — the eight-measure system which Richard Wagner still had respected. Strauss' music could consequently never stand an analysation [*sic*] by picking it to atoms. . . .

"Yet in the connection of the whole, together with the orchestra, it sounded logical and marvelous. Everything on this remarkable evening was equal to perfection. Frau Wittig was at her very best as singer and as impersonator of the title *rôle*. The handing over of her *rôle* to Frl. Korb (from the ballet) during the dance was absolutely unnoticeable. Herr Burrian, as Herodes, was a splendid representative of this nervous and superstitious king. Equally well [!] was Herr Perron as Johannes, Frl. von Chavanne as Herodias, and all the representatives of the smaller *rôles*. The orchestration sounded enrapturingly beautiful. And the impression of the whole work was grand and overpowering. Therefore, at the close, the audience seemed to want many seconds to wake up from its dream, and then it burst out into extraordinary applause. Herr Strauss had to reappear on the stage twenty-five times, accompanied for about twelve times by the singers and Herr von Schuch. The composer may congratulate himself on having experienced this splendid performance. I doubt whether he will ever see equal perfection on other stages. For the Royal Opera House, of Dresden, this *première* has been a grand advertisement."

An article in the *Musical Times*, signed A. J. J., gives a laudatory review of Parry's new cantata, *The Pied Piper of Hamelin*. Parry's nineteen previous works in this form have all been in serious vein, not always free from the reproach of being called academic, but always lofty and dignified in style. This is his first important attempt in a humorous vein and seems to have met with complete success. The gnawing of the omnipresent rats, the excited debate of the town council, the entrance of the piper, the fatal plunge of the rodents into the river Weser, the greed of the mayor, the gathering of the children, and their disappearance with the magical musician, are all depicted with the utmost musical drollery.

MILITARY MUSIC

HENRY T. FINCK

One of the most surprising things about the recent war in the East was that the Japanese won their great victories without the aid of music. Some years ago Field-Marshal Lord Wolseley wrote a preface to *The Soldiers' Song Book*, edited by Cellier and Miller, in which he said that "Troops that sing as they march will not only reach their destination more quickly and in better fighting condition that those that march in silence, but, inspired by the music and words of national songs, will feel that self-confidence which is the mother of victory." Now, inasmuch as the Japanese so cleverly adopted so many other Western ideas as to warfare, why have they ignored music?

That they have ignored it almost entirely I am informed by Mr. F. C. Clarkin, who was the New York *Evening Post's* correspondent with the Japanese army for several months. They do sing occasionally in camp, but never on the march; and as for bands, where we have one for every thousand soldiers, they had only four or five in all Manchuria, or about one for every hundred thousand fighters; and these few did not play to arouse the courage and keep up the spirits of the men in action, but were kept in the rear and served only to enliven social functions in camp.

Does this indicate that music, after all, may not have the important function attributed to it in war time? It does nothing of the kind; it simply shows that the Japanese have so much patriotic enthusiasm that they can get along without music. They are fighting for their national existence, and to prove to the world that though small they are strong; and this, with their religion (which is chiefly patriotism) and their blind devotion to the Mikado, enables them to achieve wonders, even without the inspiriting strains of music. It enables them also to dispense with what might be called eye-music — the banner, which they use only to plant here and there on an eminence, to show that it has been taken.

Several Americans and Europeans who were with the Japanese army have complained of the absence of the music which they had always deemed a necessary accompaniment of the soldier's life. The correspondent of *Leslie's Weekly* wrote that he acknowledged his "weakness for the blaring of regimental bands, or the screaming, drawling skirl of pipers, as they lead the kilties on to battle. It is the absence of music, the lack of flaring campfires — each with its group of soldiers, with fire-flushed faces within the ring and the dark of night without, smoking their pipes and laughing loud and long as the story passes around; or singing, in swinging cadences, all those melodies we learned as youngsters, or the confidential chats of home — which the foreigner with this army misses most."

There is not the slightest probability that the Japanese example in this matter will be followed in other countries. Music has always been an inseparable companion of war, as of religion and social life, and is likely to remain so, because of its utility. The German army includes more than ten thousand military musicians, all of them able-bodied men who might as well be soldiers. We may be sure that the great and shrewd commanders of that army would not employ such an enormous number of men in that way unless they were convinced from experience that they can thus render more aid in war than an equal number of fighting men.

There are at least half a dozen different uses for musicians in connection with military life. One of them — that of creating a panic — is becoming obsolete. It is believed that one of the causes of Japan's easy victory in China a few years ago was that the Chinese relied too much on the power of their war gongs to frighten away the enemy. Savages in various parts of the world use wild songs and shouts, or drums and horns, to inspire terror and create a panic in the enemy's ranks. So horrible is the sound of this music, both in itself and because of its bloody associations, that it is said that to this day the Spanish settlers in some parts of South America cannot hear the awful trumpets of the Indians without being frightened. It is interesting to note that Homer represents the Trojans as going to battle with howling war cries, while the Greeks are silent.

The use of melodies to rouse the courage of soldiers and stir flagging energies is, on the other hand, as common as ever. Grey says that in Australia four or five old women can with their singing stir up the men to acts of war. The Spartans, the most warlike of the Greeks, were much addicted to music. In the Bible there are frequent references to the encouragement given to warriors by music, as, for instance, in Chronicles, where the victory over Jeroboam is attributed to the encouragement derived from the sounding of the trumpets by the priests. As regards modern times, take as examples the miracles of patriotic or fanatic valor wrought by such tunes as *The Marseillaise* or *The Watch on the Rhine.*

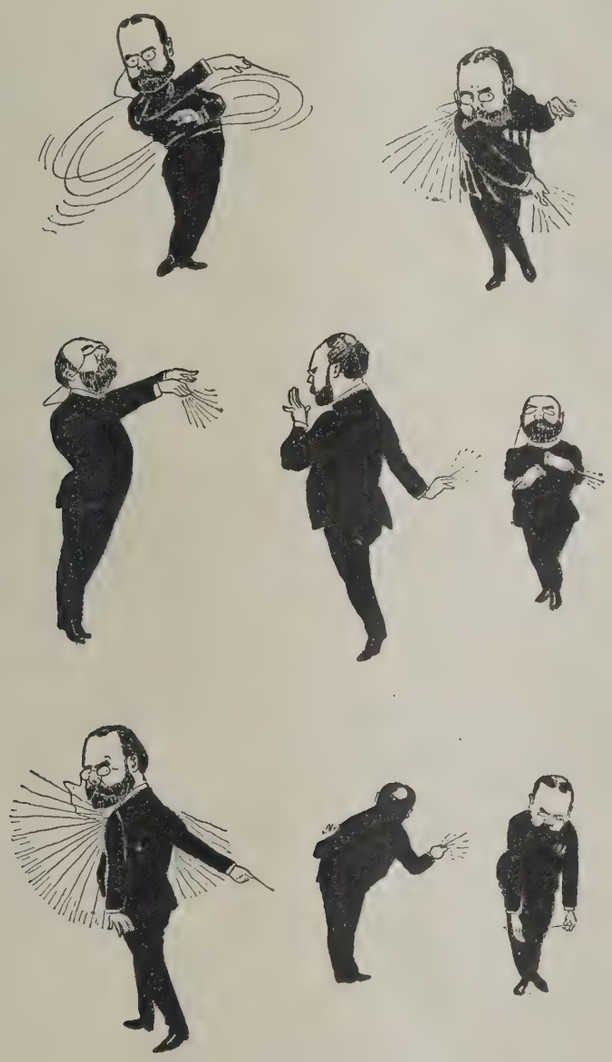
WANDERING MUSICIANS
(Rembrandt)

Zöller, the African traveler, says that among all savages and half-civilized races, song and dance are considered as indispensable aids to military training, as are drilling and drumming in our own armies. The marvelous precision with which these primitive races execute their war songs and dances has been commented on by many admiring explorers, and as the value of perfect drill and cooperation are perfectly well understood, music, which supplies the regularity of rhythm, is seen to be of paramount importance. When our armies parade, they always do so to the measured beat of military band or drum and fife.

The use of music for signaling purposes is also common to warriors of all stages of culture. In the Ashantee army certain horn calls are played to indicate the position of the chief during a battle. An African negro never mistakes the meaning of a drum beat, knowing instantly whether it summons to war or merely to a dance. The Congo negroes are so skilful in the use of the rattles that by different ways of shaking them they can tell the warriors behind them when they are exposed to danger. In the armies of Europe and America musical war signals are indispensable. The "Infantry Drill Regulations" of the United States Army gives the music and meaning of more than sixty trumpet calls — calls of warning, of assembly, of alarm, of service, with such names as guard mounting, drill, stable, to arms, fire, retreat, church, fatigue, forward, halt, quick time, charge, lie down, rise, etc., beside a dozen or more drum and fife signals, all of which must be

known to the soldiers, to whom they speak a language as definite as Wagner's leading motives.

In time of peace, too, there is a use for military musicians. They make excellent bands, which not only entertain the soldiers at their daily parades or exercises, but the general public, too, at occasional free concerts; and thus the populace get some return for the taxes they have to pay to support the army. Wars, no doubt, will some day cease, but military music will live, if only in operas. It has a charm of its own.



JOHN PHILIP SOUSA
(From the Boston *Herald*)

A women's musical club has recently been organized at Vancouver.

* *

Enrico Bossi's *Canticum Canticorum* will be given in March, at Trieste, by the Philharmonic Society of that city.

* *

Brahms' *Requiem* was sung December 5 at St. Pauls Cathedral, London, under direction of Dr. Geo. C. Martin, by the regular choir with organ and orchestral accompaniment.

* *

The London Choral Society announced Saint-Saëns' *Samson and Dalilah*, at Queen's Hall, for February 19, and for the concert of March 19, Parry's *Pied Piper* is announced.

THINGS HEARD

MISCHA ELMAN

ISRAFEL

The chief beauty of Mischa Elman's playing is its musical quality. He gives you musical emotion unmixed with any other emotion, something eerie as the crying of sea-birds in gray autumn, and rich as purple heather in a golden twilight. To him music means only Music. He gets Whistlerian tone effects, full of atmosphere and nothing else. So he creates something new and fresh that sets critics and public faintly wondering. To appreciate or even recognize Elman's particular quality one must have seen starlight in the desert (which is perhaps a good symbol of abstract beauty), and few people have seen that.

The voice of Mischa's violin is like the white voice of a boy, untinged with color, yet holding all colors in fee; a voice of the kind that sings the solo at a royal wedding. In its whiteness it is more like an exquisite piano's voice than a violin's.

His is mystical music, because the player is unconscious and instinctive; his art runs parallel with Pachmann's; it is an echo of a sound that was among the first created things. He sees tone pictures, as it were, in a crystal or a pool of ink. They say that your powers as a crystal-gazer depend on the color of your eyes. I suppose Mischa's are of the right color — that is all! So far as his music is concerned, he may be a clever boy; he may not. Though his face insists on his supreme cleverness.

How marvelously he played that Handel sonata, with its odious tinny harpsichord accompaniment, supplied by a tutor-like man in spectacles. (Surely the harpsichord was invented as a foil to the sweet violin!) His instinct followed every emotional curve of the music: now gay as a young goat, now grave as a priestess of Isis. As he fronted the huge audience, his small body, that swayed rhythmically to and fro, had the insolent swing of an Albanian warrior's.

I liked this Russian cub better as a player of ancient music than as an exponent of modern music — naturally. For very modern music is all meaning and no harmony, all color and no form, all democratic and "no class." And, as yet, Mischa cannot read programs: he can only create absolute beauty of a statuesque sort. He made the modern stuff sound rather dull and cheap, for he played it as it actually is. (I thought of the Little Boy's criticism of the Emperor of China's clothes.) The whole effect was more or less like that of an actress by daylight. Just now Mischa's musical instinct runs in leash with Joachim's and Richter's (he could play the *Preislied* but not the *Lenzlied*); one of these days he may become as faultily faultless as Kreisler, this composed, yet pale-faced little fellow in a white sailor-suit, relieved with turquoise-blue.

* * * * * *

Those of us who have sensitive souls and analytical brains delight in music such as Elman's, which is a flower for us un-humble bees.

DAILY TECHNIQUE FOR YOUNG VIOLINISTS

At least twenty minutes daily should be devoted to the following exercise: Pupils of first and second grades should practice these exercises slowly and evenly, with no gradation of tone, using four notes on one bow. The exercises on the A and D strings are preferred for students of this grade. The *legato* should be very even; the fingers of the left hand should fall with force upon the string, and no unusual pressure should be used. Fingers not in use should lie upon the strings. The fingers should be relaxed, and should rise and fall in the same plane. Do not allow the fourth finger to "dip" under the neck of the violin. The fourth finger should draw back for an attack upon the string, and should move downward as the third moves. Perfect relaxation of the fourth finger at its base is necessary. Each of the exercises should be repeated several times. Advanced pupils should practice these one hour a day, slowly and evenly, then more rapidly, with sixteen notes on a bow. Keep the tone firm and observe strict economy in the use of the bow. Advanced students should practice these exercises on the four strings. Perfect uniformity of tone and even finger action are necessary. Students will be amply repaid by the application of these principles, as strength of finger action and uniform *legato* work are the results of practicing them daily.

THE ANNUAL STOCK TAKING. WHAT HAVE I DONE FOR MUSIC?

I

At this time of year the merchant world is "taking stock." That is another name for finding out what a man is worth, what amount of business he has done during the past year, what his business has done for him, and what he has done for his business. This is the climax of the year; its results will spell profit or loss.

No merchant of any ability or standing would overlook the stocktaking process any more than he would omit to keep a set of books. The man who guesses at his stock will probably have to guess at his profit, and that is a thing one would better be certain about.

It would not be a bad idea for the musician to make a mental inventory at this time of year, parallel with that of the merchant. This would be an especially valuable process for the young professor of the art.

II

Here are some of the questions he might ask himself: —

1. What musical ability have I gained during the year?
2. What general knowledge has come through general study?
3. What has been my advance in the estimation of the public?
4. What has music done for me, financially? (Few will omit this.)
5. How is my professional standing compared with last year?
6. Am I nearer my ideals than at that time?
7. As I have come nearer them, have I advanced my standard?
8. As a result, will my ideal be higher next year?

And finally, — and here is the seed-thought from which this whole series has grown, — a question which most people omit to put to themselves, but one that is most apropos, and that one should not omit to answer thoroughly in his own thought: Those things represent what music has done for me; now, (9) what have I done for music in the community in which I live?

Many will give this a quick reply and say, "I have returned a hundred per cent for every item of income." One does not doubt that; most musicians return more. But to aid in arriving at the reply to this altruistic interrogation, let us present some sub-questions. Answer these, and you will come nearer telling "what I have done for music."

10. Have I been public spirited with my music?
11. Have I sacrificed my time, not that I might gain pupils, but that others might gain a higher musical standing?
12. Have I conducted classes that my pupils might gain an interest in history or theory?
13. Have I given lectures by which to interest the general public, or to lift it to an appreciation of better music?
14. Have I formed string quartet or vocal quartet or other small organization for the study of the classics?
15. Have I given any organ, piano, string, or vocal recitals for the benefit of those who cannot afford to pay the ordinary prices of admission?
16. Have I given of my time to the writing of musical articles for the local press — which does not pay for such things — hoping to interest a larger public in the art?
17. Have I gone out of my way to commend the work of some other teacher?
18. Have I done all I could to increase the attendance at artist recitals in which I had no financial interest?
19. Have I organized any choral society or public musical society which offered me no immediate financial profit?
20. In short, what have I done for music?

III

That is rather a searching list of questions, isn't it? Let's lay the magazine down, right here, do you say? But is it not right to look at the matter from this standpoint as well as the other? One's answers may not be such that they would make pleasant reading to present to the public, but the replies should be realized by the individual.

Of course it is not thought that any one could give an answer that would show something done along all the lines above indicated, but it would not be asking too much of one's self that the answers to two or three of them show results directed to the public good without thought of one's pocket book.

The musician must not overlook the principle of *noblesse oblige;* the very fact of his learning and his ability obligates him to a certain degree for the public good. The payment of that obligation is in the matter of self-sacrifice, the coin in which all public obligations are met.

No musician has come to his own without reaping the benefits of the self-sacrifice of others; now it is for him to pass on to still others these results, together with what he can add by his own labors.

This done, it will be easier to answer, next year, the question, "What have I done for music?"

W. Francis Gates.

FIRST PERFORMANCE OF "WALKÜRE"

Editor of The Musician: —

In an issue of The Musician recently you have an article giving the Savage Opera Company the credit for the first performance of *Die Walküre* in English in America, "Oct. 13, 1905."

I wish to call your attention to a production of this opera in English, which was given in February of 1891 in San Francisco by the Emma Juch Opera Company, and given several times later, in the spring of 1891, in the City of Mexico, by same company under the direction of the late Adolf Neuendorf. Miss Emma Juch (now Mrs. Wellman), Miss Maconda and Madame Janeshowsky, Chas. Hedtmont, Franz Vetta and Otto Rajheus were in the cast. The Mexican people were so well pleased with the opera that it was given twice a week during a four weeks' stay. I was a member of the chorus, and as you know there was nothing for the chorus to do, we were more than pleased with the opera, as it gave us a night off. You can easily verify the above by addressing Mrs. Wellman (Emma Juch) or Madame Maconda.

Hoping you will pardon my desire to place the matter right, I remain,

Very respectfully,

Geo. L. Gould.

TOUCHING DANISH AND SWEDISH OPERA COMPOSERS

To the Editor of The Musician: —

Writing in a recent issue on this subject, Mr. Elson says, *inter alia:* "Franz Berwald wrote six operas." I find trace of only two.

"A. J. Soedermann wrote many operettas." Again I can only trace two.

A. Rubenson should be credited with *Natt* (*En*) *bland fjellen* as well as with *Ryno,* in the completion of which he had as collaborators King Oscar I and Brendler.

F. Pacius is credited with *Prinzessin* (*Die*) *von Cypern.* Where can I find corroboration of this?

G. Wenneberg wrote an opera (?), *Faust.*

J. Sibelius also wrote one, *Tornissa Olija Impi.*

The two latter are not mentioned by Mr. Elson. Would he kindly state his reason for the omission?

The information is asked for solely with a view to render as full and accurate as is humanly possible the *Dictionary of Operas* now ready for issue, and on which I have been toiling — that is the exact word — six hours daily, during the past thirteen years.

John Towers.

MUSIC AND MUSICIANS

The human voice is really the foundation of all music.

Whatever the relations of music, it will never cease to be the noblest and purest of arts.

A musician's aptitude for his art is best estimated by the impress which other people's music leaves upon him.

Melody, through Beethoven, has become emancipated from the influence of fashion and fluctuating taste, and elevated to an ever valid, purely human type.

I find in the frequent and shrill demands of superficial musical dilettanti for "Melody, melody!" a confirmation of the belief that they derive their idea of melody from musical works in which, besides the melody, complete lack of melody occurs, which makes what they think melodious appear so precious.

Harmony, utterly unknown to antiquity, and its endlessly rich developments and employments in polyphonism, are the discoveries and the peculiar work of recent centuries.

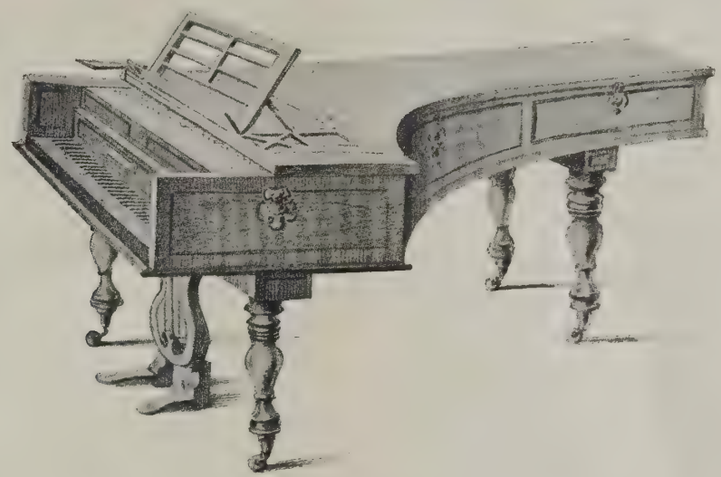
Beethoven developed the symphonic form to such comprehensive breadth, and filled it with contents of such unprecedentedly various and ravishing melody, that we stand to-day before the Symphony of Beethoven as before the stone that marks the boundary of an entirely new period in the general history of art; for in it there came into the world a phenomenon, nothing even approaching which is to be found in the art of any age or any nation. For in the symphony there is spoken by musical instruments a language of which no one in any preceding age had any knowledge, inasmuch as the pure, musical expression in it enchains the hearer with a lasting effect hitherto unknown in the most inconceivably varied shades of tone, and wins the inmost nature with a strength unattainable by any other art.

Richard Wagner.

For the Young People

Conducted by THOMAS TAPPER

PICTURE PAGE



BEETHOVEN'S BROADWOOD PIANO

nce, and one need not be musical to guess it, as n terms are so common that every one knows them. re is a list of articles that might be used in the game, the significant answer to each: —

Quire of paper (Choir).
Three dolls dressed alike (Triplets).
Carpenters' brace (Brace).
Watch (Time).
Razor (Sharp).
Chin-rest of a violin (Rest).
Card bearing the letter XL (Forte).
Some one's name (Signature).
Pair of scales (Scales).
Base of a table bell (Bass)
Peck measure containing two beets (Two beats in ısure).
12. Heavy string (Chord).
13. Flatiron with the letter B on its face (B flat).
14. Cardboard letter C hung on chandelier (High C).
15. Lump of tar (Pitch).
16. Pipe stem (Stem).
17. Half-tone picture (Half tone).
18. Bank note (Note).
19. Baby's shoe with an O on the sole (Solo).
20. Stout cane (Staff).
21. Necktie (Tie).
22. Bar of soap (Bar).
23. Door key (Key).
24. Tape measure (Measure).
25. Quarter dollar with a black court plaster dot on it (A dotted quarter).

CAN YOU NAME THESE THREE COMPOSERS?

THE VAGRANT PHILOSOPHER

WILSON G. SMITH

It had been some time since my friend, the Vagrant Philosopher, had honored my studio with his presence, and I had really begun to hanker after some of his interesting philosophical vagaries.

As I was studying the score of Tschaikowsky's Fifth Symphony — which, by the way, impresses me as being one of the most notable works in

TSCHAIKOWSKY

that form — an assertive rap and the opening of my studio door announced the fact that Vagrant was still in the land of the living. After the usual formalities of greeting, our conversation naturally turned upon the Tschaikowsky symphony, and from it to the ultra-modern school of composition. After modestly stating my views on the subject, my friend Vagrant took the bits of argument into his mouth, and I — as usual — became an interested listener.

"The ultra-moderns," said he, "avowedly throw tradition and precedent to the winds, and in their violation seek to find fitting expression of their ideas, — that is, granting they have any. Their tonal colors are so broadly massed that they appeal to impressionistic values rather than any finesse in detail or harmony of association. They discard pure melody, and give us in its stead a contrapuntal labyrinth of themes and motives. Their scores are mathematics run wild. Not having an algebraic mind, I crave the emotional or psychological.

"Some modern scores suggest to me a magnificent structure with all the building scaffolding left standing to hide the architectural beauty of the edifice. In this case the crude scaffolding mars the imposing grandeur of the edifice, and 'tis only when it is removed that we see the beauty and symmetry of the design. Unfortunately for some of the moderns, when the surrounding scaffold of their works is removed there is nothing but a monument of ugliness exposed to view, or a thing of mere vapor; a fantasm of a morbid dream, a case of mannerism in method, without any inherent structural foundation.

"If the recognized laws of beauty and complementary environment are violated in architecture, we are quick to note it and take exception. Why not, then, in music, which some imaginative poet has designated as frozen architecture? We appreciate the fact that the curve is the real line of beauty, and that the angular has its use by way of contrast to heighten the effect. Why, then, should a melodic sequence of tones be superseded — as it is so much in modern music — by discord and angular sequence of intervals, named motives to suit mechanical purposes?

"The ultra-modern tendency seems a deification of the ugly and chaotic, more than an exposition of the beautiful and symmetrical. As ulterior methods for contrast, heroic remedies may be applied; but to make them the pervading atmosphere of an inspiration seems to me a worship of false gods. There is an imposing grandeur in the mad rush of the torrent and the horrific majesty of a tempest. So is there, also, a placid beauty and calm delight in a peaceful pastoral scene. Both illustrate contrasted moods in nature, and when seen in juxtaposition the inherent beauties of each are intensified. But for continued enjoyment give me the pastoral in preference to the tempestuous. A musical illustration can be cited in a comparative consideration of *Death and Apotheosis* of Strauss, and the *Pastoral Symphony* of Beethoven. Each depicts an emotional inspiration as modified by mental environments of variance, difference and contrast. The one assumes to portray the intangible and unknowable; the other is a reflection of one of Dame Nature's moods.

"We understand — at least in part — the material forces of nature, and can receive from a tone picture recognizable suggestions. The Strauss poem deals with pure speculation and metaphysical imaginings. Our greatest teachers are experience and observation. What we learn from them we can utilize to deduce logical conclusions. Imaginative speculation deals only with hearsay evidence, and does not pass current in the court of logical certainty. What makes the speculative and common sense both possible is the diversity in tastes. I might classify them as the abnormal and normal. Lombroso, the great alienist, claims that the inspiration of genius is but an abnormal excitation of the brain cells. In other words, that genius denotes mental disease. Much that we call inspiration is the direct result of mental hallucination, and such minds demand similar conditions in others to catch the sympathetic vibration of appreciation.

"Be this as it may, I really believe there is at least a modicum of truth in the Lombroso theory. Is the average intelligence of the present day improving or deteriorating? Or is the eternal spirit of commercialism, so prevalent, bringing us back to the primal law of the survival of the fittest? What is to-day the popular appreciation of the Shakespearian drama? Who reads Dante, Milton, Goethe, or Molière? It would be an impossibility to calculate the number of wealth-seekers who never heard of them. Art is not practical — for the age is practical — from a monetary standpoint, and the false glitter of gold colors

At this point my vagrant friend recalled another philosophic appointment, and left me to meditate upon his theories. I leave my readers in the same fix.

PRIMARY VOCAL LAW

LOUIS ARTHUR RUSSELL

To sing well is not an easy task, yet when one is well equipped with correct subconscious habits properly established, it appears a simple matter, not only to the listening spectator, but to the singer himself; and this apparent ease of singing, to one who "knows how," is so deceptive as to cause us to think "effort" entirely lacking; but if we allow this illusion to prevail we soon find that, to attempt to sing without controlling muscular effort, will surely bring disaster. The apparent ease of correct singing is due to equipoise. We must learn to know the distinction between correct effort and strain. It is a lack of regard for this difference which leads so many writers and teachers astray in their doctrine; and we read and hear much of doctrine set forth as fundamental truth, which, in fact, is far beyond fundamental, and reaches into the results of most thoughtful and long-continued practice of fundamental conditions of muscular development and control.

To be told, for instance, that no local effort is to be allowed, and all that is necessary is to let the body assume a "free, flexible condition" or position, and that we will then sing automatically, is to be led into a most grave form of error; for this free, flexible condition, coupled with correct automatism, is the result of a thoughtful process of development through devices of study which include absolute local control.

The first study of the vocal student is development of automatic control of the body, so that functional life-sustaining respiration shall become an active power for art use. This is the study of poise, counterpoise, and equipoise, bringing at last elastic, buoyant freedom of body and correct automatic action. When the body habitually assumes a correct poise and properly disposes of the effort of singing, the throat is freed from stiffness and the vocal apparatus (the throat and mouth with their various parts) is allowed to operate in complete and exact response to the will. This condition, so simple in its perfection, but so difficult for many to attain, allows the student to sing in such a way as gradually to develop the voice in purity, variety of color, and in power.

At this stage of development, where the body takes the physical burden, as it should, the throat, freed from all stiffness, quickly adapts itself to the will's demands, and through a most interesting process of study, artistic results reward the student in the shortest possible time. This physical condition gives us the power to "let go" all muscular strain, it allows nature to do her part of the singing effort, and cultured will to control the entire mechanism of the voice without interference of any sort on the part of the unneeded muscles. In turn, this freedom of throat and mouth and automatic control of body and breath dismisses the usual difficulties which beset the vocal student, and permits the voice to respond to the will so freely as soon to be able to reproduce the "mental concept" with fair clearness; thus the student with acute ear, and a reliable model, having accomplished the fundamental requirements of physical "condition," will readily learn to control correct "action," and soon be on the highroad of art culture. If, however, these fundamental studies be neglected, the student will find the study of singing full of seemingly insurmountable difficulties; and local effort in making the vocal organs do the will's bidding will play havoc with the voice and artificial results will always follow, regardless of the most conscientious study.

We should, then, direct our study closely to the fundamentals, until the correct conditions are assured; we should also cultivate the ear to a fine point of discriminating judgment, and work with mind and body in closest sympathy. When this condition is reached, we say "it is now not so much making as allowing one's self to sing or to talk well."

Muscular stiffness and surplus of breath are the two great destroyers of beautiful tone. We are rid of one, the other is under control, and we are now ready to sing. There is still much ahead of us, but it is almost exclusively mind culture. The physical members are responsive and awaiting orders from the will.

To bring about this excellent condition, this free, unrestrained, responsive state, is often difficult, especially with adults with many acquired habits, and it will not suffice for the teacher to call for freedom, breath control, etc.; these must be induced by various pedagogic devices.

It is enough now to say that a great part of the true teacher's work is toward this condition of freedom, and that, when this is reached, the rest is a simple and delightful process of growth through continuous use of the voice, studying technical exercises, songs, and arias. This reads well and sounds almost too easy, but it is really the truth. Of course there is much study, much earnest work to be done, but in the main it is mental, *i.e.*, the establishment of proper ideals; correct appreciation of tone quality — a true conception of that subtle sensation which so plainly tells the initiated of the noise of the voice; a clear comprehension of that priceless thing almost lost to us to-day, legato speech in song; phrasing; nuance of force and tone color, — all that goes to make up what we know as expression, and those more superficial yet quite essential items of agility.

THE LAW — AS PRESENTED TO WAGNER BY HANSLICK
(Dr. Otto Böhler)

BEAUTY IN MUSIC

ISRAFEL

At no time has beauty been a very important factor in music. The early ancients, such as Bach, made inspired pattern music more formal than a Roman mosaic, gray granite music as sombre as Egyptian temples of an incredible date. It was warranted to wear, but not to charm; and, in point of fact, it was not beautiful. By beauty I mean the chord of the seventh as evoked by Felix Mottl, played by Pachmann, or topped by Kubelik; a limited definition of beauty, but a good one.

WOLFGANG MOZART
(E. Thelott)

The classics, excepting the works of Handel and Mozart, contain almost none of this particular beauty, which is a modern discovery. By a logical sequence, now it has been found it is not sought. Most modern composers despise it, I think. Reams have been written about the ugliness composed by Richard Strauss, the cacophony exploited by Tschaikowsky, the meaningless discords arranged for the orchestra by many young composers of to-day, who will be "original" at any cost. (And, after all, one is original by mistake, not by taking thought.) Beauty is too lightly held nowadays. Many modern pianists, for instance, are melodious blacksmiths who tone-paint cart-horse parades. And composers pander to them. Or strictly speaking, Wagner and the composer of the coon-song come nearest the heart of beauty. Yet Zerlina might play Lola to Brünnhilde's Santuzza. After all, Mozart is the only composer who meets the great Richard off his own ground — I refer more especially to the Mozart of opera, who is as fresh as dawn in Morocco and as suave as the scent of Parma violets; that music has the bloomy richness of May, the spring chill, and the delicate heady sweetness of spring flowers. Did not Wolfgang Amadeus compose the narcissus, the violet, the jonquil, the hawthorn, and the scented-geranium leaf? So much I learned long ago from his fiddler descendant, Jan Kubelik.

Yes, I think I must say that Mozart, Wagner, and the composer of the coon-song come nearest the heart of beauty.

CARL ALBERT LOESCHHORN*

THOMAS TAPPER

I

Carl Albert Loeschhorn was born in Berlin on the 27th of June, 1819. At the age of five he began his music studies with his father, and three years later he appeared for the first time in public as a pianist. From this time until he was eighteen years old his general education went hand in hand with his music training.

In 1837 Loeschhorn studied with Ludwig Berger, remaining with him until his death in 1839. Loeschhorn then entered the Royal Institute for Church Music in Berlin, studying harmony and composition with Eduard Grell and A. W. Bach, and piano playing with Rudolph Killitschgy, a talented pupil of his former master Berger. Killitschgy died in 1850, and in the following year Loeschhorn succeeded to his position in the Institute. In 1858 he became a full titled professor.

Teaching was by no means Loeschhorn's only activity. In 1847, in conjunction with Adolph and Julius Stahlknecht, he established in Berlin a series of trio concerts for piano, violin, and violoncello. Their success was great in this enterprise and equally so in a Russian tour undertaken in 1853. In 1862 Loeschhorn collaborated with J. Weiss in the publication of a *Guide to Pianoforte Literature.* In 1885 a revised version was published by Loeschhorn alone, under the title *Führer durch die Klavierliteratur.*

He has composed many works for the piano, most of which are pedagogical, and he has also written vocal pieces and a number of quartets for piano and strings. Loeschhorn was among the founders of the German Association of Organists and of the Association of Piano Teachers. In 1899, his eightieth birthday was celebrated, and he took an active part in the festivities.

II

Among the piano pieces which Loeschhorn has written for children are six sonatinas, two series of pieces entitled *Aus der Kinderwelt*, and a group of studies for beginners, Op. 65. Other technical studies are his Op. 66 and 67; Melodious studies, Op. 38, 193, 194, 195, 196; La Velocité, Op. 136; Universal Studies, Op. 185; Le Trille, Op. 165; and a School of Octaves, Op. 176.

The most popularly used of his writings are the studies in Op. 65, Op. 66, and Op. 67. Of definite purpose, the various studies in each of these three works are short, exceedingly varied, well constructed for both hands, and taken as a group, evenly graded as to difficulty and contrasted as to contents.

The charming musical value of Loeschhorn's writings, combined with definite pedagogic purpose, will always keep his *études* in favor with piano teachers. To play only the three works last mentioned, is to know many short pieces of music, perfect as to form, clear as to meaning, rich in musical content, pleasing to the ear, and never serving a technical purpose to the loss of any one of these features It is in his loyal adherence to the true musical content that Loeschhorn gave great value to these little pieces. He weaves from a brief motive a beautiful prelude (see Op. 65, Nos. 7, 42), or he writes in charming dialogue (see Op. 65, No. 43, E minor). Even an *étude* so definitely technical as the preparatory trill study (No. 36) he varies so delightfully harmonically, that its technical purpose is deftly hidden in the musical setting. Every *étude* in this opus might be quoted as an instance of the value of Loeschhorn's musical feeling combined with his superior musicianship.

To know these exercises will do much for fluent technic, good taste, and musical perception.

The leading characteristic of Loeschhorn's writing is its genuine musical worth. Gifted as Stephen Heller

CARL ALBERT LOESCHHORN

was gifted, he expresses himself as interestingly, as clearly, and as originally.

Every one of the forty-eight studies contained in Op. 65 is a real gem. In the simplest (Nos. 1, 2, and 3) as in those of broader structure (Nos. 42 and 43) there is the same true instinct for clear and natural expression. No better musical studies can be found for imparting true musical sentiment. (Had Loeschhorn followed the example set by Schumann and latterly by Cornelius Gurlitt, and named the separate pieces of this collection, it is not improbable that they would have now even greater popularity.) This is due wholly to the musical unity of the separate numbers. They form the taste, train mind and fingers; they are excellently constructed for memory work; and as illustrations of the Song Forms, to which class they belong exclusively, they are excellent types.

OLE BULL

The great Musician on the platform stood;
I was a youth, the violin my soul;
I longed to make it weep, the heart to stir,
The spirit soothe as with a balm from heaven.
Here was a wizard, who with magic bow
Transformed into a spirit of the Muse
The quick responsive violin. Entranced
By melodies that were not born of earth,
My eyes were closed in an ideal world.
A vision I beheld: The setting sun
Bright messengers of golden light sent forth.
So beautiful the scene it seemed that far
Beyond celestial regions were revealed,
And o'er me an angelic chorus sweetly sang.

Soon in the sky the crescent moon appeared;
The western star shone out with silver light;
Serene, the hallowed poetry of eve!
'Fore me a dark and sad procession passed,
The shades of beings who upon the earth
Saw not the light, their souls enshrouded by
The gloom of disappointed hope. The rich,
The poor, in endless line were moving on.
The light of Faith illumined not their way;
Sad, mournful voices, in low minor strains,
Were softly borne upon the silent air.

The scene again was changed. 'Twas early morn,
The glowing sun ascended in the sky,
'Mid canopy of crimson and of gold.
All heaven was glad, and nature woke with song.
In sweet enchantment I rejoiced; my soul
Was like unto the morn. The joyful birds
Their notes of welcome to the glorious orb
Poured forth responsive to the appearing day.

From this entrancing vision I awoke;
The grand performer still before me stood.
From out the soulful violin he drew
With subtile bow those tones so marvelous
That they from higher realms appeared to flow.
As still enrapt I gazed, with a crescendo
That filled the lofty auditorium,
Like to the genii of an ancient world,
The Master vanished from my sight
Amid the plaudits of the multitude.

High was the flight in thy loved field of art.
While trumpets sounded o'er the earth thy fame,
Dear childhood's land thou didst remember well.
O patriot, Thy worthy countrymen
Were as thy children. Thou, the blessed one,
Didst fold them to thy heart; and through all time
A grateful world will ne'er forget thy deeds.
America will cherish thy fair name,
For thou wast faithful to her cause, and freedom
E'er will bless thy memory. We loved thee,
And we love thee still. Thy soul's undying light
Illumes the world, and never shall grow dim.

— DARIUS COBB, in *Boston Transcript.*

MUSIC AND MUSICIANS

Take men as they are, not as they ought to be.

A mind that is too light generally harbors a heart that is too heavy.

To-morrow I am sure to know something new! Whence comes this?

Contemptible is the grief which stealthily creeps upon a noble heart.

Those who hope will not be confounded, says the Bible, and I firmly believe it.

My productions in music are the product of the understanding, and spring from my sorrow.

With faith man steps forth into the world. Faith is far ahead of understanding and knowledge.

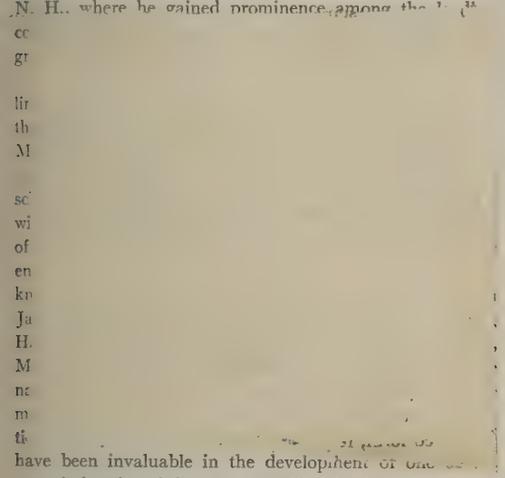
Every man has one part assigned to him — we have had our part given us — and who can say if he has played it well or ill? — FRANZ SCHUBERT.

JOHN C. HAYNES

A BIOGRAPHICAL SKETCH

John Cummings Haynes, music publisher, and now the head of the house of Oliver Ditson Company, is a son of John Dearborn and Eliza Walker Stevens Haynes. He was born in Brighton, Mass., Sept. 9, 1829.

Samuel Haynes, a thrifty farmer, came to America from Shropshire, England, in 1635, in the ship "Angel Gabriel," which was wrecked on arrival at Pemaquid, Me. Two years after coming to this country he returned to England, to fulfil his engagement with Miss Ellenor Neate, to whom he was married at St. Mary's Chapel, Dilton, Wiltshire County. They returned together to the United States, and settled at Strawberry Bank, now Portsmouth, N. H., where he gained prominence among the [illegible]



have been invaluable in the development of one [illegible] great industries of the country. The death of the famous founder of the business, Oliver Ditson, in December, 1888, led to the formation of a corporation consisting of the remaining partners of the firm, Mr. Haynes and Charles H. Ditson, son of Oliver Ditson, and the executors of the Ditson Estate. Several of the best of the young men who had grown up in the business were also, through the influence of Mr. Haynes, admitted as stockholders. The corporation was organized under the laws of Massachusetts, as The Oliver Ditson Company. Mr. Haynes is its president. Headquarters are occupied in the large building, 150 Tremont St., in Boston, and branch houses are maintained as follows: Charles H. Ditson & Co., New York, and J. E. Ditson & Co., Philadelphia.

The growth of this mammoth publishing house has been coincident with the progress of musical taste, culture, and education in the United States, while its influence in the promotion of these refining art factors can scarcely be estimated. The large and valuable house of the New York city branch, corner of Broadway and Eighteenth St., was erected under Mr. Haynes' direction. The Philadelphia store is located at 1632 Chestnut St.

Mr. Haynes' large and successful real estate ventures have placed him in possession of many valuable properties, which materially add to the assessed valuation of Boston. His self-elevation to prominence among the leading business men and financiers of the renowned old city is an example for all young men who are struggling for a foothold in life. Beginning in the humblest manner as an errand boy, he secured his employer's confidence by unremitting energy and attention to the business; and by making himself invaluable in the furtherance of that gentleman's interests, rose step by step to higher positions. When he began his career, the business was yet in its infancy. He is now one of the fathers of the great music publishing business of the United States.

It has been said of Mr. Haynes: "He is a rare judge of character; and this is specially evident when one considers the men whom he has placed in charge of his many ventures. He selects with a discriminating and almost unerring eye, and then throws the entire responsibility of labor upon the person selected. This places men upon their mettle; and while they feel that the chief has an eye upon their work, they also know that he never interferes with what they have in charge. He has so much to attend to in looking after results that he is forced to leave details to his subordinates. The love which his employees bear him is proof of the cordial respect and esteem which he has created among those who surround him in various capacities. Personally, he is one of the most genial and approachable of men. He is ever ready to listen when appealed to, and his sure and ripe judgment never fail to solve a proposition placed before him."

When a young man, Mr. Haynes assisted in organizing The Franklin Library Association; and his part in its debates and literary exercises for many years was of great advantage to him in his early training and culture. He is a life member of the Mercantile Library Association, the Young Men's Christian Union, the Woman's Industrial Union, and the Aged Couple's Home-Society, one of the trustees of the Franklin Savings Bank, a director in the Massachusetts Title Insurance Company, and a vice-president and director of the Massachusetts Homeopathic Hospital. He was for many years treasurer, and now is a director, of the Free Religious Association of the United States. The Massachusetts Club, the Home Market Club, and the Boston Merchants Association claim him as a member also. He was president of the Music Publishers' Association of the United States, which has been in existence about thirty-five years, and during all this time has been an active and influential member.

In religious, social, political, and scientific subjects Mr. Haynes has always displayed a lively interest. For many years he was president of the Parker Memorial Science Class, which held its sessions every Sunday during eight months of the year. In 1848, after having been a pupil in one of Boston's Baptist Sunday Schools, he became interested in the preaching of Theodore Parker. About two years previously the Twenty-eighth Congregational Society was organized, "to give Theodore Parker a chance to be heard in Boston." Mr. Haynes served for many years as chairman of its standing committee, and in later years took an active part in the construction of the Parker Memorial Building. He was largely instrumental in its transfer to the Benevolent Fraternity of Churches in Boston, the object of this transfer being to perpetuate the memory of Theodore Parker in charitable, educational, and religious works. He was one of the organizers of the Parker Fraternity of Boston, which was for many years a powerful social and religious society. The Parker Fraternity Course of Lectures, initiated by this society, because of the exclusion of Mr. Parker from the lecture platform of Boston, was sustained for nearly twenty years, and was conspicuous for its influence in molding and directing public opinion, especially during the War of the Rebellion, and the years of reconstruction immediately following. In the first course, in 1858, Mr. Parker delivered his celebrated lectures on Washington, Franklin, Adams, and Jefferson.

In late years Mr. Haynes has been connected with the Church of the Unity, of which Rev. Minot J. Savage was the minister, and with the South Congregational (Unitarian) Society, of which Rev. Edward Everett Hale and Rev. Edward Cummings are the ministers.

Mr. Haynes joined the Free Soil Party when a young man, casting his first presidential vote in 1852, for John P. Hale. Following his party into the Republican ranks, he is still identified with it. He was a member of the Boston Common Council during four important years, — 1862–'65, — and during that time made strenuous efforts to further such plans and incidental legislation as should enable Boston to furnish its quota of volunteer soldiers for the suppression of the Rebellion. Mr. Haynes also refers with justifiable pride to his strenuous advocacy of a measure, which shortly became successful, to secure the opening of the Public Library on Sundays. Since then he has often been solicited to assume public office, but has declined. He is a generous patron of many of Boston's charitable, educational, and business associations.

Mr. Haynes is a man of strong physique, alert mind, fine character, and refined taste. His influence in promoting musical culture throughout the country, as well as in developing the business of his great publishing house, is inestimable.

In May, 1855, Mr. Haynes was united in marriage to Fanny, daughter of the Rev. Charles and Frances Seabury Spear. Theodore Parker performed the marriage ceremony. Of this union were seven children: Alice Fanny, now Mrs. M. Morton Holmes; Theodore Parker, deceased; Lizzie Gray, now Mrs. O. Gordon Rankin; Jennie Eliza, wife of Frederick O. Hurd, deceased; Cora Marie, now Mrs. Isaac W. Crosby; Mabel Stevens, and Edith Margaret, now Mrs. Fred H. Pratt. As the result of these marriages, there are now eight grandchildren, the oldest being Rev. John Haynes Holmes, a successful minister of one of the Unitarian societies of Boston.

ANSWERS TO QUERIES

W. D. D., Ottawa, Kansas.

1. The syllable names of the ascending chromatic scale, in most common use at present, are do, di (dee), re (ray), ri (ree), mi (mee), fa, fi (fee), sol, si (see), la, li (lee), ti (tee), do. In descending succession there is some difference in usage; the general rule being, however, to indicate flats by the vowel *e* (pronounced *a*), thus: do, ti (tee), te (tay), la, le (lay), sol, se (say), fa, mi, me (may), re, ra, do.

This gives a name to every tone that is likely to occur; "sharp five," as you call it, is si (see).

2. The C clef was used very frequently indeed, in earlier days, for the notation of vocal parts. There were three different C clefs, one for tenor, one for alto, and one for treble (or soprano), in each of which the clef sign indicated the middle C of our piano keyboard. The one most commonly used nowadays is the alto C clef, in which the middle line indicates the C. It is employed almost altogether for the viola part. The tenor C clef is the one you have probably encountered in the violoncello part. There is no other reason for the employment of the various C clefs than that of convenience; they are so chosen as to correspond as nearly as possible to the compass of the required voice, or instrument, so that but few leger-lines need be used. That is the reason why the G clef (for the right hand in piano music) is generally called the violin clef. With the sign to indicate the middle C, these clefs are just as easy to read as the G or F clef; you simply reckon up and down from that C, — which is always placed on a line, as you see. Of course it takes time to become so familiar with the C clef that one can read them readily.

3. There is no essential difference between 6–8 and 6–4 measure. In one the eighth notes, in the other the quarter notes, are beats; but the accents lie at the same points in each. Probably no composer could give a really good reason for choosing between them; it is generally a purely arbitrary choice. At the same time, 6–4 *looks* broader, and is (perhaps) a little more likely to represent six individual beats, whereas 6–8 measure is very often indeed counted as if it were 2–4, each beat as triplet.

J. H. S., Elgin.

Your question seems to mean: Is a succession of diminished seventh chords correct, if the final one is properly resolved? The answer is yes, if the connections are smoothly made. In elementary harmony it is wise, and doubtless necessary, to limit the successions of chords to those harmonic bodies that are related, and to diatonic movements generally. For a time, the student must regard certain chord progressions as natural and permissible, and others as unnatural and not permissible (for him). For the *related* progressions, in diatonic succession, are, for all time, the basis of harmonic movements, and must therefore be thoroughly mastered. But in advanced harmony the statement becomes true that *any* chords may be connected, regardless of relation, — if one knows how to do it. The permanent rule is smooth part-leading. The chromatic movement, alone, makes every conceivable chord succession possible.

Returning to your question, then, it is evident that the chords you name may be connected, if properly handled. One must therefore see the notes before giving a definite answer.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

THE MAGIC PEDAL, THE SOUL OF THE PIANOFORTE—II

MARY VENABLE

GRADUAL DEVELOPMENT OF MODERN PEDAL USAGE

"All good things are threefold," says the old proverb. In modern pianos there are usually three pedals, called respectively, First, Damper Pedal or simply Pedal; Second, or Soft Pedal; Third, *Sostenuto* or Sustaining Pedal. The damper pedal is at the player's right and when pressed raises the dampers collectively. The soft pedal

is that on the left. If one should ask, "What are these, and what are they for?" fifty out of a hundred music students and ninety-nine per cent of the laity would answer, "The one on the right is the loud pedal and is used for loud playing; the one on the left is for soft playing." These are only rudimentary uses of the pedals, and are not even the most important ones. The term "loud pedal," never correct, is not appropriate; for the damper pedal, although often used to strengthen the sound, has besides many other important uses. One of these is in connection with the soft pedal in *pianissimo* passages, to give the tone warmth and color.

It is true that when the art of piano building was in its infancy, the main service performed by the damper pedal was to increase the volume of sound. The tone of the early pianos was weak and evanescent, and the sympathetic vibration of all the strings was needed often. Thinness of harmony and dryness of melody would have resulted from a too frequent application of the dampers to the strings. Even as late as the beginning of the nineteenth century all the dampers were frequently raised above the strings for many measures, regardless of the slight blurring of melodic tones, and the discordant harmonies which resulted. Beethoven himself used the pedal freely, in order to obtain the best effects of tone-sustaining and songful *legato*. He told Czerny that he had once heard Mozart play the piano; that his touch was delicate, but that he had a choppy style and no *legato*. This may have been caused by the action of the piano played by Mozart, which made strict *legato* impossible. The remark gives us an idea of Beethoven's great fondness for *legato*, in imitation of the organ effects which Czerny says Beethoven seemed to produce in his playing.

Czerny writes to Cocks, a London publisher, "*Legato* in *cantabile* on the piano was at that time unknown. Beethoven was the first to discover entirely new and impressive effects on that instrument." That this new *legato* playing was undoubtedly produced with the aid of the pedal, we can have no doubt, as Czerny says that "Beethoven, in playing the Largo of his C minor Concerto, allowed the pedal to remain down throughout the whole theme. This could have been done very well on the weak-sounding pianos of that time (1800), especially when the *una corda* pedal was also used. Now, as the tone of the modern piano has become much stronger, we should advise a renewed pressure of the pedal at every important change of the harmony, so that no defect may be noticeable in the sound."

Beethoven — *Concerto in C minor*

A use of the pedal such as this, in *cantabile* passages, would on our twentieth century full-toned pianos cause a blurring of the melody and a confusion of the harmonies which would be a barbarous violation of good taste. In Beethoven's day it was the only way in which to obtain a good *legato*. From what Czerny says we understand that in Beethoven's music the pedal should be used as in other works, to sustain the harmonies and to connect melodic tones. This manner of playing is indispensable in *cantabile* passages and movements, if the intention of the composer is fulfilled.

Besides the absolute *legato* required by the *cantilena*, in this slow movement from the C minor Concerto, the tones of the accompanying voices should be sustained (by means either of the fingers or of the pedal) in imitation of a string quartet or of an orchestra. The composer did not intend that more rests should be made than he has written down, yet the enormous technical

difficulty of connecting with the fingers all the tones of the different voices is such that special attention should be paid to this branch of pianoforte playing, which is of much *musical* importance. Sustaining of tone by means of the fingers is often obligatory for the purpose of obtaining purity of the melodic tones.

A marked improvement in the efficiency of the pedal which came about shortly after the beginning of the nineteenth century was accompanied with a greater reserve in its use. This became more and more necessary as the tonal power of the piano increased. Subsequently usage established the custom of renewing the pressure of the pedal with every measure, although changes in harmony and dissonant tones in the melody were still disregarded, as they were not unpleasantly obvious. The following example is taken from an old edition of Beethoven's Sonata in D major, Op. 10. The use of the pedal indicated in it, although satisfactory in its time, is an impossibility to-day.

Beethoven — *Largo from D major Sonata, Op.* 10

The next step towards our modern standard of pedal usage was to renew the pedal pressure

with every important harmonic change, although melodic purity was still disregarded. This manner of pedaling, begun in Czerny's time, was long continued. Numerous examples may be found in most editions of Field's *Nocturnes*, Heller's Studies, Henselt's works, and in hundreds of other compositions in editions which, but for the pedal marks, are still good. *Apropos* of this stage of pedal development are the pedal marks in the following composition: —

Field — *Nocturne in E flat*

While it is largely due to the continually increased sonority of the piano that pedal marks, which were once approximately satisfactory, can no longer be relied upon to assist the player, there is another prolific source of incorrect pedal notation. It is, the exceeding labor and difficulty of indicating with accuracy the exact moment of pedal attack and pedal release. Rubinstein's solution of this problem was to rely upon the musicianship of the performer. He therefore left his compositions as bare of marks of any kind as are those of Bach. Liszt, however, often indicated the use of the pedal, and always with exceeding nicety and power. Many modern composers imitate him in this, notably Sgambati and Chaminade, but unhappily the majority of composers and editors are even in this latter day careless in their pedal notation. For instance, if one should follow the marks of pedal and star found in the most recent Peters' edition of Meddelssohn's *Song without Words*, in E flat, Op. 67, he would, on the modern piano, produce a most unmusical blurring of the melody.

Mendelssohn — *Song without Words in E flat*

This is also true of the *Song without Words*, in F major, Op. 85. The pedal is indicated in such a manner that a faithfu. following of the marks with a modern piano would produce the very bad effect of blurring the tones of the melody, many of which are foreign to the harmony. A much more discreet use, which will avoid such blurring, can be adopted only in combination with a well-thought-out sustaining bass, upper bass, and harmony tones. This can be done by substituting one finger for another on a key, without allowing the key to rise, and so sustaining as many tones as possible with the fingers, while the pedal is used as often as necessary to avoid blurring the melody. If this sustaining of all the tones of the harmony, as indicated by the composer with pedal marks, is not obtained, the effect is dry and fulness of harmony is sacrificed.

The plan above mentioned is the only means to solve the hard problem which confronts the modern player in almost every piece; namely, to avoid sacrificing either the richness of harmony or the clearness of the melody. This perplexes the composer or editor so that he either marks the pedal entirely too much, or not at all. In any case, the player must have sufficient experience to divine the intention of the composer, and to treat the pedal, in combination with the touch, in such a way that the intended effect is satisfactorily produced, while all blurring of tone is avoided.

The best pianists of to-day, in playing *cantabile* passages, blur neither the melody nor the harmony, but manage by a judicious use of the fingers as well as of the pedal, to render the harmony rich and the melody pure.

(To be continued)

ANSWERS TO QUERIES

Miss P. F. P., Beacon, Ia.

There are, as you say, only two kinds of "time" or measure, the duple and the triple species. In duple measure there are two beats in each group, the first one accented and the other light or unaccented; in triple measure there are three beats, one accented and the other two both unaccented. If the measures contain no more than one group (of either two or three beats), they are called simple; if they are multiplied, so as to embrace more than three, — say four, six, nine, or twelve beats, — they are called compound measures. Simple measures, therefore, are such as contain only one accent; compound measures contain as many accents as there are groups. Four beats in a measure (sometimes called quadruple measure, but needlessly) result, always, from joining two duple groups, as in 4–4, which is simply twice 2–4 measure, with accents upon the first and third beats, — precisely as if one bar had been omitted. Six beats in a measure always result from joining two triple groups; your 6–8 is twice 3–8 measure, and therefore the accents fall upon the first and fourth beats. 6–4 is twice 3–4. 9–8 is three times 3–8, with accents upon the first, fourth, and seventh beats. 12–8 is twice 6–8, or rather, four times 3–8, with beats 1, 4, 7, 10 accented. 2–4 and 2–2, 3–4, 3–2, and 3–8 are simple measures, with one accent each, always upon the first beat. There is also such a thing as 5–4 measure, and even 7–4; but they are rare. They are called mixed measures, and result from joining duple and triple groups, with accents accordingly.

T. E. B., St. Paul, Minn.

1. The triplet-cadenza in the *Gondoliera* of Liszt should be so played as to sound like *triplets*. You will observe that the passage is a series of three-tone groups: —

Had Liszt intended them to sound that way, he could much more easily have written the passage in simple thirty-second-note groups. But he desired to obtain the interesting effect known as "shifted rhythm," and therefore not only carefully noted the triplet-groups, but persistently repeated the triplet sign. The accentuations must be very light, but must bring out the triplet arrangement distinctly. In listening to a pianola performance of this piece, you forget, perhaps, that a pianola makes no accents at all.

2. Chopin's Scherzo in B flat minor is generally played about ♩.=100, or a little less.

M. M. J., Grandview.

1. The 3rd, as it appears in the major scale (from key-note up to third step, C-E, for instance), is the major form. One contraction gives the minor form; one more contraction gives the diminished form. From G flat, the major 3rd is therefore B flat, the minor form B double-flat, the diminished form B triple-flat. From A, the major 6th is F sharp; from A sharp it is therefore F double-sharp; the augmented 6th, being an expansion of this, would be F triple-sharp. Uncommon, no doubt; but surely *possible*.

2. Modern theory recognizes no chords of the "eleventh."

3. The diminished 7th chord has more "resolutions" than any other chord in music. See Goetschius' *Material used in Musical Composition*, Example 149, and paragraph 311.

4. Every chord, common or "uncommon" (whatever those terms may mean), bears a relation to the key in which it occurs, — of course; also bears some relation to the chords which precede and follow it, — excepting when the progressions are chromatic. Chromatic progressions sever what might be called the tonal relation of one chord to the other. See *Material*, paragraph 296.

5. The harmonic analysis of good music is always extremely instructive.

6. There are no "hard-and-fast" rules in any art. A rule is merely a statement of what is done in the *majority* of cases.

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"Only such qualities as may be claimed for *instrumental* music are valid for the art of tone, as such. Any efforts to probe a general distinctness of music, to characterize its essence and its nature, to fix its boundaries and define its trend, must necessarily refer to instrumental music. If there is anything that instrumental music cannot do, it must never be declared that 'music possesses the power to do it'; for the former alone is the pure, absolute Art of Tone. . . . Association with poetry increases the might of music, but does not extend its bounds." — HANSLICK, *The Beautiful in Music*.

PRACTICAL ACOUSTICS—III

SMITH N. PENFIELD

I

Let us now inquire how musical tones are produced. A single shock is not sufficient. There must be a regular and rapid series of sonorous shocks lasting for at least a perceptible length of time. The piano wire will not instantly come to rest. A tuning-fork rapped hard and held to the ear will continue its sound for two to five seconds.

Musical instruments may be classed as follows: 1, stringed instruments played by percussion (pianos); 2, stringed instruments played by plucking (harp, guitar, mandolin, banjo, zither, the old-time harpsichord, etc.); 3, stringed instruments played with a bow (violin, viola, violoncello, double bass, etc.); 4, flue wind instruments (flute, piccolo, fife, all organ pipes except the reeds); 5, reed instruments (oboe, bassoon, clarinet, English horn, saxophone, all brass instruments, cabinet organ, all reeds of pipe organ, the human voice); 6, percussion instruments (tympani, triangle, xylophone, glockenspiel, etc.)

In instruments of first two classes the string is forced suddenly to one side, then recovering its position by its elasticity moves practically as far in the opposite direction then again in the first direction, continuing thus to vibrate to and fro until the effect of friction brings it to rest. In all of these instruments there is but a single impulse given by hammer, finger, or plectrum for each tone, this tone continuing with a diminuendo till the string come to rest. Consequently the tone has its greatest intensity at its commencement. A crescendo is impossible on any one tone.

In the third class a resined bow catches the string drags it to one side till its elasticity forces it to swing to the opposite, again catches and drags it, again it recovers. Thus the motion and consequent tone is continuous till the bow ceases to move. A crescendo or other modification of the tone is thus always possible.

In instruments of the fourth class there is an enclosed column or body of air set into vibration simply by the force of a small stream of air under pressure, this latter acting upon the enclosed air somewhat, like a bow upon a violin string, the tone continuing till the flow of force or air ceases. In flue organ pipes the tone is thus formed. The air is forced up from the wind chest, through a tube called the foot, into a small chamber in bottom of the pipe, and thence out through a narrow horizontal slit called the mouth. The upper side of this mouth is sharpened to an edge, and the wind emerging strikes against this sharp edge, part passing out and part up into the pipe. This produces a fluttering or vibration which is communicated to the air column within the pipe and produces the tone. In the case of the flute and fife the breath of the player is forced across and partly into the enclosed column of air, setting the latter into vibration, the pitch being given by practically lengthening or shortening the tube by use of finger holes and keys.

In the fifth class the tone is directly given by the vibration of reeds or what answer for these. In the cabinet organ and the reed stops of pipe organ these are little tongues of brass. In the clarinet and saxophone they are tongues of thin cane. All these reeds are placed over little rectangular orifices, are fastened at one end, and they nearly or quite fill the orifices. The loose end of the reed stands a little out, but is forced by the wind against or into the orifice, thus cutting off the supply of wind. Its elasticity forces it back and a little too far.

But these vibrations of wood, metal, catgut, lips, membranes, parchment, or even of enclosed air, are not sufficient to make effective tones and consequent music. These tones must, in most cases, be reinforced by sympathetic vibrations of some more sonorous body.

This brings us to the important subject of Resonance, which is defined thus by Worcester: "The property of sonorous bodies, by which they vibrate in unison with the vibrations of other bodies and strengthen the original tone."

The Germans have the expressive term, *Mitschwingung*. A tuning-fork agitated and held in the hand is not audible unless put close to the ear, but if stood by its handle on a shallow, wooden box, preferably open at one end, its tone will ring out loud, especially if agitated by a resined violin bow.

A violin string may be properly stretched between two points, representing the nut and the bridge on a cloth-covered table and the bow applied. Nothing is heard. Take the cloth away and again stretch the string, and a faint musical tone is heard. The dummy violin is on this principle. But the body of the violin, made of choicest wood, with the enclosed air, constitutes a sonorous body, which immensely increases the tone.

Piano strings stretched between pins in an iron frame and beaten by the hammers, give but the faintest tone, but with these pins set into a frame resting on a homogeneous wooden sounding-board, every part of this board gives out vibration to the air, and the tone takes on volume and beauty. The harp has a sounding-board in its main upright.

A reed of clarinet, oboe, or bassoon, away from the body of the instrument, would give no tone, but reinforced by the tube and its enclosed air, the tone is rich and full. So with the reed stops of the pipe organ (trumpet, vox humana, and others), that have little vibrating tongues.

The vibrations of the lips in cornets, horns, trombones, and other brass instruments, forming a reed, are reinforced by the column of air in the tube, and this again reinforced as in the trumpet and other reed stops of pipe organ by the growing diameter of the tube, and finally flaring out at the extremity or bell, giving bigness of tone on the principle of the megaphone.

The vibration of the vocal cords is communicated to the air of mouth and throat, and this constitutes a great resonance box, the reverberation of which enables one to speak or sing and fill the largest auditorium with sound.

ELEMENTARY GERMAN

A. RHEINGAUER

LESSON XXXVII

To address a friend in a letter say, —

Lieber Freund for *dear friend* (masc.).

Liebe Freundin for *dear friend* (fem.).

Nom. *Der nächste Donnerstag*, next Thursday.

Dat. *Dem nächsten Donnerstag*, (to) next Thursday.

Am (= *an dem*) *nächsten Donnerstag* (next Thursday) answers the question *wann?* when?

In meinem Hause (dative), at my house.

Einladen (to invite) is a compound with a separable prefix. Therefore: —

Ich lade Sie ein, I invite you.

In a participial clause the participle stands last. Ex: —

Auf Ihre Zusage hoffend hoping for your promise to come.

Treue Freundschaft (nom. and acc.), true friendship.

In treuer Freundschaft (dative), with true friendship.

Mrs. Weber writes to Miss Hill as follows:—

Liebe Freundin!

Am nächsten Donnerstag gebe ich in meinem Hause ein Konzert. Ich lade Sie hiermit freundlichst dazu ein und verbleibe auf Ihre Zusage hoffend in treuer Freundschaft.

Ihre.

Boston, den 1. Februar 1900. Laura Weber.

VOCABULARY

To be committed to memory

Geben, to give; *einladen*, to invite; past part. *eingeladen; Sie* (nom. and acc.), you; *hiermit*, herewith; *freundlichst*, most cordially; *dazu*, to it; *die Zusage*, the promise to come; *hoffen auf* (with acc.), to hope for; *verbleiben*, to remain; *treu*, true; *Freundschaft* (f.), friendship.

Translate

1. I am going to give a concert next Thursday. 2. I have invited Miss Hill. 3. I am hoping for her promise to come. 4. I shall also invite Miss Döring

LESSON XXXVIII

Ihre freundliche Einladung (nom. and acc.), your kind invitation.

Annehmen (to accept) is a compound with a separable prefix. Therefore: —

Ich nehme die Einladung an, I accept the invitation.

Nicht (not) goes before the past participle or infinitive to the end of the sentence. Ex.: —

Ich habe die Einladung nicht angenommen.
I did not accept the invitation.
Ich werde die Einladung nicht annehmen.
I shall not accept the invitation.

At the end of a letter say: —
Ihr treuer (*Freund*) for *your true friend* (masc.).
Ihre treue (*Freundin*) for *your true friend* (fem.).

Miss Hill replies to Mrs. Weber's letter as follows: —

Liebe Freundin!

Ihre freundliche Einladung habe ich heute erhalten. Ich nehme sie dankend an und verbleibe unter vielen Grüssen.

Ihre treue
Boston, den 2. Februar 1906. Lida Hill.

VOCABULARY

To be committed to memory

Die Einladung, the invitation; *freundlich*, kind; *annehmen*, to accept (past part. *angenommen*); *sie*, it (the invitation); *dankend*, with thanks; in a letter: *Grüsse* (plural of *Gruss*, m.), compliments, regards; *unter vielen Grüssen*, with kind regards.

Conjugate

Ich habe die Einladung nicht angenommen.
Ich werde die Einladung nicht annehmen.

Translate

1. I have received a letter from Miss Hill. 2. She has received my invitation. 3. She has accepted it. 4. I have not invited Miss Döring as yet (*noch nicht eingeladen*), but I shall invite her to-day.

LESSON XXXIX

The preposition *zu* governs the dative. Ex.: *Zu ihrem Konzert*, to her concert.

Zu of *um zu* (in order to) used with a separable verb goes between the prefix and the verb. Ex.: *Um sie einzuladen*, in order to invite her.

Sie (you) always begins with a capital; *sie* (she or her) begins with a small letter except at the beginning of a sentence.

Read and translate

Fräu Weber schreibt auch an Fräulein Döring, um sie zu ihrem Konzert einzuladen. Die Antwort auf dieses Einladungsschreiben finden wir in der nächsten Lektion.

VOCABULARY

To be committed to memory

Schreiben an (with acc), to write to (past part. *geschrieben*); *um zu*, in order to; *zu* (with dative), to; *die Antwort auf* (with acc.), the answer to; *ihr* (m.), *ihre* (f.) *ihr* (n.), her; *das Einladungsschreiben*, the letter of invitation; *finden*, to find.

Translate

1. I have also written to Miss Döring. 2. I invited her, too. 3. I hope she will accept the invitation. 4 We shall find her answer to my letter of invitation in the next lesson.

LESSON XL

Both *zu* and *mit* govern the dative. Ex.: —
Zu meinem Bedauern, to my regret.
Mit bestem Gruss, with best (kind) regards.

The *Present* is often used instead of the *Future*. Ex.: —
Morgen kann sie nicht abkommen.
To-morrow she will not be able to get away.

The infinitive with *zu* is often the direct object of a verb. Ex.: —
Ich hoffe Ihnen persönlich danken *zu können.*
I hope to be able to thank you personally.

Danken (to thank) takes the dative of the person. Ex.: —
Ich danke Ihnen (dative of *Sie*).
I thank you.

Miss Döring replies to Mrs. Weber's letter as follows: —

Liebe Freundin!

Zu meinem Bedauern kann ich am nächsten Donnerstag nicht abkommen, hoffe jedoch, Ihnen bald persönlich für die freundliche Einladung danken zu können.

Mit bestem Gruss verbleibe ich

Ihre aufrichtige
Boston, den 3. Februar 1906. Anna Döring.

VOCABULARY

To be committed to memory

Das Bedauern, the regret; *können*, to be able; *jedoch*, however; *bald*, soon; *persönlich*, personally; *einem* (dat.) *danken*, to thank some one; *für* (with acc.), for; *best*, best; *aufrichtig*, sincere.

Translate

1. I have just (*soben*) received a letter from Miss Döring. 2. She cannot (*kann nicht**) get away now. 3. She will soon come to see me. 4. I shall write her (*ihr*) to-day.

**Nicht* (not) goes before the infinitive.

THE ELEMENTS OF COUNTERPOINT

PERCY GOETSCHIUS, MUS. DOC.

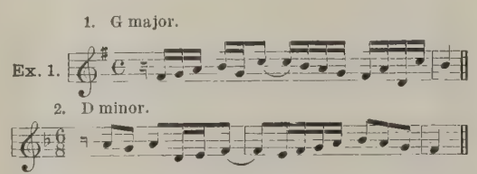
LESSON XI

The practical application of principles of two-voice counterpoint is best effected, by the beginner, in the manipulation and development of a *Motive*. To this culmination of our exercises the thoughtful student has no doubt been looking forward for some time; for every line of study must lead to some ultimate practical purpose, and even general training will finally centralize in some special object.

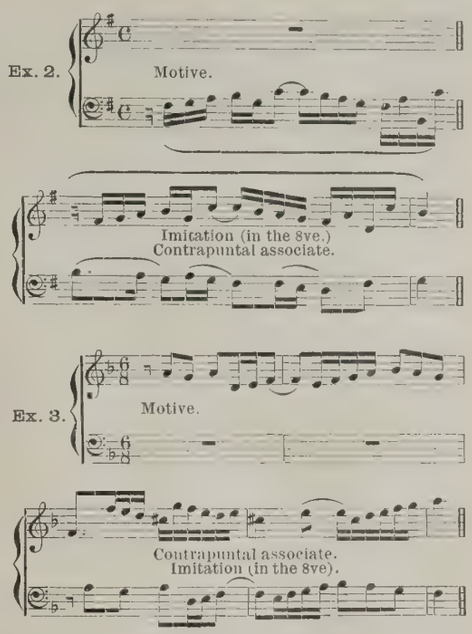
The general aim of counterpoint, as often stated, is the association of melodies, or the multiplication of melodic lines by harmonious cooperation. But the mere increase of the number of melodic parts is, in itself, no guaranty of artistic structure; on the contrary, it may easily tend to render the structure complex and obscure, and defeat the artistic purpose by diffusion instead of concentration. Multiplicity of tone lines may so divide the hearer's attention as to destroy his sense of the principal line or lines of the musical picture.

The necessary concentration is gained by the adoption of some striking motive, or leading figure, which is held more or less constantly before the hearer's mind, as the ruling idea — the principal line — to be developed. Very many devices are employed in this process of development; for the explanation of these, the student is referred to standard text-books; only the most natural and fundamental method can be considered in this lesson.

A motive is a brief melodic sentence, usually no more than one or two measures in length; of simple, regular, but somewhat striking character. It may begin at any point in the measure, and with any tone which indicates or suggests the tonic (key-note) chord of the key; it generally ends upon an accented beat, with some tone of the tonic (or, more rarely, the dominant) chord. It is chiefly necessary to provide for a clear *tonic* impression at, or near, the beginning. For illustrations of the motive the student is referred to the Two-voice and Three-voice Inventions of J. S. Bach, almost all of which begin with the "motive," in the first measure or two; sometimes it appears alone (as in Nos. 1, 2, 3, and 4 of the Two-voice Inventions), and sometimes it is accompanied by a *lower* part (as in Nos. 1, 2, 3, and 4 of the Three-voice Inventions). To these, which the student should examine most minutely, we add the following, for use in this lesson: —



The simplest method of utilizing such a motive consists in what is called its *Imitation;* that is, its recurrence in another part. The adopted motive is first announced, generally alone, in either the upper or the lower one of the two parts of which the contrapuntal sentence is to consist, and is then taken up — or "imitated" — by the other part; usually upon the same beats of the measure as at first, and upon the same steps of the scale, either an octave higher, or an octave lower, than before — as the case may be. Such a recurrence is called the "imitation" in the octave. Meanwhile, *the first part continues its melodic movement*, as counterpoint to the motive in the other part. This is called the "contrapuntal associate," and is made according to the principles explained in the foregoing lessons (particularly Lesson X, with reference to the rhythmic treatment of the two parts). These points are all illustrated and indicated in the following examples: —

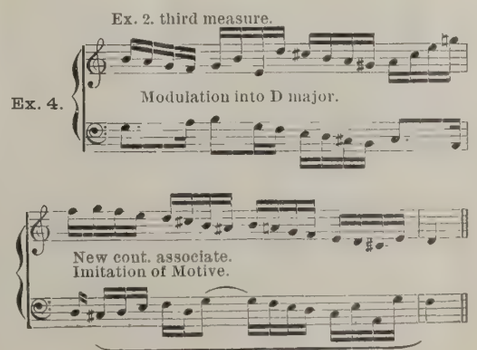


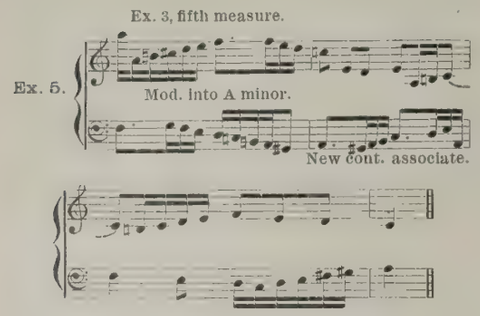
As a means of obtaining a better grasp of these important preliminary steps, the student may rewrite these two examples, reversing the order of the parts, thus: begin Ex. 2 in the upper part (an 8ve higher), imitate in the lower, and invent a new contrapuntal associate (above), in a different melodic and rhythmic form from that here shown; and begin Ex. 3 in the lower part, with imitation in the upper, and a new contrapuntal associate.

Also examine the first few measures of the Two-voice Inventions of Bach, Nos. 1, 2, 3, 4, 7, and 8; observe the manner of imitation (in every case in the lower part), and carefully analyze the formation of the contrapuntal associate.

In No. 10 of these Inventions, the imitation of the motive (second measure, lower part) is not in the octave, but a fourth below the original tones. From this it will be inferred that the motive may recur upon any steps of the scale which may prove to be convenient for the purpose. The imitation in the octave (upon the same steps) is, however, by far the most common at the *beginning;* while other steps of the scale are likely to be chosen for the reappearances of the motive from time to time in the later course of the sentence.

Should the student desire, for instance, to carry on the manipulation of the above motives a few more measures, the following design would be commended: after the imitation is finished, devote one measure to a modulation into the Dominant key, and there make a third announcement of the motive (in the part which began). Thus: —





The observant student will probably realize that the object and the labor of this exercise centres in the formation of the *contrapuntal associate;* and this is a task for which the past lessons in counterpoint must have prepared him. The difference between his preceding exercises and the counterpoints shown in this lesson appears much greater than it actually is; it is merely a difference in rhythmic appearance, and is not at all of an essential character. Close comparison with the rules and illustrations given in Lesson X will prove this. If any additional directions are necessary, they are comprised in the following general rule: Be sure that some good interval appears (or is understood) at the accents, and at strong beats in general; lead the two parts smoothly to these points, maintaining a uniform rhythmic effect, and alternating (or combining) the shorter note values so as to obtain a good rhythmic form in *each separate part.* To test this rule, analyze the contrapuntal treatment of every measure in all of the Two-voice Inventions of Bach.

EXERCISE. — Manipulate each of the following motives in the manner shown in Exs. 2, 3, 4, and 5. Each motive twice, beginning first as upper, and then as lower, of the two parts: —

Besides these, invent a number of original motives, closely imitating the character of the above, and manipulate them in the indicated manner.

A conservatorium has been opened at Bonn under the direction of Frl. A. Ziskoven. Most of the teaching staff come from Cologne. There are already over a hundred pupils.

* *

Arthur Shepherd of Salt Lake City, and also well known in Boston, won the prize in Class I of the recent Paderewski Prize Competition. His work was an overture entitled *Joyeuse.*

* *

An article appeared in *Die Musik* (November 15), entitled *Ein vergessenes Streichquartett Beethovens*, by Prof. Dr. Wilhelm Altmann. The composer, in a letter to Breitkopf & Härtel in 1802, states that he has transcribed one single sonata of his for strings. There have been various references to this in books and catalogs, but no details ever given either of the original Breitkopf & Härtel edition, or even of the new Simrock one edited by Nottebohm, in 1875. Professor Altmann came across the original edition at the Berlin Royal Library, and the work will appear in the forthcoming Beethoven Supplement (B. & H.). Professor Altmann already gives the finale in *Die Musik.* The sonata in question is the one in E, Op. 14, No. 1, but in its transcribed form it appears in the key of F.

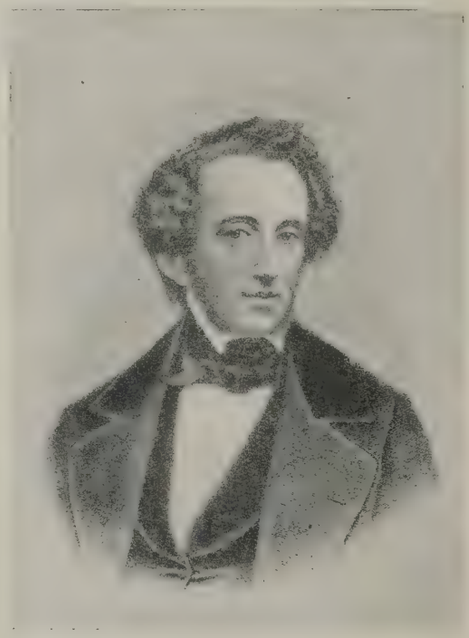
TENNYSON AND MENDELSSOHN

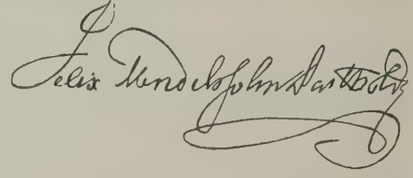
MRS. J. J. BAKER

I

While the boy, Alfred Tennyson of Lincolnshire, was writing verses in his father's flower garden, young Felix Mendelssohn was applying the rules of counterpoint to his first quartet for piano and strings. When fifteen years of age Tennyson published with his brother Charles the now rare volume *Poems by Two Brothers;* and Mendelssohn brought out his quartets and two sonatas.

The Lady of Shalott, Œnone, The Lotos-Eaters, and other poems met with so scathing criticism that the poet ventured no further effusion during a period of ten years. Mendelssohn's *Reformation Symphony,* ruthlessly rejected by the Paris Orchestra, was neither performed nor published during the musician's lifetime.





In the interval of the poet's silence, Mendelssohn's superb overture *Midsummer Night's Dream* burst on the world with startling brilliancy. Macfarren says, "No other piece of music contains so many points of harmony and orchestration that had never been written before." The magnificent *Hebrides* overture grew from a melody descriptive of the Fingal Cave. The sweet legato music of the Forty-second Psalm was written during Mendelssohn's wedding journey.

Such poems as *Morte d'Arthur, Locksley Hall,* and that plaintive song *Break, break, break,* drew from Wordsworth the eulogy, "First of our young poets!" The supremacy was soon acknowledged by the entire literary world.

II

The poetry of Tennyson, like the music of Mendelssohn, is the expression of a strong, pure nature. Neither the poet nor the musician has given utterance to one weak thought. There is not an unchaste line in the poetry. There is not a sensuous phrase in the music. In two hundred poems there are three hundred quotations from or references to scripture texts. The poetry is everywhere lighted by the faith which points to

> "That one far-off, divine event
> To which the whole creation moves."

The same faith brightens Mendelssohn's music. The sincerity of his words, "The Bible is always the best of all," is proven by the fact that he received his highest inspiration from sacred subjects.

Tennyson and Mendelssohn toiled incessantly and each gave to his works the most artistic finish. Tennyson touched all phases of human life, and employed a wonderful variety of metre which is woven into epic, idyl, ballad, and song. Mendelssohn adopted all forms of musical composition. He is inseparably associated with the Scherzo as is Chopin with the Nocturne. His concertos and symphonies are most brilliant in harmonic effect. His songs and duets for voice are as soulful as they are artistic.

Tennyson's magnificent epic, *Idylls of the King,* was the work of nearly half a century. Many of the Idylls were published at intervals as individual poems. The epic in its entirety is a work of symmetrical beauty wrought out of the mystical legends of the Court of King Arthur. The music of *Athalie* and *Midsummer Night's Dream* is as romantic as is the poetry of the epic. Were no libretto given, the music of *Midsummer Night's Dream* would sing the tale. Like the epic, it developed slowly; the principal motives of the music being found in the overture, which was written seventeen years before the opera.

III

In purpose and in form *In Memoriam* is unique and is the crowning work of the poet's life. It has made immortal the name of Arthur Hallam. The poem is not fragmentary, as appears from its form, but is a carefully connected argument. No poet has given to the world so great joy through so melancholy a medium. The sadness of the thought is superseded by the beauty of the poetry.

The oratorio of *St. Paul,* published twelve years previous to the oratorio of *Elijah,* is a marvel of completeness, being the work of a composer twenty-four years of age. *St. Paul* was in progress when Mendelssohn experienced a great grief — the death of his father. There is a touch of his own sorrow in the tender music of the chorus, *The Lord He is Good.*

The oratorio *Elijah,* dated four years earlier than *In Memoriam,* is, like the poem, characterized by maturity of thought and deep spiritual emotion. The musician has risen to the sublimity of his subject, and has completed the magnificent trio, — Handel's *Messiah,* Haydn's *Creation,* and Mendelssohn's *Elijah.*

Handel said, "I did see God when I wrote it" (*The Messiah*). So exalted a vision may have been given to Mendelssohn as he wrought out the glorious themes of *Elijah.* One year after the appearance of the oratorio, when the musician was thirty-eight years of age, his earthly song ended. While England was crowning her poet, Germany was weeping over her musician.

UNDER THE CHESTNUT TREE

Got the Music He Wanted

Uncle Joe Rich of Guildhall, Vt., was a character. He was a well-to-do farmer, and kept open house to his friends. Rotund and jovial, and dressed in his Sunday suit, blue swallow-tail coat with brass buttons, buff vest and black silk hat, he was a noticeable figure. He attended all the dances, could cut a pigeon wing, and was a great favorite with the boys.

One fall after the crops were stored they invited him to take a week's trip to Boston to see the sights with them. One night after supper "Uncle Joe" was taken to the theatre, the party occupying a box.

The old man was at his best. As he sat down and looked the audience over the orchestra struck up an operatic selection. He wanted to know "what kind of a tune" that was, anyway. This selection was followed by another. He wiped his beaming face and bald head with a red silk bandanna which he pulled out of his silk tile, and walked around uneasily.

Finally he could stand it no longer. Leaning over the box, he shouted, waving his hat: "Say, Mr. Fiddlers, if you've got those fiddles tuned, give us *Fisher's Hornpipe.*" This brought down the house, and the band struck up the music the old man wanted. — *Boston Herald.*

* *

Still more Terrible

She (as they sit and listen at the musicale). — "You have no idea what a terrible thing it is when a singer discovers that her voice has left her."

He. — "True! But that isn't really so terrible as when she doesn't discover it!" — *Fliegende Blatter.*

* *

The Real

The great actress brings a dress over from Paris.

It costs her $1000. She has to have four maids to help her get into it.

When she comes out on the stage the public at once exclaims, in rapture: "This is indeed realism!"

What is she representing?

Why, a Sicilian peasant girl. — *Puck.*

* *

A Previous Apology

"So sorry not to have heard your recital last night," said the loquacious lady. "I know I missed a treat; everybody says it was great!"

"How did they find out?" asked Mr. Frockcoat. "The recital, you know, was postponed." — *Detroit Free Press.*

* *

The birds were giving an opera.

"We want things just like human beings have 'em," declared the blue jay.

"In that case," advised the owl, "put the bald eagles in the front row and parrots in the boxes." — *Pittsburg Post.*

* *

The ancient drama never knew
Such "stars" as now there are,
And yet in William Tell it had
The greatest shooting star.
—*Philadelphia Press.*

A Den of Daniels

Hon. Joseph H. Choate tells a story of W. S. Gilbert, the dramatist and wit.

Mr. Gilbert was lunching at a country club when he found himself surrounded by six or seven clergymen who had been on a motor tour of the country thereabout. Pretty soon the author of the *Mikado* was drawn into conversation. When his identity was known, one of the clergymen asked Mr. Gilbert how he felt "in such grave and reverend company."

"Like a lion in a den of Daniels," was the reply. — *Harper's Weekly.*

* *

College Learning

Farmer Jones. — "Did yer son learn much at th' 'agricultural college'?"

Farmer Brown. — "Wa-al, yes. He learned ter play th' mandolin an' sing *In th' Shade of th' Old Apple-tree.*" — *Judge.*

* *

Extenuating Circumstance in Nero's Case

Nero was fiddling while Rome burned.

"Anyway," he protested, "I never gave a small boy a drum for Christmas."

Herewith the neighbors felt compelled to acquit him of cruelty.

* *

A Pointed Suggestion

He. — "Your voice has such a beautiful ring to it!"

She. — "Maybe; but my finger hasn't."

* *

Didn't care for It

Music-dealer. — "Can't I sell you a copy of our latest *Songs without Words?*"

Stranger. — "No; I don't think much of the missing-word craze."

* *

How It Impressed Him

"What do you think of Wagnerian music?"

"Well, it strikes me as somewhat riotous, — a sort of musical football game."

* *

"Will you sing something, Miss Skreechleigh?" "Oh, really, I can't." "Very well, then. I met your music teacher this afternoon and he told me you couldn't, but I thought perhaps he was prejudiced." — *Chicago Record-Herald.*

* *

"What is your position in the choir?" asked the new church member. "Absolutely neutral," replied the mild-mannered tenor; "I don't side with either faction." — *Philadelphia Press.*

* *

Judging by Sound

"Phwat's thot noise, Mis' Mullaly?"

"Mary Ann's phractisin' the scales."

"Begorrah, she must weigh a ton!"

Had "Solos" full of "Mucilage"

A few years ago, while I was living in Lebanon, N. H., there was a certain Mr. Bagley there who was noted for trying to use big words, and also for getting his remarks somewhat twisted. On a certain occasion he had been to a farmers' meeting at Hanover, and, while returning, one of his neighbors drove up behind him and the conversation turned on crops.

His neighbor asked: "How is your hay crop this season?"

Bagley replied: "Well, my hay crop is rather short, but I shall get my cows through the winter all right, for I shall have two solos full of mucilage."

* *

Professor Bowman needed a Valley

Professor Bowman, the organist, has summered at Squirrel Island, Me., for many years. Those who know him will remember that he is of unusually large diameter.

One hot Sunday, as he was trying to buckle his shoes, his wife passed by. Calling her, he said, "My dear, please buckle my shoes."

His wife did so, but said, rather indignantly, "You should have a valet."

"My dear," said the professor, "if I had a valley where I have a mountain, I could buckle my own shoes." — *Boston Herald.*

* *

Senator Penrose says that a friend of his residing in Wilkes-Barre recently engaged as nurse a Scotch girl just come to this country.

It appears that one Sunday the lady induced the nurse, who is the strictest sort of Presbyterian, to attend a beautiful church just erected in Wilkes-Barre.

When the girl returned, her mistress asked her if she hadn't found the church a fine one.

"Yes, ma'am," responded the girl, "it is very beautiful."

"And the singing," said the lady, "wasn't that lovely?"

"Oh, yes," replied the nurse, "it was very lovely, ma'am, but don't you think it's an awful way to spend the Sabbath?" — *Exchange.*

* *

Somewhat Puzzling

"Her enunciation is a little indistinct, isn't it?"

"It certainly is. I never know whether she is singing a Georgia coon song or an Italian aria." — *Cleveland Plain Dealer.*

* *

He. — "So Mr. Croak has had his voice cultivated?"

She. — "Yes. He can sing the *Old Oaken Bucket* so that you have to look on the program to see what it is."

* *

Uncle Geehaw (from Hay Corners, at Grand Opera). — "What's that man got over there?"

City Nephew. — "Why, that's the score."

Uncle Geehaw (brightening up). — "The score? Well, by gum! I wish you'd ask him who's ahead." — *Puck.*

* *

"How's your daughter getting on now?"

"Oh, fine! She's busy at Beethoven's works."

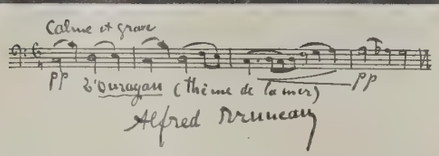
"Where's that? What do they make?" — *Cleveland Leader.*

OPERA AND REALISM

W. E. HASLAM

The production of a new work, either at the Opéra or the Opéra-Comique in Paris, is always a matter of interest to the public, musical and general. More particularly is this the case when the work is signed by men of such eminence and pronounced tendencies in their respective branches of art as are M. Alfred Bruneau and the late Emile Zola.

The announcement of the first performance of *L'Enfant Roi* at the Opéra-Comique stimulated public curiosity for a long time. Both librettist and musician are apostles of what has been termed the "realistic" school. Zola's literary status and doctrines are well known. Bruneau, the composer, for years his faithful friend and artistic admirer, appears to have determined on devoting his own talent to bringing into greater relief the muse of his collaborator. His operas so far — or, at least, those that have



attracted any attention — are all musical settings of "books" written by Zola.

I use the word "opera" in a generic sense. Nothing could be farther from the idea usually conveyed by this conventional expression than the joint productions of Zola and Bruneau, to which they have given the title of *drame lyrique*. The composer, who was a second *Prix de Rome*, attracted the attention of public, musicians and critics, by *Le Rêve*, produced at the Opéra-Comique in 1887. This work, by the daring character of its ideas, the attempt made in it to seek new formulas and modes of expression in paths unexplored even by followers of Wagner, not only aroused curiosity, but keen, and often bitter discussion between foes and followers. *Le Rêve* was succeeded by *Messidor* at the Opéra, and by *L'Ouragan* at the Opéra-Comique, always with Zola as collaborator. It was of this last work that Camille Bellaigue, the distinguished Parisian critic, said that it contained some of the ugliest music ever written.

To understand the magnitude of the task attempted by the composer, it is necessary to analyze the libretto rather minutely. Its characteristics explain why the musician has failed. The book of *L'Enfant Roi*, like most of the books by the great apostle of the "natural" or "realistic" school, concerns itself with the doings of people in the humbler walks of life. A baker, Delagrange, and his wife keep a shop in Paris, where they are apparently quite happy. It is midnight; people are coming out of the theatre. The good baker is somewhat anxious. At least, he manifests in certain "asides" as much anxiety as it compatible with the diligent attention to customers which has already made his business successful. This anxiety is caused by the fact that his wife, Madeleine, has been absent from morning on a visit to a sick relative, and has not yet returned. This "sick relative" is one of those personages whose relationship is fictitious and convenient. We learn from confidences exchanged between two assistants in the bakery that Madeleine's absences are weekly, and are in reality caused by visits to a young man, Georget. The public also learns from short confidences of the baker to such of his customers who step in on their way home from the theatre, that the only crumpled rose-leaf in his peaceful life is that he is childless. Two wicked assistants determine to open the eyes of the confiding baker to the true motives and object of his wife's weekly absences. This is done by means of an anonymous letter slipped into the "order-book." Madeleine returns at last. Late though the hour is, the baker, after indulging in musical reflections on the happiness of being simple, honest shopkeepers, who work all day to meet at night, content with their humble lot, etc., proceeds, like the practical man that he is, and following the practice that has made his business prosperous, to count the "takings" of the day and examine the orders for to-morrow. In doing this he finds the note explaining the real state of affairs as regards his wife. The good man has sufficient control over himself to order his assistants to put out the lights and close the shop. End of the first act.

The house of a toy merchant near the Tuileries forms the scene of the second. Here is where the baker's wife comes weekly to see Georget, a young man of seventeen But this young man is her own son, born before her marriage with the baker; and whose father was her cousin (now dead), son of the toy maker, at whose house the meetings take place. All this the baker, who has followed his wife, learns on surprising her during the interview with her supposed lover. The explanation given him does not appease the baker's anger in the least. He commands his wife to choose between himself and the boy. She decides for the latter. Curtain.

The next act takes place at the Madeleine flower-market. The baker's wife and her son appear. Georget has come to buy a bouquet for his mother. The baker also enters, his melancholy errand being to buy a funeral wreath to ornament the chamber of his erring wife, whose absence he deplores. A baptismal procession comes on; the flower sellers offer their roses, the young mother sings a song. This, of course, has absolutely no connection with the story. But then, it is realistic, and with the Church of the Madeleine already on the stage, it would have been such a pity not to have utilized it.

The fourth act, somewhat in the same fashion as the last act of *Aïda*, takes place underground. But instead of being, as in Verdi's opera, the dungeons beneath a temple, the underground region is the cellar where the baker's ovens are. After certain confidences between the baker's assistants who have so cruelly opened his eyes, the wife appears. She has come to tell her husband that she has changed her mind, and has decided to abandon her son and throw in her lot again with the baker. Her husband presses her to his heart, and although nearly overcome by joy, retains sufficient presence of mind to tell his workmen to look after the loaves in the ovens.

Last act: The boy Georget comes to bid his mother good-by, as he has found a situation in America. The baker generously consents to this last interview. But, melted by the grief of his wife over the parting with her son, he insists upon his remaining, and promises that he will divide the parental responsibility for the youth, by adopting him as his own son.

As I said before, in analyzing the text, one really lays bare the weakness which is inherent in the music. Bruneau has striven to emulate in realism his distinguished collaborator. For the technical skill shown by the musician there can be nothing but praise. All that can be taught or learned, so far as the *métier* of composition is concerned, is manifested in *L'Enfant Roi* in a high degree. A complete knowledge of the colors and resources of the modern orchestra; a sure technique, earnestness, conviction, a practiced hand, making no experiments so far as the media of expression are concerned — all these, and other great merits are distinctly discernible in M. Bruneau's work. But has either librettist or musician achieved the task they themselves have appointed? Let us see.

The idea of both is to avoid the conventional; to depict reality. But it seems to me that their work is conjointly as full of conventionality as are the most conventional works of the genre. Opera, whether called by this name or any other, will, and must always be, conventional. It is life idealized; not the actual representation of life. Music, whether measured or not, no matter whether in unison or harmonized, is no more real or true to nature, if made the medium of expression for a baker, than it is if employed by a troubadour. It is as unreal for a pastrycook to indulge in philosophical reflections on his lot in life, with comments on Paris as a species of ogre, whose appetite for bread must be satisfied every day by unremitting toil on the part of cooks and bakers, as it is for a minstrel knight, attired in black armor, to sing a *deserta sulla terra*, accompanied by harp chords under the window of the lady Leonora; or for an old gipsy to bore people with recitals about her defective eyesight, which shows itself in the burning of her own son instead of her master's.

These are all conventions. The theatre, operatic or dramatic, must submit to certain conventions. It would cease to be a form of art expression if its highest aim were to reproduce nature. Wagner is as conventional in another form as Donizetti or Bellini. The first form is no more real or natural than the latter. The convention has higher art value, in that it conveys more convincingly the impression of reality.

Some of the efforts made by the composer of *L'Enfant Roi* are curiously conventional. What could be more so than

EMILE ZOLA

the absurdly solemn air with which these bakers indulge in reflections on the subject of bread? The word is never pronounced except in a devout and reverent manner, just as conventional in its way as the orchestral tremolos and sforzandos that used to accompany the soliloquies of the villain in transpontine melodrama. The baker's wife gives a stale loaf to a beggar with the manner and inflections of a priest intoning some part of his sacred Office. Convention, pure and simple! So also is the effect of opening the second act with groups of children at play, and singing a round. At every point where the composer wishes to be impressive during this scene, the round recom-

mences. This is quite as unreal, as untrue to nature, as is the constantly recurring entry of conventional operatic peasants, who never seem to have any particular duties to perform, for they hurry on from the "wings," where they have been awaiting their cues, prepared at any time to enter into the sentiments of, and to sympathize with, the principal characters of the drama.

I have already mentioned the incident of the flower market, where a baptismal procession is brought on. This may be, perhaps is, realism; but none the less it is just as conventional as the three rows of black velvet on the red-and-blue skirts of the female operatic peasants of bygone years.

It appears to me a vain and empty task, this applying an art like music to the accentuating of the realistic drama. The closer to reality, or "nature," as its apostles call it, the farther from all real art value seem their works. The lyric drama must be idealized — "poetized," as the French say; else why invoke the aid of such a poetic medium as music for its interpretation? It is to be regretted that M. Bruneau's undoubted talent and sincerity should be wasted quixotically on such windmills as the efforts to express in music that which is perfectly unsuited for expression in that manner, and not worth expressing in any way.

The performance was exactly in keeping with the work. The artists seemed all imbued with the idea of accentuating the sordid banality of the piece. One and all shone much more conspicuously as actors than as singers. The orchestra was excellently conducted by the experienced Luisini. And the stage setting, as always at this theatre, was admirable for its taste and the careful attention to detail.

CONCERNING MECHANICAL PLAYERS

J. LAWRENCE ERB

It has been and is quite the habit among musicians to condemn or ridicule all kinds of automatic musical instruments, such as the Pianola, Aeolian, or Orchestrella. No matter what their private opinion, in public at least there is hardly a kind work spoken by professional musicians for any of these devices, no matter how effective. In the meantime the sale of all forms of automatic players is rapidly increasing and the quality of their performance is steadily improving. The laws of trade being directly related to the law of supply and demand, the annual sale of thousands of these instruments indicates a growing demand. A growing demand indicates that the invention fills a definite need. That it does so is borne out by the facts in the case.

Until within the last century music was essentially a luxury, like learning in the Dark Ages. Nobody but the rich heard good music because nobody but the rich could afford to pay for it. Musical education for the masses was an unheard-of thing. Noblemen and nabobs kept their bands or soloists in much the same way that they now keep their strings of race-horses or their kennels. The two chief patrons of music being the church and the nobility, there was no public to make the publication of music eminently profitable, so that few compositions saw printer's ink, and prices were high.

However, popular interest in music grew, musical culture gradually widened, and there was a greater demand for printed music of all kinds. But as a matter of fact, the cost of music is still almost prohibitively high.

Then again, music has been growing steadily more complex, so that the music of our serious contemporary composers demands virtuosity of the highest order for adequate rendition. As a matter of fact, the average good musician can hope for only a halting and stumbling acquaintance with the great body of musical literature, while even the virtuoso's *répertoire* is confined to narrow limits by the simple mechanical difficulties to be overcome, making it impossible in the ordinary limits of human life and endurance to master more than a few of the world's masterpieces. This being true of the musician trained to the work, how must it be with the amateur? For him as for the professional musician there are but three media of forming the acquaintance of good music: first, through hearing concerts or the opera; second, through personal study; third, through mechanical reproduction.

Of the first it is enough to say that the amateur who can appreciate the average serious concert, made up as it is for the most part of show pieces, or novelties, must necessarily have passed through a very considerable course of training. The great mass of the American public, intelligent and serious-minded as they are, do not attend high-class concerts, unless from a sense of duty, or curiosity. The concert-goers, and in less degree the opera-goers, are either musicians or amateurs of the higher grades.

As for personal study, there is no question as to its value, — nor, on the other hand, as to its cost. Now the average American citizen is getting more and more into the habit of "reckoning it out on paper," and he finds that for that amount of money, —he already has his piano, — he can buy a "self-player" and join a circulating library where he has access to the entire *répertoire* of nearly ten thousand selections, and still have enough money left over for a short vacation trip to Europe, — without undergoing the strain (!) upon the nerves of the family, incident to Mary Ellen's daily practice. This aspect of the case makes a strong appeal to many parents, especially in these days, when the average school boy or girl has so much school-work that there is little leisure for anything else.

Then from the musician's point of view there is really little to find fault with in the automatic player. A good musician can with more or less ease read a score mentally, but there are thousands whose fluency is decidedly of the "less" order. In fact there are comparatively few who read well "at sight," — sufficiently well, at any rate, to give any real idea of a composition of more than moderate difficulty. The automatic player can play the first time as well as the thousandth any piece arranged for it, no matter how difficult, and, without telling tales out of school, it would be perfectly fair to say that what it may lack in expression or "soul" is very likely to be compensated for by the perfect smoothness and accuracy.

Now it is a very evident fact in the realm of *literature* that the greater the number of books, magazines, newspapers, and what not, the greater the number of people who make their living in some way, directly or indirectly, from the production and interpretation of literature, — actors, elocutionists, readers, teachers, and, of course, authors. The mechanical reproduction has entered into that field as well in the shape of phonographs, graphophones, and the like — to say nothing of the "sweet girl, — or boy graduate." But there is no case on record where these have interfered with the work or decreased the demand for the services of those engaged in literary, or interpretative pursuits. On the contrary, if the truth were known, I doubt not that they have tended to increase business for these very persons.

There is no question, all musicians are agreed, that the very best thing, musically speaking, that could possibly happen to the American public, is a much more intimate acquaintance with good and the best music. Of ragtime and "popular" music we have a surfeit, but largely because the great majority have no satisfactory means of approaching the better. People by the thousands who would burn at sight any trashy or vulgar book or picture, if brought into their homes, are perfectly frank in their liking for trashy music. Yet they are people with high ideals, who, if they could buy Beethoven's music as readily as they can buy Scott's novels or Shakespeare's plays, would never be content with anything less meritorious. Our people take the kind of music they can most readily get. The cost of concerts and the opera is too high, the programs are too uncompromising, the teaching of music in the public schools is too ineffective (when it is not absolutely foolish), and we are too busy a people for the present methods of procedure to do the work that ought to be done. We must call to our aid all the allies we can find to assist in advancing American musical culture.

There is, of course, one most important qualification that must be kept in mind. Unless we can impress upon the manufacturers of the mechanical performers the advisability of adhering to the highest possible standard of musical worth in their selections, they will not prove the friends of musical progress that we would wish them to be. They, through patents, have a monopoly in their business, and if they decide that nothing shall be perpetuated but what is worthy, there is no one can say them nay, and they will be important aids in the "musicalizing" process.

And in the meantime history will but repeat itself in the increased demand for the *human* performers and teachers and composers, for whom the mechanical players will have paved the way.

Belle Isoult and Sir Tristram drink the love draught

FROM A DRAWING BY HOWARD PYLE

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

AMERICAN PIONEER ORGAN BUILDERS

I

Thomas Appleton, who was one of the most noted organ builders of his day, was a descendant of one of the settlers of Ipswich, of the same name. He was born in Boston, in Prince St., Dec. 26, 1785. His father was a house builder and contractor, and died when the son was thirteen years of age. The mother supported the family by keeping the best boarding house in Boston, at the old family mansion of Governor Bowdoin on Beacon St.

She had for guests many of the most noted men of the country, — governors, judges, and members of Congress. Daniel Webster and family boarded with her for a number of years. Daniel Appleton, the founder of the publishing house of the New York Appletons, was a cousin of the subject of this sketch.

Thomas Appleton was apprenticed to Elisha Larned, a cabinet maker, whose shop was on the corner of Salem and Cross Sts., in Boston. When he was twenty years of age he became acquainted with William Goodridge of Templeton, Mass., whose sister he afterwards married. At the expiration of his apprenticeship, he went to work with William Goodridge, building organs on Chamber St. William Goodridge, son of a Templeton farmer, was a man of extraordinary skill and ingenuity. He went to Boston at the age of twenty-one, and began building organs from his own inventive talent, studying such English instruments as he could find in various cities.

He changed the spelling of his name from Goodridge to Goodrich, and also adopted the middle name of Marcellus. He became first interested in organs from a small instrument he had seen in Templeton, built there by a man named Bruce. Soon after his removal to Boston, he became acquainted with Benjamin Crehore, of Milton, a very ingenious maker of musical instruments, and went there to work with him. He then went to Boston and began building organs on his own account.

In 1809 he engaged with Maelzel, the inventor of the metronome, to travel about the country exhibiting the panopticon, a combination of wind instruments played mechanically, after the manner of the modern orchestrion. The original panopticon was lost at sea, and Mr. Goodrich built another like it, which, after having been exhibited in Boston, was sent to Europe. His first organ was built for the old Roman Catholic Cathedral, which stood on Franklin St. He afterwards moved to East Cambridge, and had constant employment as an organ builder until his death in 1833. I have seen organs built by him which were of excellent tone in the flue work, but the reeds were very unmusical. His organs had no name plate, and there are none in existence at present.

Ebenezer Goodrich, a younger brother of William, also went to Boston when he was of age, and learned his trade from his brother. They had a disagreement, and he set up business for himself, the brothers never afterwards exchanging words. He turned his attention chiefly to the manufacture of parlor pipe organs with a fair amount of business. Some of these instruments, looking like a mahogany bookcase with a gathered silk front, are still found in old New England houses. He died in 1841.

II

About 1809 Lewis and Alpheus Babcock were making pianofortes, having learned the art from Benjamin Crehore, of Milton, who had been making violoncellos, guitars, and other musical instruments, and who had become a pianoforte maker from copying an English instrument.

In 1810 Thomas Appleton joined the Babcocks and Hayts, dealers in music and instruments, in putting up a brick building in Milk St., on the site of the birthplace of Benjamin Franklin, for the manufacture of pianos and organs under the firm name of Hayts, Babcock & Appleton. Benjamin Crehore, then an old man, worked for them.

John Osborne learned the business of piano making there, and afterwards carried it on at Pantheon Hall, just south of Boylston, on Washington St., and of him both Jonas Chickering and Timothy Gilbert learned the trade, from which an extensive business was afterwards developed. John Osborne was a kind-hearted man. I have heard an aged uncle relate that when he was a boy he frequently accompanied his father, a miniature painter, who decorated the name plates of the pianos, and on each occasion Mr. Osborne would give the lad a sixpence. A number of years ago I found one of these first Osborne pianofortes in the garret of an old New England house. This instrument was purchased and presented by my eldest son to an historical society in Chicago.

Thomas Appleton remained in this firm two years, when the business failed on account of the general depression of affairs resulting from the War of 1812. In due time Mr. Appleton took up the manufacture of organs by himself, and he was given free access to copy from the English organ which was built for the old Brattle Street Church.

Thomas Appleton stood at the head of his art for many years. Thirty-five of his larger instruments, most of them having three manuals, were built for Boston churches, and churches were supplied by him in many cities and towns throughout the United States.

He built a three-manual organ for the Handel and Haydn Society, which stood in the old Boston Music Hall until the large German organ was installed in 1863, and this instrument was sent to San Francisco. His last organ was built for the Warren Avenue Baptist Church in Boston, in 1868. On its completion he desired me to give a private test of its merits. It was a three-manual organ, placed in the rear gallery. Each stop knob was engraved with a Greek name, instead of the usual nomenclature, to please the fancy of Gen. B. F. Edmunds, who was the enthusiastic musical director of the society.

For many years his factory was located over the old Parkman Market, on the corner of Cambridge and North Grove Sts. Here the noted players and professors of the day assembled on the completion of new instruments and exhibited their skill; and when some delicate stop kindled his emotional nature, the old builder would involuntarily exclaim: —

"*Beautiful! Beautiful! Beyond description!*"

Organ sonatas and fugues did not then belong to the *répertoire* of American organists, and the player depended upon the inspiration which their own intuitions dictated.

III

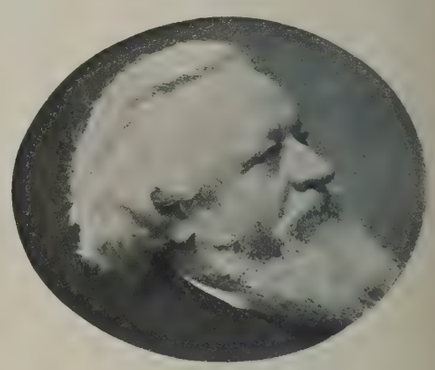
In his later days the venerable builder prided himself upon the organ built for the Bowdoin Street Church in Boston, over which Rev. Dr. Lyman Beecher was then the pastor. This instrument was built in 1831, to suit the taste of Lowell Mason, who was then the organist and musical director of the society. It had three handsome manuals, beginning on GGG and the Pedal Open Diapason ran down to GGGG, which measured 24 by 22 inches. The workmanship throughout was of excellent construction. The wind chests were large, affording ample speaking room, mahogany being freely used. Many of the manual wood pipes were of red cedar and cherry. The metal pipes were finely made, and gave a very mellow quality.

Thomas Appleton moved his organ factory to Reading, Mass., in 1851, and died there July 11, 1872.

During his closing years he often visited the factories of other builders, and was frequently seen at the exhibition of new instruments, when every good point illustrated would be quickly and generously recognized by him.

ALEXANDRE GUILMANT

Felix Alexandre Guilmant, the famous French organist, was born in 1837 at Boulogne-sur-Mer, where his father was organist of the Church of St. Nicholas for nearly fifty years, and who lived to the age of ninety-seven. He began the study of music with his father, making such progress that at the age of twelve he frequently substituted for his father. In his study of harmony he absorbed



ALEXANDRE GUILMANT

every theoretical work to which he could obtain access. He became familiar with the compositions of classical writers, and so perfected himself in organ playing that he was appointed organist at St. Joseph's at the age of sixteen.

At the age of eighteen he composed his first Festival Mass in F, other works following in rapid succession. He afterwards became a pupil of J. Lemmens, the noted Belgian organist in Brussels. In 1862 he assisted at the inauguration of the great organ in the Church of S. Sulpice in Paris, and in 1865 inaugurated the large organ in Notre Dame, for which occasion he wrote his *Marche Funèbre et Chant Seraphique*. In 1871 he was called to the post of organist of Le Trinité, which he held for thirty years.

Guilmant has been one of the most prolific of modern organ composers, his works having a widely varying character. He is the true representative of the French school of organ music in its progression from the romantic style of Lefébure-Wély and Batiste. He has made three concert tours in America. He retired from his church work in 1901.

SUGGESTIONS PRACTICALLY APPLIED

W. H. P. writes: "In a recent number of THE MUSICIAN you speak of 'Leathered Open Diapasons.' In the organ which I play the Open Diapason tone was very unsatisfactory. By leathering the pipes as you describe it has been transformed and made into a fine stop. The tone is now all that I could wish for, and is a continual delight to me. I have known of a poor 'Melodia' being improved by leathering, the tone gaining body and smoothness, although not adding to the power."

Many private letters are received from the organ readers of THE MUSICIAN testifying to the practical service of comments and suggestions, the limited space preventing an acknowledgment in these columns. Concerning the above communication, it would be of interest if "W. H. P." would state whether he performed the operation of leathering himself, or secured the services of an organ builder; also if he leathered each pipe, the kind of leather and cement used in making the transformation. Doubtless he is familiar with the voicing of organ pipes, without which knowledge and experience such an improvement should not be undertaken. Empirical work on organ pipes by amateurs, after an organ is finished, is not to be recommended.

Congregational Unison Singing

J. M. K. writes: "In the church where I am the organist it has been decided to relinquish the quartet choir and try congregational singing, led by the organ. There is to be a rehearsal of hymns at the close of the weekly evening service in preparation for the Sunday worship. In drilling the congregation I would like some information in regard to teaching all to sing the melody alone, so that I can sometimes vary the harmony in playing the accompaniment. Is it practicable to do so?"

Comments. — If all the people would willingly sing the melody, you might be successful, but as many will not do so, the plan would be a failure. Constant unison singing is only adapted to those who are totally ignorant of music. There are always present those who have been accustomed to sing the alto, tenor, or bass parts of church music, and to require such individuals to sing only the treble notes would give offense to those of better educated musical natures. It is very irritating to many to hear a man's voice singing the air an octave lower than the treble voices. It is different with a choir singing certain passages in an anthem which are written for unison effects to give a contrast, where the organ gives a massive harmony.

Although the slow choral singing in the German and Scandinavian Lutheran churches has for centuries been rendered in unison, it cannot be established in American churches, and part singing will always prevail. Have you ever been present at a service where some voices sing the melody two octaves lower than the treble pitch?

There is but little attraction in constant congregational singing to an organist, after having had a good choir. Encourage part singing at your rehearsals and in the service, and let all sing the melody who cannot read the notes, patiently bearing with those who only add discord by not singing even the melody.

A NEW ORGAN

Clarence Eddy inaugurated the new organ in St. Marks M. E. Church, Brookline, Mass., on December 14, assisted by Anna Lohbiller Mason, soprano, and Bertha Cushing Child, alto. The program included a Bach Fugue, Guilmant's seventh sonata, and other numbers by Hollins, Bossi, Eddy, Parker, Rossini, Burdett, Shelley, Alden, and Faulkes. The organ is one of the largest and best in the vicinity of Boston — action electro-pneumatic — the specification in brief being as follows: —

Great Organ

1.	Open Diapason	16 ft.	61
2.	Open Diapason	8 "	61
3.	Viol d'Gamba (49 tin)	8 "	61
4.	Dulciana	8 "	61
5.	Doppell Flote	8 "	61
6.	Flute Harmonique	4 "	61
7.	Octave	4 "	61
8.	Twelfth	2⅔ "	61
9.	Fifteenth	2 "	61
10.	Mixture. (3 ranks)		183
11.	Trumpet	8 "	61

Swell Organ

12.	Bourdon Bass	16 ft.	
	Bourdon Treble	16 "	61
13.	Violin Diapason	8 "	61
14.	Salicional	8 "	61
15.	Aeoline	8 "	61
16.	Voix Celeste	8 "	49
17.	Stopped Diapason	8 "	61
18.	Flauto Traverso	4 "	61
19.	Violina	4 "	61
20.	Flautino	2 "	61
21.	Dolce Cornet. (3 ranks)		183
22.	Cornopean	8 "	61
23.	Oboe	8 "	61
24.	Vox Humana	8 "	61

Choir Organ

25.	Geigen Principal	8 ft.	61
26.	Dolcissimo	8 "	61
27.	Melodia	8 "	61
28.	Viola Oboe	8 "	49
29.	Flute d'Amour	4 "	61
30.	Piccolo Harmonique	2 "	61
31.	Clarinet	8 "	49

Pedal Organ

32.	Double Open Diapason	16 ft.	30
33.	Double Dulciana	16 "	30
34.	Bourdon	16 "	30
35.	Flute	8 "	30
36.	Violoncello	8 "	30

There are also nine couplers, operated by tilting tablets; six pedal movements; eleven pistons (mutually releasing), and various accessories. The organ was built by Jesse Woodberry & Co., of Boston.

COMPOSERS IN THE MAKING

THALEON BLAKE

I

Let no one be led astray by the caption which decorates this article, for what follows is not nearly so ambitious as it would seem to indicate. "How to speak Spanish, or French, or how to read Latin or Greek in *four weeks*," is not a new advertisement; and the time may not be far off when "How to compose a waltz or a two-step in *thirty days*," will greet us. But until that happy time comes to pass, people will believe that composers, like poets, are born, not made. The writer is one of these.

What is here briefly mentioned is intended for beginners, for students who desire practical and simple suggestions. It is true that poets and composers — and all the artists, for that matter — are born; and yet they are really made in one sense, for, no matter what may be the inherent ability, it must be trained, and training is the making. Without the skill of practice and the culture of study and thought, there would not be — nor could there be — great artists.

The perfection of beauty, which is the goal of art, is not to be approached closely by untrained ability. Hence it is also true that the greatest artists are celebrated as much for the finish and polish of their work as for the ability and genius to be found in it. A simple letter of a master of prose may bear the impress of skill though the subject be merely the acceptance of an invitation to a dinner. That skill is made by practice and study. It may be directed by genius for language, but training gave the sureness of touch which portrays the master. So skill not only can be learned, but it must be learned to be mastered. To be skilful is therefore attainable by industrious practice.

II

Now, young people are too easily deterred from attempting to compose. They do not pause to reason that the great artists must have wanted skill — even knowledge of lines and spaces — when they were young children. Great as they became, there was a time when they, too, were beginners, — when their first scribblings were more notable for zealously smeared blots than anything else.

To learn to jot down themes quickly and correctly is an invaluable accomplishment. It cannot spoil the student for anything else; it cannot make a composer worthy of the name where talent does not exist; while it does arouse the interest of the dullest student, and quickens every faculty employed in creative work.

It must be allowed that students learn by imitation where and when they cannot learn by creation. This is no slight thing, that the beginner, learning to express himself on paper, invariably turns to see how the famous master expresses himself, from which the beginner gains impetus to make a better, more effective endeavor, being emulous of the master's method. He discovers more information of the master's works, pen in hand, than when day-dreaming. We begin to learn by imitating, and never leave off imitation though originality be our force.

III

The following method was tried by a superintendent of music in a school. He was desirous of teaching broadly and thoroughly. He first taught his pupils to sing by note; then to write on paper the songs they knew well; then new simple songs which he sang for them, slowly and distinctly. He did not have much time with the pupils, yet what he accomplished was surprising to himself and to others, for pupils who did not take much interest in their work, were aroused, and many succeeded in writing simple tunes from dictation, who had no apparent ability in any other direction in music study.

Several private teachers then tried a similar method, which was to train piano students who had no knowledge of vocal nomenclature, to copy simple tunes played to them, by spacing the notes on the paper as they thought the tones indicated. Soon these students succeeded so well in this, that they were taught the next step, — of writing themes which occurred to them, original or not. All this, remember, was done with young pupils before they had entered upon the study of harmony.

As an aid to these experiments, music of pronounced rhythm was chosen to be copied by dictation, and when the advanced students were writing their own themes, it was suggested that they make their themes idiomatic — which is characteristic of much youthful production, anyway — and of a swinging rhythm. Necessarily, the students did not attack themes longer than eight or sixteen measures; but what astonished the teachers in language was, that most of the students' compositions in theme or tune writing excelled the work they did in language — which shows how much nearer song is to the mental grasp of young pupils than speech. The most proficient wrote their tunes as if they understood harmony, although they did not; whereas in essay writing, their acquaintance with grammar was not much in evidence, although they had had one year in its elementary study.

In these methods, pursued so successfully, there was no idea of making composers. Indeed, the sole result wished for was to surprise the young people into study and enthusiasm. This result was speedily obtained.

THE YOUNG WOMAN IN MUSIC

EMILIE FRANCES BAUER

I

There is probably no side of music study more vital than the process of learning, and there is no side which is less understood by teachers and pupils alike. Before dealing with the study of music itself, there are a few words to be said upon how to study. This is the most important of all phases which may be touched upon in these articles.

Whether the student pursues instrumental or vocal music, matters not in the least, but as a usual thing the student of vocal music is still more lax than the student of any other line of musical study. The reason for this is that both teachers and pupils think of music as one thing and the voice as another, and to this mistaken idea is due the fact that there are thousands of good voices and a small handful of good singers.

Certainly the study of tone work, which means the same as the study of technique, is of utmost necessity; but this cannot be mastered without an outlined policy of study which is as serious and as intellectual as is the study of philosophy in a college course. A teacher should take into account the pupil's power of imitation and of perception, as well as what is known as an ear for music, and she should guard carefully against accomplishing ends by these means.

A voice built upon natural talent, a good ear, strong perceptive and imitative powers is one that can be relied upon for absolutely nothing. One day it is beautiful and satisfying, and the next the possessor does not know how she produced a tone before, has no way of knowing how she got it and when she will be able to get it in the same way again. The reason for this state of things is that the intellectual faculty is not awakened by the teacher to the serious side of study. The pupil either knows nothing of the deep importance of study or she is pursuing the work in a light-minded, free-and-easy way to satisfy her vanity, to make what she considers an easy living out of it, but rarely to become a noble artist and a benefit to all those whose lives she touches.

II

There is technique in study just as there is technique in a voice or the fingers; and long before the voice need be thought of, the mechanism of study should be mastered. This is the first duty of the teacher to the pupil, and thoroughness in the study of music should be considered as necessary as it is in mathematics.

It is not possible to proceed without referring to the necessity of a good foundation, to the lack of which is due the hordes of mediocrities which flood the field, disseminating in turn that which can produce only another generation of mediocrities. Question nine out of ten of these people and they will inform you that they need only about six months in Europe to become very strong factors in the musical life of this country. The probability is that by hook or crook they get to Europe; and even when there, in the heart of serious study, they have not enough intelligence to understand that they are learning nothing. No pupil leaves a smaller city for the larger centres of Europe or America without believing that she has learned all that the small city offered, and in this belief she does not come to New York or to Boston to study foundation, but to finish up, which in nine cases out of ten leaves her without any foundation whatsoever.

Once a pupil understands the mechanism of study and the value of a thorough foundation, she has that upon which great art can be built. *This is one strong argument in favor of the study of music for all children, since they may later on develop certain particular talents, and it is better to have had the foundation thoroughly laid in extreme youth.* Personally, I have always believed in and advocated the necessity of studying the piano as a foundation upon which to build the voice or any stringed instrument, as there is more likelihood of a musical understanding through the medium of the piano than through any other avenue.

In the same way as the foundation is overlooked, the importance of hearing music is held too lightly, and especially as far as children are concerned. If people live in cities where artists come only at intervals, they are prone to regard this as amusement, — and fashionable amusement at that, the older people attending because society is out in full force and the young students are kept at home because of the expense attached.

The hearing of music acts upon the intelligence and upon the ambition as well; and the teacher who does not urge upon his pupils the fact that this is as necessary as the lessons themselves, shows either a spirit of meanness or unpardonable ignorance.

It is in this particular that Europe offers many advantages which America does not. Not only that it is the custom of the country, but the cost is very much less there than here, and that is an all-important item. It is this feature of music study abroad that creates the student life which we have not in this country; and how that particular thing can be brought into America and made part of its study life, is not at this moment clear. It is this argument in favor of Europe *versus* America that cannot be refuted, notwithstanding the advantage of studying in a familiar language instead of struggling to understand a foreign tongue, thereby missing the subtleties and the delicacies of the art.

III

The teachers of Europe are not superior to those of America; indeed, the American teacher is extremely analytical. He has eliminated much that is heavy and long-drawn-out in favor of vital points which make for quicker results. In this way there is little difference in the ultimate cost of a musical education in this country or abroad, notwithstanding the fact that lessons are less expensive there than here. This brings us back to the subject of serious study, which is a life in itself, totally distinct from that of other people. It is not necessary to become one-sided, as many people suppose. To the contrary, student life should be extremely broadening in its effect. The study of music needs everything that it can draw from, and is as dependent upon the beauties of nature and the treasures of art and literature as upon close application to technical development; but everything should be done in moderation and all reading should bear upon such subjects as the student particularly needs. This does not mean to encourage cheap novel reading, nor does it mean that time should be wasted which is needed for the music itself; but an intimate acquaintance with the composers, their lives, and the works of such as Wagner, Schumann, Berlioz, and others, who have written books as well as music, is a distinct necessity.

Nor must the importance be overlooked of the influence of certain lines of reading over the imagination, which in so many cases is under-developed.

To sum it up, everything is necessary to the study of music which makes for culture and refinement. The question arises, What is culture? It is the result of a force or of a set of forces, but it is not the primary thing itself, and can only exist by reason of a sufficient length of time through which these forces may filter, creating refinement in their journey forward. In fact, the growth of culture and the power to absorb are absolutely reciprocal, — *i. e.*, the power to absorb strengthens as culture grows, and culture grows as we become more able to absorb. For this reason those who contemplate the study of so noble an art as music should plan for themselves or have some one plan for them a course of reading which will broaden the plane of thought, the point of view, awaken the emotions necessary to the appreciation of the deeper and greater things in life and control such emotions as arise from and pertain to life's frivolities.

We may not always choose such companions as can do this among the busy men and women of to-day, but we must learn that books hold all and much more than we can gain by social contact with the living intellects in the busy world of the present day. As the mind develops, so develop seriousness of purpose and intelligence. With these elements as a foundation the matter of actual method becomes an easier question to solve, since common sense is the one vital necessity upon which to build enduring work. Whether technical or mental, whether instrumental or vocal, extreme tension is to be carefully avoided; and such methods as do not depend as much upon relaxation as upon tension for results are dangerous to begin with.

IV

It is hardly possible to outline a course of study, because there is some good in all the great methods. The pupil himself must, through hearing music, find out what are the stumbling-blocks for others and what tone production, vocal or instrumental, produces the most beautiful quality. To accomplish this it is absolutely necessary to hear the best artists and to hear them often. It may be expensive, but this expense should be charged up to the study of music and not to the gratification of the pleasure seeker. It is hardly necessary to touch more deeply upon the necessity of hearing music, as this is self-evident and must not be regarded as an adjunct to music study but a very important part of it.

A word on the subject of teacher, and that is of utmost importance. It is poor policy to take an inferior teacher because his prices are low; it is also poor policy to take a teacher for whose reputation an extortionate price is demanded, especially if it is ground work and not artistic finish that is needed. *To those who labor in sincere earnest, what a teacher can impart is worth more than the glamour of his reputation.* In the same way, if it is only for the privilege of saying that one has been in Europe for study, there is nothing to be gained by a course of study there.

Harold Bauer, in conversation with the writer, said that the European teacher is afraid of the American student who goes abroad, for a few months with one teacher and a few months with another, rushing from Paris to Germany and from Germany to London, with the idea that she is getting the best from all in a very short time; then she comes back to America proclaiming herself a pupil of each one with whom she has had a few weeks' lessons, and perhaps she has learned one concerto which she feels ought to give her the privilege of playing with every orchestra in America. Mr. Bauer said further that he believed it to be to the interest of the European teachers to refuse all pupils from America unless they could be assured that the fundamental training was thorough, the intention serious, and that they came to Europe for the sake of study and not for the sake of going back home to impress their countrymen with their own importance.

All this goes to prove that the pupil is only thinking of the public and not of the study of music itself, and it may not be out of place to say that there is no possible line of thought more demoralizing to the accomplishment of great results in music than that which leads to the public. The public is the most dangerous pitfall in the study of music, and should have no relation to the study and no bearing upon the mode of procedure. It may be regarded as the end, but never as the means to an end. The student who thinks of the public selects her *répertoire* with that thought in mind. Instead of working upon such compositions as would represent food for the mind and or general upbuilding, she is engaged in the study of the lighter things such as the public wants; and the mind, instead of being occupied with the nobility of music and its pursuit, is filled with what this one thinks and what some one else says, the aim being to keep as much in the public eye as possible. Whoever thinks this is compatible with art makes a sad mistake; one which nothing can rectify, because the point of departure is wrong and the results are in consequence as far from what they should be as it is possible to bring them.

EUROPEAN LETTER

ORTON BRADLEY

Signs are not wanting that the prodigy craze is beginning to wane. Only one or two of these attractions of last season are still to the front. Mischa Elman is one, and seems to hold his preeminent position. He is now touring in Germany and will return to England in March. He is engaged to play next October at the Birmingham Festival, which will be conducted as usual by Richter.

* * * * * *

Young Franz von Vecsey has retired for the present and is to reside at Berlin with Joachim, who has undertaken to train him. He ought to know the best method for he himself was a prodigy once and is still phenomenal even as a veteran of seventy-four.

* * * * * *

Arrangements are being already made for the Hereford 1906 Musical Festival, for which Dr. Sinclair has been appointed conductor. It will be held during the week beginning September 9.

* * * * * *

Of provincial musical organizations, two of the most active and interesting are the winter Pump-room concerts at Bath and the Nottingham Sacred Harmonic Society. The former were instituted in 1755, and have seen bad times when Bath lost its fashionable prestige, but they now rank with the best concerts given outside the greater cities. The Nottingham Society is next year to celebrate its jubilee, and can claim a record of unbroken work since Nov. 4, 1856, when a performance was given of Mendelssohn's *St. Paul.*

* * * * * *

Next May a third provincial association, the Bradford Festival Choral Society, will appear in London at a Philharmonic concert.

* * * * * *

Every one will be glad to hear that the new year is to bring the second volume of Fuller-Maitland's edition of Grove's *Dictionary.* The labor of bringing this work up to date is little short of colossal, and musicians owe the editor a great debt of gratitude.

* * * * * *

A competition for women composers is announced by the Lyceum Club. It is international, and works of every description will be received in competition, whether instrumental or vocal. The latest date for the submission of manuscripts is to be the first of May, 1906.

* * * * * *

During February a new opera by an English composer will be produced by the Moody-Manners Company at Sheffield. It is the composition of Nicholas Gatty, and is entitled *Grey Steel; or The Bearsarks come to Surnadale.*

* * * * * *

There are also rumors of another new opera, this time by the talented woman-composer, Liza Lehmann. It is possible that more is known of it in America than in England, for David Bispham is reported to have the intention of producing it during 1906. The libretto, which is by Lawrence Houseman, is founded on *The Vicar of Wakefield.*

* * * * * *

To do anything but merely refer briefly to Sir Edward Elgar's unfortunate speeches at Birmingham, which have deeply stirred the whole profession, would be outside the province of this letter. He has certainly not made his position any better by writing personally to one or two of the more prominent conductors to explain that he did not refer to them in his ill-judged remarks.

* * * * * *

Here is the program for one week at the Paris Opéra: Monday, *Tristan;* Wednesday, *Siegfried;* Friday, *Lohengrin;* Saturday, *Freischütz* and *Coppelia.* The only French opera in the week was composed to a libretto on a German legend Before the novelties of the season are produced, which are to be the new ballet by Henri Busser and Max Vogrich's *Buddha,* as well as a five-act opera, *Ramses,* by Paul Vidal, public interest will be aroused by the production of two *Iphigénies,* one by Gluck, the other by Piccini. During the eighteenth century musical Paris was divided into Gluckists and Piccinists. The promised revivals will make an instructive commentary on fads and faddists. Now that *Miarka* is going strong at the Opéra-Comique, the next production has been got ready and consists of *La Coupe enchantée* in one act, by Pierné and *Les Pêcheurs de Saint Jean,* in four acts, by Widor.

* * * * * *

The concert season in Paris is now well established with the usual orchestral series under Colonne, who has just completed his Beethoven cycle, the Lamoureux concerts at the Nouveau Théâtre, and the Conservatoire weekly orchestral concerts under M. G. Marty. It was a great pity that Safonoff of Moscow should have conducted the Lamoureux Orchestra in a performance of the Beethoven violin concerto, with Mademoiselle Lüboschitz as soloist the same Sunday during December that Sarasate was playing the same work for Colonne.

* * * * * *

The "Matinées Danby" have also been resumed at the Ambigu under the direction of Alexandre Luigini, and under the title of "Matinées musicales et populaires," and the new Bach Society, which is to confine its programs to the works of Johann Sebastian, has started successfully on its career. The ambition of the Bach Society is to perform the whole of Bach's known works. In this respect most Bach societies are less ambitious but more eclectic in their programs. For example, the Heidelberg Society of this name has announced for the season 1905–1906 works by Brahms, Berlioz, Charpentier, Liszt, Tschaikowsky, Haydn, Mozart, and the *St. Matthew Passion.*

* * * * * *

From Monte Carlo comes the promise of a very delightful musical season. The classical concerts under Léon Jehin have begun, and in February the annual performances of grand opera will be resumed. The great novelties of the year are to be Saint-Saëns' *L'Ancêtre* and Bizet's *Don Procopio.* Among the singers are Geraldine Farrar, Rouselière, and Chaliapine, while Paderewski has been engaged for one appearance at the concerts. Two new operas are promised at Milan, in both of which *Madame de Cisneros* is to appear, and Franchetti's *La Figlia di Toris.*

NOTES

The Philharmonic Association of San Diego Cal., has been disbanded for lack of financial support.

* *

A new opera, entitled *Le Clown,* libretto by the tenor, Victor Capoul, music by M. de Camondo, will probably be produced this spring at the Theatre Sarah Bernhardt, Paris. M. Renaud and Geraldine Farrar are mentioned for the leading *rôles.*

* *

Representative Barthold, of Missouri, recently introduced a bill in Congress to prevent the Marine Band from competing with civilian musicians. It raises the leader of the band to the rank of captain in the Marine Corps and provides for thirty first-class musicians at $100 a month and thirty second-class musicians at $75 a month, on condition the band is not to compete with civilian organizations.

* *

Moritz Rosenthal has signed a contract with the Weber Piano Co. for an extended tour in America during the season of 1906–07, which will include nearly one hundred appearances.

* *

Washburn College, Topeka, Kan., is doing much to advance the cause of music in the West. There are about two hundred students in the musical department under direction of Edward Scherubel, Dean of the College. There has recently been organized a young men's choral club, weekly recitals are given, and the facilities for acquiring a thorough knowledge of all the higher branches of musical art are unexcelled. The Leschetizky and Virgil systems are used in the piano department, and in the violin department the Sevcik school is the basis of the instruction.

* *

Ellen Terry is said to have made the remark that "we hear too much now of the charm and amiability of this actor and that, of his skill at golf or his proficiency as a painter or musician. We hear of his popularity socially. The actress's beauty is much more discussed than her talent. Nowadays capability for their work is often the last qualification for which actors are recommended."

* *

Mr. Henry Harland, the American author who wrote *The Cardinal's Snuff-box,* died December 20, at San Remo, Italy. His American home was at Norwich, Conn., and he also had a London residence. Mr. Harland wrote under the pseudonym of Sidney Luska. Mr. Harland was educated at the College of the City of New York and at Harvard, and also studied in Europe, spending his time chiefly in Rome and London. It was during this period, and when about twenty years old, that he wrote that brilliant and imaginative tale of Jewish life, *As It was Written,* which he published under the pen name "Sidney Luska." Of late years he had lived in London, where he was one of the chief contributors, and quite the most artistic of them, to that bizarre venture, the Yellow Book, which gave a place for his delicate, yet striking, style. Yet it was only a short time ago, with his pretty love story, *The Cardinal's Snuff-box,* that he rather suddenly won recognition as one of the leading prose writers of the day.

* *

The late George Charpentier was the publisher of Zola's works, as well as of those of Daudet, Goncourt, and other eminent French men of letters. Zola had a modest contract with Charpentier, but when his novel, *L'assomoir,* made him famous, the publisher tore up the contract and made another more favorable to Zola. Charpentier's house was headquarters for the impressionists, as well as the revolutionaries and "intellectuals." The eminent publisher walked the streets of Paris, at the age of fifty-nine, looking young and in the best of health, only two days before his death.

* *

Vincent d'Indy, the French composer, just before he returned to Europe to resume his duties as director of the Schola Cantorum in Paris, stated that American audiences were not disposed to discriminate between good and mediocre music. He admitted, however, that Boston appreciated his music more than any other American city, so far as he knew.

"In Boston, I think," he said, "they show most appreciation for things musical. I met there a great many earnest students of music and a number of young composers, whom I always found interesting. My reception in New York was so friendly that I was both touched and charmed."

* *

Arrangements have been made between Harvard University and the New England Conservatory of Music in Boston, for an exchange of the privileges of each institution for students of the other.

SAVE ONE HUNDRED DOLLARS ON A PIANO

The $100 that it ordinarily takes to sell a piano by means of local canvassers can be saved by getting your piano direct from the world's largest music house, Lyon & Healy, Chicago.

Lyon & Healy often sell from 20 to 30 pianos direct in a single day. And the cost of handling this immense business is very little greater than that of a smaller concern selling only a few pianos a month, hence the great advantage of dealing with them.

The freight on a piano from Chicago to this city is only a few dollars, and you run absolutely no risk in ordering from Lyon & Healy, for if the piano they send you is not satisfactory, they agree to pay freight both ways.

Write to-day for a copy of *A Piano Book,* which is the most beautiful piano catalog ever printed. It offers a choice of four different plans under which you may secure an instrument. A copy will be sent free by Lyon & Healy, 28 Adams Street, Chicago.

Public School Music

WHAT HIGH SCHOOL MUSIC MAY BE

H. W. JONES

The director of music in public schools is brought face to face with many perplexing problems, not the least of which is the problem of music in the high school. Shall it be made a required study or an elective? How much stress shall be placed on the art of music, and how much on theory? Shall it exist for the pleasure and profit of the few, or for the benefit of the many? Is it better to have a chosen few trained to sing well, or to have the body of students trained only fairly well, — some not singing at all? Indeed, what is the purpose of music in the public schools?

To say what high school music *should be* is comparatively easy; to say what it *may be* is quite another matter. Already the course of study of most high schools is overcrowded with what the powers that be regard as "necessary branches." Lack of time and facilities in many high schools prevent the continuance of class work in music as it was in the grades. What, then, is the work of the high school? With what material can this work be undertaken, and with what probable result?

The writer insists that every graduate from a reputable high school should have obtained a practical knowledge and appreciation of music, to the end that his life may be enriched by those refining influences that come only from good music. He should be able to know and to appreciate not only good music, but also what is good in music. While the business of the high school is not primarily with specializing in any line, yet a good foundation for specializing should be provided for pupils who desire afterward to specialize. This is no less true in music than in other branches. The coming high school will give to the ambitious student of music the same opportunities as it now gives to the student of law or of medicine; and, when it does, fewer hopes will be crushed beneath the heel of poverty.

That this is not an "iridescent dream" is proven from the fact that one of the well-known state educational institutions in the middle west now offers, free of charge, individual instruction in vocal and instrumental music to any of its students living within the State. If this has been found to be feasible (and it certainly has been) in a State institution having fifteen hundred students, something at least in the same line might be done in the high school of almost any progressive city.

Usually, pupils come from the grades into the high school with a fair knowledge of the primary principles of music, and a reasonable ability in note reading. At once choruses are organized from among the most *promising voices*, — choruses that "reflect great credit upon the instructor," and bring honor and fame to the school and city. All this is probably as it should be; but what of the ninety and nine who were not selected for the chorus? These are they who allow music to become less and still less a factor in life, and who sit dumb-lipped in the house of prayer while hallelujahs to the King of Kings and Lord of Lords should be ringing. Ah, it would be fully as well for business integrity if a song were to crowd out a sale now and then.

While it is always desirable that in each high school there should be a well-trained chorus to furnish a concrete illustration of well-rendered music, it is even more important that the body of students be formed into one great chorus for the study of the better class of music. What if some do not sing, either from inability or choice? What if effects are not altogether satisfactory? Many an indifferent student has come to love good music from being surrounded and saturated with a musical atmosphere. Others have become interested through an intelligent explanation of the origin and thought purpose of the choruses studied.

Americans will not average well in mass singing until they come to realize that it is the boy and the girl who do not sing at all rather than the embryo nightingale that need attention and assistance.

In school music, as in government, the motto should be, "The greatest good to the greatest number." The nightingale is apt to learn anyway, though perchance every way. Educators must in time come to regard music as much more than a polite diversion.

It is quite possible for six or eight hundred pupils, having come from the grades, to study in one body, with a very fair degree of success, choruses ranking in grade with the "Pilgrim Chorus" from *Tannhäuser*, and it is equally possible and eminently desirable to inculcate a taste for this class of work. Nothing is apt to interest a high school class more than the relation which music sustains to science, history, and literature, when this relationship is properly presented. Add to this magnificent chorus of young voices an orchestra, which can be organized with proper enterprise, and a competent conductor can make the music period the brightest, most attractive, and not the least profitable of all.

But — the conductor must be a past master in the art of "handling people." There must be no question of his ability as a musician. He must impress his students with the fact that he has mastered his music, and woe be unto his peace of mind if he is possessed of eccentricities.

Rightly to direct the enthusiasm of youth into proper musical channels is one of the grandest opportunities for doing good, — physically, mentally, morally, and spiritually, — which can come to any one who would leave the world better for his having lived.

To no one does this opportunity come closer than to the instructors of music in high schools.

NOTES

The regular monthly meeting of the Providence Round Table was held December 12. Arthur H. Ryder, organist of Grace Church, gave an interesting lecture, the subject being *The Place of the Modern Organ among Instruments.*

* *

Della Rogers, an American soprano, has made a great success as Isolde at the Hamburg Opera.

* *

A lyric drama, *Eumenides*, is shortly to be produced at the Social Theatre, Treviso. The composer is Filippo Guglielmi, who was formerly on intimate terms with Liszt.

* *

Vincent d'Indy appeared in Boston, December 11, with the Longy Club, in several of his chamber compositions for wind instruments.

* *

The Worshipful Company of Musicians, London, which undertook, at the instigation of Sir Homewood Crawford, to assist in the matter of the prize of £25 offered by the proprietors of *The Gentlewoman* for the best orchestral composition by a British woman composer, appointed a special committee (Sir F. Bridge and Mr. Thomas Lea Southgate), and nominated as judges Sir George Martin and Messrs. E. Markham Lee and Percy Godfrey. The competition closed January 10.

* *

Dr. Otto Neitzel is to make a tour in America during 1906–'07, giving piano lecture-recitals for which he has become noted in Europe.

* *

Anton Hekking, the 'cellist, has not become weary of America, judging by the report that he will make an extended tour of the States, beginning in October, 1906.

* *

George W. Chadwick, director of the New England Conservatory of Music, figured prominently on the program of a recent concert given by the Concordia Society of Leipsic. His dramatic overture, *Melpomene*, his *Ecce jam Noctis* (a hymn for male chorus composed for the '97 commencement exercises of Yale University), and his third symphony in F major were performed. Professor Chadwick, who is an honorary member of the Concordia Society, and in whose honor the concert was given, conducted his works in person, which scored a great success. Professor Chadwick is recuperating in Lausanne, Switzerland.

* *

Howard Penn, of New York, has been in London, and arranged for the appearance in the spring of Creatore, the erratic, and his band.

* *

H. Powell, Secretary of the Morecambe (Eng.) Competition Festival, to be given May 9, 10, and 11, has issued a preliminary announcement. There will be thirty-five classes and over forty pieces. The judges will be Dr. W. G. McNaught, H. Walford Davies, and Ivor Atkins. There will be a festival choir and orchestra formed for the evening performances. The works mentioned include Parry's *Pied Piper*, Stanford's *Revenge*, and Humperdinck's *The Pilgrimage to Kerlaar.*

* *

The dates for the remaining Symphony Concerts, conducted by Henry J. Wood at Queen's Hall, will be February 3 and 17, March 3.

* *

Henri Marteau, the violinist, is playing a new concerto by Dalcroze, in his American appearances this season with the Boston Symphony Orchestra.

REVIEW OF NEW MUSIC

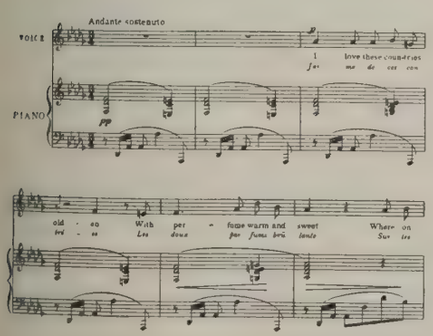
NEW SONGS

EMIL SJÖGREN. Two Songs, Op. 43.

1. *How Dear to Me the Hour.* Medium voice in C (c to F)..... .60
2. *Orientale.* High voice in D♭ (c to g♭ or a♭).. .60

These very interesting and artistic songs are among the most recent compositions of the talented young Scandinavian musician. They do not bear the hall-mark of nationality as strongly as songs by Grieg, for example, but exhibit a broad sympathy with the best modern thought. No. 1 is a setting of verses by Thomas Moore and is especially desirable for a contralto or mezzo-soprano; the rhythm is moderate, the mood warmly emotional, and the harmonic background is rich in color. Such a song may be useful in teaching, and it is perfectly adapted for recital work.

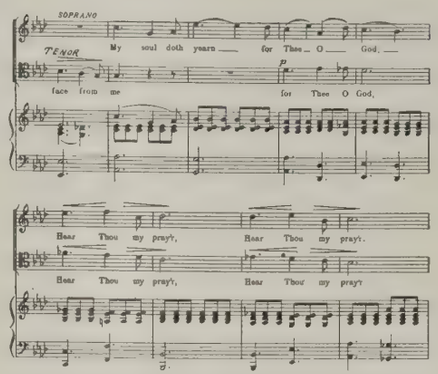
The *Orientale* (No. 2) is a setting of verses by Victor Hugo, which have been rendered into smooth and musical English by Isabella G. Parker. Both texts are given. The picture of languorous Southern climes is made vivid by music which is appropriately sensuous in style, and warmly harmonized. The piano plays an important part, though by no means overshadowing the voice; a rippling figure is introduced in the middle section with entrancing effect. The voice part is sympathetically written, and presents to the intelligent singer many opportunities for telling work.



C. W. HEINRICH

My Soul doth Yearn. Sacred duet for soprano and tenor..... .75

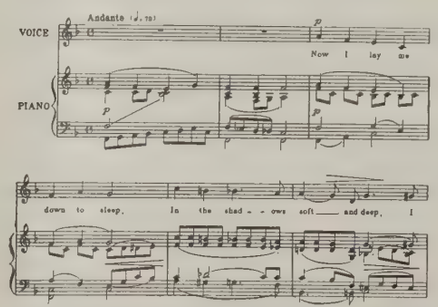
The demand for duets suitable for church use is large and the supply of good ones limited; but in this new composition we have a successful claimant for popular favor. Both parts are melodious and of equal interest; and they are very smoothly and euphoniously combined. The words are of such a character that they may be sung in any Protestant church; and the duet is of convenient length. The vocal character of the writing will be at once apparent.



JOHN WIEGAND

Cradle Song of the Soul. Sacred song for low voice in F (c to D)..... .60

A gently fervent evening prayer, the words of which (by Mary Lathbury) differ somewhat from the conventional sacred song. The stanza form is followed, and the structure is simple, though an adequate musicianship is evident in the well-planned accompaniment. The song lies in a rich register for medium voice, and by its range is quite as available for really low voices.



NEW PIANO MUSIC

LEO OEHMLER, Op. 54.

Recreation March. In B♭ major, 4–4. Tempo di marcia. Five pages. Grade III..... .60

A fine, bold, breezy foot-rhythm and an easy swing distinguish this march. For its grade and the few difficulties involved, it is exceptionally effective. The Trio is in E♭ major, a catchy melody which, though with less motion, has more sonority than the principal movement, a shortened return of which concludes the piece. As a march for school or class use this should prove immediately popular.

FREDERICK A. WILLIAMS, Op. 55.

Jubilee March. In E♭ major, 4–4. Tempo di marcia. Five pages. Grade III–IV..... .60

This piece has a somewhat dignified movement, though it is not lacking in energy and animation. The themes are squarely set forth in full chords and octaves, and some ease in octave-playing is essential. The Trio (in A♭ major) is a *cantabile* theme, which must be well enunciated; the march-rhythm, however, loses none of its impetus. Like the *Recreation March*, reviewed above, this is eminently desirable for school or class work.

RECENT WORKS

Among other new works mentioned is an interesting violin concerto by Sibelius, whose *Swan of Tuonela* pleased Paris more than it did London. Debussy's three-part suite, *La Mer*, is also well received in the French capital. Camille Erlanger's latest work is the opera *Aphrodite*. Siegfried Wagner's fourth venture, *Bruder Lustig*, adds a fourth failure to his list. The veteran Goldmark is occupied on a setting of Shakespeare's *Winter's Tale*. We are certainly behind the times in America, as far as Goldmark is concerned. We ought certainly to have a chance to hear *Heimchen am Herd*, to say nothing of his later operas.

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round.

IF YOU ARE RECEIVING LESS, WE CAN DOUBLE YOUR EARNING POWER.

THE TUNE-A-PHONE IN USE.

We teach **Piano Tuning, Action Regulating, Voicing and Fine Repairing,** all in one practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life.**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. Many professional tuners study with us to perfect themselves in their art. SCORES OF MUSICIANS take the course that they may be able to care for their own instruments. More take our course as a **sure means to money-making.** We fit our students to command splendid profits in the pleasantest of professions.

Read what some of Our Graduates Say about it.

NILES BRYANT, DIRECTOR

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos."—Joseph Gribler, Astoria, Oregon.

"I average $9 a day."—Simpson Thomas, Aquebogue, N. Y.

"I easily make an average of $5 to $6 a day."—John T. Hannam, Galt, Ont.

"I made $100.00 fixing two old pianos."—Mrs. S. A. Albertus, Los Angeles, Cal.

"I made $31.50 the first two weeks, and $5 to $12 per day thereafter."—Carey F. Hall, Coffeyville, Kan.

"I am earning good money since I began tuning, repairing, etc. Last week I took in $27.50, and next week I am sure I can raise that."—Ray J. Magnan, Manistee, Mich.

"This profession, I find, is one that is surely not over-crowded. At a place where there are several older tuners, I get more work than I can easily dispose of, from which I realize from $2.50 to $3 per instrument."—J. W. Unser, Tiffin, Ohio.

OF THE CITY OF NEW YORK

53 Fifth Avenue, New York **FRANK DAMROSH, Director**

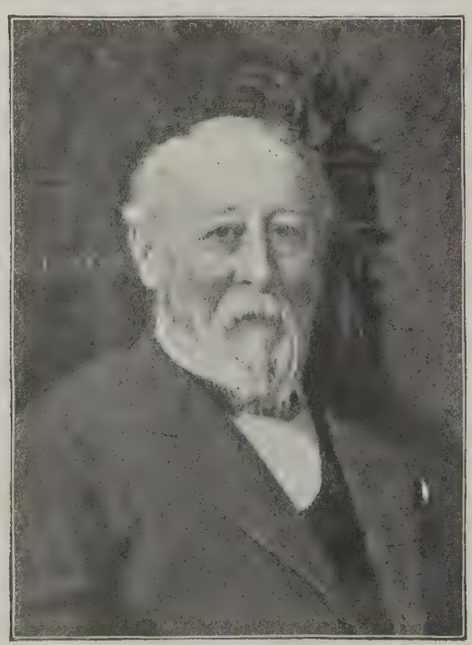
Established and endowed for the education of serious students of music. Offers all advantages of a European musical education. Faculty composed of the most eminent teachers of Europe and America.

Prospectus on application to the Registrar.

THE OLIVER DITSON COMPANY: ITS PAST AND PRESENT

The Oliver Ditson Company, the oldest musical house in the United States, and the largest in the world, was founded in 1834 by the late Oliver Ditson, in conjunction with the late Col. Samuel H. Parker. The firm was styled Parker and Ditson. The first place of business was on Washington St., near School St. Thence it was moved to a portion of what was until lately the famous Old Corner Bookstore.

Mr. Ditson, born in Boston in 1811, was then twenty-three years of age. In 1840 he purchased the interest of Colonel Parker, the firm name was changed to Oliver Ditson, and at the age of twenty-nine, unaided by capital



OLIVER DITSON

or influence, the career of this remarkable publisher may be said to have been fairly and successfully launched.

At this time Mr. Ditson was closely identified with the best that Boston possessed in the way of music. Besides being organist and choirmaster in the old Bulfinch Street Church, as well as in "Father" Taylor's Baptist Bethel, he was active in a local glee club, named after the famous singer Malibran, and also in the Handel and Haydn Society. He held the most amicable relations with composers and artists, and encouraged rising talent in every way possible.

In 1844 Mr. Ditson removed his business from the Old Corner Bookstore to larger quarters in a building on the site of what is now the plant of the Boston *Herald*. Shortly after this change he took into his employ a boy of fifteen, John C. Haynes, the present head of the Oliver Ditson Corporation. The business increased steadily, and in 1852 Mr. Haynes received an interest in the business. He became a copartner in 1857, and the designation of the firm was changed to Oliver Ditson & Co. The new firm possessed all the unique characteristics of the old, and with the introduction of young and vigorous blood the house was in a sense revitalized. New methods were adopted, especially in advertising; the field of activity was greatly enlarged, and the publications of the firm increased in like ratio with the advance of the whole country in population, wealth, and culture.

In 1857 Oliver Ditson & Co. moved to a commodious building, 451 Washington St., owned by Mr. Ditson, and specially erected for the business. At this time, also, the firm became first identified with musical journalism by the purchase of the late John S. Dwight's *Journal of Music*, then the leading periodical of its class in the country. Mr. Dwight continued as editor, and the periodical for more than twenty years was a power in the musical world. In 1878 was established the *Musical Record*, which afterwards became the *Musical Record and Review*. In 1903 THE MUSICIAN, the foremost educational music journal in the country, was purchased from the founders, the Hatch Music Co. of Philadelphia, and the *Musical Record and Review* was merged into the larger paper. The *Choir and Choral Magazine*, established a few years before, was continued in addition to THE MUSICIAN.

Let us return again to Oliver Ditson & Co., as the firm was called in the early sixties and during the Civil War period. In 1860 was established a branch house in Cincinnati, under the charge of John Church, who afterwards, in 1871, bought out the interest of the Boston house, becoming sole proprietor. In the early sixties the house added to its business of publishing and selling sheet music, the sale, importation, and eventually the manufacture of musical instruments of every kind. For this purpose a branch store was established at 33 Court St. In 1864 another branch house was started in Chicago, with George W. Lyon and P. J. Healy in charge. Lyon & Healy were in partnership with Oliver Ditson & Co. until 1890, when the Western branch became a separate corporation, still retaining the agency of the Eastern house.

The New York branch house was established in 1867, with Charles H. Ditson, eldest son of Oliver Ditson, at its head. He has continued in that capacity to the present time. The Philadelphia house was founded in 1875 by the purchase of the valuable Lee and Walker catalog, and was in charge of Mr Ditson's youngest son, James Edward, until the latter's death in 1881. Under other management this branch is still in successful operation.

On Dec. 21, 1888, Oliver Ditson, the pioneer in American music publishing, passed away at the age of seventy-seven, after an illness of fifteen months. For more than half a century his name had been a household word throughout the United States. Even after a lapse of more than seventeen years, Mr. Ditson's memory is held in grateful esteem by all who had been associated with him, as well as by the many that had received his invaluable aid and advice.

In 1890 the surviving partners, John C. Haynes and Charles H. Ditson, with the executors of the estate of Oliver Ditson, organized a corporation entitled the Oliver Ditson Company. The present officers are John C. Haynes, president; Charles H. Ditson, treasurer; with Edward S. Cragin, Charles F. Smith, and Moses Williams as directors. Within the last fifteen years the growth of the corporation has been well-nigh phenomenal. The new building, erected at 451 Washington St. in 1901, although in every sense up to date, was nevertheless unequal to the constantly growing business. In 1903 was erected the superb building at 150 Tremont St., which is now the home of the Oliver Ditson Company. It is unique among music publishing houses, and the visitor can spend hours in visiting the many departments which take care of the enormous daily business of the company.

A brief description of this building will interest the readers of THE MUSICIAN.

There is a sub-basement, used for the heating, lighting, and power appliances. The basement above is a general shipping room, which leads to the main retail department on the street floor. Here is a salesroom with every convenience for customers. The furnishings are in oak with an ornamental gallery, midway in side and rear, that gives quick access to the thousands of cabinets containing music. These have handsome paneled drop doors, proving a delight to the eyes of customers. Facing the door are fine portraits of the late Oliver Ditson, and the present head of the corporation, John C. Haynes.

CHARLES H. DITSON

The second floor is entirely devoted to the sheet music publications of the house, and is in easy reach of the retail department. The rear of the floor is used for the mailing and shipping of light packages.

On the third floor front will be found the general business offices of the company, the rear being used for the immense stock of band and orchestral music; also for the reserve stock of the company's publications.

The next three floors — four, five, and six — are given up to the display and sale of musical instruments of which every kind can be found here, excepting pianos and organs.

The seventh floor is devoted to the offices of THE MUSICIAN, with the subscription and publicity department.

The eighth and highest floor contains the spacious offices occupied by Mr. Haynes. These are ideal in every respect, and the out-of-door view to be obtained from them, both summer and winter, is attractive to a degree.

Other offices on this floor include those of the superintendent of printing, the musical editor and his assistants, superintendent and manager, editor of the band and orchestra department, rooms for correspondence and stenographers, and other offices incidental to the business. There are twin rapidly moving passenger elevators, connecting all floors, and a large one for freight purposes.

This retrospect and description of the Oliver Ditson Company and its present home is necessarily brief. The company's beginnings were small, but its growth has been steady and consistent. Now it stands at the head of the musical publishing houses of the world; it is, in fact, *sui generis*, in a class of itself. The future means a continuous "onward and upward."

Twenty Songs

By STEPHEN C. FOSTER

THIS volume contains Foster's twenty best-known songs. Seventeen of the numbers are arranged for solo voice with the chorus or refrain arranged for mixed voices. These, however, may be sung throughout by a single voice, the melody always being in the soprano. The accompaniments have been carefully revised by N. Clifford Page and expression and phrasing marks which have been lacking hitherto have been conscientiously supplied in all of the songs.

CONTENTS

Come where My Love lies Dreaming
Comrades, fill no Glass for Me
Ellen Bayne
Fairy-Belle
Farewell, My Lilly Dear
Gentle Annie
Gwine to run All Night (De Camptown Races)
Hard Times come again no More
Massa's in de Cold, Cold Ground
My Old Kentucky Home
Nelly Bly
Nelly was a Lady
Oh! Boys, carry me 'long
Oh! Susanna
Old Black Joe
Old Dog Tray
Old Folks at Home (Swanee River)
Uncle Ned
Under the Willow She's Sleeping
Willie, We have missed You

The book contains a biographical preface and portrait of the composer and sixty-two pages of music. Published in the Half Dollar Music Series.

Price, 50 cents, post-paid

The Waverley Magazine

IS THE OLDEST, BRIGHTEST AND BEST FICTION MAGAZINE PUBLISHED

For over fifty years it has carried its cheery message into thousands of homes, and it is more warmly welcomed now than ever. Under new management it is rapidly forging ahead — a welcome guest — a household necessity.

Why You Should Read It

The Waverley began life as a high-class fiction Magazine in 1850. It had no pictures, no frills; and it is the same to-day — a family magazine brimful of original stories, helpful suggestions, and practical home hints, with numerous special features and departments.

Bright, Entertaining, Wholesome

The Waverley has more reading matter than any other magazine of its class, yet it is only

One Dollar a Year.

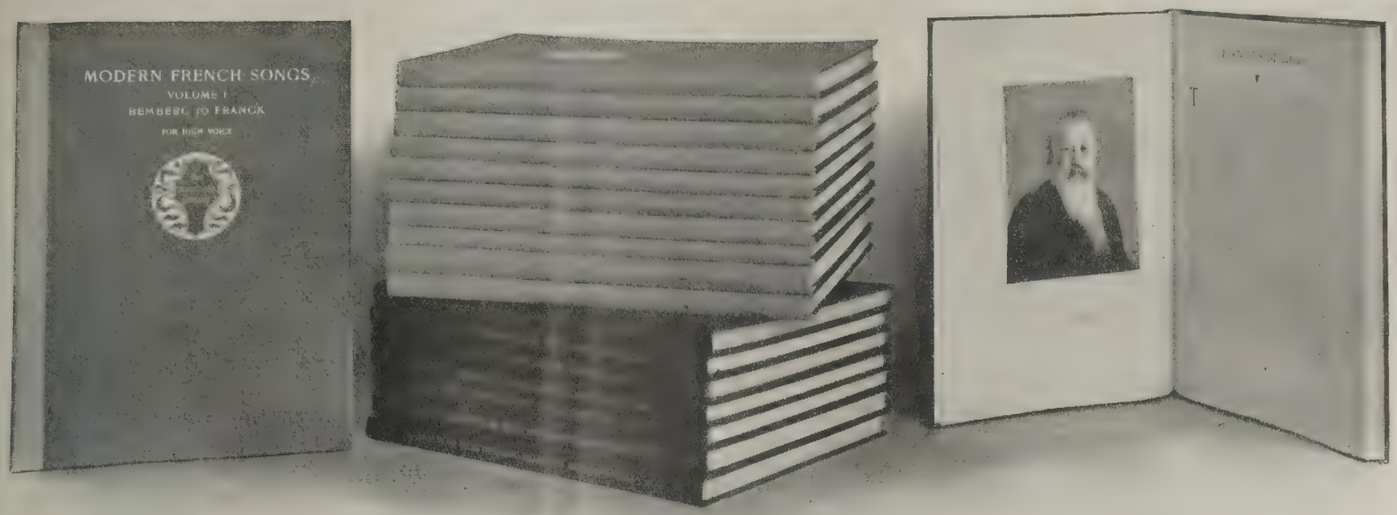
Subscribe now for the Waverley Magazine. From a fiction standpoint it will be the best investment you have ever made.

Remit by Post Office or Express Money Order or Registered Letter.

Waverley Publishing Company,

262 Washington Street, Boston, Mass.

SPECIAL OFFER: For only $1.25 we will send both The Waverley Magazine and The American Queen each for one year, and a book containing 32 complete novels.



THE MUSICIANS LIBRARY

A library not only for musicians, but for all who believe in music and who cherish musical ideals. It is designed to include the masterpieces of song and piano music; to gather into a uniform series of volumes the best works of the best composers

SPECIAL FEATURES

Each volume is carefully edited by an authority who is at the same time an enthusiast on the subject or composer represented.

Each volume contains the best obtainable portrait of the composer or composers.

Each volume is enriched by an elaborate critical introduction, possessing genuine literary value.

With the music is given, as far as known, the date of the composition, and the contents, when possible, are arranged chronologically.

The various song volumes are issued in two editions—one for high voice and one for low voice, thus bringing the best song literature within the reach of all. Whenever possible the original key is named.

In the songs by foreign composers the original texts are in all cases given. Great pains have been taken to secure faithful translations that fit the music and have literary worth.

The music pages, printed on a specially made paper, are uniformly of full folio size.

The volumes are artistically bound in paper with cloth back, and also in full cloth, gilt. These cloth-bound volumes are eminently desirable for library use and as gifts.

That the typography, engraving, accuracy, and artistic *ensemble* of the volumes be of the highest excellence, neither care nor expense has been spared.

No lover of music should be without these matchless volumes

The Technics of Bel Canto

BY

G. B. LAMPERTI

Translated from the German by Dr. Th. Baker

Net $1.25

THIS work is dedicated to Marcella Sembrich, a pupil of the author's, who is one of the most eminent authorities on vocal art of our times. It demonstrates both theoretically and practically his own method of teaching the pure Bel Canto, which, it must be admitted, has lost but little of its effect on enthusiastic auditors, even in this period of ultra-moderns.

It represents the fruits of his experience as a teacher and is offered for the benefit of his own pupils and other earnest students.

COLLEGE SONGS

NEW AND ENLARGED EDITION

The typical college song is a song of good cheer—a song of youth and comradery.

This collection, as far-and-away the most widely circulated book of its kind, has done more to scatter smiles, to brighten dull hours, and enliven happy ones, than any song book ever published.

From East to West and North to South, even in islands far away, wherever youth and good fellowship meet together, its songs are sung.

Here are jolly songs, nonsense songs, convivial songs, plantation melodies, serenades, songs of rollicking swagger, and songs of tender sentiment touched with the rosy tint of youth.

The book belongs on every piano, in every house, wherever "good fellows get together." Without raising the price, low as it is, or taking out one number, twenty-eight favorites have been added in the new edition, making an unrivaled collection of one hundred and thirteen songs.

This, by far the most popular college song collection ever published, has been enlarged by the addition of twenty-eight favorites, making a total of one hundred and thirteen songs. The additions include Bullard's famous "Stein Song," the Yale "Boola Song," "Bohunkus," "The Pope," "Bring the Wagon Home, John," "Little, Old Red Shawl," "She's Gone, Let Her Go," "Landlord, Fill the Flowing Bowl," and the five best of Foster's melodies, and fifteen popular numbers.

C. H. DITSON & CO., New York

J. E. DITSON & CO., Philadelphia

The Music Students Library

A Series of Educational Text-books Suited to the Requirements of the Average Student

Intervals, Chords, and Ear Training
By JEAN PARKMAN BROWN

The author of this book, feeling that a course in Ear Training cannot be begun too early, has compiled a simple and yet thorough set of exercises and examples in rudimentary harmony for use in conjunction with the study of the piano.
PRICE, post-paid, $1.00.

Ear Training for Teacher and Pupil
By C. A. ALCHIN

This work does not aim to take the place of a text-book on harmony, but is designed rather, through training the sense of hearing, to teach the pupil to think in tones, so that he may sing, name, write, and play what he hears; to harmonize melodies at sight, to improvise accompaniments, and to recognize and appreciate not only the melodic effects in music, but the harmonic and rhythmic as well. PRICE, post-paid, $1.00.

Harmonic Analysis
By BENJAMIN CUTTER

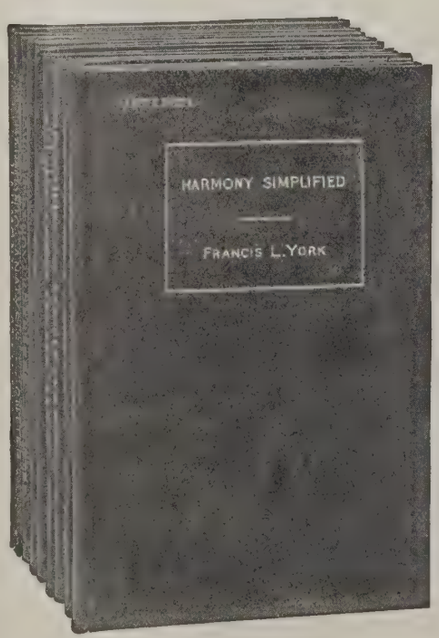
A book designed primarily for those who have studied harmony and would apply it in their playing, in their teaching, and in their everyday musical life. A careful study of this book teaches one to analyze the harmonic structure of both classic and modern music and to hear with greater understanding, to read at sight with more facility, and to play or sing with more intelligence. PRICE, post-paid, $1.25.

How to Study Kreutzer
By BENJAMIN CUTTER

A handbook for the daily use of violin teachers and students. It contains explanations of the left-hand difficulties and their solution, with directions for the systematic acquirement of the various bowings, both firm and bounding. By putting in book form what every teacher discusses and illustrates in the lesson room, the writer explains to all violin players those principles which have made the studies of Kreutzer so justly famous.
PRICE, post-paid, 75 cents.

Harmony
By SIR JOHN STAINER

A new edition of this standard work with the author's latest revisions and an appendix. This is the only edition published in cloth binding. PRICE, post-paid, 75 cents.



Lessons in Music Form
By Dr. PERCY GOETSCHIUS

A manual of analysis of all the structural factors and designs employed in musical composition, explaining thoroughly each design or form, from the smallest to the largest. Numerous illustrations are given in the text, which are supplemented by frequent references to classic literature. The book is intended for the general music lover or student, and aims to give not only increased enjoyment and understanding, but the power interpret with intelligence and authority. PRICE, post-paid, $1.25.

Burrowes' Piano Primer
Edited and Revised by FREDERIC FIELD BULLARD

A new edition of this well-known work. The editor has preserved the original text and contents, as far as possible, but has eliminated antiquated ideas, corrected faulty terminology, and replaced old-fashioned terms by modern ones. The pronunciation of each foreign word is given in the text as it occurs. Several exercises have been transferred from the appendix to the earlier pages, and the scales and arpeggios completed, substituting foreign fingering for the so-called "American" system. It is adapted for either private or class instruction and provides a guide to practice. PRICE, post-paid, 50 cents.

Harmony Simplified
By FRANCIS L. YORK, M. A.

A practical text-book presenting to the student in a concise manner the fundamental principles of harmony. Non-essentials are omitted. The work is modern in spirit and its many illustrations are from the best sources. In style the book is simple, but direct, explicit, and commendably complete.
PRICE, post-paid, $1.00.

English Diction
By LOUIS ARTHUR RUSSELL

This book is intended to establish English in its rightful place as a "Song Language." The author calls attention to the fact that the varieties of vowel and diphthong pronunciation, on account of which foreigners consider English unmusical, are its chief strength and beauty. Musical illustrations are given to show the simplest way of fitting text to tones so as to make the meaning of both clear to the listener. The work is eminently logical and the rules are given in terse, everyday phraseology. PRICE, post-paid, $1.00.

FOLIO EDITION—SHEET MUSIC

Compass shown by letters in brackets [ ]. First letter is lowest note; notes below the staff indicated by small letters; on staff by CAPITAL letters; above staff by *italic* letters.

HIGH VOICE

GODARD, BENJAMIN — PRICE
Lullaby from "Jocelyn." (With Violin and 'Cello.) [F] [F to *a*]..... 75
A favorite standard song of modern style, equipped with a well-written obbligato for either violin or 'cello.

SJÖGREN, EMIL
Orientale. Op. 43, No. 2. [D♭] [c to *a*♭]..... 60
A dreamy tone picture of Southern scenes, vocally effective and musically interesting.

MEDIUM VOICE

GODARD, BENJAMIN
Lullaby from "Jocelyn." (With Violin and 'Cello.) [D♭] [d♭ to F]..... 75
(See above.)

SJÖGREN, EMIL
How Dear to Me the Hour. Op. 43, No. 1. [C] [c to F]..... 60
Richly harmonized and melodious lyric, available for either medium or low voices.

MANNEY, CHARLES FONTEYN
May Morning. Op. 11, No. 1. [F] [c to E or F].... 50
A bright and happy love lyric, whose success for high voice led to its publication in a lower key for medium range.

Sacred Song

HIGH VOICE

AMBROSE, R. S.
One Sweetly Solemn Thought. [E♭] [E♭ to E or *g*]...
This standard sacred song in a convenient key for high voice. 35

Piano Solo

WACHS, PAUL
Staccati. (Scherzo.) [D] [III-IV]..... 40
Attractive, tripping rhythm and piquant melody characterize this playable and dainty recreative piece.

Organ Music

FOERSTER, ADOLPH M.
Postlude in D Minor. Op. 62, No. 3. [F]..... 60
A stately march rhythm is dominant, gratefully relieved by more fluent passages. Registration fully indicated.

Mandolin Orchestra Music

BENDIX, THEO.
Symposia Waltz. (Arr. by H. F. Odell.)
A combination of favorite waltz strains, excellently arranged.

BIZET
Fantasia from "Carmen." (Arr. by H. F. Odell.)
A very effective selection from the most popular of operas.

PLANQUETTE, J. R. — PRICE
Selection from "Chimes of Normandy." (Arr. by H. F. Odell.)
Effective opera selection; not difficult.

ROLLINSON, T. H.
Fantasia on "The Old Oaken Bucket." (Arr. by H. F. Odell.)
Playable and ingenious arrangement.

OCTAVO EDITION

(PLEASE ORDER BY NUMBER)

Anthems for Mixed Voices

ABT, FRANZ
No. 11,479. **O Lord Most Holy.** (With Soprano Solo). 05
A short, melodious number of simple but beautiful sentiment.

ARCADELT, JACOB
No. 11,475. **Give Ear unto My Prayer.** (For Lent).. 05
Dignified and churchly anthem, brief and concise.

CALLSIN, J. BAPTISTE
No. 11,476. **Rend Your Heart, and not Your Garments.**..... 05
Short anthem, musicianly and not difficult.

GOUNOD, CHARLES F.
No. 11,474. **Blessed is He Who Cometh** (Benedictus). (With Soprano Solo)..... 05
Deeply religious in feeling and effective in performance. English words only.
No. 11,471. **Jesus, Word of God Incarnate**..... 05
Very effective, quiet number, which may be sung unaccompanied.

HAYDN, F. JOSEPH
No. 11,481. **O Lord, rebuke Me Not** (Et Incarnatus). (With Soprano Solo)..... 05
An anthem of great beauty, simple but dignified.

MARTIN, GEORGE C.
No. 11,473. **The Great Day of the Lord is Near.** (With Bass Solo)..... 05
A theme used significantly, dramatic effect, coupled with fine words.

MORSE, CHARLES H.
No. 11,480. **Have Mercy on Me.** (With Soprano Solo)..... 10
A simple, melodious solo, repeated for quartet, with devotional effect.
No. 11,472. **O Rest in the Lord.** (With Alto Solo).. 10
Devotional and churchly short anthem.

STEWART, H. J.
No. 11,449. **Come, Pure Hearts.** (With Soprano Solo)..... 12
Fresh, attractive melody and harmony characterize this excellent number.
No. 11,446. **Come unto Me, Ye Weary.** (With Baritone and Bass Solos)..... 12
Melodious anthem, in which solo and chorus effects are skilfully contrasted.

Part-song for Women's Voices

SCHUBERT, FRANZ
No. 11,467. **Hark! Hark! The Lark.** (Three-part Song.) (Edited and arranged by N. Clifford Page).. 10
This arrangement of a famous song will be found both practical and delightful.

NEW BOOKS

Cantata

SCHNECKER P. A. — PRICE
Hymn to Light. (For Soli, Chorus, and Piano or Organ)..... 40
A short secular cantata, with stirring choruses and melodious solo parts, which are grateful to sing.

CHORAL WORKS

The Half Dollar Choral Series

LICHTER, HANS. (Compiled by)
Twenty Part-songs for Men's Voices..... 50
An excellent selection of attractive numbers, varied in style and of medium difficulty.

CLOUGH-LEIGHTER, H. (Compiled by)
Twenty Quartets for Women's Voices. (Secular).. 50
Recommended to clubs and choruses everywhere as the best collection of its kind in the market.

Ditson Edition

DANCLA, CHARLES
No. 51. **Fifty Daily Studies for the Violin.** Op. 74. (Edited by Benjamin Cutter)..... 50
Contains the essentials of violin technic, and will ensure free and nimble finger-work.
No. 52. **Six Airs with Variations** (Six Petits Airs Variés). Op. 89. (For Violin and Piano.) (Edited by Benjamin Cutter)..... 1 00
These graceful and eminently practical pieces are standard instruction numbers in a superior edition.

EVARTS, RALPH
No. 28. **Six Piano Pieces for Little Hands.** Grades II and II-III.) (Edited by W. S. B. Mathews).. 75
An attractive group of teaching pieces, pleasingly melodious and fresh.

KELLEY, JOHN CRAIG. (Edited by)
No. 43. **Twenty Pieces for Violin and Piano in the First Five Positions.** Book IV of Graded Pieces for Violin and Piano..... 1 00
All the numbers in this collection are of solid musical worth and dignity; they afford excellent contrast, and are also splendid study material.

PREYER, CARL A.
No. 94. **Twelve Wrist Studies in the Form of Short Pieces for the Piano.** Op. 43. Introductory to Twenty Progressive Octave Studies, Op. 30, and to Octave Studies in General..... 1 00
Valuable, practical studies, which are at the same time so musical and well made that they will both please and be productive of good style.
No. 96. **Twenty Progressive Octave Studies for the Piano.** Op. 30. Book II, Ten Studies..... 1 00
Excellent technical work, which appeals by the charm of its contents to the musical imagination as well.

The Half Dollar Music Series

Easy Salon Music for the Piano. (Second Series).... 50
A collection of graceful, light, or sentimental piano numbers.
Popular Salon Music for the Piano..... 50
Every number in this book is attractive and charming; the contents show wide variety as well.
School and Gymnasium Marches..... 50
Stirring foot-rhythms characterize all these pieces, which are fresh, vigorous, and melodious.

THE SPARRELL PRINT, BOSTON

Regarding Church Organs

And the Value of a Guaranty

THE WORTH OF A GUARANTY DEPENDS ON THE MAKERS

Financial Standing

If he is new to the business, but has plenty of money, perhaps you can make him give your money back if his guaranteed organ goes wrong.

Business Life

Some manufacturers are in business to stay; others move on after a few months. If your organ maker stops making and selling organs during the term of the guaranty, his promises will not do you much good.

Reputation

If your organ maker has been in business a long time and has always kept his promises to others, you have a right to rely upon his dealing fairly and honorably with you.

WITHOUT THESE HIS GUARANTY IS WORTHLESS

THE WORTH OF THE ESTEY ORGAN COMPANY'S GUARANTY IS KNOWN

By their well-known financial ability.
By their sixty years of past business life and growth.
By the fourth generation of Esteys now growing up to continue the business.
By their unbroken record for doing the square thing.

No matter how small or how large an organ purchase is contemplated, don't fail to write

THE ESTEY ORGAN COMPANY

BRATTLEBORO, VERMONT

You Should Send for the Following Collections of Pipe Organ Music

The Organists' Sketch Book
By C. C. Stearns
Pieces for church or home use, for pipe or reed organ, with or without pedals. **Heavy paper covers, $1.**

Fifteen Marches
By Scotson Clark
These marches are used very extensively by the leading organists for Postludes, Processionals, etc. **Heavy paper covers, $2.**

A New Pipe Organ Book by Geo. Henry Howard

Modern and Classic Repertoire for Organ
Contains forty-seven (47) pieces for use in church, consisting of Preludes, Postludes, Offertoires, Responses, etc. **Boards, $1.00; cloth, $1.50.**

The Progressive Organist
By P. La Villa
A new book for two-manual pipe organ, containing Preludes, Postludes, Offertoires, Marches, etc. Few, if any, of these selections have appeared in any other collection. **Limp cloth, $1.50.**

The Junior Church Organist
By C. H. Morse
Each piece is arranged for instruments of two manuals, with only the ordinary complement of registers, this making them practical even with small organs. This book is a fitting companion to "The Church Organist" by the same author. **Limp cloth, $1.50.**

Mail orders filled to all parts of the country, or you can procure this music from your dealer.

PUBLISHERS' NOTES

RECITALS Although the end of the teaching season is still three or four months away, it will be necessary to begin preparations early for the final recital. It is a good plan for schools and teachers to give recitals, because it enables them to show what progress their pupils are making, and helps to sustain the pupil's interest in study until the end of the term. Playing before an audience is admirable practice for students.

The piano teacher should be careful to offer a program containing an interesting variety of pieces, and to arrange its order so as to allow as much contrast as possible. This may be accomplished by the introduction of selections for four and six hands and for two pianos. *Ensemble* numbers will give the younger pupils a chance to play. A vocal or violin solo will also add interest to the occasion.

To the vocal teacher, when the class is fairly well divided among the four voices, the question of variety is not so serious. Solos, duets, and quartets, and choruses in which every pupil can participate, are at his disposal. Solos with violin or 'cello obbligato are also available.

The programs of music schools, some of which are fortunate enough to have a good pupils' orchestra, are frequently such as to attract the attention of regular concert goers. These are commencements in the true sense of the word for many pupils, who are thus launched out into a successful musical career.

To select music suitable for recital or commencement use involves frequently a considerable expenditure of time. The standard works are well enough known, but it is desirable to include novelties, especially by American composers. We invite correspondence from those in search of such material, and on request will send post-paid our thematic catalogs of vocal music and music for the piano, violin, and other instruments.

COMMENCEMENTS In graded and high school commencements the musical part of the program is incidental to the more important one of graduation. Some of the programs that have come to our notice, however, reflect much credit on those in charge. Such an event usually attracts a large audience. Most of the hearers will appreciate a lighter order of music or music with good strong rhythm. With a large chorus available, it is possible to arrange a most effective and inspiring program. This work should be taken up early enough so as to insure a finished performance.

The following is a partial list of our most successful school choruses: —

TWO-PART CHORUSES FOR WOMEN'S VOICES.

6,155. Fondly We greet You.....*Claribel*

6,769. Song of the Sea.....*Veazie, G. A., Jr.*
10,655. From a Bygone Day.....*German Folk Song*

Copies of any of the above may be had for examination. We publish also a number of appropriate cantatas, a complete descriptive catalog of which will be sent post-paid to any address. For the benefit of those in charge of school music who are unfamiliar with our publications of this kind we will make selections ourselves of such pieces as we can especially recommend. Liberal discounts are given to schools, making the cost of copies as low as usually paid for inferior editions.

EASTER MUSIC Choir leaders who have not yet planned their complete Easter programs will find timely suggestions in our list of new Easter music. On other pages of this magazine are given also the names of the most successful anthems, carols, songs, and cantatas published by us in the last few years. Our complete catalog of Easter music will be sent post-paid to any address. Music published by us will be sent for examination, and on request we will make selections ourselves of such pieces as we can especially recommend.

The Music Supplement of the March and April numbers of the *Choir and Choral Magazine* will each contain several new Easter selections for the choir. The March issue will appear about the first of the month. The price of a single copy is 10 cents, which represents but a part of the value of the music alone. The yearly subscription price of the *Choir and Choral Magazine* is 50 cents.

A NEW GRADED VOCAL COURSE We are now preparing for publication a graded, systematic series of vocalizes for all voices, selected from the works of Alary, Aprile, Brambilla, Bordogni, Concone, Crescentini, Lablache, Lamperti, Marchesi, Nava, Paer, Panofka, Panseron, Savinelli, Sieber, and others. The books have been compiled and edited by Eduardo Marzo.

The purpose of this series is to place in progressive and systematic order before the teacher and pupil the best vocalizes by the best masters. It covers the entire course of vocalization. While not intended for beginners, it contains all that is required for the complete study of the vocal art. Each number has been selected not only for its intrinsic merit but also because of its pedagogical value.

The Course does not pretend to teach singing without the aid of a teacher. It merely places in view all the best material that can be gathered for the study of vocalization. Each set of vocalizes covering a special difficulty is preceded by a page of the exercise which they illustrate. Complete explanations are given as to the manner of performing them.

Three books for sopranos will be the first to appear. Book I will contain forty vocalizes, Book II thirty-six vocalizes, and Book III twenty-four vocalizes. The price of each book will be 75 cents, but in advance of publication we offer them for 40 cents each, which includes postage if cash accompanies order.

TWENTY MELODIES, BY STEPHEN FOSTER — Stephen Collins Foster, whose song, *Come where My Love lies Dreaming*, is included in the music supplement of this issue, may be justly termed the founder of American folk music. As a token of the esteem in which he is held by Kentuckians, a statue of Foster, paid for by popular subscription, will be unveiled at Louisville in June. Kentucky thus bestows upon the composer of *My Old Kentucky Home* a greater honor than ever paid before to an American musician.

Some of Foster's other well-known songs are *Massa's in the Cold, Cold Ground, Old Black Joe, O Susanna, Old Uncle Ned, Hard Times come again no More, Old Dog Tray*, and *Old Folks at Home*. The last named, often known as *Swanee River*, is probably the best-known American folk song. *Twenty Songs*, by Stephen C. Foster, contains the above-mentioned and twelve of his other most characteristic compositions. The price of the book is 50 cents, post-paid.

BIOGRAPHIES OF GREAT COMPOSERS — Our special offer on nine biographies of great composers, as announced in the February MUSICIAN, is still open. The following is a list of the works: —

Life of Beethoven, Schindler, edited by Moscheles	$1.50
Life of Liszt, De Beaufort	1.25
Life of Gottschalk, Hensel	1.25
Life of Handel, Schoelcher	2.00
Life of Rossini, Edwards	1.50
Life of von Weber, by his son, Vol. I	1.25
Life of von Weber, by his son, Vol. II	1.25
Life of Mendelssohn, Lampadius	1.50
Life of Chopin, Liszt	1.25
Life of Schumann, Wasielewski	1.25

Each biography, excepting that of Weber, is complete in one volume. The prices given include postage to any address. While the sets containing one or two slightly shop-worn copies last we shall continue to offer them for $7.00, which includes the cost of transportation if cash accompanies order. The regular price of a set is $14.00. Copies of any or all will be sent for examination. The special discount of 50 per cent, however, applies only when the ten volumes are ordered.

THE TRAINING OF BOYS' VOICES — We are now preparing for publication a work by Claude Ellsworth Johnson entitled *The Training of Boys' Voices*. The book will be divided into seven parts, as follows: Children's Natural Voices, The Beginning of Tone Production, Voice Training, Vocal Exercises, Music in Schools, Boys in Church Choirs, and The Selection of Music for Boys' Voices. The final chapter includes a carefully prepared list of anthems, also a list of secular music. The author is organist and choirmaster of one of the leading churches in New York City, also a teacher at a prominent conservatory of music.

The work is short and practical, and will probably appear within two or three months. The price will be announced at an early date.

THE YOUNG VIOLINIST BY GEORG WICHTL — In preparing a new edition of this well-known work, the value of which has been proven by the test of many years, the editor, John Craig Kelley, has endeavored to make clear certain points which have not heretofore been sufficiently obvious. To this end the text has been reshaped to a considerable extent. The disjointed fragments scattered throughout the book have been incorporated into the introductory matter. "How to hold the violin," "How to hold the bow," "How to draw the bow across the strings" are explained in a clear and practical manner. "How to tune the violin" and "Where to place the fingers on the strings" have been added by the present editor. The editor has also provided directions to accompany the various exercises.

The Young Violinist is in preparation. It will be No. 91 of the Ditson Edition. The price will be $1.00. In advance of publication, we offer it for 40 cents, which includes postage when orders are accompanied by cash.

LIBRETTO OF FAUST — We are about to issue a libretto of Gounod's *Faust*, with the original French text and an excellent English translation. The preface will comprise the story of the opera and a short history of the Faust legend. An arrangement for piano solo of the favorite number from each act will be included. The libretto will be ready by the time the Metropolitan Opera Company starts on its annual tour. The price will be 25 cents per copy, but until publication we are offering copies at a special price of 10 cents, which includes postage if cash accompanies order.

SUMMER SCHOOLS — To the teacher who does not have time during the busy season to keep up practice and to study the higher branches of musical theory, the summer music school offers an opportunity of turning to good account the dullest months of the teaching year, July and August. Earnest advanced students will also find it worth while to continue their studies during the warm weather instead of taking the usual holiday. When, as is frequently the case, the school is located in a pleasant town or city, the best kind of a vacation may be enjoyed. Under the guidance of experienced instructors much progress can be made in the rather limited time.

Schools which make a specialty of teaching teachers during the summer months will find THE MUSICIAN a valuable medium for announcing their plans. The advertising rates are as low as those of any other available journal. The character of THE MUSICIAN circulation is as superior to that of any other music magazine as are its articles and general features. Rate cards will be sent to any address on request.

GRAND RENEWAL OFFERS

THE MUSICIAN and the *Choir and Choral Magazin*, both for one year, $1.60.

THE MUSICIAN for one year and the *Art of Vocalization*, Soprano, Books I, II, and III, by Eduardo Marzo (in press), $2.30.

THE MUSICIAN for one year and the *Nine Biographies of the Great Composers* (see opposite page), $8.00.

TESTIMONIALS

MUSICIANS LIBRARY

I am perfectly delighted with the Schumann Book.
FANNY BEALE STEVENSON.

I have received the Schumann collection of the Musicians Library and am very much pleased with it.
HARRIETTA M. OSBORN.

May I congratulate you on your Musicians Library? In the line of vocal and piano publications it is certainly the finest thing out.
HAROLD L. BUTLER.

The volume of *Modern French Songs* (No. 2) which I purchased recently is a splendid collection and eminently satisfactory in every way. I consider it worth many times the price you ask for it.
C. BECHER FURNESS.

I am greatly pleased with *Fifty Master Songs*.
MISS ADA L. SWAIN.

I regard the Musicians Library as indispensable. Any musician who wishes to have the best must have your series.
A. E. MCKEE.

I have found your *Fifty Master Songs* and other albums most satisfactory; particularly the *French Songs*, with Mr. Hale's effective notes and sketches.
R. S. PIGOTT.

It would be hard, after knowing Madame Hopekirk's accompaniments to *Seventy Scottish Songs*, to be content with any other. They have just the right flavor of archaism, while making use of the modern resources which the pianoforte of to-day offers. The insight shown in the setting of such tunes as *Hey Johnnie Ofe*, for example, is that of a truly Celtic genius.
AMY MURRAY.

MISCELLANEOUS

Send me also an order blank, please, as I wish to continue my subscription. I consider this one of the best musical guides I have ever known.
ELIZABETH REBEKAH SPEER.
Director of Music, ——, Pa.

I have received York's *Harmony Simplified* and am much pleased with it. THE MUSICIAN seems to explain everything in the line of music in a very satisfactory manner.
MARY CRARY.

Mrs. Lewis's *Manual* impresses me as being a very satisfactory work for its purpose. It ought to facilitate the organizing and conducting of kindergartens in Sunday-schools now lacking them.
JOHN C. LEE.

I wish to write a few words in praise of the editions of music you have published, edited by Mr. John Orth. They are such an improvement on the old editions that I find them very valuable in my work. I will mention especially the *Last Hope* by Gottschalk, and the *Erlking* by Schubert, the old editions of which I should not think of using with pupils. Teachers should be advised to use the newer editions, for surely Mr. Orth has done much to make these great works more simple and beautiful.
ABBIE DANIELS MASON.

I have looked through your latest edition of Stainer's *Harmony* and am delighted with the work in every respect. I shall be glad to recommend it to all harmony students.
THOMAS H. HOLLAND.

I am so pleased with the *Fifty Easy Melodies* for violin and piano, by John Craig Kelley, that I want the *Thirty Easy Pieces* by the same author.
MRS. W. H. OWEN.

There is no question of the superiority of the Ditson volumes over similar publications of other big music-publishing houses. I take pleasure in stating that I have recommended them highly hereabouts.
C. BECHER FURNESS.

Eliland, by Von Fielitz, is a most delightful and artistic song cycle. I shall use it in a Recital Program this year.
J. K. JACKSON.

Kelley's *Thirty Melodies* for violin and piano is just what I have been trying to get for years. On the strength of this volume I have recommended a friend to send for Vol. I, and I shall await Vol. III with interest.
SARA M. BURLINGAME.

TAPPER'S GRADED COURSE

Tapper's *Graded Course* is one of the best courses for piano I know of. Am now using it in my classes.
J. W. CROSLEY.

FLORA
OR
The May Queen Festival

By AGNES AMES WHEELER

A simple and melodious work which will be of interest to those preparing children's entertainments. There are four principal characters and parts for a number of girls and boys. If desired, as many as forty children ranging from five to fifteen years of age may take part. For those children who cannot sing but who are able to speak well there are recitations. The dialogue is of more than ordinary interest. The work closes with a May-pole dance forming a tableau of beautiful color effects.

The preface contains all necessary suggestions as to the rather simple arrangement of stage and costumes, and allowance is made for the adaptation of original ideas to any variety of material which may be on hand. The time required for performance is 45 minutes.

Price, post-paid, 25 cents.

New Easter Music

SONG

DRESSLER, LOUIS R.

Christ is Risen. (With Violin.) High voice in F [E to *a* or *b♭*]. Medium voice in D [c♯ to F♯ or *g*] Price .60
Pleasingly melodious number, with good points of climax, and an attractive violin part.

ANTHEMS

BRACKETT, FRANK H.
11,509. **Lift Your Glad Voices** (Carol-Anthem) . . . . . Solo Voices. Price .12
An easy, tuneful number, in pleasing rhythm.

CLOUGH-LEIGHTER, H.
11,515. **Break Forth into Joy** . S .16
Dignified and strong, well knit and impressive.

MACFARLANE, WILL C.
11,517. **In the End of the Sabbath** S or T .16
Not difficult, musicianly, and with well contrasted episodes.

MARZO, EDUARDO
11,512. **Come, See the Place where Jesus Lay** . . . . . S & B .12
Attractive in melody and harmony, singable and not difficult.

NEIDLINGER, W. H.
11,511. **Welcome, Happy Morning** S .12
Brightly melodious, simple, and with pleasing solo passages.

SPENCE, WM. R.
11,513. **Come, sing We Loud Hosannas** . . . . . A or B .12
A jubilant, well-rhythmed anthem of moderate length.

SYDENHAM, E. A.
11,505. **Christ is Risen from the Dead** 05
An easy number in simple, melodious style.

WOELTGE, ALBERT
11,519. **Christ our Passover** . T & A .16
An effective number of moderate difficulty.

CAROLS

CLOUGH-LEIGHTER, H.
11,503. **Christ the Lord is Risen To-day** (Processional) 10
In well-sustained march rhythm, with inspiring melody.
11,504. **Hark, Ten Thousand Voices Sounding** (Processional) 10
A stately, yet vigorous carol, richly harmonized.
11,514. **Triumphant Bells** (Unison) . .10
A persistent bell-figure, ingeniously treated, is the basis of this carol.

MANNEY, CHARLES FONTEYN
11,502. **Ring out, Ye Bells** 10
Melodious and strongly rhythmed, and in bright spirit.

NEIDLINGER, W. H.
11,510. **Easter Chimes** (Unison) . .10
A cheerful melody in simple, straightforward style.

NEVIN, GEO. B.
11,508. **The Day of Resurrection** (Processional) 08
Vigorous march tempo with melodious part-writing.

STORER, H. J.
11,395. **Rejoice, the Lord is King** (Processional) 08
A spirited number, well written and direct.

MASS IN C (No. 6)

For Women's Voices

By A. MONESTEL

This work is intended for convents and for women's and children's choirs. It is for two part chorus and has only two short solos, one for soprano and one for alto. There are no repetitions of the text and in the "Gloria" and "Credo" the choir begins with the words "Et in terra pax" and "Patrem omnipotentem" instead of repeating the words chanted by the priest. The work is melodious and not difficult. Price, post-paid, 50 cents.
Copies sent for examination.

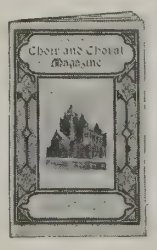
Choir and Choral Magazine

A monthly publication devoted to the music of the church.



The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

Published Monthly
Subscription price, 50 cents per year
Single copy, 10 cents

OLIVER DITSON COMPANY, BOSTON

OPERA SINGERS By GUSTAV KOBBÉ

A BEAUTIFUL collection of photographs with biographical sketches of all the grand opera stars, including the newer artists. Such favorites as Sembrich, Nordica, Ternina, Melba, Eames, Calvé, Plançon, and Caruso, are represented in a variety of rôles. One hundred and twenty-seven illustrations in all are given, twenty-nine of which are full-page portraits, forming the most interesting and complete collection of its kind ever published. The biographies are absolutely authentic, the facts being taken down from the lips of the singers themselves.

The latter part of the volume entitled "Opera Singers Off Duty" shows the lighter pastimes indulged in when not occupied with the arduous duty of public performance.

The book is printed on finely finished, heavy paper from large, clear type, is substantially bound in strong, board covers and bears a life-like picture of Nordica as "Brünnhilde" on its title cover.

GRADED EDITION FOR THE PIANO

The Teachers' Edition

Your labors will be reduced while the pleasures of teaching increase, if you adopt the

L. F. GRADED EDITION

of MERITORIOUS STANDARD COMPOSITIONS consisting of one hundred carefully selected compositions in all grades, representing the best productions of successful and intellectual writers. Standard prices prevail.

FIVE HUNDRED BUSY TEACHERS used the edition last season with complete satisfaction, and will repeat the action this year. 50% of them have written that they recommended the edition to other members of the guild and have caused many dealers to handle the line entirely of their own accord, unsolicited by us.

L. F. GRADED EDITION

was built to suit the requirements of the greatest number of teachers by eminent instructors who selected the numbers which comprise the edition.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.

FRITZ KREISLER.

Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

EASY AND DIFFICULT. Send us a postal and we will forward them for EXAMINATION.

Molineux' Six-Hand Collection (Piano Trios)

Vol. 2 now published. Three Performers on one Piano. By J. W. LERMAN.

Is **UNIQUE.** Because there is very little six-hand music published (especially in book form), and **that** little is, for the most part, so difficult or intricate that seldom can three pianists of sufficient ability get together and perform it well. Not so with the pieces in this collection; for, while they are very **BRILLIANT** and showy enough for concert use, they are so arranged by Mr. Lerman, in a novel manner entirely his own, that they **sound** pretentious and full of "go," yet are so **EASY** to play that even those with but little ability—mere beginners, in fact—may take part in them. In nearly all the pieces, two of the parts (bass and middle) are played within the compass of a few simple notes or chords, and even the Primo (treble) part is not difficult. Most of the ledger line notes are **written on the staff**, with directions to **play** them higher or lower as is necessary.

For novelty, brilliancy and ease, this set of six-hand pieces is truly "MULTUM IN PARVO."

Price of books, 50 CENTS EACH, mailed, post-paid, to teachers, for 40 CENTS EACH, or both volumes for 75 CENTS.

All the pieces in these Books are also published in **sheet form. Catalogues mailed if desired.**

Rest Your Child's Back---Consider---

What makes your child so tired after a half hour at the piano? No rest for the back—an unsteady seat.

Secure an **Ekrub Adjustable Piano Chair** (patented) with moulded back attached to rigid seat and **give your child a chance.**

Pupils who have the **Ekrub** practice twice as long, with twice the interest, and learn twice as quickly as others. And why?

The seat is firm, does not swing or tilt, and the back fits.

Many superior features we have not space to explain. Very best materials and workmanship. **Endorsed by teachers and pianists everywhere.**

$10.00 to any address. GET ONE NOW!

Ekrub Adjustable Chair Co., 56 Lincoln Avenue, Wollaston, Mass.

A Word to Music Teachers

LET US GO FOR PLEASURE	4 hands	*Mazurette*	$1.00
THE TAMBOURINE MARCH	4 hands	*Treloar*	$1.00
SLEIGHRIDE GALOP	4 hands	*Treloar*	$1.00
RAIL ROAD GALOP	4 hands	*Treloar*	$1.50

These piano duets are correctly written, instructive, and interesting, and are used by many prominent teachers preparatory to something more classical. They are bright, pleasing, and showy, and make most excellent exhibition numbers. We are certain they are just what you have been looking for and know you will thank us for calling your attention to them. They may be obtained at any first class music store, or, all four duets will be mailed on receipt of introductory price, $1.00 by the publishers.

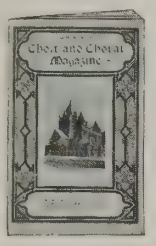
THE TRELOAR MUSIC CO.
505 Hall Building Kansas City, Mo.

BACK NUMBERS

A limited number of complete sets for last year are still on hand.

The Musician for 1905 contains over 500 articles, essays, and sketches on all subjects pertaining to music: also 164 pages of vocal and instrumental music.
Price, while they last, $1.50.

The Choir and Choral Magazine for 1905 contains nearly 140 practical articles of interest to choir leaders, choir singers, and organists; also 152 pages of church music. Price, while they last, 50 cents.



These prices include the cost of transportation. With but few exceptions there are no single copies available of either magazine.

Supervisors or Special Teachers

A SPECIAL TEACHER to successfully carry on her work must have *Special Training*. The only School in the country devoted exclusively to the subjects of Music, Drawing, Physical Training, Penmanship, Domestic Science and Art, and Manual Training, as taught in Public and Normal Schools, is the claim of this School. Students wishing to take up this line of work, address the Secretary for catalog, and copy of School Magazine, and full information.

THE THOMAS NORMAL TRAINING SCHOOL
(*Founded in 1888 by Mrs. Emma A. Thomas*)
LOUIS A. THOMAS, *Secretary* 552 Woodward Avenue, DETROIT, MICH.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

Announcement

THE School of Music of Northwestern University, located at Evanston-Chicago, on the shore of Lake Michigan, has inaugurated a Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

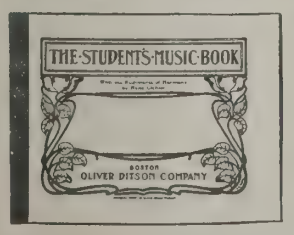
THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.
P. C. LUTKIN, Dean.

The American Institute of Applied Music

(The Metropolitan College of Music.)
EDGAR O. SILVER, President. 212 West 59th St., NEW YORK CITY.
The Faculty and Examiners: William Mason, Albert Ross Parsons, Harry Rowe Shelley, Kate S. Chittenden, Paul Savage, Paul Ambrose, H. Rawlins Baker, Herwegh von Ende, William F. Sherman, Geo. Coleman Gow, McCall Lanham, Mme. Adrienne Remenyi von Ende, Felix Boucher, Fannie Greene, Margaret Goetz, and others.
The advantages are unequaled in America. Send for circulars and Catalog.
KATE S. CHITTENDEN, Dean of the Faculty. **20th year begins Monday, September 25th.**

THE STUDENT'S MUSIC BOOK

WITH THE RUDIMENTS OF HARMONY, *By HANS LICHTER*



A blank book of forty-eight pages, good quality paper with flexible cover and cloth back. Each leaf perforated so as to be easily detached.
Price, post-paid, 15 cents. Discount for quantities.

OLIVER DITSON COMPANY, BOSTON
C. H. DITSON & CO., New York J. E. DITSON & CO., Philadelphia
LYON & HEALY, Chicago

NEW TEACHING PIECES

SOME FIRST PIANO PIECES

By MRS. CROSBY ADAMS

Op. 12. Outline Melodies. (1a) **Complete** .40
No. 1. The Clock Story.
No. 2. Fairies' Dancing Song.
No. 3. Brownie Steps.
No. 4. The Fairy Raindrops.

Op. 14. Tone Stories. (1b-c) **Complete** .40
No. 1. Harp Song.
No. 2. The Rainy Picnic Morning.
No. 3. Doll's Lullaby.

Op. 15. Church Music. A Sunday Group. (1b) **Complete** .40
Preliminary Study in F major.
I { a. Hymn-Tune in F major.
I { b. Hymn-Tune in D major.
II { a. Hymn-Tune, "Thou Who dost as a Father Heed."
II { b. Hymn-Tune, "O God of Grace."
III Little Blessing or Grace.

The composer of these sets of piano pieces has gone back to the very foundation of piano playing, and has successfully aimed at furnishing music that actual beginners can play, with both pleasure and profit.

In the Op. 12, the little pupils are first taught to play very simple melodies, simultaneously singing them to cunning juvenile rhymes. Starting with one hand only and in one clef only, gradually the scope of the execution is widened in Op. 13, 14, and 15, to the border of the second grade.

The group of duets in Op. 13 is excellently adapted for beginners and the "Sunday Group" covers a branch of the art that is too often neglected by piano teachers. The whole collection is destined to become popular with young pianists.

FOUR COMPOSITIONS FOR PIANO

By JOHN W. METCALF

Danza. (3c) 40
Remembrance. (3b) 40
Discontent. (3b) 40
Repose. (4a) 40

These piano compositions by Mr. Metcalf possess unmistakable merit and availability. They are well suited to the instrument, and their rhythmic, melodic, and harmonic contents are decidedly pleasing. In point of difficulty they may be assigned to the third grade. As recital pieces they will be found effective and popular, and teachers can make good use of them.

PAUL ZILCHER

Op. 34. In the Circus. Six Piano Pieces.
No. 1. The Procession. (2b) 30
No. 2. The Prancing Horse. (2c) . . .30
No. 3. The Clown. (2c) 30
No. 4. Around the Ring. (2b) 30
No. 5. Out Comes the Bear. (2c) . . .30
No. 6. The Juggler. (2b) 30

One of the teacher's hardest tasks is to find a sufficiency of satisfactory piano pieces for beginners, — pieces that are not too difficult and yet not commonplace, and that are both instructive and interesting. The composition of a piece that is easy and simple, and still artistic, is an art by itself.

The six little pieces comprising the set entitled "In the Circus" by Paul Zilcher, are admirable examples of this class of compositions. They are well within the capacity of advanced first-grade pupils, and are adapted to small hands. The character of the music is suggested by the titles, and is uniformly of a jolly, sparkling order, eminently fitted to please the youthful fancy.

SIX DESCRIPTIVE STUDIES FOR THE PIANOFORTE

By STEPÁN ESIPOFF

No. 1. Pleasant Memories. (Octave and Thirds) 40
No. 2. Prayer in the Storm. (Arpeggio) . .40
No. 3. Pleasantry. (Thirds) 40
No. 4. Pattering Raindrops. (Staccato) . .40
No. 5. Impetuosity. (Scales) 40
No. 6. Whispering Zephyrs. (Broken Chords) 40

This set of new Descriptive Studies for the piano will commend themselves highly to teachers for their special educational value, and to pupils for the intrinsic beauty and grace of their contents. All of the six are useful, not merely as practical technical exercises, but also as stimulants to the esthetic sense. In their scope they extend from the Advanced Second up through the Third Grade. The objects particularly aimed at are improvement in the execution of free octaves and thirds, and accuracy in scale passages, arpeggios and staccato work.

Though the etude-character always predominates, more than one of the Studies will be found available and effective as a salon piece.

L. E. ORTH

Op. 17. Three Tuneful Piano Pieces
No. 1. Dainty Steps. (1c) 40
No. 2. Staccato March. (2a) 40
No. 3. Happy Hearts. (2a) 40

Op. 30. Piano Studies for Little Artists.
No. 1. You can't catch Me! } (1a-b) . .30
No. 2. Little Musician }
No. 3. Listen to Me! } (2a-c) . .30
No. 4. In Singing Style }
No. 5. The Child and the Flower. (1c) . .30
No. 6. Light of Heart. (2a) 30
No. 7. Question and Answer. } (2a-b) .30
No. 8. That's the Reason Why. }
No. 9. Gently Gliding. (1c) 30
No. 10. A Penny for Your Thoughts. (2b) .30

These compositions by L. E. Orth are among the most acceptable of recent additions to first and second grade pianoforte literature.

Op. 30, entitled Studies, and containing indeed much useful study material, is essentially a group of tuneful pieces like Op. 17. All are very short and simple of construction. They can be highly recommended to teachers.

N. VON WILM

Op. 215. Eight Little Piano Pieces.
No. 1. Joys of Youth. (2a) 40
No. 2. Maybells. (2b) 40
No. 3. A Country Dance. (2b) 40
No. 4. Slumbering Child. (2b) 40
No. 5. Full of Frolic. (2c) 40
No. 6. Silent Grief. (2c) 40
No. 7. Before the Marionettes. (2c) . .40
No. 8. In the Moonlight. (2c) 40

We can unhesitatingly recommend these eight little piano pieces as charming, and instructive work for little hands. Everything is technically correct, yet tasteful and melodious, without the least suspicion of cheapness. Every pianist will take delight in these daintily fashioned little gems, and will appreciate their artistic simplicity.

NEW SONGS

FIVE SONGS

By J. W. BISCHOFF

Five Little White Heads. D (b-e) 50
Love Sings the Lark. B♭ (d-g) 60
Two Hearts . . . . . .2 keys .50
The Rose I Give You . . . . . .2 keys .50
Open to Me the Gates (Sacred Song) . 2 keys .50

These new songs by Prof. Bischoff are fully up to the high standard of all his compositions and are characterized by the gracefulness, melodiousness, and artistic charm which have been the invariable attributes of their predecessors from the same pen, and have gained for them their enviable popularity. The composer's long and successful experience as a vocal teacher enables him to write in a manner peculiarly grateful to the singer; and these five songs are in his happiest vein. As usual in his songs, also, the accompaniments are admirably effective.

All five are well adapted for public performance, and none of them have any special difficulties.

THREE LOVE SONGS

By M. W. DANIELS

Op. 9

Highland Love Song . . . . . .2 keys .50
Love's Gift . . . . . .2 keys .30
My Soul Doth Call . . . . . .2 keys .50

These new songs may appropriately be termed a musical triptych, for although each is distinct and complete in itself, all three are pervaded by the same sentiment, all are essentially "tone-paintings," and they have evidently been conceived as an integral art-work, with the words and the music by the same hand.

The songs are constructed according to the most approved modern standard of spirit and style. In the melodic themes and harmonic texture there is a constant intent to furnish a faithful musical illustration of the thought embodied in the words. None of the three is difficult vocally, accompaniments, though effective, are quite simple and easy.

"COBWEBS" and OTHER SONGS

By GERRIT SMITH

Op. 24

Cobwebs. A♭ (*d–f♯*) 50
Billy and His Drum. B♭ (*d–g*) 50
Dandelion. D (*d–g*) 50
The Candy Lion. D (*d–e*) 30
The Swing. F (*d–g*) 30
Slumber Song. A (*c♯–f♯*) 50
Learning to Play. G (*d–g*) 50

In these seven new songs Dr. Smith has made a notable contribution to the lyrics of child-life. They are not juvenile jingles, intended for nursery performances, but are mature songs on subjects relating to childhood, and attractive alike to young and old. The words are selected from the charming poems of Abbie Farwell Brown, James Whitcomb Riley, and Robert Louis Stevenson.

The songs are all lightly fanciful, delicate, dainty, melodious, thoroughly vocable and pervaded by a flavor of the musical humor. They contain no special technical difficulties and all are within a very moderate vocal compass. The accompaniments are finely and ingeniously conceived.

MACDOWELL'S SONGS AND PIANO PIECES

HENRY T. FINCK

I

When we bear in mind that not one of Beethoven's sonatas was played in a London concert hall till twenty-one years after his death, and that Schubert's marvelous songs were neglected by the professional singers till after Liszt had arranged them for the piano and thus revealed their incomparable beauty, we have perhaps no reason to complain that so few of the pianoforte pieces and songs of Edward MacDowell have so far found a place on our concert programs; for he is only forty-four years old, and the maxim of Germany (whence we derive most of our musical practices) in regard to the truly great has always been that no man can be a genius while he is alive. At the same time, it does seem as if we ought at last to give up this habit of what Schopenhauer called "eating raisins only and always neglecting the fresh grapes." Edward MacDowell, alas! is now stricken with a brain disease which the medical experts pronounce incurable. He will never write another piece of music. Yet it is not too late to enjoy in all their freshness the grapes he has raised for us. Some of them are, indeed, just off the vine. Let us all, therefore — singers, players, lecturers, conductors, critics — unite in our efforts to make the public acquainted with the products of his genius. There is in his works a wealth of beauty, fancy, virility, romance, tenderness, emotion, of which the musical world has as yet not the faintest conception.

Mesdames Sembrich and Gadski and Mr. Bispham sang MacDowell songs at their last New York recitals. Their good example will no doubt influence others. Regarding the average recital program, I took occasion to remark in my recent book on Norway's immortal composer (whose works also are shamefully neglected) that "when, after regaling myself with Grieg's songs, I attend some of the public recitals and note the commonplace programs in vogue, I feel like one who sees people walking in a brook-bed gathering pebbles, blind to the diamonds and rubies they might pick up in their place." I might have said the same with reference to the songs of MacDowell, the "American Grieg." There are among them many diamonds and rubies and emeralds — enough to make a crown for him as the king of American musicians.

As the genius of Grieg reaches its high-water mark in the songs contained in Volume IV of the Peters edition, so does MacDowell's in his *Eight Songs*, Op. 47. In these, one finds all the best qualities of his art happily united. The first thing to emphasize is the abundant supply of fresh, spontaneous, individual melody. When we reflect on the distressing melodic drought which at present prevails in the musical world, this quality alone ought to have insured a tremendous vogue for these songs long ago; but again we think of Schubert and Grieg and realize that, though the musical world "does move," it moves very slowly indeed.

Never shall I forget the day when I first became acquainted with these *Eight Songs*. I had just delivered one of my lectures on musical history at the National Conservatory and went to the

HENRY T. FINCK

room of Mrs. MacDowell (the composer's mother), who was at that time secretary of that institution, for a chat. Seeing a collection of songs on her desk, I took it up and said: "What's this?" "My son's latest compositions," she replied; "take them along if you like." I did so, and on getting home lost no time trying them over on the piano. My eyes opened wider and wider, and my pulse beat faster, as I perused song after song; and when I had by way of climax played that weird and marvelous tone poem, *The Sea*, which takes us to the very bottom of the ocean, where the wrecked ship and the lover lie on the coral bed, I felt like exclaiming, as Schumann did when he first became acquainted with a Chopin piece: "Hats off, gentlemen, a genius!" Here was a first-class song composer, American-born, and I had not been aware of it! Needless to say that I forthwith bought all his works and had a royal feast. That was about a decade ago, and my admiration of MacDowell's genius has steadily increased from year to year.

II

I have been accused of using too many superlatives in speaking of Grieg's songs; but this was, perhaps, because I ignored the less good and dwelt only on the best. If there are so many of these best, that, surely, is not my fault; and as for poor MacDowell, now that he is not composing and competing any more, he, too, ought to be pardoned by his contemporaries and rivals for having written so much that is first-class. The next generation will bless him for it.

The object of this article is not to provide a catalog of MacDowell's song and pianoforte pieces (his publishers, Breitkopf & Härtel and Arthur P. Schmidt, will gladly supply such), but to tempt the appetite of professionals and amateurs by naming some of the best and dwelling on their charms. I have always held that by far the most important function of criticism is discovering and calling attention to good things the merits of which are not sufficiently known to the public, and to arouse enthusiasm for them.

Of the abundant fresh melody in the MacDowell songs I have already spoken. Much of it has the simplicity and the apparent inevitableness of folk songs, or of flowers, which one accepts as a matter of course when once heard or seen, though each is a marvel of creative power. In the earlier songs the individuality (as in the case of all the great masters) is, of course, much less manifest than in the later ones. The opus numbers of the songs are 9, 11, 12, 26, 33, 34, 40, 47, 56, 58, 60. There are forty-two songs all together, — a number which probably would have been doubled in the next ten years. In all the history of music I know of nothing more regrettable than this abrupt cessation, except the early deaths of Mozart, Schubert, Weber, and Bizet. Nature is cruel to musical genius,— and why must it always be the best who are stricken?

The very first of the songs, *Deserted*, in Op. 9, is misleading. It seems surprisingly mature and soulful for so early a work; but, in truth, it belongs to a considerably later period, and its listing as Op. 9 was merely a matter of convenience, to fill a void caused by self-criticism. I have written elsewhere of the emotional realism — the fitness of the music to the words — which characterizes *Deserted* and its companion, the *Slumber*

Song, and MacDowell's songs in general. I have always regarded this emotional realism as being, next to the incessant flow of melody and the always harmonically interesting piano parts, the most praiseworthy thing in MacDowell's songs. Imagine my surprise on reading the charge made by Lawrence Gilman in his little book on MacDowell (an otherwise most commendable production) that this ideal correspondence between music and poetry in these songs is the exception rather than the rule. I suppose it is all due to my stupidity and lack of critical acumen, but I must confess my inability to find a single one among the forty-two songs that bears out Mr. Gilman's charge, except in details here and there, such as may be found in Schubert, too, and are hardly worth mentioning. Quite likely Hugo Wolf and Debussy would have adopted a more bar-by-bar realism here and there; but such things are trifling compared with MacDowell's faculty for creating fresh and novel ideas. It is this faculty that we call genius. Wagner and Liszt, with all their realism, would not have been geniuses but for their incessant supply of fresh and novel melodic and harmonic ideas.

After assimilating the *Eight Songs*, I should advise the readers of THE MUSICIAN to get the *Six Love Songs*, Op. 40; not for the sake of *Thy Beaming Eyes*, which is the most popular of MacDowell's songs at present, but for *Sweet Blue-eyed Maid*, a marvel of beauty and tender expression. And then not a moment must be lost in getting acquainted with the *Idyll* of Op. 33, which has moved me to tears many a time; but, like others of these songs, it is so easily spoiled by inattention to the expression marks! *The Swan bent low to the Lily* (Op. 56) is another of the immortal songs; *Menie* still another. A vein of sadness there is in all of them — like a premonition of the composer's fate; and those who cannot trace and exploit that vein had better leave these heartful songs alone.

III

It is in their songs that both Grieg and MacDowell are most frequently at their best. I have mentioned only a few of them by way of tempting the reader's appetite, leaving to him the agreeable task of discovering the other gems. Yet in turning now to the pianoforte pieces I almost feel like agreeing with my friend Gilman that these are better even than the songs. It all depends on which I hear last! As regards the sonatas, I ought to bear MacDowell a decided grudge. After I had written and argued a hundred times that the sonata form was "played out" he went to work and wrote four sonatas to confute me. To be sure, I might have my revenge and say they are "not sonatas"; but they are no more unorthodox than the sonatas of Chopin, Schumann, Liszt, and Grieg, though they have a freedom of their own which is captivating. They are brimful of individuality and charm; they will be heard often in the concert halls of the future. Gilman has an eloquent chapter on the sonatas, which he considers MacDowell's most significant and important contribution to musical art. Apthorp waited until two of the sonatas had been printed before he unreservedly acknowledged that their composer was a genius.

For my part, I like the short pieces even better than the sonatas, — possibly because I am more familiar with them. One of the things I like most in them is the commingling of poetic fancies with the musical thoughts. I should advise all those who would become acquainted with MacDowell's genius as a writer for the pianoforte to begin with the *Woodland Sketches*. Here, as in the songs, they will be struck, at once, not only by the originality and beauty of the music but by the mirroring in it of the pictures suggested by the titles: *To a Wild Rose*, *Will o' the Wisp*, *At an Old Trysting Place*, *In Autumn*, *From an Indian Lodge*, *To a Water Lily*, *From Uncle Remus*, *A Deserted Farm*, *By a Meadow Brook*, *Told at Sunset*. In the next collection to be studied, the *Sea Pieces*, the poetic background of the music is sketched out more fully; in some cases in single lines, like the "And who shall sound the mystery of the sea?" which heads No. VI, *From the Depths;* or the "A fairy sail and a fairy boat," of No. VII, entitled *Nautilus*. In other cases there are several lines of poetry. What could be better than the following motto prefixed to No. II, *From a Wandering Iceberg?*—

"An errant princess of the North,
A virgin, snowy white,
Sails adown the summer seas
To realms of burning light."

Here we have program music of the most artistic type. The hearer is enabled to see the same imaginative vision which stirred the composer's creative fancy, and he is thus ready to receive the music in the right mood, which is a great gain; it gives to pianoforte pieces something of the advantage which operatic music enjoys through its association with scenery. The *Sea Pieces* constitute one of the finest collections of pianoforte music in existence. Their vogue will be great when once it is known generally not only that they are particularly interesting as music, but constitute also a musical description of the trip of the "Mayflower." The key lies in No. III, which is entitled *A. D. MDCXX* and has this motto: —

"The yellow setting sun
Melts the lazy sea to gold,
And gilds the swaying galleon
That towards a land of promise
Lunges hugely on."

Even in the sonatas, which represent a sort of compromise between absolute and program music, there is a decided leaning toward the poetic side, which influences not only the substance but also the form of the music. Their titles in themselves, *Tragica*, *Eroica*, *Norse*, *Keltic*, are towers of strength and lighthouses for the guidance of players.

In the *Marionettes* we have titles only: *Prologue*, *Soubrette*, *Lover*, *Witch*, *Clown*, *Villain*, *Sweetheart*, *Epilogue*. In buying these, care should be taken to get the revised edition, into which Nos. 1 and 8 have been added and various changes made which MacDowell considered great improvements. He also revised the *Poems* and *Idyls* in the Arthur Schmidt edition; his new versions of some of the Breitkopf & Härtel pieces are not yet in the market, so there is still something new to look for from his pen, apart from a string quartet, the first two movements of which are perhaps sufficiently worked out to be given to the world.

The last of his opus numbers — 61 and 62 — are collections of pianoforte pieces: *Fireside Tales* and *New England Idyls*. When I first became acquainted with these I fancied that there was a slight falling off as compared with the *Woodland Sketches* and the *Sea Pieces;* but I soon discovered my mistake, and I now hold them to be in some ways — especially in their harmonic texture — the most remarkable of all his works. For sheer intrinsic beauty there are some numbers — like *By Smouldering Embers*, *With Sweet Lavender*, and *From a Log Cabin* — which must be placed in the front rank of pianoforte compositions. They are MacDowell in every bar, unique, original, the type, perhaps, of the American music of the future; for, since we have no real folk song, Americanism in music can come only through the characteristic works of our men of genius.

IV

As in the case of the songs, I have had room to mention only a few of the pianoforte pieces. Let players hunt for the other gems themselves; they will find it a delightful employment. And when they have reached the end of the list and played the best ones a dozen times, they will, if they have any music in their souls, feel the pathos of the lines prefixed to *From a Log Cabin.*

"A house of dreams untold,
It looks out over the whispering tree-tops
And faces the setting sun."

It was in that log-cabin, at Petersboro, N. H., that many of MacDowell's best works were written. Those "dreams untold" will, alas! remain untold. Ten or twenty more years of them — what a difference they would have made to American music!

A MACDOWELL CLUB

Admirers of the music of E. A. MacDowell have formed a "MacDowell Club." The members set forth their aim as the organization of an effort "to study, faithfully interpret and promulgate the tendencies and ideals embodied in the compositions and known esthetic convictions of Edward MacDowell." They will meet on selected dates to hear performances of his compositions as well as those of gifted composers with kindred aims and ideals whose works are not as yet widely known.

They will discuss the generic principles and vital motives of the correlated arts — music, literature, painting, sculpture, architecture, and criticism; a correlation felt, declared, and championed by Mr. MacDowell. They will arrange for and manage at least one annual public concert, soloists to be selected from the club membership, if possible, and the proceeds to be held as a fund for the ultimate establishment of a permanent club home and for the promulgation of the arts.

The following persons are to serve as an advisory board to the club: John W. Alexander, John Burroughs, Henry T. Finck, Daniel C. French, Henry Fuller, Philip Hale, Mrs. John L. Gardner, Hamlin Garland, Richard Watson Gilder, Mrs. Ben Ali Haggin, Henry L. Higginson, W. D. Howells, Seth Low, Robert Underwood Johnson, Frederick Macmonnies, William Mason, Mrs. Howard Mansfield, Charles McKim, Wassily Safonoff, Augustus St. Gaudens, Templeton Strong, and Owen Wister.

SPEECH AND SONG — V

LOUISE KARR

I

Refinement in any art requires an exact adjustment of the local organs required to make a given effect. This is indeed a truism and might be treated as such, if it were not for the fact that it is so seldom carried to its logical conclusion. The spirit of music must be freed from its prison in the body at just the point where the physical organism comes in contact with the freeing instrument. The violinist, as well as the pianist, plays at the extreme end of his fingers. The greater his artistic power, the more informed are those fingers with spirit. The thought, the emotion are not thrown off at the elbow or the shoulder, but are carried to the last outpost of the body, to the coast line, and then cast lightly but surely as an entity to the public.

This is one difference between the artist and the tyro. The latter uses his whole body with lumbering effect to get some slight expression, where the artist turns the thing off with an effort so slight as to be imperceptible. Thus is perceived the meaning of the word "effortless."

This local dexterity presupposes control of the greater organs of the body. It is not possible to be a great interpretative artist without magnificent power over the lungs and the muscular system. This, however, may be taken for granted, and does not need enlarging on at present.

II

What is true of the other arts of expression is equally true of the arts of speech and song. The thought, the picture, must be brought to the front of the mouth, to the lips themselves, to the very tip of the tongue, before they are given freedom.

To do this in very truth, a complete training is required of both lips and tongue, a careful and specific training, and one which few singers and fewer speakers are willing to undergo.

This mere mechanical training should be exactly the same in both speech and song. It has to do with utterance pure and simple, but how many singers do we hear performing gymnastics at the back of the throat, how many speakers whose choicest sentiments are chewed and rolled about in the mouth and finally swallowed as if in unwillingness to part with thoughts so precious!

In a former article I alluded to the care necessary in using the lips and facial muscles, but nothing has been said about the tongue except that it should be trained to perfect quietness before any attempt is made to give it dexterity.

After control has been obtained over the swallowing muscles and the tongue acquires sufficient intelligence to know the tip from the middle — not so easy a matter as it sounds — the work of definite training may begin.

The ordinary singer and speaker is entirely at sea as to which part of the tongue is to be used for the different consonants, and this in spite of training received at school in the nearly forgotten days of childhood, to which he vaguely alludes if approached on the subject, and he says, "Oh, I have had all that." He is greatly mistaken. He has not "had all that," — or if he has, it has made no impression to be observed in his speech or song usage.

To quote from a lecture by Mr. Samuel Arthur King of Bryn Mawr College, an authority upon this question: "The slovenly and lax articulation of the present day is entirely due to mechanical derangement." And again: "Just as the muscles of the hand and fingers can be trained to write the letters, so can the muscles of the tongue be trained to speak the letters with distinctness and purity."

Each consonant has its place on the tongue or lips. Every one believes this theoretically, and if every one will find this place in practice and never allow any confusion in its use, an exquisite diction will be the result, both in song and speech.

III

It is impossible to go into detail as to each consonant. I will, however, take three which are important in respect to the sending and defining of the voice.

In the first place, consider *t*. Take the sound of it and not the name. Give it lightly, delicately, and without explosive force. It is made on the extreme tip of the tongue. The less effort we make in doing this, the more surely shall we get the real essence of the initial motion. The ordinary practice given by elocutionists on this sound is a heavy explosive, which uses the tongue, not only at the tip, but for between an eighth and a quarter of an inch back, — a considerable surface when the limited area of the member is remembered. To give the sound of *t* as it should be given, cleans up the ambiguity attendant on many and many a word.

If after *t* we take *d*, and work it up until it never fails to do its duty, particularly at the end of words, a result will be obtained that will render even the inspired utterances of church choirs intelligible to a patient and uncomplaining public. *T* and *d* are great stepping-stones to the understanding, and it is a pity to eliminate them from the singer's vocabulary. That they are practically eliminated from that of most singers, I, for one, will stake my reputation for accuracy in listening. I occasionally hear a final *t*, but a *d* at the end of a word is as rare as a roc's egg.

After the *t* and *d* test, the letter *r* may be attacked. This letter has been more quarreled over than any other, except possibly the broad *a*, and with reason. Its use indicates the amount of refinement possessed by either an individual or a people. It should be a delicate roll at the very tip of the tongue; not easy to acquire. When it comes between vowels, it should have a distinct, clear roll, which does not interfere with either the preceding or the following letter. To give it after another consonant, as *br*, *tr*, requires a control and a power of distinguishing between different motions and combining them which mean real cultivation and refinement. The final *r* is a matter of discussion between experts, but there is no doubt that the customary pronunciation of it in many parts of our country is not the real *r* at all, but a guttural sound, caused by turning the whole end of the tongue over and throwing the sound back into the hollow and then further back into the throat. This is distinctly bad, from whatever point of view it is regarded.

In all the exercises for the tongue, the final aim should be distinctness and flexibility. When these are acquired, an effort should be made to get rapidity. This is a point where Americans are more than lacking. Where the intention is to be careful, frequently great deliberation is observed. Where the care is lacking, we are much addicted to the drawl. The Yankee drawl, the Southern drawl, the plaintive whine of the well-meaning philanthropist, are all variations of a most unpleasant habit. "Speak the speech, I pray you, trippingly on the tongue," said Hamlet, and let all the people say Amen. Certainly, if we should practice the different exercises, just recommended until we could do them fast and lightly, a vast improvement would be the result.

IV

This speaking fast and trippingly brings me to another point, namely, that of accent and intonation, or rather inflection. Our idea of accent is not an idea at all, but a happen-so. One hears many women speak who accent every single word and end it with a drawl. There are others who accent at certain mechanical intervals irrespective of meaning, thus throwing verbs, nouns, and pronouns into hopeless confusion.

As to the matter of accent, the real genius of the English speaking upper classes, whether English, Irish, or Scotch — I quote from Miss Mary S. Thompson, who represents the Bell Method in New York — is to give a strong accent upon the first syllable of a word and to allow the other syllables to run trippingly off the tongue — hence the pronunciation of such words as "*or*dinary," "*ne*cessary," which is totally different from the usage of Americans, who give each syllable equal value. The advantage of the English custom is that it relieves the speech of monotony, and more closely allies it with music. In the latter art, one of the chief marks of beauty are the constantly shaded and graded accents, always with rhythmic meaning. The important part of the sentence should be brought into proper relief, and the unaccented part be given lightly, but distinctly, just as a musician should never blur his runs, and yet would not think of giving them with force on the unaccented part of the measure.

If we stop to consider musical usage in regard to the phrase and apply the general idea of accent and stress to our speech, with limitations, of course, and not straining the analogy, we shall add much to its musical quality.

YOUNG TEACHERS OF BEGINNERS

MAGGIE W. ROSS

My words are directed to young teachers of beginners. I have noticed that many so-called graduates, boasting brilliant *répertoires*, turn to the stable occupation of teaching when they have failed to find engagements as concert players or professional accompanists. Frequently they have no adaptability for teaching, and sometimes no training in this direction. Hence their first pupils suffer. Many such aspirants need only a few suggestions to become successful teachers. It is hoped that the definite plans hereinafter set forth may help them.

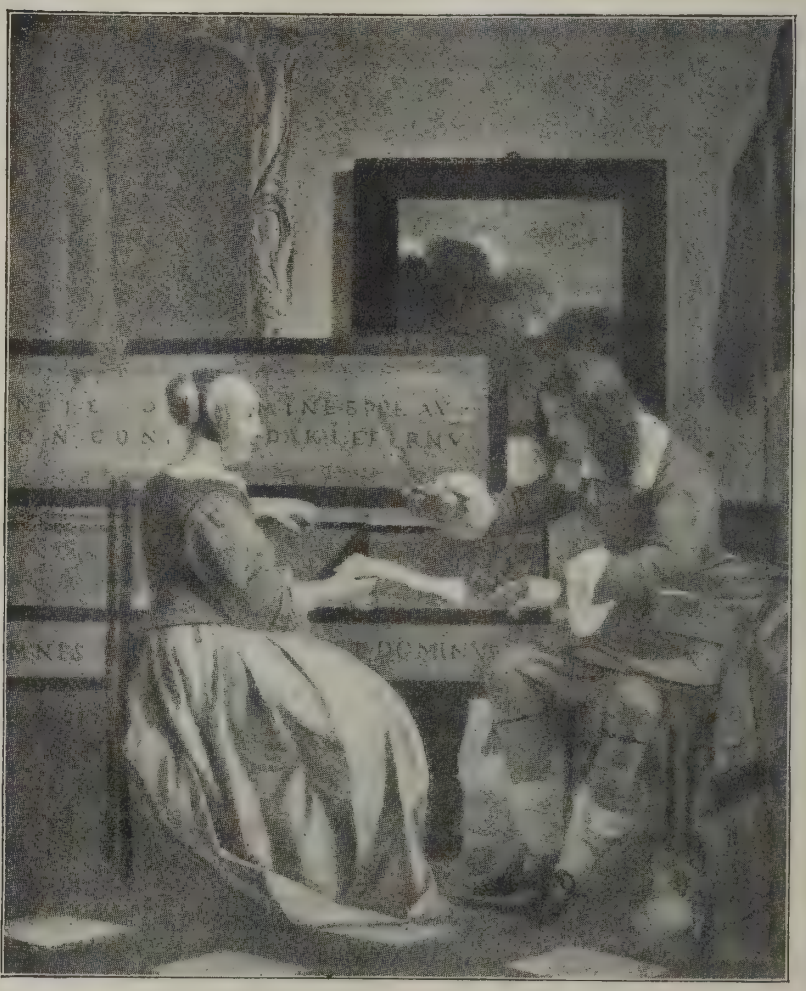
Had this class of teachers to deal only with the advanced player, success might come easily. Unfortunately, they must accept the beginner; sometimes the little child, and, often in these strenuous times, the ambitious adult, who has just found means and leisure for study. When pupils of this sort present themselves to the young teacher — and I use the word "young" in its relation to pedagogic experience, not actual years — he is frequently embarrassed. A wide *répertoire* does not help one at this time. It is brains, ordinary common sense, and the true pedagogic instinct that are essential. I frequently hear pianists of ability assert that they have not the patience to instruct the beginner, or that they do not know how to go about teaching the young child. Some of the pupils I have received prove that many more teachers should have had similar convictions.

By myself, no pupils are so royally welcomed as the beginner. It is like starting on a journey with a broad level road ahead; no jarring ruts to go over, and no holes to avoid; the little hills, which inevitably must be climbed to the goal of success, smooth and easy to surmount.

The initial duty of the earnest instructor is to train the child to use its mind, and he should begin at once to make the pupil independent, in so far as it is possible. At no time should a teacher lose sight of the fact that he is engaged in an important business. He should treat the work reverently and conscientiously. I do not advocate a long face or a pedantic air. Wear a smile and carry a cheerful mien, but be ever serious in your heart.

Plans

Adopt a method at the start and stick to it, using, of course, common sense to bring to your aid all the new wrinkles you can find from reading good literature, talking with wiser and more experienced teachers, or studying further on your own part. Set out at once to win the confidence and affection of the pupil. Talk to him freely and in the most simple language. Discuss the formation of the hand, and show him the knuckles and their uses. I take a large sheet of paper and trace the outlines of the child's hand upon it. I then number the fingers, and in this interesting way the pupil learns immediately the finger numbers. I use the table for natural hand position, and instruct the child to "play" upon the table or desk at every chance. This makes the little one accustomed to use his fingers, and he does a great deal of practice on "hand position" when he would not go to the keyboard. I show pupils the two pictures of St. Cecilia; one by Dolce (1616–1686) and the more modern painting by Naujok; I call especial attention to the hand position of the respective figures, extolling that of the Naujok, and condemning the depressed knuckles of the more ancient figure. These pictures can be had in inexpensive form. They are beautiful and inspiring, and help the child more than words, or the cuts in ordinary instruction books.



In familiarizing pupils with the keyboard, I try to make use of their powers of vizualization. I call attention to and emphasize the groups of black keys by twos and threes, explaining in this connection the position of the C and F. I take them back and forth for hasty glances at the keyboard, and ask them to tell me what they see. I also make them close the eyes and "see" the keyboard. I take small pieces of cardboard, each marked with one of the seven tone letters, and allow the child to cover the corresponding keys. If you employ this simple "play," you avoid drudgery in the most uninteresting part of teaching and learning. I seldom allow a child to play on the instrument until the "hand position" is pretty well established. This method is more satisfactory in the end, because a little child always pushes too hard on the keyboard, bends its first knuckle joints, and thereby establishes a bad habit.

In teaching the notes, use a large staff ruled on plain paper. Spell all the simple words possible with the tone letters, and let the child help make the words. Once, for a tiny tot who could not remember the lines, I made an old woman of the treble clef sign, giving her a nose and a cap, and calling her "Mother Clef." On each

line I placed a funny face, calling them respectively, Ed, George, Bob, Dave, and Frank. Each had a different countenance, and of course a story went with the picture. From the date of that lesson my little girl had no more trouble with the lines. In applying the written notes to the keyboard I do not push the child. I begin with middle C and teach only a few notes at a time, remembering always Patti's motto, "He who goes slowly goes safe; he who goes safely goes far."

Material

Any standard instructor will serve for fundamental work, if used with a large portion of common sense. I have found none "complete," though many are so called. Since no two children are exactly alike, no two will disclose the same faults; therefore, no book will contain everything necessary for every child. I have used with success the Köhler and the Landon Methods, *always* supplemented with the *Graded Course of Studies* by Mathews. The last-named studies are interesting in the fullest sense of the term, and relieve the monotony of the instruction book. Make the work pleasurable by a wise sprinkling of simple pieces. Those of Arthur L. Brown are highly instructive, especially the Pixie group. If their use be accompanied with stories of the pieces, the results will be surprising. I find the juvenile compositions of Paul Ducelle very excellent. In giving pieces, do not fail to cultivate the imagination of the child. It helps wonderfully towards artistic execution.

Nothing stimulates time and rhythm as well as duet playing. A little child enjoys the fellowship it affords. I use Schwalm's *Young Musician*, and Josef Löw, following them as the pupil advances with good arrangements of four-hand sonatinas.

Never introduce scale playing until the *hand* and *mind* are fully prepared for it. Give exercises for crossing under and over; as, for instance, the following: —

(1) Hold 2 and 3; pass thumb under.
Hold 3 and 4; pass thumb under.

(2) Hold 1 on F, cross 3 over to E, and back to G.
Hold 1 on C, cross 4 over to B, and back to D.

(3) Play 3–1–2–1 on E F G F, and 4–1–2–1 on B C D C.

(4) Play the scale of C with 1–3–1–3–, etc., overlapped and very slowly. Play in the same way with 1–4–1–4–, etc.

Let the pupil know the object of this preparatory work and he will do it more graciously. Then teach the scales, *on the keyboard*, by intervals, and with the proper fingering, drilling unceasingly on the key relations. Make the pupil write each scale with the correct signature, and you will find he will never forget them. Bright first grade, and ordinary second grade pupils, can do this work. I have had pupils who could not read correctly first grade music, and yet asserted that they "know the scales." Invariably I find them totally ignorant of key-signatures or relations, with no method of fingering, and incapable of good legato in the crossings.

Use every opportunity for introducing a brief story or simile. For instance, a bright little pupil was studying an *étude* by Mathews. The editorial note said, "subordinate the right hand." When asked if she understood "subordinate," she replied, "I know what a subordinate officer is." (We live adjacent to a garrison.) "Very well," said I, "who gives the orders on parade?" "The captain," she replied. "Then," said I, "since we do not hear subordinate officers speak, we will let the right hand notes keep time and make but little noise, like soldiers, but the chords in the left hand must issue the orders, for they are officers." That *étude* was learned quickly and with exactness. Soon each chord received a name, and Captains Jones, Smith, and Brown became excellent commanders.

You can call the *portamento* touch "some one walking in the dark," feeling his way along, as it were. An unexpected rest in a running passage may be compared to the sudden halt caused by the catching of your dress on a nail when running. Call the heavy accented notes "boy notes," and the soft tinkling tones "girl notes." Describe the *staccato* as the difference between a crisp, crackling cookie, and a soft, doughy one. Or, in another way, tell the child to imagine that the key is very hot. Overcome the tendency of children to rest at the end of each measure in $\frac{3}{4}$ metre by suggesting that they must not "sit down at the end of each measure." They will quickly see the point. For the pupil who plays too fast, suggest the method followed by good horse trainers, who keep the best speed for winning occasions, and do not waste the animal's vitality in continual racing. Illustrate the *legato* touch by the rising and falling of a "teeter board." Children understand this.

Be ever and insistently vigilant against such common faults as dropping the wrist, bending in the first finger joints, sticking out the elbows, and sitting ungracefully at the instrument. It matters not what method you are teaching, or what hand position you favor. These common errors will, like the poor, be ever present, and must be painstakingly eradicated.

A final word: be scrupulously nice in matters of dress. If you are of the gentler sex, see that the hair is becomingly arranged, and ornamented with a bow or pin. Wear bright attractive clothing, for such things children notice and admire. Be frank and honest. Give encouragement, but do not flatter. The last remark needs to be emphasized for those male members of the ranks who "purvey politeness" under the name of music lessons. Treat your pupils as intelligent beings, and do not undertake to play the knight or lover to each one. This of course refers to the teacher's manner toward adult beginners, though I have known little girls of ten to object to their too affectionate "professor." You may deceive yourself into believing that you please by over-indulgence in flattery and attentions, but it is not so. Except in occasional instances, your pupils pay you for musical instruction, not "sweetmeats."

Organize a study club, and get your pupils acquainted with each other, and familiar with musical things generally. Encourage them to play with and for each other. Become enthusiastic if you are not already so, and your pupil will soon be inoculated with a like spirit. Then, and only then, will teaching the beginner become the joy that it should be.

A TEDIOUS EVOLUTION

CHARLES H. STEINWAY

On the morning of May 9, 1876, a stone was placed in the cloisters of Santa Croce, in Florence, bearing this inscription: —

"To Bartolomeo Cristfori, the inventor of the pianoforte."

Now, what is this instrument, the invention of which is credited to this seventeenth-century Florentine?

It is a box of metal strings, each one of which is tightly screwed into a metal clamp. And upon this box of metal strings has been expended more thought and more money than upon any other instrument the world has ever acknowledged. Composers have penned more notes for it than for the bulk of all the orchestral instruments, and it possesses to-day a literature unrivaled in any other branch of musical composition.

During the past year there was made in the State of New York thousands of pianos. To-day there are nearly one hundred firms of piano makers in New York City and Philadelphia. The estimated amount of capital tied up in the piano enterprise in America is $100,000,000.

Now, to what do we attribute the wonderful popularity of this instrument? This pet of musicians, this business man's recreation, that has consumed the thought and lined the pockets of many interested?

Is it nothing but the mechanical perfection of the instrument, for which all makers are striving, and which all performers are demanding in their instruments? In a sense the piano is a mechanical instrument and with the development of its mechanism is to be found the growth and development of our art from its very beginnings; without this mechanical growth, our pianoforte literature and pianoforte virtuosity would have been impossible; and in the history of our perfected piano of to-day is written the history of the instrumental music of the world.

But, if this were all, then would our work be in vain. For, as a matter of fact, together with this mechanical perfection, there has come a greater insight into the possibilities of the instrument as an interpreter — a new fact which the beginners failed to perceive, an opportunity for the perfection of the instrument as a receiver of and producer of the individual expression of the performer.

Go back to the beginning of all things in instrumental music and see this instrument foreshadowed. The oldest musical instrument known is the Chinese pien king. Upon two horizontal bars are suspended sixteen metal plates, which, when struck with a hammer, gave out the notes of the Chinese scale. Here is the first piano. The ancient dulcimer was an open box of strings which, when struck with a hammer, gave the notes of the scale. The psaltery is a dulcimer played with a plectrum instead of a hammer. Man's ingenuity soon constructed a mechanical device for plucking the strings. Fastening a quill in one end of a long stick and adjusting the stick on a lever, or key, he forced the string to sound by pushing the key up or down. And this is the spinet. Another inventor attached to the end of this horizontal key-stick an upright piece of metal, which pushed up against the string and caused it to vibrate. And this was the clavichord. A still more resonant tone was demanded and a little hammer was made and put in place of the metal tangent of the clavichord, and here was the embryo piano.

Now note the further process: —

When the first piano maker used his hammer keys, he found it impossible to keep his strings in place with the strong pounding they were getting, without making an additional support for them, and finally strengthened the strings themselves. His frame was strengthened by additional pieces of heavy wood under the sounding-board, wherein were fastened the pegs for the strings, which from catgut have been turned into wire, and the single wire has been doubled and trebled. The increasing strain on the frame forced the maker to heavier and heavier woods, until iron took the place of the heaviest.

And right here, note the development of pianoforte music and compare it with the growth of the instrument itself. We all remember the differences of opinion between the two schools of Clementi and Mozart, and about the meeting of the diametrically opposed players.

Clementi was the father of pianoforte playing. He lived in and through a wonderful epoch in the life of the pianoforte. At his birth Handel was still playing upon his Schudi harpsichord. During his life Mozart, Beethoven, Cramer, von Weber, Kalkbrenner, Czerny, Moscheles, Mendelssohn, Chopin, Pleyel, Liszt, Thalberg, Kullak, Clara Schumann, Reinecke, Gottschalk, Rubinstein, and von Bülow had come into the world, each to add his or her mite toward the perfection of expression, or technic, of skill in the manipulation of the piano's keys.

Before his death the old Bach touch had become obsolete. The gentle whispering to the keys, so common with Mozartian players, had been drowned in the echo of the fiercer, more virile stroke necessitated by the Beethoven music, and virtuosity became the ruling passion of the hour.

For years its builders tried every expedient to make the tone of the pianoforte more brilliant, more lasting, clearer, louder. Every ingenious shift that could be imagined was utilized to increase the ease of producing these tones. We no longer have the two rows of keys used by Handel, for in our one row we have more power than in his two. We have done away with draw stops, and have substituted automatic dampers. The centuries have not been wasted, for we have under our piano lid not only an action that enables us to overcome all obstacles, and that plays for us the most intricate, most difficult of passages, but an instrument so attuned to the needs of the individual player that there can be practically no thought of the intelligent performer that cannot be expressed by the perfected pianoforte.

In its history is written the history of instrumental music. From the oldest known instrument to the newest, most prominent, most perfectly fitted with every musical device — from the Chinese pien king and the ancient psaltery and dulcimer to the twentieth-century Steinway grand pianoforte—there has been one continued development.

Since the revival of instrumental music in 1600, the piano has ever held a prominent place in the use of instruments and in the literature of instrumental music. It has seconded every thought and borne out and made possible every attempt at progress in the literature of the instrument. The growth of the piano literature from the days of the Fantasias of Scarlatti, Couperin, and Sebastian Bach to the pleasing melodies of Haydn and Mozart, from Field's *Nocturnes* to Beethoven's *Sonatas*, from the romanticism of a von Weber to the clear-cut tones of Thalberg; from the perfection of Chopin's work to the versatility of Liszt, the titanic power of Rubinstein, and the intellectuality of Paderewski, this growth has been possible only because of the evolution of the pianoforte itself. — *New York Commercial.*

MOZART FOUNTAIN, DRESDEN
(Hermann Hosaeus' accepted design)

ANTON RUBINSTEIN

(Told to Children)

EDNA BAKER OYLER

The older members of our families have found much to say about Russia for weeks and weeks past. The newspapers have been telling us many unpleasant things which have happened there. We somehow have begun to think that really no very good thing could come out of such a country. We must not forget, however, that Russia is a very large place, covering, as it does, about one seventh of all the land of this great earth of ours. Many kinds and classes of people live there, besides the stern rulers and noblemen, the soldiers and "working class" people, about whom we have heard so much recently. We are, in fact, quite indebted to Russia for many of the world's best writers of books and composers of music.

ANTON RUBINSTEIN IN 1842

Most of the Russian composers did as Grieg does, and tried to tell the story of their country in their music. One can almost always recognize the music of Russian composers because of this, yet the composer we are going to speak of did not follow this style so closely as the others. I feel sure that those of you who have music in your homes have at some time heard of the great Russian composer and pianist, Anton Rubinstein.

We are apt to think of Rubinstein as a German or a Bohemian. His father was a Polish Jew, and he used to tell jokingly that when he was in Germany he was taken for a Russian, but that when he was in Russia he was taken for a German. In spite of this, he never ceased to consider himself a Russian.

It was the mothers of Handel and Grieg and many other great musicians who first discovered the musical talent of their children. This was the case with the child Anton Rubinstein. His mother was a musician, and played the piano beautifully. Little Anton used to sit and drink in the sweet sounds and long to play himself. When his mother saw how earnestly her little son listened, and how hard he tried to make his little hands make the sweet music he loved so dearly, she resolved to teach him all she knew.

Little Anton was delighted. He learned so rapidly that it was not very long before his mother began to say to herself, "What shall I do with my little son, after I have taught him all I know" for they were too poor to send him away to study, and there was no good teacher where they lived. While she was still wondering what to do, something happened which made the way seem clear. Just as the people are badly treated by the rulers in Russia to-day, so they were then, and it became necessary for some of them to leave the little town in which the Rubinsteins lived. Anton's grandfather gathered together all his sons, and their wives and children, and moved to the great city of Moscow.

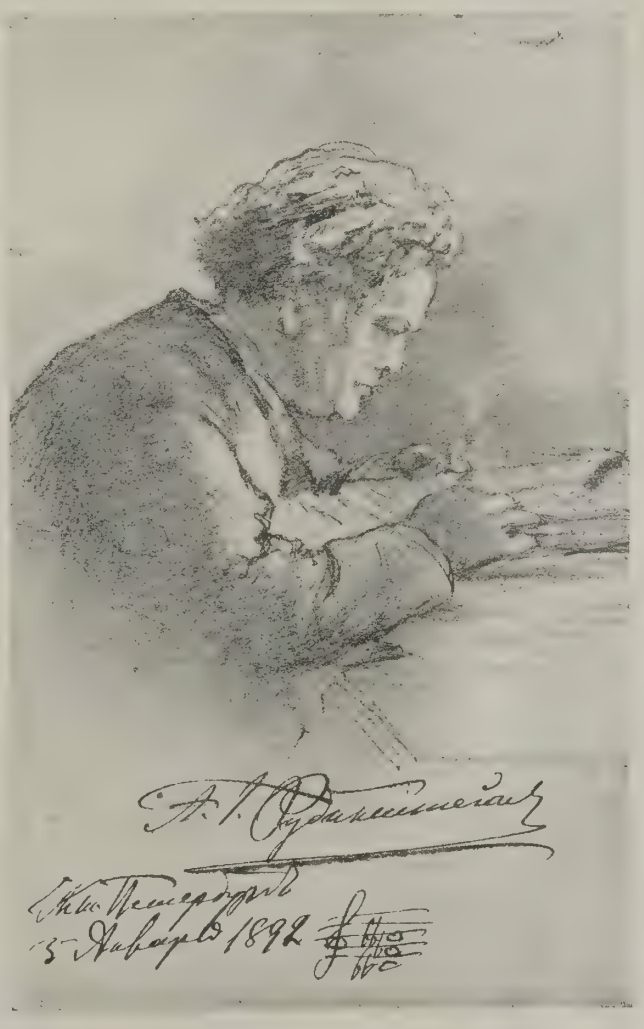
As soon as they had settled, Anton's mother found a splendid teacher for him; but, alas, they could not pay his price for lessons. "Oh, well," said the teacher, "he has much talent, and I am not in need of money; I will teach him for nothing." Think how pleased the Rubinsteins were and what a fine chance for Anton it was! He never had any other teacher and he never needed any other.

When he was ten years old he played in public in Moscow, and at twelve years of age he played before the crowned heads of Europe. When he was sixteen years old his father died, and from that time on he had to earn his own living. He concluded to go to Germany. There he hoped to fall into the good graces of the great teacher and musician, Liszt. One day he mustered up courage to call on Liszt, but found him in a bad humor. He told Anton that he had no time for him, and that "every musician must work out his own way to success." Anton's heart sank within him, and he went back to his lonely attic room, cold and almost starving. We can imagine some of the thoughts that came to him then, for it was very hard for a boy to get a start in a great city without help.

Rubinstein did not lose hope. One day, not long after his visit, Liszt became ashamed of his treatment of the lad and invited him to dinner. From that time they were the best of friends, and Rubinstein learned much of Liszt and followed many of his ways.

Although Rubinstein composed even better than he played the piano, he loved the piano more than any other instrument. Rubinstein, the pianist, is better known to the world than Rubinstein, the composer. He worked hard all his life, that he might give to the world the best of his talent. Beside concert giving and composing, he found time to plan for and found the great conservatory, or school of music, at St. Petersburg, Russia.

In 1872 he came to America, and was heard in some of the large cities. People came hundreds of miles to hear him play, and all were charmed. Some of the best of Rubinstein's compositions for the piano are the beautiful *Melody in F*, Op. 3, which you must get some one to play for you; the *Romance*, Op. 26, No. 1; the *Barcarolle*, Op. 30; the *Impromptu*, Op. 44, No. 3, and the one with the name hard to pronounce, *Kammennoi Ostrow*. There are also duets, or four-hand pieces, the most beautiful of which was called *Bal Costume*. This is a group of several pieces, and has been arranged for orchestra. He wrote four sonatas and six concertos, the best being the fourth and fifth. He also composed some operas, which are not often sung. Rubinstein died Nov. 20, 1894.



ANTON RUBINSTEIN

LETTERS FROM A COUNTRY MUSIC TEACHER

JEAN URQUHARDT

I

It is good to live in close communion with Mother Nature, and yet there are times when the dear old lady distinctly nods, and has nothing to say to us. Thoreau, solitary being that he was, complains now and then of infinite loneliness. It is a feeling that is shared by us all, — even to the oldest inhabitant. But while the aged can usually fall back, for conversation, on the fearsome tales their forbears used to tell of the year "Eighteen hundred and Starve to Death," when there was frost every month of the twelve, and no corn ripened, with the young the sense of solitude engenders a growing distaste for home limitations, and an unfilled longing for the supposed gayeties of town existence.

In some communities dancing and card-parties are strictly tabooed; but there are always ways and means. And nothing else will help so much toward filling the aching void as a good country singing school. The middle-aged people who attended in their youth are still excellent sight singers, and might help the younger folks to form a choral society. It is a valuable help alike to the veteran, and to the raw recruit. Sight singing is not in the ordinary curriculum of many high-priced voice-culturists, and trained singers are frequently handicapped and forced to stumble along in the wake of an untaught voice that can compass new music. It is another case of the unlettered Irishman who said he could read at sight, but not at first sight.

Even for those whose ability is not in the direction of singing, the discipline is useful. It helps us, as nothing else, to realize that instrumental music is really based upon four-voice harmony. A knowledge of part singing stands us in good stead when we come to study fugues.

The neglected left hand will be more apt to come into its own, when the student realizes that it represents the voice-parts of one, two, three, or more participants. Then, too, when we grasp the possibilities and responsibilities of the separate voices, one can give a better and more telling interpretation of each phrase.

Nothing can impress upon us the importance of these things so clearly as an intelligent study of choral music, or what may be called *ensemble* singing.

II

I remember the struggles of a volunteer church choir with an anthem which glowingly described the safety and comfort of the faithful, even while wild beasts went supperless. In the middle of the compositions there occurred a passage wherein the upper voices were silent, and the bassos entered *forte* with the brave assertion that "The lions shall lack, and suffer hunger." But the *basses lacked*, — ardor and military prowess. They hated to come out, all alone, from under cover of the three sheltering allies. The result was a most lamb-like little wail, and a general scramble to get into the next musical pasture lot, and behind the bars with the rest of the flock.

The solid advantages are legion, and manifest. But if only for pleasant comradeship, let us have singing schools in the country, and lots of them. They will lead us in time up to musical festivals and visiting with the neighbor institutions. It is easy to find a meeting place. Even if we lack an instrument, the plan need not fail; for with a tuning fork, a blackboard, a modicum of intelligence, and a competent instructor, musical wonders have been, and can be again, accomplished.

A CLUBWOMAN'S MONOLOGUE

JEAN URQUHARDT

As the Musical Clubwoman knit her brow, in a frown that recked not of the beauty specialist, she tapped the floor, impatiently, with a dainty boot.

"I'll tell you what it is," quoth she; "you have got to stick as close to business as a barnacle, and run a Musical Club just about right, or else you're preparing to go to smash on any number of submerged rocks.

"Now, the founder of our club was a clever woman, — a very clever woman.

"I don't know that I should have given her the ballot, because she would undoubtedly have pitched it over the back fence, when she once got tired of it, and trotted off to find a new plaything.

"But as an organizer she was an artist — I will say that for her.

"In the beginning there was Chaos — and no musical club in the town.

"So this woman invited several musical friends to meet one afternoon, at her house.

"And over the tea-cups she unfolded her neat little plan for our consideration.

"As she said, twelve conscientious working members were enough to have in a musical club.

"You see, she was allowing five minutes for each one to perform.

"It is a long piece, and a very long song, that would take more than five minutes.

"Twelve times five would make sixty minutes, or one hour, for the musical program.

"Two or three short essays on the musicians of the day would perhaps cover another half hour, comments and all.

"That left another half hour for roll call and business.

"And really, from three until five is long enough for a club meeting; and once in two weeks is quite often enough.

"At roll call, it was suggested that each member should respond with a quotation about music, or a musical fact, or an item of musical news.

"It was sort of a musical ragbag. Each member was anxious to see what the next one would bring to light.

"Then some one else suggested having historical notes at each meeting. That is, a brief paper on the world-events which took place during the lifetime of the musician of the day.

"We all liked that, too.

"It goes without saying that we elected the organizer our first President.

"And how earnestly we all worked that year!

"One bright member prepared our maiden prospectus.

"It would look odd, now. For it was only one sheet from a paper pad, with the names of Germany's foremost composers, with dates, in chronological order.

"This list was read aloud, and we all copied it.

"It was the humble beginning of a very prosperous club.

"For we flourished as the bay tree, while we labored faithfully.

"We did not reach the place where we owned bank stock and an expensive club-house.

"But we did get to that proud eminence where our friends came forward and invited us to use their parlors, whenever the exigencies of house cleaning, or the raids of the interior decorator, put our own homes out of commission.

"Our troubles began when we took to running after strange gods, and non-musical members.

"Elaborate refreshments are also playing their part in our club undoing.

"We have people in the club now who do not know one note from another, — and the social climber is much in evidence.

"To give these latter a chance to shine, we are going to have three receptions during the season.

"Now, one function of that kind means a lot of fuss and feathers.

"And when you come to multiply it by three, how much time does that leave for solid work?" queried the clubwoman, indignantly.

"Then there is another thing.

"We have taken to meddling with things that are none of our business, musically speaking.

"Just fancy taking up the time of the club with discussions on manual training in the public schools and preservation of the forests, when there is hardly a tree in the town much bigger than a sapling!

"What became of our founder?"

"Well, as I said, she was brilliant, but erratic.

"She became offended with us for some trifle.

"So she went off, and founded another society.

"She still calls herself the mother of our club. But, as one of our members remarked, stepmother would come nearer to the situation.

"After all, it does not matter.

"She did her work for us, and passed on, — as we each must.

"However, as I said before, we are traveling at a pretty swift gait, and I am afraid we are bound to come to grief, unless we return to first principles, and the much-advertised simple life.

"I don't wish to figure as the Cassandra of the club, but the country folks have a saying that just exactly suits our case, to my mind.

"They say, 'You can fly high, but you've got to come down to drink.'"

SAID BY HAYDN

The invention of a fine melody is a work of genius.

God bestowed a talent upon me and I thank him for it.

I certainly had the gift, and by dint of hard work I managed to get on.

On hearing Handel's *Hallelujah Chorus*, he said: "He is master of us all."

Melody is the charm of music; and it is that which is most difficult to produce.

Art and composition tolerate no conventional fetters; mind and soul soar above them.

FOR THE YOUNG PEOPLE

Conducted by THOMAS TAPPER

PIANOFORTE PRACTICE METHOD

W. RALPH DRIFFILL

This is not a new Pianoforte Method. It is merely an attempt to help boys and girls — for whose piano troubles I have a profound sympathy — and to make practice more interesting.

Let me begin by an illustration. You know how beautifully a piano is polished. There is much to be done, however, before the polishing takes place. The wood has first to be cut; then worked into the proper shapes by sawing, planing, and sandpapering. For simplicity, we will imagine that a man has a rough plank twelve feet long, to prepare for polishing. He must make it smooth with a plane. But he will not try to take a shaving off the entire length of the board. He will plane a little at a time. By following this plan, he knows he can the sooner finish the work.

We will suppose this rough work done, and the man is ready to polish. He will have more sense than to try and polish the whole length at once. He will take it in small sections, and, in places where the wood is softer, he will have to work harder and spend more time.

Now let us apply this to practicing the piano. We will suppose that you are beginning a new piece, and that you have to prepare part of it for the next lesson. Begin by reading it once through. You will find then where some of the difficult places are. You may find that one or two measures require as much practice as all the rest of the page. But I am afraid the general tendency is to keep playing over the whole section; and we saw how foolish it would have been if the man who was planing the board had tried to do the whole length at once.

This rough work, then, which consists in learning the notes, metres, and fingering, should be done in small pieces. I want to make you understand, if I can, how important fingering is. You form habits of fingering, good and bad. I daresay you have noticed that in one place in a piece you always make the same mistake. You know it is wrong, but it *will* persist in going so. This is habit. Your fingers have got into the habit of playing it wrong, owing to your not having been careful enough to see that they played it correctly.

Very well. If bad habits can be formed, so can good ones, and the ways to form them are this: —

(1) Study the fingering very carefully, and learn it.

(2) Drill it into your fingers so that it becomes habitual with them, and they *must* do it that way.

(3) *Never finger the same passage in two different ways.*

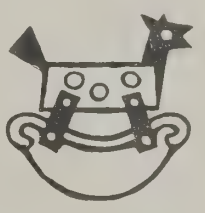
(4) Be sure to practice everything slowly to begin with, gradually increasing the pace as you are able.

So much for the rough work. The polishing, by which I mean phrasing, marks of expression, and general finishing of the piece, should be done in the same way, but always remember this: whether you are doing the rough work or the final polishing, stick at the part which needs practicing. Do not keep playing over the parts that you can play already. If there are a few measures which will not go smoothly, play them over and over again till you master them. If you find they go no better, give them a rest, and come back to them later, when you are fresh.

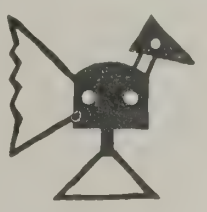
Now a few words about Finger Exercises: —

I wonder how many boys and girls really understand the value of them. When we have done the first two pages in the Instruction Book, I am afraid most of us think we may close it for good. This is a great mistake. Let us think what they are for.

Most of you know that you can take hold of anything with the hands, and grasp it firmly. You know you do this by means of muscles. But how do you let go? You have two sets of muscles in the hand — one set inside and another

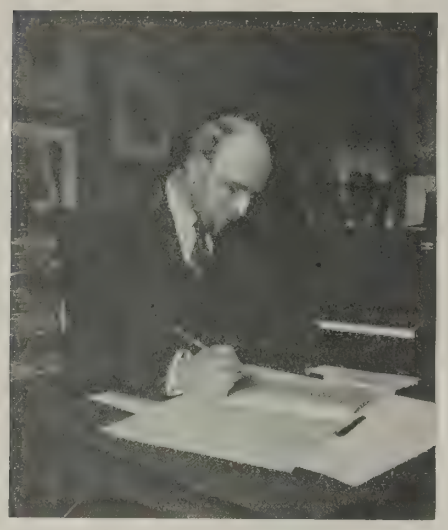


set at the back. The muscles at the back of the hand are used, as a rule, only to straighten the fingers after you have relaxed the inside muscles. So the muscles at the back are naturally weaker than those inside. Finger Exercises, practiced



from a muscular point of view, give control over the fingers by strengthening the back muscles, and enables one to play smoothly instead of unevenly.

Another time I shall say a little about Finger Exercises from another standpoint.



MR. LOEFFLER IN HIS STUDY

Club Programs from all Nations

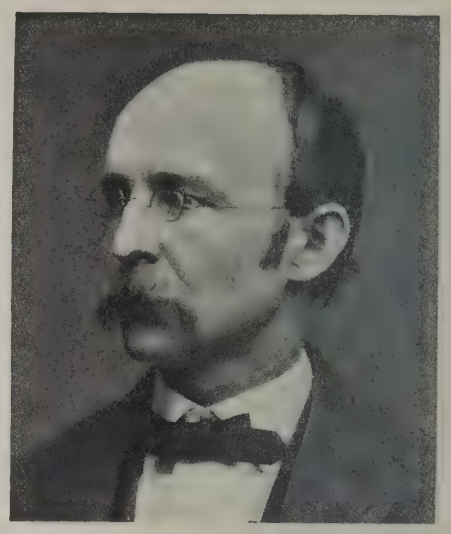
X. AMERICA

ARTHUR ELSON

In every issue of THE MUSICIAN this department will present an elaborate study of a national school. The purpose will be to give a correct chronologic summary of the school, its principal representatives, to indicate a practical club program, and to review the presentation of the subject by means of a list of queries.

Clubs planning to use this material may address correspondence concerning any feature of the work to the EDITOR OF THE MUSICIAN.

Every assistance will be given to clubs, classes, and private students. The editor will be glad to lend help to those desiring to secure speakers on topics relating to music



JOHN K. PAINE (AN EARLY PORTRAIT)

Historically speaking, the beginning of American music dates back to the time of the Puritans; but their hymns and psalm tunes were few in number, and exerted no great influence upon future developments, save in the field of sacred tunes. In fact, the Puritans set their faces sternly against violin and organ music, though the 'cello was admitted to their services at an early date.

One of the earliest native composers was James Lyon (1735–1794), a native of Newark, "patriot, preacher, psalmodist," who published at Philadelphia, probably in 1762, the collection of hymns entitled *Urania*. The same city saw the birth of Francis Hopkinson (1737–1791), composer and harpsichord player, whose song-collection of 1759 and 1760 antedated the work of Lyon. More famous than either was William Billings (1746–1800), the tanner's apprentice who chalked music on the sides of leather while at work. His *New England Psalm Singer, or American Chorister* appeared in 1770, revised later as *The Singing Master's Assistant*. Its tunes became widely popular, especially *Chester*, which was often heard around Revolutionary camp-fires. Four later volumes followed, and many single works. Other early hymn composers were Oliver Holden (who wrote *Coronation*), Andrew Law (composer of *Archdale*), Jacob Kimball, Jr. (whose collection, *The Rural Harmony*, was quite successful), Samuel Holyoke (whose chief hymn was *Arnheim*), and Timothy Swan (*Ocean*, *Poland*, and other tunes).

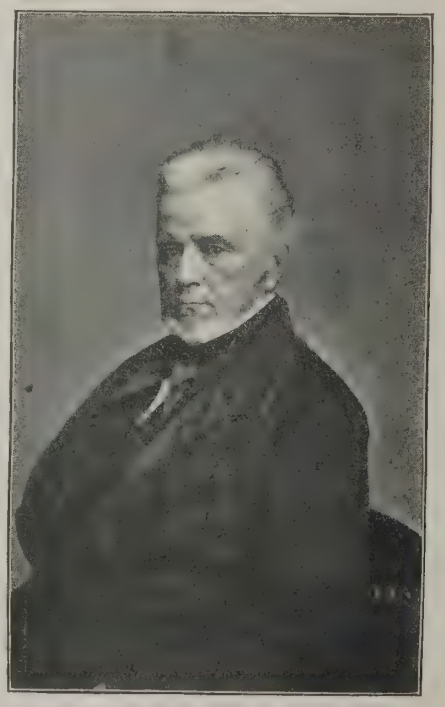
One important service of Billings was the formation of a singing club, that afterwards grew into the renowned Stoughton Musical Society. A successful peace concert after the War of 1812 led to the beginning of the Handel and Haydn Society (March 13, 1815), which has ever since then served as a model for many similar organizations. It has brought to the front such well-known figures as Lowell Mason, Carl Zerrahn, and Benjamin J. Lang, and has done invaluable service to sacred music in America. Its recent reorganization, which brought in Emil Mollenhauer as leader, has placed it on a higher plane of efficiency than it ever before reached.

Lowell Mason (1792–1872) was at first a bank clerk in Savannah, but the success of his early compilation of sacred music (containing many of his own works) led him to adopt a musical career, and in 1827 he became president and conductor of the great Boston organization. As its leader, as composer of many sacred works, as teacher, and as organizer of teachers' conventions, he exercised an invaluable influence upon American music. Not gifted with the highest genius, his attainments were exactly those best suited to make him a leader in his time.

The first important impetus to orchestral music was given by Gottlieb Graupner, a German oboe player, whose efforts led to the Boston Philharmonic Society. In 1840 came the Boston Academy Orchestra, after which the Germania Orchestra entered the field, in the middle of the last century. After the war came the work of the Harvard Musical Association, and finally, in Boston, the present Symphony Orchestra, founded in 1881 and led by Henschel, Gericke, Nikisch, Paur, and again Gericke.

The Musical Fund Society did yeoman service in Philadelphia, from 1820 to 1857, but was hampered by lack of funds. In 1842 came the New York Philharmonic Society, which is still flourishing. Among its leaders have been Uriah C. Hill, its founder, Theodore Eisfeld, Carl Bergmann, Theodore Thomas, Leopold Damrosch, Adolph Neuendorff, Anton Seidl, Walter Damrosch, and Emil Paur, while in recent years it has imported such men as Colonne, Weingartner, Strauss, Henry J. Wood, and Safonoff.

Theodore Thomas (1835–1904) did more than any other man to raise the standard of orchestral music in



LOWELL MASON

America. In chamber music the Mason-Thomas concerts (with William Mason, the famous pianist and son of Lowell Mason) introduced the works of Brahms and Schumann. The Thomas orchestral concerts began in New York in 1864. As leader of many concert tours, as director of the Cincinnati College of Music, and conductor of the great Chicago orchestra, his breadth of taste and unswerving fidelity to the highest ideals of art won him universal homage.

Dramatic performances were given in New York as early as 1750, when the *Beggar's Opera* led the way for other English ballad-operas. New Orleans possessed a permanent French opera troupe in 1791, and for many years witnessed excellent performances. In 1793 Philadelphia entered the field. The title of first American opera is claimed for several works, among them *The Archers*, by Benjamin Carr, and *Edwin and Angelina*, by Pellisier. The first native opera composer of any worth was William H. Fry, whose *Leonora* was given in 1845.

The national music of America may be divided into two parts, — patriotic songs and plantation songs. The Indian melodies have exerted no important influence on the art, and are valuable chiefly to ethnologists. The national songs are not of deep musical significance. *The Star Spangled Banner* and *America* are frankly borrowed from English sources, the real origin of *Yankee Doodle* is not yet settled, *Hail Columbia* is rather bombastic, while Keller's *American Hymn* and other modern efforts are not widely popular.

Among the Civil War songs, George F. Root's *Battle-cry of Freedom* and *Tramp, Tramp, Tramp* have become permanent. Henry Clay Work achieved even greater success with his *Marching through Georgia, Say, Darkies, hab You seen My Massa*, and others. *John Brown's Body*, adapted from an old camp-meeting tune, led to Julia Ward Howe's inspiring words. *Dixie* was a minstrel tune by Dan Emmett before it became the Southern war-song.

The real plantation music often partakes of a weirdly impressive minor character, but of this little has reached the public. The livelier rhythms and plaintive melodies, however, have given the distinctive flavor that Dvorák infused into his great *New World* symphony, and that so many song composers have followed. Most famous among these composers is Stephen C. Foster (1826–1864), whose *Old Uncle Ned*, *My Old Kentucky Home*, and *The Old Folks at Home* are a few of many compositions dear to the popular heart.

For many years John K. Paine (1839–) has been considered the Nestor of American composers. He was the first to hold a chair of music in America; his work at Harvard began in 1862 and lasted until 1905, being carried on now by Walter R. Spalding. Professor Paine's compositions show a high order of dignity, a true sense of beauty, and the most solid musical learning. There is not much evidence of powerful dramatic expression in them, but they incline rather to a sound conservatism.

His Mass in D appeared at Berlin in 1867. Next came the oratorio *St. Peter*. A first symphony in C minor was soon eclipsed by the second, or *Spring*, symphony, the composer's favorite work. The *Tempest* fantasy was the first great American work to appear in the Boston Symphony concerts. Later came the music to *Œdipus Tyrannus*, remarkable for the loftiness of its inspiration. Subsequent compositions include *Phœbus, Arise*, Milton's *Nativity*, *The Song of Promise*, the *Columbus March and Hymn* (for the Chicago fair), many songs, organ pieces, and chamber works, and recently the opera *Azara*, to be given at New York in 1906.

Three other men (Chadwick, Parker, and MacDowell) now share the foremost position. George W. Chadwick (1854–) has shown a mastery of form and an ability to blend classical dignity with modern passion. Though credited with three symphonies, he has attained the highest

rank with his overtures, which are heard in concerts on both sides of the Atlantic. *Rip Van Winkle*, the first, attained a high level, but the *Thalia* and *Melpomene* are even greater, giving the true spirit of comedy and tragedy without becoming too definite program-music.

STEPHEN C. FOSTER

Chadwick has shown a great versatility in his works. They vary from admirable string quartets to the successful popular opera, *Tabasco*, or from the most unassuming songs to the ambitious cantata *Phœnix Expirans*. His piano quintet and his sacred opera, *Judith*, are other notable works, the latter being full of the most graphic effects.

Horatio W. Parker (1863–) is another who holds an academic position, and under him the musical course at Yale has assumed a growing importance. He, too, has essayed many fields of composition, and succeeded in them all. His *Hora Novissima*, a cantata treating the old sacred poem of Bernard de Morlaix, is one of the most important works yet produced in America. The composer reverts to the impressive dignity of the contrapuntal style; but there is not the slightest trace of pedantry in it, and its masterly power of expression won it a memorable success in the Worcester (England) Festival, as well as in the United States. So much was it admired that the composer received an order for a new work to be given at the Hereford Festival, for which he wrote *A Wanderer's Psalm*. *The Legend of St. Christopher* is another remarkable work, in similar style. His compositions

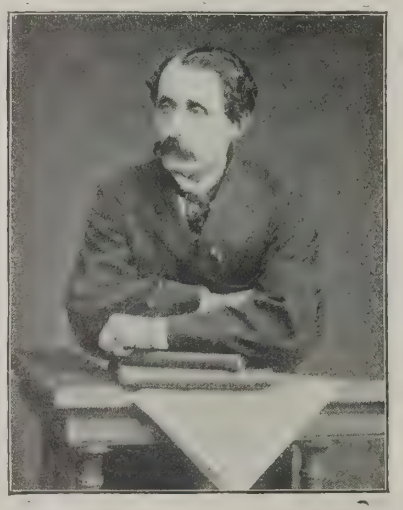
THEODORE THOMAS AS A YOUNG MAN

include a symphony, several overtures, a concerto, and other works for organ, a string quartet and quintet, piano pieces, songs, and many choral works. But his great oratorio cantatas alone suffice to win him enduring fame, and have not been equaled in America.

Edward A. MacDowell (1861–) numbered among his teachers such great names as Teresa Carreño and Joachim Raff, and won the favor and patronage of Liszt by his early piano suites. Since then nearly all of his large works have been heard in Europe. He, too, has been united with the musical movement in the universities, and for some time held the chair of music at Columbia, now occupied by Cornelius Rübner. As a composer, some critics place him foremost among the Americans, and at one time a few enthusiasts rated him the best of living music writers; but his work, in spite of its many excellent qualities, has not surpassed the *Œdipus* music, the *Melpomene* overture, or the *Hora Novissima*.

Best among MacDowell's works is the Indian Suite. A notable example of orchestral dignity, it would hardly be recognized or understood by the aborigines; but it certainly wins the admiration of more cultivated musicians. *Lancelot and Elaine*, *Hamlet*, and *Ophelia* are other orchestral works, while the two piano concertos grow on repeated hearing. MacDowell's piano compositions, especially his sonatas, deserve the highest praise, and his songs are no less worthy of admiration.

Arthur Foote (1853–) is worthy of a place with the other foremost men, for the excellent discretion and finished skill of his orchestral work. His suite in D minor, clean-cut, direct, and beautiful in both themes and development,



L. M. GOTTSCHALK

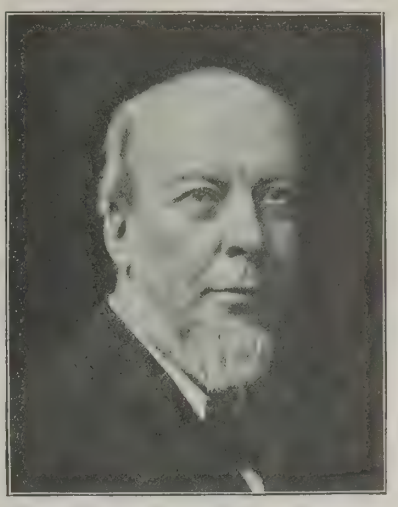
will stand comparison with any work in this form. His D major suite for strings is a lesser work, while *The Wreck of the Hesperus* and other cantatas are learned rather than dramatic; but his string quartet and piano quintet are always successful, and his songs decidedly beautiful. Other large works by him are *Francesca da Rimini* and the overture *In the Mountains*.

Henry K. Hadley (1871–) is of a younger generation, but has already a number of orchestral works to his credit. His two symphonies, *Youth and Life* and *The Seasons* are clear, graceful, and altogether interesting. He has written also three Suites, a Festival March, a Heroic Overture, and other large compositions, all of them showing a refreshing freedom from morbid tendencies or latter-day experiments with dissonances.

Frederick S. Converse (1871–) is another who seeks orchestral utterance in the larger forms. He is more in sympathy with the modern colorists and such works as the *Festival of Pan* and *Endymion's Narrative* are spoken of by him as "Romances for orchestra." In these, as in the overture *Euphrosyne*, he handles his instruments in masterly fashion. His chief defect is a lack of coherence, but in orchestral rhapsodies this is a fault that leans to virtue's side.

Howard Brockway (1870–) studied much with O. B. Boise, his father-in-law, and at twenty-four was well advanced on the symphonic path. His *Sylvan Suite* is a charming concert number, full of delicate beauty. Other works by the same composer are a symphony, a symphonic ballad, a violin sonata, and a romance for violin and orchestra.

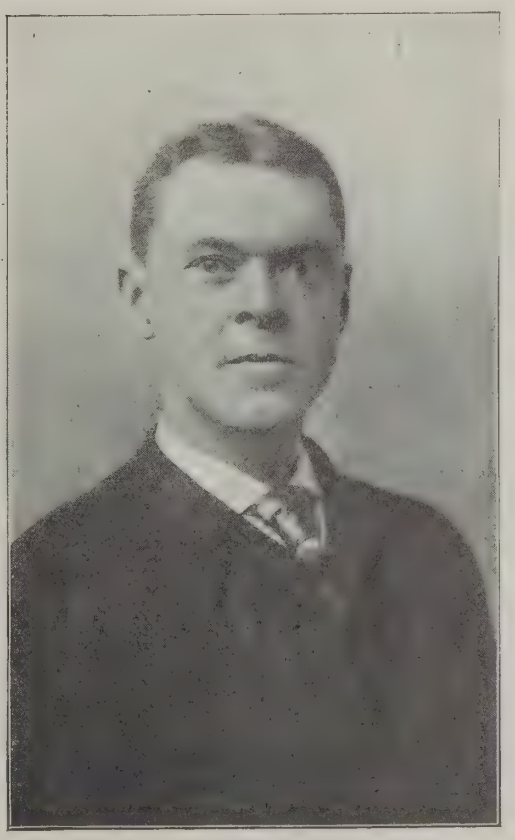
Of greater importance than either of these is Frank Van der Stucken (1858–). His leadership of the Arion Club in New York, his conducting of symphony concerts there and in Cincinnati, and his activity as head of the Cincinnati College of Music have all been most efficient and valuable. As composer, he is one of the radicals one of the very few in America who can handle the full orchestra in the ultra-modern style. His *William Ratcliffe*, based on the grim tragedy by Heine, is almost as complex and highly colored as the great tone-pictures of



DUDLEY BUCK

Strauss. A later work, entitled *Pax Triumphans*, is in similar style, and the triumph of peace demands about as much noise as the most frenzied battle scene. The opera *Vlasda* is also an ambitious work.

Another composer who handles the largest orchestra with superb mastery of color is Charles Martin Loeffler (1861–), a native of Alsace. His songs, many of them beautiful, and his *berceuse* for violin and piano, are overshadowed by his larger works. His symphonic poem, *The Death of Tintagiles*, is a masterpiece of superb coloring, while *The Morning Star*, based on one of Verlaine's



ARTHUR FOOTE

most beautiful poems, is another example of vivid expression. *La Vilanelle du Diable* is a highly spiced picture of that satanic worthy prowling about in search of trouble. The chief defect of Loeffler's work is the ceaseless striving after new harmonic effects, and a consequent lack of continuity; but this cannot obscure the real greatness of his orchestral work.

Another foreigner who has gone even farther in search of novel harmonies is Gustav Strube; but the refreshing beauty of his violin concerto shows that he does not always wander far afield. Rubin Goldmark (1872–) is a nephew of the great Goldmark, and his piano trio caused Dvorák to say, "There are now two Goldmarks." His

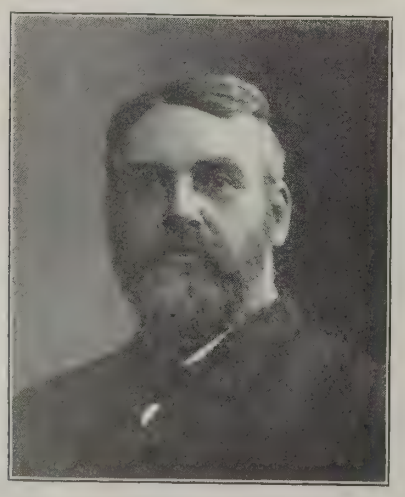
HENRY HOLDEN HUSS

Hiawatha overture is well written and graceful, if not tremendously great.

Carl Baermann, pupil of Franz Lachner, is familiar to all as a renowned pianist and excellent teacher; but he deserves increased recognition as a composer, too. His works are nearly all written for piano, and in addition to their technical excellence they are remarkably attractive in material. They are imbued with true musicianship throughout, and show a rare feeling for the highest musical beauty.

Another foreigner who has won laurels in America is Hugo Kaun (1863–), formerly of Milwaukee. Many of his works, such as the Festival March, the symphony *An Mein Vaterland*, and the symphonic poem *Vineta*, have been given by Thomas, while a later symphonic poem, *Minnehaha*, has been well received in all the large musical centres.

Besides foreigners in America, three Americans residing abroad deserve mention. Otis B. Boise has written symphonies, overtures, concertos, and other large works, and has done important educational work in Baltimore.



ADOLPH M. FOERSTER

Arthur Bird, a pupil of Liszt, has produced a symphony three suites, and many excellent piano works. Templeton Strong (1855–) fills his orchestral works and cantatas with a delicate, romantic grace that is altogether charming. His *Sintram* symphony was given by Seidl, while the symphonic poem *Undine* is another worthy work.

In Chicago Frederic Grant Gleason (1848–1903) held a position of prominence as teacher, critic, and composer. His works include two grand operas, *Otho Visconti* and *Montezuma*, and the symphonic poems *Edris* and *The Song of Life*, all decidedly modern in effect. Another Chicago composer is Henry Schoenefeld (1857–), whose clear and unaffected style is well adapted to the plantation flavor that he strives to introduce into his works. A Suite (Op. 15) and the *Sunny South* overture show this distinctly, while his *Rural Symphony* received the Dvorák prize, and a violin sonata won a later offering from Marteau.

A New York composer of renown is Henry Holden Huss (1862–), whose piano concerto, rhapsody for piano and orchestra, and romance for violin and orchestra show much ingenuity in figure treatment. Harry Rowe Shelley (1858–) is credited with two symphonies, the symphonic poem *The Crusaders*, the overture *Francesca da Rimini*, a violin concerto, and an opera. Silas G. Pratt (1846–) showed much good technic, but one finds in his work an excess of the patriotic. Louis A. Coerne (1870–) is of a younger generation, yet has had time to produce works of real value. His grand opera, *Zenobia*, was recently given in Germany, while *A Woman of Marblehead*, treating the Floyd Ireson episode, and the orchestral picture, *Hiawatha*, are worthy attempts to depict American subjects.

Johann H. Beck (1856–) has upheld the cause of music in Cleveland, O., where he has written overtures, a cantata, chamber music, and some songs. Another leader in Cleveland is Wilson G. Smith, a composer of much admirable piano music. Ernest R. Kroeger (1862–) is the leader in St. Louis, where he has brought forth a

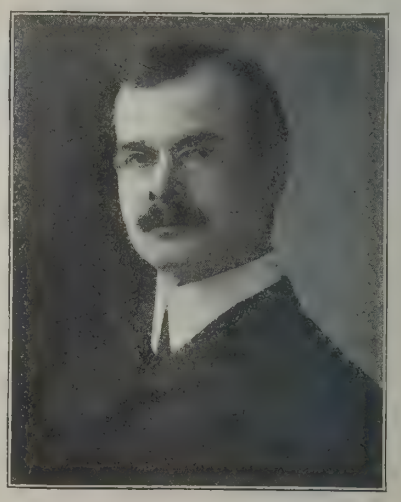
HENRY K. HADLEY

symphony, the overtures *Sardanapalus*, *Hiawatha*, *Thanatopsis*, and *Endymion*, and an interesting set of *Ten American Sketches*.

Pittsburg can boast of Adolph M. Foerster (1854–), who employs melodic and romantic effects with taste and discretion. Many of his orchestral works are still unpublished, *Thusnelda* being almost the only exception. His songs are eminently successful, as would be expected from an intimate friend of Robert Franz. Arthur B. Whiting (1861–) is a Boston resident, whose work is always refined and polished. A piano fantasia, a concerto, and lesser instrumental works show some boldness of modulation, but his best work is in the vocal field, where his settings of Herford's *Floriana* and Kipling's *Barrack-room Ballads* show a mastery of opposite styles. Carl V. Lachmund is another New Yorker, whose *Japanese Overture* has won an artistic success.

Dudley Buck (1839–) has been a leader in the field of cantata. His *Legend of Don Munio*, *Voyage of Columbus*, and *Light of Asia* are all effective through their melodious style. His church cantatas and organ works are also worthy, while his many male choruses and songs have achieved permanent renown. J. C. D. Parker (1828–) is another melodious vocal composer, his best work being an oratorio, *The Life of Man*. William W. Gilchrist (1846–) upholds the standard in Philadelphia. His works show commendable ease and skill in the leading of the voices, and he has achieved real success, especially in the gentler moods. Benjamin Cutter (1857–) is the composer of an excellent mass, the orchestral vocal ballad, *Sir Patrick Spens*, and much worthy chamber music.

In light opera Edgar Stillman Kelley (1857–) has shown himself a master of lively and brilliant orchestral expression. *Puritania* is an especially striking example



E. R. KROEGER

of this school, its music being imbued with the utmost freshness and originality. Similar qualities are shown by his humorous symphony, *Gulliver in Lilliput*, and the Chinese suite, *Aladdin*, while his *Macbeth* music and the incidental music to *Ben Hur* are in more serious vein.

More conventional in style is Reginald de Koven, whose *Robin Hood*, *Don Quixote*, and other operas have nevertheless been a perennial delight to the public. Of his many songs, *O Promise Me* is said to have had a sale of a million copies. Far more musically gifted is Victor Herbert (1859–), who writes light operas by preference, but whose work in conducting shows him to be a gifted musician. Even in his light operas, such scenes as the *Angelus*, from *The Serenade*, display a breadth of effect that mark him as above his school. Bruno Oscar Klein (1858–) has attempted a grand opera with his *Kenilworth*, but succeeds better in shorter compositions.

Of those who have confined their efforts chiefly to small forms, Ethelbert Nevin is one of the best. His songs are all delightful in their unforced sweetness, and his piano works, too, show much of the poetry of Schu-

ETHELBERT NEVIN

mann. Clayton Johns is another composer whose songs bubble over with sympathetic expression, while George L. Osgood, of Boston, and Jules Jordan, of Providence, have won similar success in this field. The lyrics of Fred Field Bullard, too, are noted for their refreshing virility of expression. Harvey W. Loomis has won much success with his songs, and has written some interesting incidental music for spoken pieces.

An early composer who ranked as a classic in American piano music was Louis Moreau Gottschalk (1829–1869). Well known as a pianist, he became a celebrity in nearly every civilized country. Educated abroad, he appeared in this country almost as an exotic. Despite the bohemian influences of the greenroom, he left some compositions that still give the true ring of musical worth.

Among American organ composers the greatest is George E. Whiting (1842–), whose sonata and studies for that instrument are models of their kind. He has written, besides orchestral works, four great Masses, a *Te Deum*, and several worthy cantatas, including *The Tale of the Viking* and *The March of the Monks of Bangor*. His works show a gift for rich melody, united with unusual vigor in the more martial works. Another notable writer for organ is Samuel B. Whitney (1842–), whose Anglican services rank with the very best. Other organ composers worthy of mention are Samuel P. Warren, George W. Warren, H. J. Stewart, Henry M. Dunham, Gerrit Smith, and Wallace Goodrich.

The women composers of America number at their head Mrs. H. H. A. Beach, whose E♭ Mass and Gaelic Symphony are ambitious works of the largest proportions, while numerous cantatas show a similar largeness of effect. She has written many piano works, but her songs win the most popularity for her. Mme. Helen Hopekirk, now a Boston resident, has won success with a piano concerto, as well as with some charming Gaelic and American songs. Margaret Ruthven Lang is another successful song writer, while many other American women are now well known.

With all this, it would seem that the American school is in a flourishing condition. In a way this is true; musical appreciation is widespread, and constantly growing; and many gifted composers have made worthy efforts in nearly every field. Yet the fact remains that we have not yet produced a single genius of the first rank, and none that can equal even the second-raters, such as Bruch or Raff. It may be that the American master is now growing up among us, but it is far more probable that modern civilization, with its luxuries and distractions, will prevent composers from reaching the highest artistic development, not only in America, but in all civilized countries.

GEO. W. CHADWICK

Questions

1. Name as many composers of the Revolutionary period as you can.
2. Describe the work of Lowell Mason and the growth of the Handel and Haydn Society.
3. Describe the rise of orchestral music in the United States.
4. Prepare a brief sketch of Theodore Thomas.
5. Describe the beginnings of opera in this country, and name the first great American opera composer.
6. What can you say of our national music, and of the Civil War songs?
7. Describe the plantation music, name a great song-writer who employed its effects, and give a list of the composers who have been influenced by it.
8. What are the chief works of John K. Paine?
9. Name and describe the compositions of George W. Chadwick.
10. What is the greatest work of Horatio Parker, and what others has he written?
11. How does MacDowell rank among American composers, and what are his best works?
12. Name as many American orchestral composers as you can.
13. In what field of music did the following men work: Loeffler, Buck, G. E. Whiting, Gottschalk, Baermann?
14. Name five great American song-writers.
15. What is your estimate of the American school?

THE VOICE

Conducted by WILLIAM SHAKESPEARE

All communications regarding the Voice Department of THE MUSICIAN should be sent directly to the Editor-in-Chief. Students who follow the work which is outlined in this Department may write freely regarding any further helps and hints that they need. If there is any point in your study or teaching which you desire to have discussed here, please communicate with us about it.

In acting for a time as Editor of the Voice Department of THE MUSICIAN, *I feel that I must first express my admiration of the earnestness of purpose and high standard of this journal, in which I have read with the deepest interest many valuable articles.*

With warm regards
Yours truly
Wm. Shakespeare

WHAT IS VOICE PRODUCTION?

WILLIAM SHAKESPEARE

In the preceding number of THE MUSICIAN an attempt was made to answer the questions: "How should the breath be taken?" and "Where should it be held?" by inculcating the practice of noiseless and imperceptible breathing. This will be found to necessitate the use of the diaphragm and rib-raising muscles of the back about the shoulder blades, and the avoidance of all movement at the points of the shoulders. Thus the breath is drawn in, held back, regulated and economized, while the powerful abdominal muscles simultaneously force the breath against the delicate edges of the vocal cords.

Then came the questions: "What is voice production?" "How can it be acquired?" and "How did the old masters teach it?" It was suggested that the muscles which form the floor of the mouth are capable of sustaining the larynx in its right position without causing any rigid fixing of the jaw or of the throat, tongue, lips, or of the face generally, and that the result of this is fulness of tone, perfect freedom of pronunciation, and natural facial expression. In other words, the voice is rightly placed.

We now offer some further remarks on this fulness of tone and its relationship to a right breath-control.

The use of the mirror by the old masters not only revealed to them the facial distortions which accompany throaty, nasal, frontal, and other defective sounds, but it provided them at the same time with the means of correcting these faults. It enabled them to observe and measure the breath required to produce a full tone, and they judged *that* to be a perfect note which sounded in fulness without clouding the mirror.

Their judgment was thus in agreement with the requirements of all arts and sciences, viz., *the accomplishment of the greatest effect by the least means.* The engineer builds his bridges to sustain the greatest weight with the maximum of lightness and elasticity, so the good singer causes his voice to sound in fulness to the least possible pressure of breath through the elasticity and balance of the different organs pertaining to the voice. The rigidity of the jaw, throat, tongue, lips, and eyes are but the results of a clumsy endeavor to perform that which should be brought about in balance and elasticity.

The old masters also practiced singing against a lighted taper, which scarcely flickered when the note was properly sung. In these modern times we might use the mirror with great advantage or sing against the finger for fifteen or twenty seconds. In the *Art of Singing*, Part I, page 19, I have advised the student to practice the breathing exercise many times daily, so as to acquire an automatic control over the breath before practicing the vocal exercises.

It will be readily seen also that we might ensure the control of the breath by watching the descent of the ribs and by trying to hold them up so as to restrain and control the downward pull of the expiratory muscles. In this way, after practice the good singer tires at the breathing muscles or beneath the breast-bone and those near the shoulder blades: the bad singer, on the contrary, tires at the throat.

To cause the vocal instrument to respond in fulness when we only breathe out as though warming some object — say a finger held close to the lips — is, in reality, to insist on the placing muscles poising the larynx exactly in the right position over the breath: in other words, by preparing and measuring the breath and by producing a full tone, we have compelled the vocal instrument to adjust itself rightly. If I ventured to paraphrase Tartini's advice already quoted as to the production

FRANCESCO LAMPERTI AND SOME OF HIS PUPILS

Numbering from the left-hand corner, the people in the picture taken at Lake Como in 1885, are: Elvin Singer, now of Detroit; Mlle. Lola Beeth, of the Imperial Grand Opera House, Vienna; Mlle. Juretitz, of the National Opera House, Buda Pesth; Signor Francesco Lamperti; Signora Edwige Lamperti (his wife); and Mr. Phillips, of Australia.
(Loaned by *Musical America.*)

of tone in violin playing, substituting the word *breath* for the *bow*, and the vocal cords for the strings, it would read: "Your first study should be the true manner of holding, balancing, and pressing the breath (bow) lightly and steadily against the vocal cords (strings) in such a manner that it seems to *breathe* the first note it gives, which must proceed from the freedom of vibration of the vocal cords (the friction of the string) and not from a sudden shock of the breath (from percussion), as by a blow given by a hammer upon it. This depends on sending out the breath lightly against the vocal cords, at the first contact and on gently pressing it afterwards, *which if done gradually can scarcely have too much force given to it*, because, if the tone is begun with delicacy, there is little danger of afterwards rendering it either coarse or harsh."

"*Of this first contact, and delicate manner of beginning a tone, you should make yourself a perfect master, in every situation and part of the voice.*"

This does not mean that every note we sing or play should be begun softly and then reinforced, but that we should be able to start any note rightly with the least possible pressure and without a blow, leaving to after experience the crescendo and intensification of the notes. All this will be observed by paraphrasing the rest of the quotation alluded to above.

Let us now note some of the consequences of attempting to produce a full tone with the least breath.

We can only breathe out slowly up to a certain pressure. On exceeding this the breath slips out without our being able to control it rightly.

Now no note properly produced demands a greater pressure than we can control.

Every bad note upsets this control, although by the rigidity of its production it *does* help us to hold back (but wrongly) the breath with the throat.

Every good note demands that throat freedom and breath control must coincide. One condition necessitates the other; the failure of one produces the failure of the other.

In attempting then this double act the first error to avoid is *holding the throat* when we would *hold back the breath;* the throat should be *unconscious*, although the balancing back of the breath is *conscious*. We must take care also on starting a note with the *throat loose* and unconstrained, *not to loosen the restraint over the breath.* Thus it is possible to produce the note while the larynx is so sensitive to pressure that the breath escapes unless we control it. Yet, until we have mastered this control, we should scarcely dare to sing in public with this sensitive state of voice, lest we should become breathless.

The first rigidly produced note carries the breath away from us, but a note rightly sung compels us to restrain the breath in such a manner that *it seems to come towards us* instead of slipping out. The right command of the breath is *under* the note, but when the throat is in the squeezed condition usual to a bad production, the sensation of the singer is that the command of the breath is chiefly *above* the larynx instead of below it, and this is really the case.

As a help towards starting the note in freedom, imagine the jaw to be floating, and in the production of the medium and head notes assume a natural expression of the upper lip, as in smiling.

The accomplishment of singing with the requisite freedom of the larynx is a knack which may be revealed to us at any moment during practice. We shall only be able to intensify a perfect note when we have acquired that command over the breath-pressure which is a matter of years, if we are to sing in large buildings.

A good note speaks *fully* immediately the breath reaches the vocal cords, but a badly produced note *only half responds;* then comes like lightning that *after-pressure*, so often perceived, which brings out the note — *always a bad one* — with a sudden puff, unlike the slow warming of the finger or the unclouded mirror before referred to.

We shall in time get all the notes to adjust themselves automatically to the breath, the voice will become even, and the breath will play the voice like the bow of the violin.

The results of a good production, besides perfect pronunciation and natural facial expression, are therefore *fulness of tone and great sonority;* the voice resounds all over the room, the tone is no longer woolly, foggy, reedy, or gritty, but more than all this —

(1) The note responds with unerring tuning in the very centre of the sound intended, and proceeds in unconscious freedom to any other note, in the so-called "legato style" (See *Art of Singing*, Part I, page 31).

(2) The different registers of the voice are blended and come unconsciously into play.

(3) Scales and trills are produced with amazing facility.

(4) And lastly effects of crescendo and diminuendo or "messa di voce" become easy.

Every time we succeed in causing the notes of the voice to sound to this less pressure (this warming feeling) nervousness is dispelled and we are emboldened to sing with confidence in our Art; sharp and flat singing, unsteadiness and tremolo are impossible. With each year we are enabled to intensify the breath pressure more and more, until *the voice, always developing, becomes in time really dramatic in the largest halls.*

THE CHOICE OF A SINGING TEACHER

ELISE LATHROP

Assuming the possession of a voice, the most important requisite for a singer is correct tone production, and since this is sometimes, though rarely, the gift of nature, knowledge of how tones are produced correctly is most necessary. Without this knowledge, illness or any temporary upsetting of the vocal apparatus makes singing impossible, the afflicted one does not know how to overcome the obstacle, how to sing over the cold, how to keep the high notes from breaking. Then, too, her career would be short, for she would not know how to preserve her voice from the ravages of time.

Now what is the usual way of selecting a teacher? Often the teacher of a friend, some one who enjoys a great reputation, although no inquiries as to the justice of this reputation are made, or some fashionable, high-priced teacher, merely because he is high priced and fashionable, is chosen. No intelligent investigation of methods is made, and the results are left to chance.

In the case of a student seriously seeking the best, there are two reasons which often govern the choice. First, because the teacher sings well: a fact which does not insure a good teacher, for he — or she — may be in the heyday of youth, singing well because of natural great gifts, not study, or, to the trained listener, he may actually sing very badly, but with a voice so beautiful in itself that the untrained ear perceives no defects, merely remarking the quality of tone, while poor breathing, defective phrasing even throaty tone production, pass unnoticed.

The second reason for selecting a teacher is better, but not always safe. This is after having heard the teacher's pupils sing. One or two pupils singing well, do not warrant the conclusion that the teacher is a good one. Take the case of a teacher whose pupils are constantly singing in public with brilliant success. Inquiry would often elicit the information from them that the greater part of the vocal training had been acquired under other, almost unheard-of teachers, that they studied with the celebrity merely to acquire the artistic finish and style for which he is so justly renowned. Tone production may be totally neglected by him, perhaps he never had any knowledge of it, or success has made him careless and indifferent, he no longer troubles himself about the rudiments, and there is no time in all one's vocal education when more careful, unremitting attention is required than during the first two years. During this time, except to teacher and pupil really interested in the work, and watching the results obtained, there is much drudgery for both. After this, the work becomes a pleasure with intelligent pupils.

What then is the young student to do? If she tries one teacher after another, trusting blindly to their guidance, what is the result? In too many cases a ruined voice. The writer knows of more than one case where a voice has been ruined while studying under a teacher with a great reputation. In one instance, only the extreme youth and general good health of the girl made the recovery of the voice possible, and even then it was effected only after three years of absolute rest and idleness, with consequent loss of time. Are there then no directions that may serve as guide to the young student in search of a teacher? To this question I unhesitatingly answer yes.

No teacher should object to allow a prospective pupil to be present at one or two lessons given some one already studying with him. If his method with a beginner can be observed, so much the better. If not, a few lessons should enable one to form some opinion as to whether this teacher is the best one for a beginner. Any teacher who does not from the very first lesson insist upon correct breathing, explaining and illustrating until he is well understood, is worthless for him, or for any pupil however advanced, who has not already mastered this essential to good singing. Too much stress cannot be laid upon this. Many people imagine that all persons breathe correctly. "Breathe naturally and you are all right," we often hear. This is not the case. Very few men or women have naturally good breath control, even when they know how to fill the lungs well, which is more common. No matter how great the chest expansion, when they come to sing the breath escapes too rapidly, chest collapses, and they have not sufficient breath to carry them to the end of a moderately long phrase, to say nothing of the detriment to the quality of tone, and its loss of carrying power. To teach and insist upon correct breathing and good breath control, which is within the reach of every one, being simply a matter of practice, after once the manner is taught, should come first with the really good teacher, for if left until later, it is far more difficult to acquire.

Next after breathing, comes tone production, or as it is often called, placing the voice, and here breath control is of the greatest assistance. It is impossible to lay down rules for this. The really good teacher studies the voice of each pupil, for each has its peculiarities, nor can any two be treated in exactly the same manner. Even the most serious defects in voices may usually be overcome, granted patience and the greatest care on the part of both pupil and teacher. With such care, in time the results often surprise not only one's friends, but the teacher as well. Very few voices are without some such defects, owing often to the habit of allowing children to sing at the top of the voices music utterly unsuited to the young, delicate voice, as well as to our climate, with its frequent sudden changes, inducing catarrh and kindred ailments, and our national reproach, our shrill, often nasal speaking voice.

The Musician

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY

OLIVER DITSON COMPANY
Boston, Mass.
U. S. A.

VINCENT MUSIC COMPANY, Ltd.
60 Berners St.
London, W. England

WE HAVE DECIDED TO ADOPT THE FOLLOWING FORM

Illustrious brother of the sun and moon! Look upon the slave who rolls at thy feet, who kisses the earth before thee, and demands of thy charity permission to speak and live. We have read thy manuscript with delight. By the bones of our ancestors we swear that never before have we encountered such a masterpiece. Should we print it, his Majesty the Publisher would order us to take it as a criterion, and never again print anything which was not equal to it. As that would not be possible before 10,000 years, all tremblingly we return thy manuscript and beg thee 10,000 pardons. See — my head is at thy feet and I am the slave of thy servant.

GERMANY FOR AMERICAN MUSIC STUDENTS

Would you advise me, an American, to come to Germany to study music? This question has been asked me many, many times, and is almost as impossible conscientiously to answer without any further particulars as to age, ability, and real musical worth as it would be to answer the question, "Can you tell me where the nearest gold vein is?" The musical atmosphere of both Germany and America has greatly changed during the last thirty years, and the days of yore, when our highly esteemed senior of music in America, and father, as it were, of us all, J. K. Paine, passed his student years in Berlin with the late most excellent Bach connoisseur, organ virtuoso, and very lovable teacher, August Haupt, will never return again.

Germany has perhaps made but little progress compared to the tremendous strides of young and energetic America in every department, not excepting music. The result is that we have to-day, from a pedagogical standpoint at least, as fine a staff of teachers as any country in the world.

But to return to former Germany. In the days referred to Americans were just beginning to show a shadow of interest for something besides building up immense cities, counting money, and election day; thus it was most natural that musical Germany, the birthplace of the noblest and the greatest, the home of profoundness and thoroughness, became the goal of every student's ambition. Accordingly, "he studied abroad" meant something then, and many a man strained every nerve, saved every penny or borrowed it, to accomplish this end.

Among the many who came to Germany there were two special kinds — those who came to study in earnest; those who came for the name of the thing. The latter knew quite well the ensnaring power of "studied abroad"; knew that it was considered the very best recommendation, and hence the password to many otherwise painfully exclusive circles. Of course this folk took vanity by the forelock, and lost no opportunity to swagger about in good society, asking high prices, playing or singing murderously bad, blarney and bluff carrying them triumphantly over every slippery spot. The semi-foreigner was better than many a high title or decoration and almost equal to a real lord. Few troubled themselves to ask what this fellow did while abroad; for it was quite sufficient to say, "This is Mr. So-and-so, who studied so long abroad with the best masters." Thank heaven, these imposters, musical nullities, and general idlers have little by little dug their own graves and buried themselves in their own brazenness. To-day no sensible person cares a fig whether a musician studied in Germany or Texas.

On the other hand, the earnest students and afterwards successful teachers suffered severely in their efforts to raise the standard of music under the heavy ballast of this shabby crowd, and it took years of hard work to convince people that there is nothing in a name. All things taken into consideration, the actual worth of studying music in Germany, which was years ago a necessity, has dwindled to a luxury. Firstly, the teachers are quite as good in America, and the good and better ones are not much dearer; secondly, ninety-nine out of a hundred who come here are absolutely ignorant of the language, which means at least one year total loss; thirdly, most of them are scarcely better than well-to-do amateurs; fourthly, conservatories of music are quite as bad here as anywhere in America, and he who comes to Europe to study at one of these warehouses must be either too chaste for this wicked world, or the *quinta essentia* of rusticity; lastly, many students here flutter from one teacher to another. For you know, they say, we can only stay here a short time and must get as many different ideas as possible. They forget that what one teacher mends the next tears again, and so on from one to another *ad infinitum*, until the pupil is confused and empty-headed. It is like sending one's clothes to several tailors. The first sews the tear; the second says, "What a fool!" rips, and sews again after his manner; and so on until there is more hole than garment left.

To sum up — after having lived twenty years more or less in Germany my advice to young foreigners contemplating a trip abroad to study music is: Do not come here until you have studied in earnest with a conscientious teacher at home and have become a good player or singer and musician. It is absolutely necessary to be able to speak the language at least passably. For such advanced and intelligent young people there is much to see and hear. Especially the opportunities for hearing, for little money, the best chamber, piano, vocal, and orchestral music are legion, and these are advantages which often educate a hundred times more than many private lessons of the best teachers. I need hardly add that this last applies especially to Berlin, as there are naturally many more concerts here than in Dresden, Leipsic, or Munich.

For this reason, and as the life and musical atmosphere in the capital is far more cosmopolitan than it possibly can be in smaller cities, Berlin is the best place for the above-mentioned musical student to learn, meditate, store up, and, last but not least, that which is absolutely essential to keep body and soul harmoniously together, amuse himself.

ARTHUR BIRD.

Berlin, January, 1906.

EQUAL TEMPERAMENT

To the Editor of THE MUSICIAN: —

I have been very much interested in the letter of one of your correspondents concerning just and tempered intonation. There seems to be little reason, however, that the question should be a mooted one from a practical standpoint — or a theoretical, for that matter.

No one of any information can doubt that just intonation is what is given us by string quartets. The overtones of the stringed instruments are so insistent and the possibility of responding to them so great, that playing in just intonation is inevitable with the musical performer. But when once there is joined to the strings any other instrument of tempered intonation or limited resource the result is inevitable — the more facile instrument must yield; and this with no loss of musicianship — for undoubtedly our ears are not of such sensitiveness as to appreciate *in these circumstances* the difference in tonality. That there is a difference between a tempered and a just B can be readily heard by listening for the overtone B arising from the G below middle C, and comparing the B (ten notes above) of a well-tuned piano. There is a distinct difference in vibration, which is evidenced by a "shiver" in the sound.

A corresponding difference can be made on the resourceful violin, and *is* made under favorable circumstances, but so far as actual performance goes, it is largely a matter of intuition in the infinitely slight shifting of the finger.

Inasmuch as nine tenths of a violinist's work is done in connection with a tempered instrument — piano or orchestra — a virtue should be made of necessity and the tempered scale adopted. The mechanical difference made by the exigencies of quartet work is so slight that a sensitive ear may be relied upon to adjust the tone to the altered conditions, and still leave the tempered scale our practical ideal.

Very truly yours,
AMY KEITH JONES.

APPRECIATION

There is a Boston music publishing firm — call it the house of Richard Watson, one name is as good as another — that issues a music journal. The circulation manager has recently sent out a circular signed by the firm's name to all old subscribers urging them to renew their subscriptions. The following is one of the answers he received: —

TRURO, N. S., *December* 8.

Dear Richard, — You certainly do try to hold old subscribers. I have repeatedly returned the paper to the postoffice. I have written requesting you to discontinue the paper. We don't need your paper. We have all the music at our house we really need; two lusty kids and an Irish terrier pup eight weeks old make lots of noise and harrow our nerves sufficiently without our reading about some one with long hair and his eye with fine frenzy rolling. We don't want your fool magazine.

G. D. M.

The circulation manager feels discouraged, especially since others in the office have got possession of the letter.—*From an Exchange.*

CERTAIN LETTERS

It is impossible for us to answer certain letters we receive. The following may be easy of solution on the part of some of our readers, and in the hope of thus securing the information we insert them.

I

Who is considered the *leading* vocal teacher in this country? Or who are the two or three leaders? — H. G. H.

(*Continued on page* 131)

(*Continued from page* 130)

If the leader or the leader and his running mates will send the proper address, or addresses, to this office, we will forward the same to our correspondent.

II

What is the *quickest* way to learn Harmony? Please don't recommend a book, as I haven't time for it. — A. L. F.

It is said of Beethoven (though unfortunately we fear without authority) that he never had any liking for Harmony. Indeed, Albrechtsberger, the great theorist, called him, in a jocular tone, a blockhead. Why does A. L. F. not expose himself to a great theorist? He *might* win the same condemnation. He would then be in the same class with Beethoven *on one score.*

III

EDITOR: —

Dear Sir,—I am a boy of sixteen years old, and am deeply interested in music and my parents haven't the means to educate me in what I want to learn.

Do you know where I could work for some musician and get my music education by working that way? I have taken two years on the Pipe Organ and every day except Sunday I practise four hours a day and I am working very hard to learn. Thanking you in advance,

I remain,

Very truly yours,

M. D.

This boy is certainly deserving of encouragement. The letter is a genuine statement, and if any reader of THE MUSICIAN can suggest a way by which M. D. can help himself we shall be glad to turn the information over to him.

PROGRAM OF THE MUSIC SECTION OF THE NATIONAL EDUCATIONAL ASSOCIATION, SAN FRANCISCO

TUESDAY, JULY 10, 1906

FIRST SESSION, A.M.

1. Organ Solo.
2. President's Address, Hamlin E. Coggswell, Edinboro', Pa.
3. Music from the College Standpoint.
4. Vocal Solo. (Selected.)
   Mrs. Mabelle Wagner Shank, Des Moines, Iowa.
5. Music from the Standpoint of a Superintendent, Supt. Wm. McK. Vance, Ohio. Discussion led by Mrs. Gertrude Parsons, Los Angeles, Cal.

SECOND SESSION, P.M.

1. Violin Solo.
2. The Ideal Supervisor, Mr. Frederic H. Ripley, Boston, Mass. Discussion led by Mr. A. J. Gantvoort, Cincinnati, Ohio.
3. Discussion and Adoption of a Course for the Training of a Supervisor and Grade Teacher as set forth in Mr. Tapper's Report at Asbury Park.
4. Appointment of Committees.

WEDNESDAY

THIRD SESSION, P.M.

1. Vocal Solo.
2. Round Table: Discussion and Adoption of Course of Study for Graded Schools as set forth in Mr. Hayden's Report of the Committee of Ten at Asbury Park.

THURSDAY

FOURTH SESSION, A.M.

1. Presentation of the Work of the Various Grades of the San Francisco Schools, under the direction of the Supervisor of Music, Miss Estelle Carpenter.
2. The Part the Normal Schools should take in Public School Music, Mr. Charles A. Boyle, Emporia, Kansas. Discussion led by Mrs. Constance B. Smith, Urbana, Ill.
3. The Music of France compared to United States, Miss Fannie Edgar Thomas, Washington, D. C. Free Discussion.

FRIDAY: UNIVERSITY OF CAL. BERKELEY

FIFTH SESSION

1. Presentation of Work of Berkeley Schools under the direction of Mrs. I. V. Sweezy, Supervisor of Music.
2. The Music of Bach: Its Influence, etc. Dr. J. Fred Wolle, University of California. (With Organ Illustrations.)
3. Unfinished Business, Report of Committees, etc.
4. Election of Officers for Ensuing Year.

SATURDAY

GENERAL SESSION AT PALO ALTO, LELAND STANFORD UNIVERSITY

THE VAGRANT PHILOSOPHER

WILSON G. SMITH

I anticipated another visit from my peripatetic friend. Some occult or telepathic vibration suggested him as I was looking over a collection of song-recital programs that had accumulated upon my desk through my capacity as critic upon the *Press*. In looking over the programs — the majority of them presented by American singers — the small percentage of songs with English words struck me as not only incongruous but unpatriotic, and I was lamenting the tendency in modern recitalists to ignore the native tongue. French, German, and Italian songs and arias there were galore, and all of them sung in a language little known by the general public, and caviar to the great majority.

It occurred to me that the literature of many countries was known to the reader through translations so well done that one could catch at least an occasional glimpse of the intimate personality of authors. Such being the case, I had decided that it would not be a bad idea for me to write an article for my paper on this faddish habit of vocalists. I had just adjusted my paper to my typewriter and was deciding upon a caption when my studio door opened and the intelligent face of my vagrant friend beamed upon me.

"You are just in the nick of time, friend Vagrant," said I by way of greeting, "to advise me in a matter I am considering."

Therewith I handed him the programs, asking him to note the preponderating number of foreign songs as compared with those in the English tongue.

Vagrant immediately buried himself reflectively in their examination. I could see by the play of his features that they were impressing him with a mood similar to my own, and, consequently, I waited patiently for him to give utterance to his reflections, which he did without much preliminary ado. A cloud of smoke issued from his lips, and thereupon, in his oracular voice, he gave expression to the following: —

"It is something of a conundrum to explain why singers are so much addicted to the use of alien languages when singing for an American public, but I do not hesitate to say that it is due primarily to vanity. It flatters their egotism to display to the unsophisticated public what appears to be linguistic versatility. The chances are, however, that not one third of the singers on these programs could furnish a literal, or consistent translation of the songs they sing in a foreign language. Most of them have acquired a parrot-like facility in pronunciation, and rely upon it to exploit in song what they really do not comprehend from a literary standpoint. And even then vocalization covers a multitude of sins, except to the educated listener. They claim that a foreign language loses its flavor and atmosphere in translation, and that the proper interpretation of a song demands that it be sung in the original language of the verbal text. I admit it — if they made the translation — but most of the poets, like Heine, have been poetically Englished, so that their argument does not hold.

"Did the audience but know the trials and tribulations of a vocal coach in putting these same vocalists *en rapport* with the rapid-transit method of singing in an alien tongue, it would not submit with such resignation to having it hurled at them in vocal pyrotechnics and simulated sentimentality. The public vocalist makes a direct appeal to the public for recognition and is supposed, parenthetically, to entertain. Why then is it unwise and inartistic to make that appeal in a language generally understood? The public is hard enough to win under ordinary conditions, without handicapping it with a vocal address in a language it does not understand. Moreover, to the uneducated listener, the sentiment expressed in the words is more direct in its appeal than the music to which it is allied. An orator, in touring this country, would have but a sorry time did he address the public in a foreign tongue. The auditor could, possibly, comprehend the unuttered significance of his facial expression and gestures, but as for the substance of his harangue, it would be but the substance of things unheard. There is just as much reason in a singer warbling ditties in a foreign tongue. True, the program sometimes indicates in translation the significance of the verses, but the chances are that the concert-goer cannot keep track of the special songs being sung. And besides this, the still hunt of the auditor for the translated version detracts not only from a proper appreciation of the music, but also from its interpretation by the vocalist. The fact is, my dear professor, it is purely a fad — this use of foreign words — since almost all printed songs are furnished with adequate and appropriate translations.

"I know personally, vocalists who carry the matter to such an extreme that they sing their native English with an affected imported accent. Just as the vibrato, which originally emanated from *passe* celebrities, was copied by younger singers to ape their vocally decaying masters.

"When I hear a singer native to the English tongue, I want to hear him sing in a language indigenous to the locality; not one imported from a foreign clime. Foreign artists, whose knowledge of our language is limited, we can forgive and admire, but natives hardly. It smacks too much of superficial veneer. Too often the singing is bad enough, but when wedded to an alien tongue by the rapid-transit method, the dose is much too allopathic. I much prefer homeopathy. The medicine is at least harmless, if not efficacious. I am opposed to musical vaccination. I do not like art that reflects pink teas and superficial functions.

"What would we think of a lecturer or reader who charged the public a high price to read Homer's *Odyssey* in the original, when Pope's masterly translation is accessible? So far as I am concerned, I never experienced any trouble in enjoying Goethe's *Faust*, or Dante's *Divine Comedy* in translation. I am only surprised that Tschaikowsky's songs are not sung to us in Russian. They would be, if the rapid-transit method included the Russian language in its curriculum. I respect the Russians for their language not being available for vocal exposition.

"This sentiment of song losing its potency in an alien language is to me pure affectation. I believe with Wagner, that music is but the vehicle for verbal expression, and when the verbal text is not understood, singing degenerates into pure solfeggio. An aria in Italian is quite as interesting to me as a Concone vocal study, and means just as much.

"What is vocalism, properly expressed, but intensified speech? I have heard orators whose finely modulated tones were music to my ears, but without the inspired thoughts these tones expressed, of what value their oratory? So it is in song. The sentiment of the words is the elemental factor, and without it the real significance of the music is lost. When logarithms and the calculus are wedded to song I may change my mind, but not till then."

After friend Vagrant had delivered himself of this argument, he left me to ponder thereon, and the longer I pondered the more I was convinced that he had uttered much that is the truth.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

THE MAGIC PEDAL, THE SOUL OF THE PIANOFORTE

(*Continued*)

MARY VENABLE

THE DAMPER PEDAL

Management of Dampers by Fingers Alone

The management of the dampers in sustaining and connecting sound by means of the fingers alone should be mastered before attempting to control the dampers by means of the pedal. Before the player begins the study of the pedal, he should have definite conception of the effect he desires to produce by means of it and of why this effect is a desirable or an indispensable one. Not only are there many poetic effects which the fingers cannot accomplish unaided, but the employment of the pedal is often imperative to the correct musical rendition.

The Correct Use of the Damper Pedal

Says Albino Gorno: "The artistic use of the pedals cannot be taught, for the artist is born, not made. To speak of teaching an artistic use of the pedals is as inappropriate as if one should speak of teaching an artistic employment of chords, in the practical school of the harmony teacher. What can be taught is a correct use, founded upon a knowledge of the functions of the pedals and acquired skill in their use, and not upon genius or talent. . . . Of the three pedals, the most important is the first, or damper pedal. . . . *The acquisition of a correct use of the damper pedal is to be considered as a study in controlling the dampers by means of the foot, to obtain certain desirable effects which the fingers alone cannot produce.*" These effects are of three different classes: (1) tone connection by means of the pedal; (2) tone sustaining by means of the pedal; (3) tone coloring by means of the pedal. It not infrequently happens that a tone should continue sounding for some time after it is necessary to remove the finger from the key which produced it, when of course the finger cannot be the tone-sustaining medium. Instead, the foot becomes the agent which keeps the dampers raised from the strings, by pressing down the damper pedal before the finger pressure is removed from the key which is producing the tone; thus the string continues free to vibrate and emit sound, as long as the pedal pressure is maintained.

Pedal Legato

One of the aims of every pianist is the attaining of as good a *legato* (connection of tone) as is compatible with the nature of his instrument, which, besides being somewhat short toned, has the added disadvantage that every tone is produced by the attack of a hammer upon its string or strings. "He does not know how to connect two notes," was Chopin's severest censure of a pupil. Broadly speaking, legato playing consists in sustaining the sound of a tone until another tone is produced, so that connection of the two tones ensues. All modern pianists are agreed that as a rule the pedal pressure should be applied *after* the key is struck, for if applied simultaneously with the finger-stroke when attempting to connect two tones of different pitch, the result would not be a connection (legato), but an over-connection (superlegato), an overlapping of the two tones, which would both sound together, contrary to the player's intention. In songful passages, the pedal should not be pressed fully down, as this frees too many harmonics (through sympathetic vibration of the other strings) and impairs purity of tone; a slight pressure is usually sufficient, unless great volume of tone or long sustained tone be required.

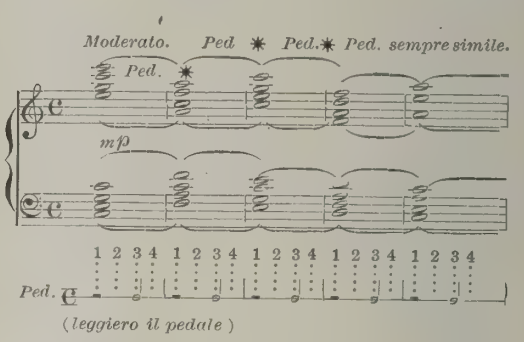
Mode of pressing the Pedal

The method of pressing the pedal will, of course, depend somewhat upon the length of the player's foot. In order to obtain the leverage necessary, either the ball of the foot, or, if the player's foot be of insufficient length, the toes should be placed quietly on the pedal before pressing it, so as to avoid the noise which would otherwise result from the sudden contact of foot with pedal. The foot should remain in full control of the pedal as it rises, and should not be too suddenly removed, as the dampers, falling abruptly on the strings, and the pedal striking against its wooden support, make noises which annoy the hearer and distract his attention from the music being played. Neither should the pedal remove the dampers violently from the strings, as this sets them slightly in motion and their vibration causes an indefinite rolling sound.

Pedals used to destroy Finger-rests

The use of the damper pedal is often essential to connect tones or chords so distant from each other that, although marked legato, the fingers necessarily play them staccato. In the following illustration it is impossible to connect the slurred legato chords by means of the fingers, as unwritten and undesired rests occur when the fingers are removed from one key to another, causing a break in the continuity of sound, not desired by the composer. When the pedal is properly used, however, these undesired rests are obliterated, and the chords are connected.

Gorno — *Material for the Study of the Pianoforte Pedals: Part I, No. 4*



In playing, listen attentively in order to produce and to perceive strict connection of tone. Note that if the fingers be taken away from the keys before the pedal is pressed down, a disconnection of tone results; while if the pedal be held too long, a blurring of one chord with another follows. It is best in beginning the study of the damper pedal to be very exact in its use, and to press the pedal down considerably after the chord is struck, and at a precise moment previously determined upon. This is here indicated below the music upon a single line, marked "Ped. C" (meaning, "pedal line; common time"). The notes and rests on this line indicate time only — when the pedal should be pressed down and when allowed to rise. The time should be counted aloud, "1, 2, 3, 4," and these numbers, printed above the pedal line, help to show most definitely the moment of pedal pressure, which in this exercise occurs on the third beat of each measure. The chord, played by the fingers on the first beat of the first measure, is sustained through the third and fourth beats by the pedal; therefore, immediately after the third beat, the fingers are not needed to sustain the tone and can be removed quickly from the keys and placed upon the keys of the next chord, so as to be prepared in readiness to play it on the first beat. As soon as this prepared chord in the second measure has been played and connection of the two chords is made, the pedal is released, so as to avoid blurring the two chords together. The slow tempo in which this study should at first be played, allows plenty of time for the ear to make sure that the chord is sounding and that *but one* chord is sustained by pedal pressure. Besides the graphic signs of pedal usage indicated by the notes and rests on the pedal line, the customary (rather vague) signs of "Ped." and star (✱) are employed above the music.

Widespread Harmony sustained by Pedal Pressure

It is often impossible to sustain with the fingers alone the full harmony, especially when it is in the form of widespread broken chords, such as are characteristic of Chopin, Schumann, and Liszt; in which case the pedal is the only means of producing the legatissimo, or, more correctly,

the *armonioso*, or overlapping (superlegato) of tones required.

Gorno — *Pedal Studies (Material, etc.), Part I, No.* 28

Here the pedal should be pressed on the second eighth of the measure, directly after the bass note is struck, so as to sustain it and all succeeding tones of the same harmony; as soon as the bass tone Ab is connected to the next bass tone (Eb) in the succeeding chord, the pedal should be released, as indicated by the eighth rest; then, while holding down with the fingers the key sounding the bass note, the pedal should be pressed again on the second eighth of the second measure, so as to sustain this new bass tone and the broken chord founded upon it. As before, the moments of pedal pressure and of pedal release are defined with nicety by means of rests and notes on the pedal line.

Sounding Rests

Rests in Pianoforte Music

Not only is it often desirable and frequently imperative for certain tones to continue sounding longer than is indicated by the time value of their notes, but this desirable sounding of tones over their apparent duration should often be extended through *written* rests. In music composed for the pianoforte, rests are often intended for the fingers but not for the ear, and it is not an easy matter to decide whether the composer has intended rests of silence or sounding rests. The sounding rest is found only in pianoforte music and is the source of confusion to many players. An intelligent and discriminating study of all rests in pianoforte music is of great importance. Carl Reinecke, in his *Letters on the Beethoven Sonatas*, in referring to the Rondo of the Sonata, Op. 53, dedicated to Waldstein, makes the following interesting remarks concerning the rests in the few measures before the prestissimo in the last movement.

Beethoven — *Sonata, Op.* 53, *Rondo*

"No one seems to have understood for what reason Beethoven cut up the bar rest into two quarter rests. And yet it is so easy. That is to say, it would have been impossible to indicate in any other way the exact letting down of the dampers with the entry of the second quarter rest. An analogous case is in the second movement of his G major Concerto, where he has cut up an eighth rest into two sixteenths."

Beethoven — *Concerto in G major*

Sempre pedale, Mit Pedal

Cases of sounding rests prolonged through many measures are found in Beethoven's *Appassionata Sonata*, Op. 57, where the composer has marked not only pedal but also frequently uses *sempre pedale* (always pedal), although rests are found in these same measures repeatedly.

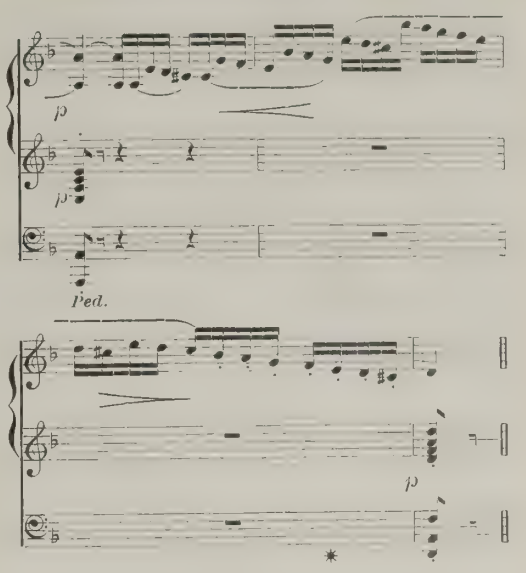
Beethoven — *Sonata Appassionata, Op.* 57

The expression *sempre pedale* does not mean to keep the pedal pressed down continuously, but to continue to use the pedal freely so as to bring out the effect desired by the composer. The word "Ped." used alone, and not followed by a star (*) has the same meaning and is often used to indicate the desirable sustaining of a pedal point or of certain other tones (most frequently in the bass) without too much blurring of the other voices. The sign of a star for pedal release is often omitted because, as the proper use of the pedal cannot be clearly indicated by signs, its discriminative employment is left to the judgment of the performer. Sgambati, in his Toccata in Ab major, uses this manner of pedal notation frequently. Schumann often uses the German words, *mit pedal* (with pedal), with the same significance.

Schumann's Notation of Sounding Rests

Schumann frequently employs sounding rests. Several notable instances occur in his D minor Sonata for violin and piano.

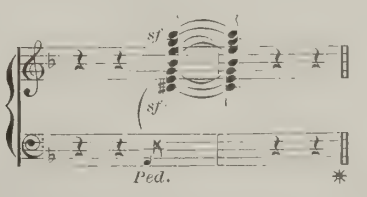
Schumann — *Sonata, Op.* 121



In the sixth measure of the first movement, a staccato chord on the first beat of the measure, written as an eighth, is followed by rests in the remainder of the measure and for two successive measures, during which the violin has a passage in sixteenths. But Schumann also places immediately after the chord in question the sign "Ped."; and the sign for the release of the pedal does not come until the middle of the third measure of this example. This marking clearly indicates the composer's wish that his written rests should not be considered as rests of silence, but as sounding rests which should be destroyed by the use of the pedal, so that the chord can continue to sound for nearly three measures, forming a harmonic foundation and background for the violin passage.

Sustained Bass Tones written as Grace Notes

A similar instance is found eleven measures after: —



where a syncopated chord which is played on the last beat of the measure, and held for one beat in the next, should be sustained all through the measure, during the second and third beats; for although the rests are written by Schumann, so also are the signs "Ped." and star, leaving no doubt that these rests are intended for the fingers only and not for the ear. The bass note Ab in form of an accacciatura grace note should sound with the chord, being written as a grace note only, because of the impossibility of holding it with the fingers while playing the rest of the chord. Schumann often writes bass notes in this way, and this, and other examples which could be adduced from the works of different composers, show that bass notes, notes of the harmony in inner voices, and even melody notes are sometimes written in form of grace notes to indicate that, although the tone must be sustained by the pedal, the hand

should leave such notes immediately after striking, in order to play other distant notes. In these cases it is necessary to strike the important grace note marcato, and immediately after the pedal should be employed to sustain the tone. Of course, this can only be done where the harmony allows it.

Pedal with Staccato Chords

When Schumann marks the pedal's use at all he is extremely careful to indicate exactly his meaning. His manner of indicating the pedal in the first five measures of this same sonata shows that the notes of the staccato chords are to be prolonged over their value as written, still not destroying entirely the effect of rest.

This manner of playing might be called semi-staccato, produced by ending the tone with the pedal, and sustaining it a little in such a manner that the tones sound sufficiently disconnected. The composer further indicates his desire for this effect by the use of the word "kurz" (short) at the same time as the word "Ped." This is one of the cases in which the pedal is used simultaneously with the fingers (instead of after them), so as to strengthen the volume of tone and give the chords an orchestral quality otherwise unobtainable; both pedal and fingers should be used in a staccato manner. The final chords of Beethoven's *Sonata Appassionata* are similar in nature and should be played in this way, but with louder, shorter tone and more vigorous orchestral coloring.

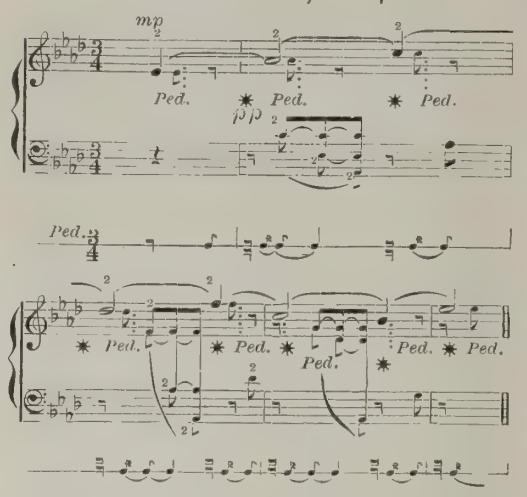
Orchestral Effect produced by One Hand assisted by Pedal

In the two following studies all the rests and staccato dots are intended to show quickly to the eye that it is necessary to remove the fingers from their keys in order to strike other keys.

Gorno — *Part II, No.* 40

In this study and in similar cases in many compositions, if the damper pedal be correctly employed to sustain the tones without blurring them, one hand alone can play a richly colored legato melody accompanied by full, sustained, and wide-spread harmonies. This exercise should be played by a single hand at a time; first by the left hand then by the right hand. The melody should be well brought out by a proper subordination of the other parts, each of which has its own varied tone-tints.

Gorno — *Part II, No.* 41



Orchestral Effect produced by One Finger and Pedal

Even a single finger, when assisted by the pedal, can create fine orchestral effects of melody supported by sustained broken chords of great compass. Here, the second finger of one hand is used to produce the tones which the damper pedal is employed to sustain, in order that the same finger may be free to produce another tone. The pedal should be used exactly as indicated on the single line below the two staves.

(To be continued)

MUSIC AND MUSICIANS

FRANZ LISZT

What is genius else than a priestly power revealing God to the human soul?

The beautiful is only the reflection of the true; art is only the refraction of the thought.

Genius is always endowed with its own sacred intuitions! Poetry ever reveals to her chosen the secrets of her wild domain!

An artist can have abstract ideas, but he cannot serve opinion without making his vocation impossible; for art, like the solution of all opinion, lies in the feeling of humanity.

That musician especially who is inspired by Nature, without copying her, breathes out in tones the tenderest secrets of his destiny; he thinks, feels, and speaks through her.

Broad paths are open to every endeavor, and a sympathetic recognition is assured to every one who consecrates his art to the divine services of a conviction of a consciousness.

To comprehend art not as a convenient means for egotistical advantages and unfruitful celebrity, but as a sympathetic power which unites and binds men together; to educate one's own life to that lofty dignity which floats before talent as an ideal; to open the understanding of artists to what they should and can do; to rule public opinion by the noble ascendency of a higher and thoughtful life, and to kindle and nourish in the minds of men that enthusiasm for the beautiful which is nearly allied to the good, — that is the task which the artist has to set before him.

TECHNIC

JEAN PARKMAN BROWN

Morton Prince says, "It is the case with all associated movements of any degree of complexity in man, and probably also to a great extent in animals, that they first must be acquired consciously with the aid of the higher centres of ideation, before they can be performed unconsciously by the lower ones."

The movements of the fingers necessary in piano playing should be acquired consciously, or they will never be able to perform their work unconsciously. The more thought given in practicing a technical exercise, the sooner the difficulty will be mastered. It is not enough to repeat a five-finger exercise mechanically; it is better to do it fewer times and do it *thinkingly.*

Any one can bang out a loud tone. A full, sweet tone is another matter. This needs a strong, sensitive hand, full of vitality.

To play a composition the fingers must know it so well that the performer is free to interpret the music. No artist, when playing with full enthusiasm and fire, feeling the beauty of the music, is conscious of his hands. The fingers seem to have brains of their own and play the brilliant arpeggio, the pianissimo run without the conscious effort of the artist. This subordination of the machinery, however, is not obtained without first consciously teaching the fingers their part.

The youngest pupils should form the habit of practicing slowly from the first little exercise on the piano — the five fingers pressing the keys down. I hold a pencil over the finger that is to play, and tell the child to let the finger come up and "hob-nob" with the pencil while I count *three;* then let the finger go down, and "hear it sing" while I count three. If the fifth and fourth cannot play with the other fingers down, as often happens at first, let the other fingers be raised from the keys, and the fifth and fourth be kept down for this exercise.

A few lessons later, this five-finger exercise — "one, two, three, go" — may be practiced to advantage. I have been able to interest my little pupils with this story: When I was a child in Germany, my nurse used to take me to the parade ground to see the subalterns drill the raw recruits from the country. The recruit would have to stand as straight as a ramrod and perfectly still, until the severe subaltern was satisfied with his position. Then would come the order in a voice of thunder to take one step. "We will play that your fingers are the recruits and I am the officer. Press a key down with the thumb; now, the second finger is to be drilled. Hold it still while I count *three.* "One, two," — do not make little bobs with the finger; keep it in a line with the others; that is better. "One, two, three — good — go"; and so on with the other fingers.

The key should not be jerked down, but just *put* down.

One Motion

A useful exercise is the *One-motion Exercise.* Thumb down on C; then the second finger down

on D, the thumb must not be raised. When they have both pressed the keys for about as long as it takes to count three, the thumb is raised slowly; but let the pupil watch the other fingers, and not allow the little finger to make a bob. Now, the third finger goes down on E and "hob-nobs" for a while with the second; when the second finger has gone back into position, the fourth is placed on F. The pupil sees why this exercise is called the one-motion exercise, as there is only *one* motion made at a time, — either the raising or the putting down of a finger. The attention should be entirely concentrated on the finger which is to make the motion. No special effort should be made to hold the other fingers quiet. They should not be held in a hard, stiff position. This entire concentration of the attention on the finger which is to make the motion will be efficacious in bringing about a right condition in the other fingers.

One reads and hears so much about vital finger tips. I sometimes say to my little pupils, "Think of your finger as a little live animal. His brain, his nose and eyes are in the tip of your finger. He

MRS. H. H. A. BEACH

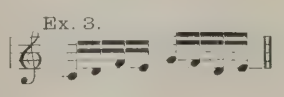
sees the key, he feels of it with his little nose and presses it down. Do not hold him in with the other muscles. Give him his head."

The weight of the arm must not drag on the hand. The arm must be held in place by its own muscles.

ALOISE SCHMITT

When a pupil begins to study these Exercises, I have found the following way the most useful: —

Ex. 3.



Let the pupil cover the five keys of the exercise; that is, let him press the C with the thumb of the right hand, the other fingers raised above the keys, the little finger over the G. Now, as in the "one, two, three, go" exercise, count one, two, for the second finger; if it is held quiet, say *go*, and let the finger play — the thumb coming up at the same time. Then count "one, two, go," for the fourth finger, and so on for each finger through the exercise. Then let the pupil play the exercise through twice slowly, without counting. When the pupil has memorized this exercise, let him transpose it into several other keys.

THIRDS

Let the pupil press down the first five keys of the scale with the five fingers. Let him practice raising the first and third fingers together, then the fourth and second, then the third and fifth. When he can do this fairly well, let him practice thirds in this way: Begin with all fingers down as before. Count one, two, three, raising thumb and third at *three;* count one, two, three, thumb and third descend at *three;* count one, two, raising thumb and third at *two;* count one, two, thumb and third descend at *two;* now count one, two, three four, five, six, seven, eight, thumb and third up on *one*, down on *two*, up on *three*, down on *four*, and so on. Then proceed in the same way with third and fifth.

I am indebted to another teacher for this most useful way of counting.

ETUDES DE L'AGILITE

HENRI HERZ, OP. 179

These are excellent studies and very little known in America. Pupils like them. They are not only good for agility, but excellent for the practice of crescendos, diminuendos, pianos, and fortes.

The first study might be practiced thus: Press all four notes of the first group down, so that the hand takes the shape.

Then play them slowly, with a firm touch a number of times. Then the group once very fast; then twice in succession, very fast; then three times in succession, very fast. Each different group should be practiced in the same way.

The left hand, beginning in measure *three*, has the same work to do, and needs the same practice.

CZERNY TOCCATA

The first time I saw this Toccata I was a child in Dresden, studying under one of the Beckers. It looked most alarming. When my teacher was a little girl, Mendelssohn, who often came to her father's house, said to her one day, "Play me something." She had been practicing this Toccata of Czerny, and she played it through to him, without her notes and without a wrong note.

Mendelssohn was so pleased that he said from that day forth she should be his pupil.

The little Princess Marguerite of Saxony was studying with my teacher's sister, and she, too, had been given this Czerny Toccata to study. Her father, Prince George, heir to the throne of of Saxony, was practicing it with her.

This Toccata is too long and difficult for school children who practice an hour a day. It is a useful study for pupils who can give several hours a day to the study of the piano.

ON THE DRUDGERY OF TEACHING

HENRY C. LAHEE

I

One hears frequently, from teachers, many complaints about the drudgery of teaching. These complaints do not come alone from teachers of music, but from all kinds of teachers, and they give rise to thoughts and queries. Are teachers the only people who complain of drudgery? Probably not. Are teachers the only people who drudge? Certainly not. But it does appear as if teachers consider themselves more entitled to sympathy on account of their drudgery than the majority of people in other occupations. The majority of mankind have some things about which they may be expected to grumble, — therefore why not the teacher?

There are certain professions which are chosen by ambitious youth because they have high ideals. The doctor gives his life to the alleviation of human suffering. In order to qualify himself he must spend years of study, he must endure the loathsome work of the dissecting room. In order to follow his profession he must work amongst the conditions most repulsive to a refined mind, — squalor, dirt, disease. If he did not entertain a love for his profession, he would be unable to do these things.

II

Missionaries, — by which I mean those who work in the slums of our great cities as much as those who go away to foreign countries, — have to work under very similar conditions. We should be surprised to hear them grumble about the drudgery of their existence. On the contrary we generally find them full of enthusiasm, full of happiness if they are able to see some result of their work, and yet full of determination and energy if that result is a long time coming.

A mother endures the greatest drudgery in her duties to her children, and she endures it because of her love for the children. A father works unceasingly to maintain his home and give all that he can get to his family. The father and the mother have undertaken the highest responsibilities, and the drudgery of everyday life counts as nothing because of the object in view.

Now the teacher is in a peculiar condition. He is, perhaps, earning a living for his family, in which case he is less likely to grumble about the drudgery of teaching than if he is simply a teacher and nothing more. We prefer to regard him simply as a teacher who has entered the profession with a view to earning his living. He has either taken to it because he thinks he can earn more money in that way than in any other, or he has taken to it because he thinks that to impart knowledge and to raise the intellectual standard of the human race is one of the noblest callings. Perhaps he was moved by both considerations.

III

We can now come to the music teacher. Music is an ennobling art. Like any other art it is very

difficult to cultivate when the seed falls upon stony ground. It is an art which practically every one enjoys, but which comparatively few are qualified to absorb, yet one with which almost all desire to amuse themselves. There is perhaps no profession in which more frogs are trying to become oxen, or in which more teachers are expected to produce oxen from frogs. Hence the teacher has many disappointments. And yet, when the frog comes to the teacher and makes known his desire to become an ox, the teacher at once sets to work without any hesitation. Should he complain if he does not succeed, or should he grumble about the drudgery of trying to make oxen out of frogs? No. If he succeeds in producing something a little better than a frog, he has added something to the value of his frog. The teacher must not expect a pint pot to hold a quart, and grumble because it cannot. Let him fill the pint pot, and feel that a pint pot full is better than a pint pot empty.

IV

There are all the time more teachers and they all want more pupils. The more pupils there are, the more drudgery there will be, because a greater number will be taking lessons who will never produce satisfactory results. The good teacher can

MARIE TAGLIONI

benefit them all, but only a few will grow into disciples worthy of full admiration.

I have often thought that a teacher who grumbles about the drudgery of teaching has mistaken his calling. Perhaps this is too sweeping a judgment, but it would be well for the teacher who grumbles to study a little philosophy. Philosophy acts as a lubricant to the troubled mind, and it may open the eyes to the highest comprehension of the relation of the teacher to the pupil. At the least he is likely to learn that one cannot do more than extract from the pupil the best that is in him, by giving to the pupil the best that he (the teacher) has, and if that best is limited, on either side, the results cannot be great, — but they are quite likely to be good, and to be worth while.

NATURAL LAWS IN PIANO TECHNIC

MARY WOOD CHASE

The Muscles

The muscles which move any one part of the body extend from the lower end* of that part up into the upper end of the member or part next above and sometimes into the one above that. For instance, the muscle which draws the *first* phalange of the finger in toward the hand is the flexor on the *inner* side of the *second* phalange. The muscle which straightens or extends it is the extensor on the *back* of the *second* phalange.

The muscle *flexing* the *second* phalange is on the *inner* side of the *third* phalange. The muscle *extending* the *second* phalange is on the *outer* side of the *third* phalange. The muscle *flexing* the *third* phalange is in the *palm* of the hand — and *extending* it, is on the *back* of the hand. These latter muscles (flexor and extensor of the third phalange) extend up into the forearm, and on account of their great length have great power of contraction. The flexor of the first phalange cannot be used without the assistance of the flexor of the second phalange, nor can the extensor of the same member be used independently of its neighbor. Besides these flexor and extensor muscles of the fingers, there are also muscles between the fingers for lateral flexion and extension.

The thumb has these very important muscles seated in the palm of the hand at the base of the thumb. The one which flexes the first phalange can, unlike the same muscle in the fingers, be used independently, but like these finger muscles it should be used in connection with the muscle flexing the second phalange.

The muscle which draws the thumb down away from the hand has as its opposing muscle the extensor, seated between the thumb and finger on the back of the hand, and which lifts the thumb to a level with the hand. The third, which draws the thumb across the palm of the hand, has its opposing muscle in the extensor on the inner side of the back of the wrist.

The flexor, which draws the hand towards the inner part of the forearm, is located in that part of the forearm, and its opposing extensor on the back or upper part of the forearm draws the hand back from the wrist.

The lateral flexor and extensor, drawing the hand in and out laterally, lie in the forearm on a line with the thumb and *outer* edge of the fifth finger.

These four muscles taken in order produce a rotary motion of the hand from the wrist.

The forearm flexor, which draws the forearm to the shoulder, is on the inside of the upper arm, and is commonly known as the biceps, on account of its two-pronged division at the upper end. The opposing extensor or triceps, also named on account of its shape, is the powerful muscle on the back of the upper arm, and extends the forearm to a straight line with the upper arm. The lateral muscles of the forearm, also situated in the upper arm, move the forearm in a rotary motion from the elbow. The two muscles in the shoulder, one of which draws the shoulder up, and with it, of course, the arm; the other extending the arm not only at right angles but even to a perpendicular position with the body, have for their opposing flexors two muscles over the ribs and directly under the arm, which draw shoulder and arm down. The lateral flexor of the upper arm, located in the chest, and the lateral extensor, in the back, draw the arm forward and back, and together with the others in turn produce a rotary movement of the arm from the shoulder.

This abbreviated sketch will give the student the necessary knowledge of the more important muscles and their uses. I have preferred not to burden the mind with unnecessary names, which are valuable only to the special student of anatomy. For all further information in regard to the matter, I would refer to Gray's *Anatomy of the Human Form.*

(*To be continued*)

*I use the expressions *upper* and *lower* as applying to hand and arm when hanging at the side.

COMMONPLACE PHYSIOLOGICAL TERMS

LOUIS ARTHUR RUSSELL

Plain talk appears essential in any treatise on Voice Culture.

There is much of scientific fact regarding the proper use of the voice, with which the student need not be familiar, and much of this I shall omit, referring the reader who wishes to delve into these depths, to the many works on vocal physiology, most of which are more learned than practical.

But even in such a purely practical treatise as this is intended to be, there must be included the discussion of some physiological facts of which the student must know, else even the simplest discussion of the philosophy of voice will fail in intelligibility.

The singer must know of his Body, Limbs (arms and legs), Head, and Neck.

The Body (Torso) is the main workshop of the singer, and there are a few specific muscular centres in the body (virtually forming the body), Bone surfaces and Joints, of which all should know, and over which the will should have complete control, altogether, in groups of parts, singly. (See *Body and Breath* by the author of this work.)

The singer, fully to comprehend the physical side of the vocal effort, must see, as it were, inside as well as outside of his body, so that he may differentiate muscular action closely and accurately. This power includes what we call introspection.

(*a*) *The principal muscular groups* of the body are, the Abdominal, surrounding the abdomen; the Costal, covering the ribs at the sides; the Dorsal, reaching to the spine; and the Diaphragm, separating the upper and lower cavities of the body.

(*b*) The two (upper and lower) cavities of the body are: —

1st. (Upper.) The Thorax, surrounded by the Chest walls, and within which are the Lungs and Heart; and

2nd. (Lower.) The Abdomen, containing the digestive organs, etc.

(*c*) *The Bones of the Body* of most interest to us at this time are the Spine (Back-bone); the

Ribs, floating and fixed; the Sternum (Breast-bone); and the Clavicle (Collar-bone). The Arms attach to the Body at the Collar-bone, the Joints here are the Shoulder Joints. The Legs attach to the lower body at the Hip Joints. The upper and lower parts of the body are connected by no bones except the Spine. The Head is connected to the body at the Neck, with only the Spine for the bone connection. At all of these points of juncture, the Body or the adjoining members can move in various directions, giving the freedom of movement necessary for the ordinary physical energies.

(*d*) The Neck contains the Throat, and through the Neck, surrounded by a mass of muscular tissue, pass the Trachea (windpipe) and Esophagus (gullet).

(*e*) The Head includes the Ears, the Nose, the Eyes, the Chin, and the Mouth (and, of course, the Brains). The construction of the Mouth includes the two Lips (in front), the Cheeks (both sides), the Hard Palate (front roof), the Soft Palate (back roof), the Pharynx (back wall against the spine), the Uvula (soft pendant from the soft Palate, hanging down toward the Tongue), the floor of the Mouth, under the Tongue, forming also under surface of the Chin at the Neck.

BRUNO OSCAR KLEIN

(*f*) Within the Mouth are the Tongue, rooted in the muscles of the Neck, and reaching its tip out to the front of the Mouth; the Teeth, resting in the Upper Jaw, behind the Upper Lip and in the Lower Jaw or Chin, behind the Lower Lip, both upper and lower Teeth reaching around, back to, or near, the inside surface of the Cheeks. At either side of the Tongue, following the line of the Soft Palate at the Uvula, are the *Pillars* of the Throat, alongside of which are the *Tonsils*.

This point across the back of the Mouth is sometimes spoken of as the *Veil of the Throat.*

The open space at the back of the Mouth, surrounded by the soft Palate, the Tongue, and the Pillars, is called the *Fauces.*

(*g*) Within the Trachea at the Throat is the *Larynx*, the outside walls (Cartilages) of which form what we know as the Adam's Apple. Within this Laryngeal space are the two Vocal Cords, which when we use the voice (as we say) are brought together by a complex muscular mechanism and are put in vibration by the breath which is sent from the Lungs.

The Movements of the Various Parts of the Vocal Apparatus

It will be seen that we are carrying this study of anatomy to no great detail. I am only mentioning such parts as the singer will need to consider individually in his practice.

We will now glance at the broadest classes of movement of these parts, passing over the movements of the Body, the Limbs, and the Head at the Neck, all of which movements are well known and need no telling here.

(*a*) The Chest (Thorax wall) may be expanded or contracted by the action of the Diaphragm, the Rib muscles, the Dorsal muscles, and the Abdominal muscles. These muscles act both voluntarily and involuntarily.

(*b*) The Larynx may at will be raised or depressed, by muscles seated in the Neck.

(*c*) The back Mouth at the Throat may be opened or closed by a depression of the Larynx; by a spreading of the parts spoken of as the Veil of the Throat (enlarging the space named the Fauces), and by a flattening of the Tongue. (All of these things occur in yawning.)

(*d*) The Tongue can move in practically any direction; it can be drawn back, curled over toward the Throat, or under into the lower Jaw, its tip thrust into the Cheeks or far in front past the Lips. It can flatten itself so that it lies out, as if it were the floor of the Mouth; it can wabble from right to left, or flap itself up and down at the tip, and it can be taught to do these many contortions with great speed. A complete conception of the possibilities of the Tongue's movements and a control of the same is an important item in the singer's culture.

HELEN HOPEKIRK

(*e*) The Cheeks can be puffed out or drawn in;

(*f*) The Soft Palate can be raised or allowed to drop toward the Tongue;

(*g*) The Lips can be separated (opened apart), puckered, drawn in toward the teeth, and spread sidewise (as in a grin).

Let the student be sure that every item of this simple exposition of everyday happenings of the Body be fully understood, every part placed in the mind's eye, and every motion under control, for *some of these things occur when they should not,* and *some should occur when they do not;* therefore every one who expects to sing well should have these elementary muscular actions under mental control. *Practice before a mirror.*

We may broadly divide singing into three processes, *i.e.*, Breathing (the motive power), Phonation (the mere voice at the Larynx), Quality including Speech (Enunciation), and character of

CARL A. PREYER

tone. All of these will be treated specifically later. As each of these processes is the result of muscular action, the *subject of the mechanics of voice culture is one of muscular control*, and it is *in the diversity of terms* used in expressing muscular condition and action that the vocal student finds his greatest distraction and often his undoing.

The Breathing process is done exclusively by the muscles of the Body, acting upon the Lung tissue. Phonation is the work of the Vocal Cords vibrating by the force of the air current from the Lungs (Thorax).

The making of tone character (Beautifying the tone), and the forming, so to speak, of tone into articulate speech, is the work of the oral cavity (upper Throat, front and back Mouth, etc.) and the movable parts of the Mouth.

MUSIC AND MUSICIANS

L. VAN BEETHOVEN

A musician is also a poet.

I live wholly in my music.

For me there is no pleasure so great as to pursue my art.

He who appears something must in reality be something.

Art, — who comprehends it? With whom can I discuss this mighty goddess?

Emotion suits women only; music should strike fire from the soul of a man.

Let all that is called life be sacrificed to noble claims and to a sanctuary of art.

I well know that God is nearer to me in my art than others.

I commune with him without fear; evermore have I acknowledged and understood him.

The intellectual realm is the most precious in my eyes, and far above all temporal and spiritual monarchies.

From my childhood, whenever my art could be serviceable to poor suffering humanity, I have never required anything beyond the heartfelt gratification that it always caused me.

Truth for the wise,
Beauty for a feeling heart,
And both for each other.

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"Music is always fatally handicapped by association with words. In the first place, words impose upon it a concrete meaning immeasurably more trite, prosaic, and limited than that abstract and indefinable meaning to the heart and mind which is its proper prerogative; the expressive power of music really begins where that of poetry fails and ceases. In the second place, the limitations of all vocal music are in many ways serious."— D. G. MASON, *Beethoven and His Forerunners.*

PRACTICAL ACOUSTICS—IV

DR. SMITH N. PENFIELD

VIBRATIONS

I

One complete excursion of a vibrating body to and fro, say from right extreme to left extreme, and thence back to right extreme, constitutes one complete vibration (called by the French alone two vibrations).

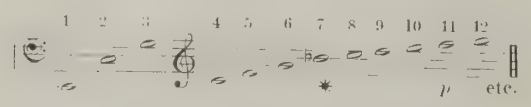
The pitch of a tone depends on the rapidity of the vibrations, and that, other things being equal, upon the length of the vibrating body. These vibrations may be either transversal or longitudinal.

In stringed instruments they are transversal. The number of vibrations per second and consequent pitch depends on four things: being inversely proportional to the length of string, inversely proportional to the diameter of string, directly proportional to the square root of the tension, and inversely proportional to the square root of the density of the string.

If a string is stretched and then firmly held or stopped at its middle point and one half part agitated, we hear the octave of the original tone.

Let it be stopped at a point one third of its length and the shorter part sounded, and we hear a tone one twelfth from the original or fundamental.

Likewise one quarter of the string gives a tone two octaves higher; one fifth a tone two octaves and a third; one sixth two octaves and a fifth; one eighth three octaves, etc., being precisely "nature's harmonic series" before referred to. We repeat this series here for convenience of reference.



But we do not need to stop firmly the string to produce these various tones. Let an open string be lightly touched with a feather or a finger at any of these exact division points referred to, which are called "nodes" and the bow be applied, and the same tone will be heard, but more faintly, called a "harmonic" tone, being given now not only by the one subdivision agitated by the bow or hammer, but by the entire string which has subdivided itself into the proper number of sections, which are called "ventral segments."

*A little too high. ♭A little too low.

This will be readily discovered if little pieces of folded paper be placed on the wire or string. When they are at any exact node, as thus constituted by light touch of feather or finger, they will remain when the wire is agitated, but if in the middle of a ventral segment, they will be instantly tossed off, for there is no motion at a node, but a maximum of motion at the middle point of a ventral segment. The same tones will appear if the string be touched at any other of its nodes. Take, for instance, the D (open string) of violin or corresponding string of piano and touch it at a node one eighth of its length measured from the end farthest from bow or hammer, and a tone three octaves above will be heard just as plainly as if the nearest node were touched. All these subordinate tones of the string are called its "overtones."

Thus the first overtone (octave) is 2 of the harmonic series, the next 3 of the series, and so on. As a matter of fact, this whole series of overtones may and does sound more or less clearly with every main tone given by all musical instruments, so that every tone we hear is a composite one, the string or column of air vibrating as a whole, in one direction, then in the other, and also each half, third, fourth, fifth, etc., part having a faint vibration of its own; these latter vibrations being superposed upon the main vibration, and in opposite directions for each successive ventral segment. A violin string may have also longitudinal vibrations. If a bow be drawn diagonally across the string, we often hear a very shrill squeak. It is, in fact, a longitudinal vibration, giving a pitch immensely higher than that of its transversal vibration.

II

Rods may also be made to vibrate either transversely or longitudinally; the former by percussion, the latter by rubbing briskly lengthwise with a resined cloth or leather piece, or even by resined fingers. In either case the nodal points, if any, will be the same; namely, if the rod be fixed at both ends they will correspond to the nodes of a violin or piano string. Still the rod may vibrate as a whole.

If the rod be fixed at one end and free at the other, the rod may vibrate as a whole, or have one node at a point one third of its length, measuring from the free end, or have two nodes at points respectively one fifth and three fifths of length from the free end. If the rod be free at both ends, there will always be two or more nodes. If two, these will be at points one fourth and three fourths of its length, measuring from one end, and the rod then gives its fundamental or lowest tone. The xylophone and glass harmonica are on this principle. They are strips of wood or glass suspended on two strings at their nodal points one fourth and three fourths of their length, and are played with mallets. The glockenspiel consists generally of steel bars suspended loosely from a frame and struck by mallets.

If there are three nodes, these will be at points one sixth, three sixths, five sixths of the length. If four, at points one eighth, three eighths, five eighths, seven eighths, etc. All this is because there will be the freest motion at the free end of a rod which would thus be in effect a centre of a ventral segment, but at a fixed end it will be in effect a node. Therefore from a free end to the nearest node there will be always a half ventral segment.

The pitch of tones resulting from longitudinal vibrations is extremely high.

The pitch of overtones in longitudinal vibration follows the order of nature's harmonic series, but those in transversal vibration of rods do not, for they rise proportionately higher with addition of each successive node.

THE ELEMENTS OF COUNTERPOINT

PERCY GOETSCHIUS, MUS. DOC.

LESSON XII

Nothing remains to be said about two-voice counterpoint. The fundamental conditions which govern the association of two contrapuntal parts have been amply explained and illustrated in the foregoing lessons. All the essential rules, and all the important methods of treatment, have been thoroughly rehearsed.

It rests now with the student to continue the exercise of these methods in his own way, inventing thematic melodies and motives, and supplying them with contrapuntal associates, in order to develop more complete technical facility. This he should not fail to do; for if it be true that technical facility is the first and most indispensable condition of fluent and effective expression (whether reproductive or productive), it is also true that two-voice counterpoint constitutes the groundwork of all tone association, and, therefore, its command is the fundament for every task in the fuller styles of harmonic and contrapuntal writing. To the student who has learned to think and feel the simultaneous progression of two parts, who can carry two melodies side by side with perfect ease and consciousness, all combinations are possible; and their complete mastery is to him only a question of time and of course — earnest effort.

The next step in his studies of contrapuntal element is the simultaneous treatment of *three* individual melodic parts. "Individual" they must be, to a certain extent; for the contrapuntal principle does not rest upon mere duplication, or accompaniment. It involves the association and interaction of *separately* complete and satisfactory melodies. At the same time, their individuality must be limited by harmonious agreement with each other; their independence must consist solely in their personal melodic formation, — as melodies, — and not result in conflict of harmonic formation. In a word, the parts should be *melodically distinct, but harmonically unanimous.*

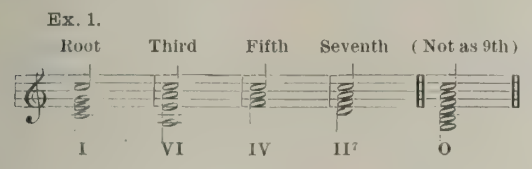
This means that a harmonic basis is necessary, and that, therefore, the underlying chords must first be defined from point to point, as a guide to the melodic course of the separate parts. Harmony is the foundation of all music-writing, whether it be a humble Two-Step, or a most elaborate Fugue or other contrapuntal masterpiece.

Of the three parts, one is apt, for some reason or other, to be the leader — for the time being. It may be that it is the adopted motive; or that it attracts attention as highest part. In any case, the mind is inclined to give momentary preference to some single melodic line, and to

define the chords from that (as, for instance, the upper line in Ex. 5). Such "harmonizing" of a melodic motive is less difficult than is commonly supposed, and is subject to but one sweeping rule: —

Each tone may be harmonized by any chord of which it is a component interval; that is, the tone may appear as root, third, fifth — possibly as seventh or even ninth (if it *acts* according to the rules of resolution) of some chord. Thus, the tone C may indicate, in C major, the following chords: —

Ex. 1.



or, in its fuller significance, in any key: —

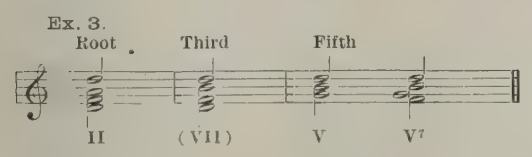
Ex. 2.

This list is not exhaustive; the given tone may also appear as root, third, or fifth in several other chords of the seventh (as root, for instance, in the dominant — seventh chord of F major and minor, etc.). Such an array of possibilities may startle the novice, and cause him to mistrust our statement that the task of harmonizing a melody is easier than he supposes. The task of selecting the proper chord would be formidable, if this entire list of possibilities were always valid at every point. But the choice is very greatly reduced by the ruling key, or tonality; whether, for example, the C in Ex. 2 would be treated as a major third, or as a minor third, must depend upon whether it occurs in the neighborhood of A minor, or of A♭ major. And, consequently, the number of available chords for the harmonizing of the tone C, in C major or its vicinity, would dwindle down to the brief list given in Ex. 1. Hence, further, while Ex. 2 discloses an inspiring outlook for the intelligent student, and clearly exhibits the infinitude of the composer's resources, it also suggests the necessity of rational limitation, and vindicates the truly vital principle of tonality and key, as temporary centralizing influences.

The same restrictions apply to every tone; as in the case of C, so with D, and the rest; among all the *possible* harmonizations there are a very few *probable* ones, to which preference must be given, and which are to be singled out as first choice.

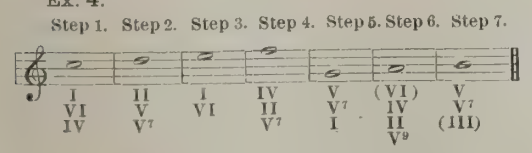
Thus, the tone D in C major suggests only the following chords: —

Ex. 3.



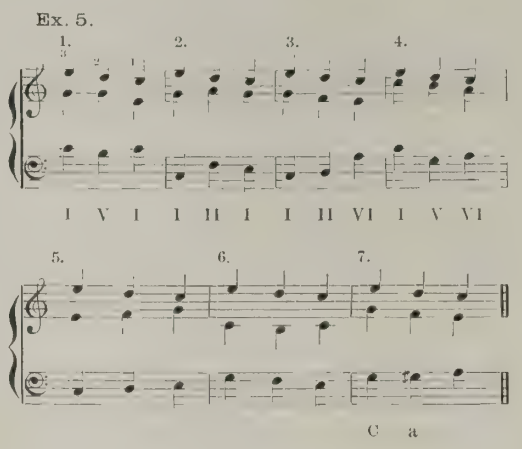
This narrow, or rational, choice of chords for each individual step of a scale, may be tabulated as follows, for C major (or minor): —

Ex. 4.



The table is limited to the simple, best, chords; but it may be amplified by the student (according to his knowledge) to embrace other possible chords of C major or minor. Its application to a given melody is made by simply defining first the *scale-step* which each melody tone represents in the momentary key, and then selecting one of the chords that are valid for that scale-step. Thus, the given melodic figure (E, D, C) as upper part, harmonized with a lower and one inner part: —

Ex. 5.



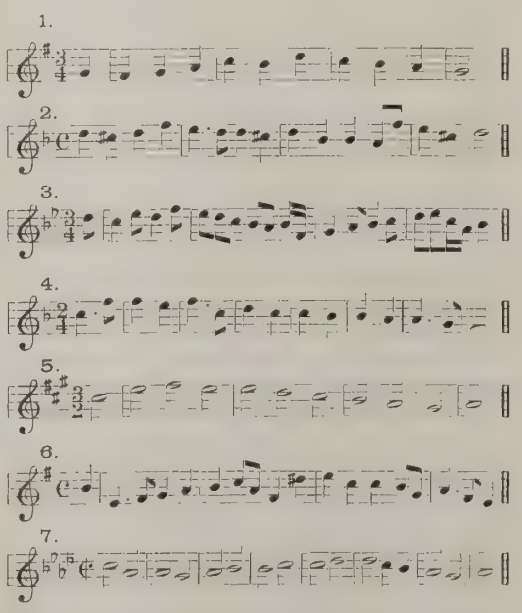
These experiments may be greatly extended, not only in the original key of C major, but with modulations into other *related* keys, as seen in the seventh version. The student is urged to do this, as exhaustively as possible.

With a complete melodic phrase, as upper part, the result might be about as follows: —

Ex. 6.

This is, to be sure, a purely harmonic task; merely the defining of the chords that are required or suggested by the successive melody tones. But it acquires a certain contrapuntal flavor through the effort to give each separate part a good melodic form. Sing, or play, or write out, each of the above three parts alone by itself, and it will be seen that something more is accomplished than the mere harmonic accompaniment of the given melody. Such practice is so beneficial, so instructive and so stimulating, that the student should make extremely thorough use of it before undertaking the genuine contrapuntal treatment of three parts.

Exercise. — Add a lower, and one inner part, to each of the following melodic phrases, in the simple harmonic



and rhythmic form shown in Ex. 6, and with close reference (if need be) to the table in Ex. 4. Each melody should be harmonized in at least four different ways (with modulations). The exercise may be further extended by using each given melody as *lower* part (transposed to a convenient register), adding an upper and inner part; also as *inner* part, adding two outer parts. The details of Ex. 4 will, in these cases, require some modification. Also invent a number of original melodic phrases, in the same simple form as those here given, and manipulate them similarly.

ELEMENTARY GERMAN

A. RHEINGAUER

Test Paper

The material of the following four sections may serve as a test as well as a review of the *Elementary German* which has been presented in the last five issues. In addition to each rule, one or two examples should be given for illustration.

Section I

1. Where is the subject of a German sentence placed when the latter begins with a word other than its subject?

2. What case is required in German to express duration of time?

3. What case does *nach* govern?

4. Write the third person singular and plural of the present indicative of *arbeiten* and *schlafen*.

5. Indicate the gender of the following words: *Zeiger*, *Uhr*, *Stunde*, *Tag*, and *Nacht* by putting the proper definite article before each word.

6. Name the German words for *Sunday*, *Monday*, *Tuesday*, etc.

7. Give the plural of *die Minute*, *die Stunde*, *der Tag*, *der Monat*.

8. Write the accusative of *der ganze Tag* and *die letzte Nacht*.

9. How do you form the perfect tense of *arbeiten* and *schlafen?*

10. What position does the past participle of a verb take in a sentence?

11. Mention three adjectives and use each of them as an adverb in a sentence.

12. Supply prepositions in the following sentences: *. . . jener Uhr ist es halb eins. Der Minutenzeiger steht . . . sechs, der Stundenzeiger . . . zwölf und eins. Wo steht der Stundenzeiger . . . drei Uhr?*

Translate

1. Have you the correct time? 2. Is your watch fast or slow? 3. What time is it now? It is half past twelve (half past one, quarter past three). 4. How many hours have you worked to-day? 5. What did you do in the forenoon (afternoon)? 6. How did you sleep last night? 7. Do you work every day? 8. Did you work all day yesterday?

Section II

1. What is the accusative singular of the following words: *der Tag*, *die Stunde*, *das Jahr?*

2. What case is required (*a*) after *von*, (*b*) after *während?*

3. Write the German words for *January*, *February*, etc.

4. Count in German from *one* to *one hundred* by *fives*.

5. Put the first three ordinal numbers before the following nouns: *Tag*, *Stunde*, and *Jahr*.

6. Translate the adverbs, *to-day*, *to-morrow*, *yesterday*.

7. Put the German equivalents for *each*, *this*, and *which* before the following nouns: *Woche*, *Jahr*, and *Monat*.

8. Use the adjective *schön* in a sentence to illustrate the rule about (*a*) the predicative adjective, (*b*) the attributive adjective.

9. Conjugate the perfect tense of (*a*) *sein*, (*b*) *haben*

10. Ask in German what day of the month it is.

11. Give a few examples for the contraction of *an* and *in* with the definite article.

12. Indicate the gender of the following nouns: *Uhr*, *Tag*, *Nacht*, *Zeiger*, *Jahrezeit*, *Sommer*.

Translate

1. In summer we are in the country. 2. We have a beautiful house there. 3. We also have a large playground. 4. Last summer we had a long vacation. 5. We were in the country for three months. 6. Did you have a vacation? 7. Were you in the city last summer? 8. Did you work all summer? 9. Where were you in July and August? 10. Are you resting to-day? 11. What will you do to-morrow? 12. Will you come to see me to-night?

SECTION III

1. State the order of words in a German sentence in regard to adverbs or adverbial phrases of time and place.
2. Tell when *in* governs the accusative, and when it governs the dative.
3. Give two examples for the use of the definite article in German contrary to English usage.
4. What is the gender of the following words: *Theater, Konzert, Reise, Landungsplatz.*
5. How do all transitive verbs form their perfect indicative?
6. Tell whether *gehen* is a transitive or an intransitive verb, and how it forms its perfect indicative.
7. Translate: *I go, I come, I stay, I relate, I depart.*
8. State how the future tense of a German verb is formed.
9. Conjugate the future tense of *gehen.*
10. Write the accusative and dative of *ich, er,* and *wir.*
11. Name some verbs with a separable prefix.
12. Write the past participle of *besuchen einladen, abreisen, erzählen,* and *annehmen.*

Translate

1. I called on Mr. Hill to-day. 2. He is going to Europe. 3. When is he going to leave? 4. Will he come here to-night? 5. Is he not coming to see us? 6. He has company. 7. He has had company all day. 8. I shall not be here to-morrow. 9. I shall go to New York. 10. Where will you be next Monday? 11. I shall be in Boston.

SECTION IV

1. Why does *erhalten* form its perfect tense with *haben?*
2. Where is the *ge* of the past participle of *abfahren* and *ankommen* placed?
3. Form the perfect tense of the following verbs: *ankommen, einladen, schreiben,* and *annehmen.*
4. *Dear friend* may be translated in two ways; what are they?
5. Write the nominative of *meinem Hause, dem nächsten, Donnerstag, treuer Freundschaft, vielen Grüssen, Ihnen,* and *ihrem Konzert.*
6. What is the position of the participle in a participial clause?
7. What tense often takes the place of the German future?
8. Make the following statements negative: *Ich habe die Einladung angenommen. Ich werde den Brief schreiben.*
9. Explain the position of *zu* in *um sie einzuladen.*
10. What case do the prepositions *zu* and *mit* govern?
11. State the gender of the following nouns: *Einladung, Gruss, Einladungsschreiben, Antwort.*
12. Explain why the subject follows the verb in the sentence, *Ihre freundliche Einladung nehme ich mit Dank an.*

Translate

1. Mrs. Weber is going to give a concert. 2. She has written to Miss Hill. 3. Now she is writing to Miss Döring. 4. She has invited me personally. 5. I have accepted the invitation. 6. You will receive an invitation; will you accept it? 7. I shall not be able to get away; I shall have company.

This is a pretty time of the night for that Dasher girl to be playing the piano!

Oh, she's no respecter of time. You can tell that from the way she's playing,—*Baltimore American.*

QUESTION BOX

H. S. L., CHICAGO, ILL.

The *Gondoliera* of Liszt (in the set of pieces called *Venezia e Napoli*) is based upon one of the popular melodies of that part of Italy, which Liszt accounts for as a *Canzone del Cavaliere Peruchini.*

As to your question, whether the runs and trills describe the splashing of the water as the gondola glides over the lagoons, and whether the heavy bass tones near the end represent the striking of the town clock counting the midnight hour? — no one could give you positive information excepting the composer himself, who is unfortunately no longer alive. And even Liszt himself could not declare positively that his runs and trills *describe* the splashing water; he might admit that it was his intention to *suggest* this natural effect (an effect to be expected and, perhaps, required in such admitted surroundings); but even then, it would remain to be proved that music has the power to "describe" anything. As to the "town-clock" episode, it would be difficult to prove that this particular clock struck fifteen at midnight, and that the strokes were irregular — as is the number and condition of the heavy bass notes near the end. This does shake one's faith a little.

Now, for a person who cannot discern enough intrinsic meaning in the music itself, *as music,* the addition of some such showy poetic clothing may be desirable. But do you not see that such extra wraps are not only needless but actually misleading; that they tend to conceal the *real,* intrinsic beauty of the work of art? Do not answer too hastily — think it over, quietly and seriously; and when you find that you have to acknowledge the fact, then direct your quest after the true musical meaning of the piece upon some deeper and more specifically *musical* condition. Add nothing to a master work; get all that you can out of it. If the thousand and one subtle "suggestions," which every true musical master work contains, are consistent, congruous, — not contradictory or obtrusive, — they may be accepted as legitimate means of illuminating, or even emphasizing, the intrinsic musical meaning; but under no circumstances do they create this meaning.

MUSIC AND MUSICIANS

ROBERT SCHUMANN

Talent labors; genius creates.

True talent always takes Time captive.

It is the artist's lofty mission to shed light on the human soul.

The most important thing for a musician is to refine his "inner ear."

Success in a small style often leads to one-sidedness and mannerism.

He who is anxious to preserve his originality is in danger of losing it.

No one does more than he knows, and no one knows more than he does.

Art has no business to imitate the unlucky octaves and fifths of life — it should rather conceal them.

A beautiful thing is effective even in a small form, as a charming idea delights us pronounced by the lips of a child.

True virtuosity gives us something more than mere flexibility and execution; a man may mirror his own nature in it.

The person who is unacquainted with the best things among literary productions is looked upon as uncultivated. We should be at least as advanced as this in music.

It is the curse of Talent that, although it labors more steadily and perseveringly than genius, it does not reach a goal; while Genius, floating on the summit of the ideal, gazes above, serenely smiling.

In no other art is demonstration so difficult as in music. Science fights with mathematics and logic; poetry wields the golden, decisive spoken word; other arts have chosen Nature, whose form they borrow, as their judge; but Music is an orphan, whose father and mother none can name, and perhaps in the mystery of her origin lies half her charm.

SOME HELPFUL PIANO PROGRAMS

I

By the Enna Conservatory of Music.

Sonata, Op. 16, Emil Enna (Mr. Emil Enna); Scenes from *Aucassin and Nicolete* (Danish), August Enna; *I see You, Little Star, I Lost a Pearl So Bright, Cradle Song* (Danish), August Enna; *I Chide Thee Not* (German), Robert Schumann; *Since We Parted* (English), Frances Allitsen (Mr. Alex Enna); *Cavatina* (*Carmen*), Bizet; *I once had a Sweet Little Doll, Dears,* Nevin (Miss Ellis); *Who is Sylvia?* (German), F. Schubert; *I Love Thee* (German), Grieg; *Absent* (English), John Metcalf (Mr. Alex Enna); *Just a Wearin' for You,* Carrie Jacobs Bond; *Shadow Song* (Dinorah), Meyerbeer; *The Jap Doll,* Gaynor (Miss Ellis).

II

At the studio of Ad. M. Foerster.

I'll not Repine, Two Grenadiers, Schumann; *On Pinions of Song, The First Violet,* Mendelssohn; *With a Violet, I love Thee,* Grieg; *With Verdure Clad* (*Creation*), Haydn; *The Lord is King, Ave Maria,* Foerster (Violin obbligato, Karl F. Hammel); *Angels Ever Bright and Fair,* Handel; *Springtime,* Becker; *It was a Dream,* Lassen; *Who is Sylvia?* Schubert; *These are They* (*Holy City*), Gaul; Duet, *Give Me Thy Hand* (*Don Juan*), Mozart.

III

By pupils of W. L. Blumenschein.

Concerto, D minor, Hummel Cadenza, Mozart (Elizabeth Mouk); *Concerto,* C major, First movement, Beethoven Cadenza, Beethoven (Sara Hoffman); *Concerto,* B ♭ major, First movement, Moschelles Cadenza (Eva Whitmer); *Serenade and Allegro giojoso,* Mendelssohn (Mary Dunkelberger); *Don Juan* (Fantasia), Mozart (for two pianos by Lysberg) (Jean Wright, Mr. Blumenschein); *Rose Softly Blooming,* Spohr; *An den Sonnenschein,* Schumann; *Das Veilchen,* Mozart; *Ungeduld,* Schubert (Flora Oelman); *Ueber ein Stuendlein,* Weingartner; *Nur wer die Sehnsucht Kennt,* Tschaikowsky; *Lithuanian Song,* Chopin; *Autumnal Gale,* Grieg (Mrs. E. T. Brewster); *Deserted,* MacDowell; *An Irish Love Song,* Lang; *Shena Van,* Beach; *Spring,* Henschel (Willetta Hammond); *Good Friend for Jesus' Sake,* Beethoven; *The Wanderer,* Fesca; *All through the Night,* Welsh Air; *The Best of All,* Moir (Paul Fox); (second piano and accompaniments, W. L. Blumenschein).

IV

At McGill University, Historical recital of Bach's compositions, by Dr. Hans Horthan. *Fantasia Cromatica e Fuga,* in D minor; *Fantasia,* in C minor; seven *Preludes and Fugues* (from the "Wohltemperirte Klavier"); *French Suite No.* 6, in E major; (Allemande, Courante, Sarabande, Gavotte, Polonaise, Bourée, Menuet, Gigue).

V

By pupils of the Faelten Pianoforte School.

Symphony, D major, First movement, Mozart (Mr. Amos Moody, Mr. Oscar Henning, Mr. Charles R. Calkins, Mr. Warren Smith, Miss Edwina Davis, Miss Pearl Libby, Miss Mabel C. Stone, Miss Esther M. Whittredge); *Courrente,* F major, Handel; *Valse,* A minor, *Album Leaf,* E minor, Op. 12, Grieg; *March Bohemienne,* A minor, Op. 75, Raff (Ruth Whitmore); *Catch Me if You Can, The Goblins,* Henriques; *Etude,* C major, Ravina (Edmund Clark Brown); *Gavotte,* D minor, *Rondo alla Russa,* A minor, Op. 87, Nos. 3 and 5, Lazarus; *Forest Sprites,* B♭ major, Op. 133, No. 6, Schytté (Estelle Mardon); *The Butterfly,* Grieg; *Murmuring Breezes,* Jensen-Nieman; *Tarantelle,* A minor, Raff; *Waltz,* A major, Rachmaninoff (Virginia Beck) (Illustration of General Training); *Solfeggietto,* C minor, Ph. Em. Bach; *Etude,* G major, Moskowski; *Pizzicato,* B♭ major, Fanchetti; *Le Papillon,* E minor, Lavallee (Cecilia Peterson); *Krakowiak,* E major, Op. 14, Chopin (Miss H. Louise Jensen). Second pianoforte: Mr. Carl Faelten; Tutti: Mr. Wilmot Lemont, Mr. Frank Luker.

UNDER THE CHESTNUT TREE

Three Lessons for the Cornet

Lesson I

Secure a room with a south exposure. Place a few potted plants in the window. On the walls hang a few choice prints of Hi Henry, Liberati, Sousa, Arthur Pryor, Washington crossing the Delaware, and Admiral Togo. Purchase a good cast iron music rack, bracing the legs firmly with bound volumes of late Patent Office reports. Remove the cornet from the newspaper wrappings and polish briskly with a flannel rag. Care should be taken not to allow any of the ravelings from the flannel to become entangled in either the water key or the valves, as this has a tendency to split the tone when forced. Gaze at the cornet for some time, then wrap up again in the newspaper and think of the engagement you had to go walking in the park.

Lesson II

Enter the room cheerfully and note whether or not anything has been disturbed. See that the music rack is still firmly braced. Carefully polish the cornet again, using this time a chamois skin, such as can be easily obtained at any drug store. Lock the door. Place the cornet to the lips. Unlock the door and take a brisk walk into the country.

Lesson III

Enter the room after unlocking the door and carefully remove the cornet from under the bed. Lock the door. Place the cornet to the lips, with the bell pointing away from you! This is important and the professor will not be held responsible for any accidents arising from neglect of this precaution. Place the fingers on the finger buttons, open the water key to its fullest capacity, depress all three valves and produce the tone. Tone production is to-day considered quite important by all first-class instructors, indeed some of them going so far as to state that no first-class performer should be without it. A good tone is obtained in the following manner: Have the mouthpiece pressed firmly against the outside of the lips. It is no longer considered good form to rest the mouthpiece on the teeth with the lips outside, as this has a tendency to cause a rough, coarse tone and is also quite painful, as you will ascertain later when you attempt to play on the march with any first-class band, especially when the streets happen to be paved with cobble stones. Double up the tongue in a tight knot, drawing it back in the back part of the mouth, something in the form of a pretzel, then violently propel it forward against the mouthpiece, at the same time pronouncing the word "Kamatkatska" and expelling the breath. If you have been careful to still keep all the valves down while you are doing this you will now be surprised and delighted to find that you have produced the note F sharp, C sharp, F sharp again, still another C sharp, and possibly still another F sharp. This will be enough for to-day. Carefully polish the cornet with a cotton cloth this time, wrap up in the newspaper, unlock the door and proceed to your daily toil. In our next lesson we will treat of double and triple tonguing, its cause and cure; high C and how to avoid it; how to produce sore lips; how to transpose a tuba part for a cornet; the evils of the A shank and how they may be prevented; also a first-class recipe for polishing up the outside of a cornet case and making it look like new.— *Musical Enterprise.*

His Favorite Rôles

Andreas Dippel is disappointing to the matinée girl. He is absorbed in his work and happens to be married to a beautiful and charming Viennese. So he sometimes fails to respond to the enthusiasm of his girl admirers.

"Do tell me," one of them said the other day, "do you prefer French or Italian rôles?"

"Vienna rolls," he answered, with a disheartening lack of sentiment. "I like them best and eat them every morning. Probably that comes from the fact that I lived so many years in Vienna."

Then he walked over to look at the ticker.

* *

Modern Criticism

Up in Massachusetts, where culture is alleged to be rampant, a certain paper published the following musical criticism, which is probably the champion case of critical acumen on record: —

"Nothing marred the finished excellency and beauty of its rendition. The orchestra played wonderfully and with the most exquisite judgment and reserve. The infallible accuracy of the renditions wooed the ear, their tonal wealth wrapped one about, their breadth of phrasing and very tender but firm pianissimo filled with a delight. Their rhythms were nothing external, they chimed with the emotional vibrations of the hearer. And the whole of their renditions had such clearness, such insinuating charm, so poetic a color, that it delivered the music in an irresistible manner. Their lovely tones fairly reveled in the liquid smoothness," etc., and so on for many more lines.

* *

A Musician's Philosophy

Willy Hesch, the well-known Viennese singer, has recently published some misanthropic aphorisms in regard to stage life, of which we extract a few: —

"It is difficult to love one's neighbors on the stage — as they love themselves."

"The greatness of an artist often appears in his being as ready to leave a theatre as to enter it."

"The sweetest colleagues are those that make one's life sour."

"Nothing is so readily forgotten as the kindnesses done to one's associates — and the long years spent on the boards."

"An earnest actor never loses his humor."

"The only thing willing to come down in a theatre is the curtain."

"To become an actor is easy; to be one difficult."

"'Anything is possible in a theatre' — many a man has said this, and then gone on the stage."

"I like stupid people better than smart ones; stupidly enough they at least once in a while tell you the truth."

* *

Kubelik's Strange Experience

Writing of his tours, Kubelik, the famous violinist, recalls the following incident: —

"I was once asked to play before the inmates of an insane asylum," he says, "the doctor believing that music was a fine medicine for unbalanced minds. I accordingly accompanied him to the institution, where he introduced me, and said I would favor my hearers with something gay and happy.

"I hadn't intended to do this, but, following his suggestion, I played a brilliant Slav composition, which I hoped would be joyous enough. The crazy folk were all seated about the platform in chairs, and seemed to be intensely interested. As I finished, a very pretty young woman rose and beckoned to me. I thought, artist-like, that she wanted an encore, and so said to the doctor: —

"'Ask her what she desires.'

"He rose to his feet, and was about to question her, when she exclaimed: —

"'To think of the likes of me being in here and he being at large in the world!'

"That was the last time I ever played in an insane asylum."

* *

A Coleridge Story

Lord Coleridge, in his recent pleasant book about the Coleridge family, gives a letter in which we are told the following of Samuel Taylor Coleridge: —

"At the end of this time I got one of them, a beautiful woman and a superior singer, to sing some Italian Arie to him. His very frame shook with pleasure, a settled smile and a sort of tittering noise indicated his feelings. He prayed that she might finish those strains in Heaven, and sitting down by Mrs. May [the hostess] recited some extempore verses on the singer."

This is quite a new interpretation of "Go to — Heaven!" — which might in other circumstances be capable of a very decided *double entendre.* — *Westminster Gazette.*

* *

Quarter Rests

Mr. Cross. — "Carrie, you should not try to sing when you're shaking with chills."

Carrie. — "I didn't have chills, father; I was practicing on my tremolo."

* *

Hotchkiss. — "What do you think of Miss Shreek's voice?"

Melsom. — "What do I think of Miss Shreek's voice? Why, I'm circulating a subscription paper to send her abroad." — *Winnipeg Town Topics.*

* *

Miss Pounden-Thump. — "You're not a music lover, I'm afraid."

Mr. Foote-Innit. — "Indeed I am. What makes you think I'm not?"

Miss Pounden-Thump. — "I thought you looked bored while I was playing."

Mr. Foote-Innit. — "I may have looked bored, but I do love music." — *Cleveland Leader.*

* *

Mother (speaking of his playmate to her own little boy who is just learning to whistle). — "Can Harold whistle?"

Four-year-old (contemptuously). — "Whistle! no, he can only make the hole." — William H. Branigan, *in Lippincott's.*

* *

With Apologies to Judge

"Once," drawled Uncle Enoch, "I knew two boys who went to a concert over in Crownville, but they didn't like it much — it was clear over their heads. So on their way home, bein' bound to have some fun, they stopped at the old pond, down by Harkins's mill, an' whisked off their evenin' toggery an' jumped in."

"And did they enjoy that?"

"We never found out. The pond went over their heads, too."

BOOK REVIEW

OXFORD HISTORY OF MUSIC. Vol. VI. THE ROMANTIC PERIOD. Edward Dannreuther. Clarendon Press. 1905.

EDMONSTOUNE DUNCAN

I

A pathetic interest attaches to this posthumous publication, inasmuch as the author was snatched away ere it could issue from the press. Those of us who were privileged to attend the quiet, artistic music gatherings at Orme Square, London, will ever bear with them the memory of a sincere and steadfast musician, whose whole heart was in his work, which aimed high and achieved such fruitful results.

The present book bears eloquent testimony to its writer's true catholicity of view, and strong intellectual grip of the important historical period of which he treats. He strikes bravely into his subject with the following definition of its import: —

"Romantic music is, in some sense, an offshoot of literature; a reflex of poetry expressed in musical terms; a kind of impressionism which tends to reject formality, and aims at a direct rendering of its object; a desire to produce musical effects suggested by natural phenomena; an art, eager, sensitive, impulsive, which seeks its ideal of beauty through emotional expression. With Wagner it is *ancilla dramatis* — a powerful rhetoric which, like scenery and action, is made subservient to the purposes of the theatre."

Romanticism was no new invention. Premonitions of its feeling appear in writers such as Schutz, D'Anglebert, Froberger, Buxtehude, J. S. Bach, Beethoven, Dussek, Schubert, and Spohr; such is Mr. Dannreuther's list, to the early part of which he might well have added the name of Henry Purcell. Others who foreshadowed the romantic movement were Gluck, Pergolesi, Spontini, Méhul, and Boieldieu. The actual beginning of methodical impressionism is traced to the year 1820, with Weber as its prime agent. The old forms were quickly modified or discarded. The orchestra itself became reorganized. In spite of many excesses the movement led to a real widening of the musical horizon.

Romanticism, thus briefly hinted at, began to make itself chiefly manifest in opera. Mr. Dannreuther declares that its triumph over the older forms was coincident with the production of Weber's *Der Freischütz* in 1821. The story which follows is a fascinating one. And those who have long undervalued some of the early pioneers of the new movement should study the pages of this history. Rossini appears in quite a becoming light. One thinks better of Auber after reading Mr. Dannreuther's estimate of him. Opera, however, is not all. Romance penetrated to pianoforte music, just as Weber himself wrote sonatas and concertos. The orchestral developments were endless. Mendelssohn, Schumann, and Wagner in their overtures, Berlioz in his symphonies, and Liszt in his tone poems, all derive their poetic impulse from the same source. Even oratorio owes much of its *afflatus* to the informing spirit of romance. Hence our author devotes a chapter to what he terms "concert-music of a serious kind." It will be seen from this enumeration of the subdivisions of the book, that it covers much of the whole ground of modern history. It stops short, however, of the *most* modern; and those who look for disquisitions on Tschaikowsky and Strauss, will be disappointed. The book scarcely goes beyond Schumann, though it is not anywhere strictly limited.

II

Some of our historian's estimates of men once covered with fame, express posterity's verdict with epigrammatic terseness. Rossini is a man of rapidly acquired facility, though not of complete mastership. The overture to *William Tell* is of high rank among *potpourris!* Meyerbeer's work from an artist's point of view is a huge pile of commonplaces, infinitely ingenious, and *barren*. His scores look elaborate and full of work, but are afterwards seen to be empty and obvious. "The music glitters and roars and warbles in well-disposed contrasts, but the inner life is wanting." (p. 45.) It is curious to note Schumann's verdict on *Le Prophète* — which took the form of a mere record of the event, with the significant addition of a cross, which no doubt meant the cross of misfortune, trial, and vexation. Thus: —

Prophet von Giac. Meyerbeer
(Den. 2. Febr. 1850)

†

Our historian, by his half-hearted article on Berlioz contained in Grove's *Dictionary* (eliminated from the new edition), gave an impression to the world that he undervalued the great French composer's genius. It is with genuine regret that in Mr. Dannreuther's final record we meet with no better appreciation of France's best musical son. To the writer of the present article, and to tens of thousands of people who appreciate great music, *Faust* is a masterpiece — the truest France ever produced. Mr. Dannreuther finds it a patchwork of irrelevant pieces, doing violence to Goethe's poem. He describes the *Easter Hymn* as *not particularly impressive*, the *Soldiers' Chorus* as *queer*, and the epilogue *trite* and *insignificant*. Such criticism is sheer nonsense, and disfigures an otherwise excellent book.

To Berlioz's instrumentation, it is true, the historian grants the supremest merit. This, however, is not enough, and unless we are hopelessly mistaken, the world will not have it so. Berlioz is not to be condemned with such lame praise. Passing to the estimate of the *Niebelungen Ring*, Mr. Dannreuther lightly brushes aside the "futilities of an overgrown Wagner literature," and the endless attempts to discover hidden meaning in the dramas, but he does nothing more than offer a few scattered allusions. Music drama no doubt will be considered in a forthcoming volume. The last really romantic opera was of course *Lohengrin*. As Wagner advanced, he came to believe in mythology as the true stock-in-trade of music drama, while Beethoven's orchestral methods were to bring forth its music. *Tristan*, *The Mastersingers*, and *Parsifal* are excluded from the historical picture presented, for the same reason. The romantic impulse enters truly enough into all these works; but romance is not their primary aim.

In the section devoted to pianoforte music there is an immense amount of careful criticism and well-digested opinion. Englishmen, however, come off with scant notice. Sullivan indeed is well described, with a graceful tribute to the fresh air and healthy laughter which his pieces provoke. Technically an artist, Sullivan encouraged his Muse to express good-humored, amiable melodies. He seemed to have said to himself, as did the Merry Andrew of Goethe's *Faust*. "Posterity! Don't name the word to me. If I should choose to teach posterity, where would you get present fun?"

III

Not the least interesting portion of Mr. Dannreuther's book is contained in Chapter XV, where he treats of "Musicians and writers on music." In considering the writings of Weber, we find a just comparison with Wagner's essays. "There is little of enduring value in Weber's literary remains, except in his last publication — a small pamphlet that accompanied his directions as to the *tempi* in *Euryanthe*. . . . This is a little masterpiece, a landmark in the history of style." Weber's views regarding "modification of tempo" are exactly those of Wagner, as set forth in the latter's essay on Conducting. There is another curious and highly significant point of agreement between the two masters; "I look upon any one," says Weber, "who performs a piece from one of my operas at a concert as my personal enemy." As regards Schumann, Mr. Dannreuther makes the following pronouncement: —

"At once enthusiastic and humorous, bold in imagery, and whimsical in phrase, the style is redolent of Jean Paul Ritcher and E. T. A. Hoffmann — not involved like Jean Paul's, however, but made up of short, vivid sentences, always fresh and breezy. . . . He was a perfect hater of shams. And though he dealt gently and kindly with all manner of ephemeral productions, he never lost sight of a high standard of excellence. The essay on Brahms, with which he closed his career as a journalist, is written with the same care as the essay on Chopin, with which he began it."

IV

Many will turn with some curiosity to the author's criticism of Wagner's writings on music. As a personal friend of the master's, Mr. Dannreuther had watched the rise, development, and close of his career, with quite peculiar independency of visual range. Situated in London, practicing for the most part chamber music, teaching, and writing, especially in his strenuous early advocacy of the composer's claims, Mr. Dannreuther was enabled to form a more just estimate of his life and work than was any other musician in England. Being a German, he was born to the same literary heritage as Wagner. His national sympathies were in the main identical. Added to this, his thorough knowledge of England and English gave Dannreuther a new standpoint, of which he did not fail to take advantage. Witness the present volume. Here is a matured piece of thought: —

"Wagner's criticism is always valuable, even if it is but a sidelight or indirect comment on his own practice. Now and then his judgment seems somewhat strained and beside the mark — as when he maintained that in Beethoven's Ninth Symphony instrumental music has burst its confines and said the last word possible, when he denounced the oratorio as a feeble hybrid without proper *raison d'être*, or when he refused to credit Jews with creative ability. But his width of view and his absolute sincerity are everywhere apparent."

After the valuable essay on conducting, which is Wagner's contribution to the ethics of style and execution in classical music, Mr. Dannreuther places the treatise on Beethoven, which constitutes the Bayreuth master's views on the metaphysic of music. In the latter he follows Schopenhauer, or to again quote our author: "It is based on Schopenhauer's famous theory; which that philosopher candidly admitted to be incapable of proof, though it satisfied him. Wagner accepts it, and supplements it, by way of analogy, with quotations from Schopenhauer's *Essays on Visions*, the doctrine of which is at least equally problematic."

In his final summary, Mr. Dannreuther gives the advocates of program music a severe blow. Music can never be identical with verse or picture; it can only reflect or become analogous. In Beethoven, the music exists not by signification, analogy, or reflection, but by the breath of its own entity; it aims at being nothing else but what it is — the full and uninfluenced expression of man's whole soul. Program music is then in pursuit of a false ideal.

The illustrations in music type are profuse and for the most part thoroughly illuminative of the text. It must, however, be observed that the whole book would have gained by a severer revision, had not Fate interposed.

Public School Music

HOW MUCH INITIATIVE TEACHING SHOULD THE GRADE TEACHER ACCOMPLISH?

DR. FRANK R. RIX

Under present conditions the power of the grade teacher ultimately measures the extent and, largely, the quality also of school music. This must be so since school authorities, while more and more conceding the value of the study of music, will hardly become enthusiastic enough to supply specially qualified teachers to do all the work. The ideal condition would be that in which in every school one or more qualified persons would assume all the teaching of this subject. This would be an extreme extension of the departmental idea. But, as departmental teaching is now only in the experimental state, it is hardly possible, except in large elementary schools in the last two years of the course, economically to organize departmental work. Until longer experimenting shall have given more positive data for determining its value, the extent of departmental teaching will rest largely with the several principals who wish to employ it.

It would seem, however, that in the teaching of music the departmental idea might be advantageously employed to relieve grade teachers of certain parts of the work: —

1. The assembly singing, which should be an inspiration and a power for good, should be in charge of a teacher specially qualified in music and of that strong and magnetic personality which gives the power to control and direct with real enthusiasm and inspiration.

2. In the last two or three years, during which part singing is considerably employed, teachers with more than usual musical ability, or with more than usual faith and willingness both to study and to do, may very well relieve other teachers in those grades of their music. But the conditions must be right, and these are seldom the same in different schools. Doubtless the best singing can be thus obtained in these grades, and in them the music should largely consist of the sight singing of songs and of song interpretation.

3. Help may be afforded to less gifted teachers in primary grades by having the rote songs taught by some one who is a good singer. By far the most difficult part of the primary teacher's music is the teaching of rote songs, and yet it is all-important that these should be well sung and that there should be a considerable number of them, since the musical progress of the child must be founded upon an experience of rote song. It is an obvious advantage to have these songs presented by some one who is more than ordinarily musical, and afterwards the regular class teacher can direct them.

If the aids I have indicated are utilized, more excellent results than usual may be expected, it being understood that the regular teacher shall carry on the remainder of the music in the class.

It goes without saying that there must be skilful superintendence of all this by a teacher specially trained in laying out the work, in giving model lessons, and in supervising the work of the class teacher. Special teachers will always be needed, for it is reasonable to suppose that it will ever be an exception to find in a school a teacher capable of directing all the music methods. The supervisor, too, is needed to keep the work uniform throughout the school system. Without supervision school music would quickly revert to a chaos of rote singing characterized by everything bad as to tone quality and interpretation, and sight singing would be a dream of the past.

DR. FRANK R. RIX

In small schools departmental methods are impossible, in many large schools they are not used at all, and in primary and lower grammar grades it seems granted that exchange of work is undesirable. Class teachers, therefore, up to or including the sixth grade, must do their own music work. The amount of teaching that falls to them then will depend upon the requirements of the course in use in any particular locality. Certain large cities, notably New York City, have a definite course of study and a syllabus regulating and defining the minimum amount of work for each half year, but the majority of schools are following the lines indicated in the systems of music adopted in the particular locality.

To the writer of this article it seems that the amount of work called for in many of the school music books is greater than is desirable in elementary grades, — not necessarily more than it is possible to do, or more than is being done in some schools, but, considering schools in general, the limited training of class teachers, and the small amount of time allotted, it would be well to modify the attempt to teach the whole art of song in the eight years of school.

New York has done well to demand that the serious study of music shall be deferred until into the third year, and that the first two years shall be devoted to rote singing, to voice training, and to the memorizing of scale relations and of simple rhythms. The protest of the principals has also been heeded, and very properly the technical and theoretical study of triads and the like has been eliminated, so that the last two years may, like the first two, be years of song singing and of song interpretation, but with this difference: that the songs now are mastered through sight singing.

The amount of teaching that should be given by the class teacher is that which brings the pupils to the point where they can read ordinary music at sight in common major and minor keys and interpret readily the usual and common rhythms. The theory should include that which is incidental and necessary to the natural progress of the work. Unusual or exceptional problems in tone or rhythm are out of place. Part singing should be simply and naturally developed and applied as far as possible in songs. These things are not beyond the ability of the average teacher. The principles that govern the teaching of language underlie the teaching of music, and the all-round good teacher in other subjects will teach music just as well as she does language. Under the guidance of a good supervisor such a teacher will often get better results than those who are trained musicians, because the latter are not always willing to take the necessary steps, try short cuts and neglect the directions of the supervisor.

The class teacher performs a necessary part of the training. She carries on the daily practice, without which no progress would be possible. It is her faithfulness that makes for thorough knowledge, and finally for art.

JOSEPH MISCHKA

H. J. STORER

Joseph Mischka, superintendent of music in the public schools at Buffalo, N. Y., fills many important music positions in that active city. The story of Mr. Mischka's career is an interesting one, especially to those who would win recognition by their own unaided efforts.

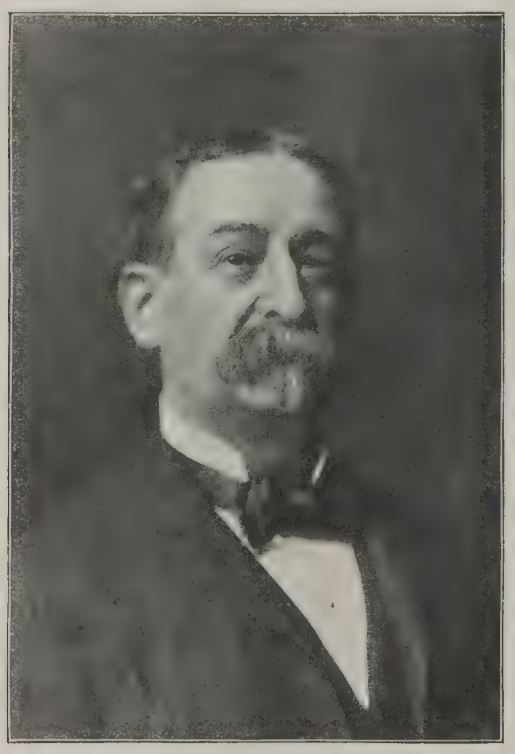
Born at Herrman-Myestetz, Bohemia, May 8, 1846, Mr. Mischka came to America with his parents, in 1852; at the age of six, and the family settled in Buffalo. The parents being in very humble circumstances, the subject of this sketch became a bread-winner at an early age, and thus was obliged to divide his time between labor and study. At the age of seven young Mischka began the study of the violin, and soon after became a choir boy in St. Louis Church, where he was assisted materially in his musical studies by Rev. William Deiters then in charge of this parish.

At thirteen Mischka was employed by a local music house, and in this way was able to attend most of the musical functions given at the time. Two years later, in 1861, he became organist at the North Presbyterian Church Sunday-school. Afterwards he filled similar positions in the Calvary and Westminster Presbyterian Church, then to the old Unitarian Church.

While organist of the Westminster Church Mischka began his career as director of singing societies, as head of the newly organized Arion Society, a chorus of mixed voices. The year 1868 saw Mr. Mischka chorus-master of the Caroline Richings Opera Company.

When Mr. Mischka returned to Buffalo early in 1870 he was appointed director of the Liedertafel. This position he retained until the fall of 1894. When he retired he was elected honorary member and honorary director of the Liedertafel.

Mr. Mischka has for thirty-five years been Professor of Music in the State Normal School, which position he now holds. For the same period of time he has been organist at the Temple Beth-Zion. From 1880 to 1887 he was organist at St. Paul's Church, leaving that position to become organist at the Delaware Avenue Methodist Church, and holds the place at present.



JOSEPH MISCHKA

Mr. Mischka was director of the Vocal Society from 1887 to 1894, and brought that organization to a high pitch of excellence. In the fall of 1894 Mr. Mischka was appointed supervisor of music in the public schools, and the responsibilities of this position were so great that he severed his connection with the Liedertafel and with the Vocal Society.

As a promoter of music no man has a record superior to Mr. Mischka. He has always been active in support of enterprises and has never been sparing of his time or strength in contributing to their success. His generosity toward his colleagues is well known, and many a young musician dates his career from the time when Mr. Mischka brought him to public notice.

SAID BY WEBER

I detest everything in the shape of imitation.

To be a true artist you must be a true man.

Contact with the powers of others calls forth new ones in ourselves.

I do not wish to take possession of the road to prosperity by force.

Art has no fatherland, and all that is beautiful ought to be prized by us, no matter what clime or region has produced it.

The applause and the enthusiasm of the public at large are no doubt our chief aim, but we are more truly invigorated and rewarded by the genuine approbation of those whose genius we prize, and who thoroughly understand and appreciate us.

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

THE SENSATIONAL AND RELATIONAL IN MUSIC

Music has two distinct components — the sensational and the relational. One part of the impression it produces results from the character of the tones, and the other part from the mode of combination of the tones. The feeling a piece of music produces may be in various degrees pleasurable or sometimes painful, according as the component tones have *timbres* that are in various degrees agreeable or sometimes even disagreeable; while there is another pleasure which the successions and combinations of tones may give apart from their qualities.

The tones are the products of the voices or instruments employed, and though the singer and the player respectively try to improve them, they are in their main qualities fixed. The chief part of the executive skill to be gained, especially by the instrumentalist, is skill in producing successions of tones in the most perfect way, or, as on the piano, combinations of tones: the relational element of the music predominates in his thoughts. Still more is this so with the composer. In his mind the relational element is practically the exclusive element. While he desires that his ideas shall be expressed in fine tones and tones appropriately varied, yet, as composer, he is almost wholly occupied with such arrangements of tones, successive and simultaneous, as will convey his ideas. Hence it happens that in chief measure the composer, and in large measure the performer, when judging of a musical effect, thinks more of its relational characters than of its sensational characters.

A Paganini will take greater pride in his marvelous dexterity of arm and finger than in the *timbres* of his tones, though he desires that these also shall be good. And similarly a Beethoven, when listening to a symphony he has composed, will receive greater gratification from the beautiful successions and complexes of its notes than from the tones of the various instruments, however good they may be. Hence, then, musicians of both classes necessarily tend to overvalue the relational elements.

The violin is currently called a perfect instrument — perfect in the sense that it expresses with facility all the relational elements of music — all the varieties of contrasts and kinds of contrasts among tones. One incurable defect is conspicuous — the hiss of the bow and the production of high over-tones as it is drawn over the string, which, however much subdued by a first-rate player, can never be wholly got rid of. The other, though not conspicuous, is no less great, perhaps even greater. The sounds come from strings restrained in their vibrations. Continuous contact of the bow prevents each string from reaching the normal limit of its swing in either direction, and the character of the air-waves produced differs from what it would be were the oscillations unchecked.

To this contentment of musicians with an instrument so imperfect in its tones, though perfect in its relational expressiveness, we may ascribe the characters of orchestras, since in them the tones of stringed instruments so greatly predominate We are all of us, composers and musicians included, brought up in passive acceptance of ideas, sentiments, and usages, political, religious, and social, and, I may add here, artistic. We accept the qualities of orchestral music as in a sense necessary, never asking whether they are or are not all that can be desired. But if we succeed in escaping from these influences of custom, we may perceive that orchestras are very defective. Beauty they can render; grace they can render; delicacy they can render; but where is the dignity, where is the grandeur? There is a lack of adequate impressiveness.

Think of the volume and quality of the tones coming from an organ, and then think of those coming from the stringed instruments of an orchestra. There is a massive emotion produced by the one which the other never produces. You cannot get dignity from a number of violins. Not only are they predominant in the sense that they yield the greater part of the sound, but also in the sense that their presence is continuous.

The contrast between the emotion produced by an organ and that produced by an orchestra, shows that a large part of this contrast is due to the far greater predominance which the bass has in the organ than in the orchestra. It is from the volume of an organ's deep tones that there comes that profound impressiveness which an orchestra lacks. As a masculine trait, deep tones are associated with power, and their effect is relatively imposing. To show that this is so, it needs but to recall a part of an organ performance in which the upper tones only are used, to see that but little of the dignity and grandeur remain. Necessarily, therefore, in an orchestra, while the sounds of the violins are predominant, the trait of dignity is absent. — *Herbert Spencer.*

CORRESPONDENCE

DAILY ORGAN PRACTICE

B. A. — "I intend to devote two hours a day to regular organ practice. Will you kindly give an outline of a routine of work. I can read ordinary music at sight."

Comments. — If you are an experienced player, and understand the management of the organ, you would find it advantageous to spend your time as follows: —

15 minutes, pedal scales with manual accompaniment.

15 minutes, pedal arpeggios with manual accompaniment.

30 minutes, standard fugues by Bach, Nicholl, and German composers.

30 minutes, sonatas by Mendelssohn, Merkel, Widor, Guilmant, etc.

30 minutes, offertoires, orchestral transcriptions, and music in the free style.

HORACE WADHAM NICHOLL

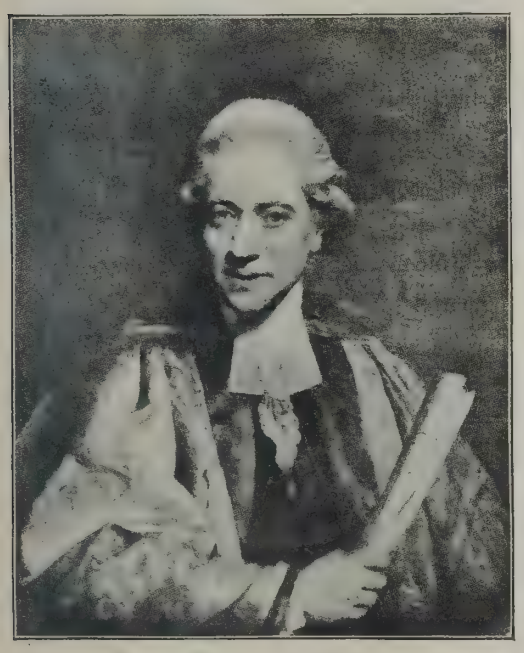
B. M. J. — "I noticed in a recent number of THE MUSICIAN that Horace Wadham Nicholl had visited you at Clarigold Manse in Reading, Mass. I have not been able to find his address at the New York music stores, and had supposed that he was yet residing in Germany. As I was once a pupil of his, years ago, I then had a strong faith in his great talent as an organist and composer, and it would give me pleasure to shake his hand again before he leaves America, if you will kindly give his address."

Comment. — The present address of Mr. Nicholl is 540 West 159th Street, Washington Heights, New York City. He is living in quiet retirement from public musical life, and is still under contract with Peters, the Leipsic publisher, to furnish a series of classical organ compositions. It is probable that he will remain in New York for a year or two, and I am anticipating a visit of a month from him next May or June, when he has promised to play his compositions for a few select friends, if the new organ for Clarigold Hall is completed.

THE VOX HUMANA OF THE EIGHTEENTH CENTURY

Dr. Charles Burney, the English organist, composer, and musical historian, was a pupil of Dr. Arne. He was born in 1726 and died in 1814. He received his degree of Mus. Doc. at Oxford in 1769. His famous *History of Music* was issued between the years 1776 and 1789. In obtaining the materials for his history he visited France, Italy, Germany, and the Netherlands in 1771 and 1772, and published three volumes on the *Present State of Music* in those countries. Concerning his visit to the Haarlem organ he thus comments: —

"As to the *Vox Humana*, which is so celebrated, it does not at all resemble a human voice, though a very good stop of the kind; but the world is very apt to be imposed upon by names. The instant that a common hearer is told that an organist is playing upon a stop which resembles the human voice, he supposes it to be very fine, and never inquires into the propriety of the name or exactness of the imitation. However, with respect to my own feelings, I must confess that, of all the stops which I have yet heard that have been honored with the appellation of



DR. CHARLES BURNEY

Vox Humana, no one in the treble part has ever reminded me of anything human so much as the cracked voice of an old woman of ninety, or, in the lower parts, of Punch singing through a comb."

YORK MINSTER ORGAN

The large organ standing on the choir screen was rebuilt in 1901 by J. W. Walker & Son of London, retaining the former oaken case. Visitors previous to this time will remember the array of reed pipes which projected like a battery of horizontal cornucopias over the gallery railing. These pipes belonged to the Solo Tuba, and have now been removed to the interior. The keyboards are in the south end of the case, which enables the organist to accompany services in either the nave or choir. The hydraulic equipment for blowing includes a set of three throw pumps operated by a gas engine, which force the water into tanks or cisterns placed in the roof of the north transept, 106 feet above the floor, each having a capacity of 4000 gallons. As this water is used by four hydraulic engines continuously, instead of being permitted to waste, it is pumped up again to the tanks as fast as it falls, without any further expense for water. The expense for the rebuilding of the organ was $22,500. The organ has twice been rebuilt. The original instrument of 8000 pipes was built by Elliott and Hill in 1829, at an expense of $25,000, and rebuilt by Hill & Son in 1863. It has tubular pneumatic action, and the general mechanism is entirely new. The pedals are radiating and concave. Among the pedal stops is a very small scale 16 ft. Dulcian-Gamba, which gives a delicate 'cello-like quality of tone for soft accompaniments. The organist is Dr. T. Tertius Noble.

THE CAPACITY OF THE ORGAN

The Organ, as its name implies, is *the instrument*, in distinction from all other and less noble instruments. We almost might think it was called organ as being a part of an unfinished *organism*, a kind of Frankenstein creation, half framed and half vitalized.

It breathes like an animal, but its huge lungs must be filled and emptied by alien force. It has a wilderness of wind pipes, each furnished with its own vocal adjustments, or larynx. Thousands of long, delicate tendons govern its varied internal movements, themselves obedient to the human muscles which are commanded by the human brain, which again is guided in its volitions by the voice of the great half-living creature. A strange cross between the form and functions of animated beings, on the one hand, and the passive conditions of inert machinery on the other!

Its thunder is deep as that of billows that tumble through ocean caverns, and its whistle is sharper than that of the wind through its narrowest crevices. It roars louder than the lion of the desert, and it can draw out a thread of sound as fine as the locust spins at hot noon on his still tree-top. Its clustering columns are as a forest in which every music-flowering tree and shrub finds its representative.

It imitates all instruments; it cheats the listener with the sound of singing choirs; it strives for a still purer note than can be strained from human throats, and emulates the host of heaven with its unearthly "voice of angels." Within its breast all the passions of humanity seem to reign in turn. It moans with the dull ache of grief, and cries with the sudden thrill of pain; it sighs, it shouts, it laughs, it exults, it wails, it pleads, it trembles, it shudders, it threatens, it storms, it rages, it is soothed, and it slumbers.

Such is the organ, man's nearest approach to the creation of a true organism. But before the audacious conception of this instrument ever entered the imagination of man, — before he had ever drawn a musical sound from pipe or string, the chambers where the royal harmonies of his grandest mechanism were to find worthy reception were shaped in his own marvelous structure. The Organ of Hearing was finished by its Divine Builder while yet the voices of the young creation joined in their first choral symphony.

The ear is as carefully adjusted to respond to the blended impressions of sound as the eye to receive the mingled rays of light; and that as the telescope presupposes the lens and the retina, so the organ presupposes the resonant membranes, the labyrinthine chambers, and the delicately suspended or exquisitely spread-out nervous filaments of that other organ, whose builder is the Architect of the Universe and the Master of all its harmonies. — *Dr. Oliver Wendell Holmes.*

THE POSITION OF THE ORGAN

Concerning the location of the organ in English churches, in an address before a Guild of Organists one of the speakers remarked that the designer of a church being usually the architect, it was his idea to make the church as beautiful as possible. Hence the organ was often, in his estimation, an intruder which must be thrust out of sight, so that it would not offend the architectural eye. The west end was the location of most organs until recent times, but the choir has been moved into the chancel, and owing to the unsatisfactory results from having the organ at one end of the church and the choir at the other, the former has followed the choir. The organ chamber has become a sort of cupboard, specially designed to hide the instrument and to stifle its sounds, which came into existence as a consequence. The result of such a custom is that the organ cannot be heard by the congregation, and therefore gives neither support nor encouragement to congregational singing.

The ideal instrument would be an electric organ, consisting of a small three manual in the chancel and a large three manual in the west end, not played by two organists, as is the case in some of the continental cathedrals, where there are two distinct organs, but from one console in the chancel. In accompanying music sung by the choir only, the chancel organ would be played, while for music in which the congregation is expected to join, and for recital purposes, both would be employed.

CHURCH BELLS AND THE ORGAN PRELUDE

What organist has not been irritated by the clanging and tolling of the church bell during his opening voluntary? A writer in an English exchange thus comments on the subject: —

Long before we enter the church we are met by an instance of useless clinging to tradition, for if we happen to be living in a town, we are driven half mad by the cacophonus jangling; if in the country, by the tinkling of something bearing a resemblance — in sound — to the tapping of an earthenware jar. Why, in these days, when everybody, from the small choirboy upwards, carries a more or less reliable watch, it should still be considered necessary to inflict upon the sorely tried nerves of the populace this additional incentive to madness — for some of the bells used are a disgrace to the parish using them — is not easily explained.

Probably, too, the ringing of a bell before service accounts to no small extent for the large number of people who habitually arrive late for service through having acquired a habit of postponing their departure from home until the bell begins to call them thence. It is not considered necessary to ring a bell before a concert, neither is the attendance at those places of worship which do not possess a bell diminished, owing to the absence of it.

Generally speaking, the custom of ringing a bell for service is actuated more by sentiment than by necessity. It has been associated with us from the very moment when we first began in a small way to assign a reason for everything which affected our senses, and as well might one attempt to remove the dome from the top of St. Paul's Cathedral as to move churchmen to abolish the practice of ringing a bell prior to the commencement of the church services. In a certain sense we are in a groove, and so long as its existence constitutes nothing more than a matter of inconvenience, we shall have to tolerate the custom.

GOOD ADVICE

"We cannot commend the far too frequent readiness of the average church committee to buy a good-sized instrument, even though it be open to the suspicion of belonging to the class of cheaply built products.

"An organ must have good tone, variety of tone, and durable mechanism, if it is to have utility and length of life. Much as it is to be regretted, there are many organs built, and in places of public worship, that have none of the qualities they ought to have, from which nothing satisfactory can be produced, and which are only a distress to an intelligent musician from the beginning, and equal disappointment to all who subscribed in payment, when they begin to fall to pieces, as they inevitably do in a short time.

"We would say with emphasis: buy rather a small organ and a good one, but not for the sake of size purchase a large instrument unless means are sufficient to insure its being first class. We have been greatly pained to see how much is wasted in the purchase of cheap organs. They mean nothing mechanically or musically, and we are opposed to them for the same reason that we avoid cheap furniture and shoddy clothing. Having a good organ, take care of it; see that it is kept in repair and in tune, so that it may accomplish its best work. We have seen many an organ in a state which has seemed to us very unworthy a church, the members of which as individuals would never think of letting their personal property get into such a condition." — *Advance.*

MASON'S PRACTICE METHODS — II

W. S. B. MATHEWS

Before proceeding to the Mason methods of passage practice, it is no more than fair that I should assume personal responsibility for two features in the combination of two-finger exercises I have recommended for daily practice. The first of these relates to the exercise for clinging legato, which I never teach in the superlegato form, more recently always given by Dr. Mason. This manner of practice can be excused at best only as a temporary doing of evil that good may come. Leschetizky also teaches superlegato practice in passages where he wants the legato to be very close and appealing. Thus this element is not peculiar to Mason. Godowsky also uses it at times. But the difficulty with it as a form for daily practice is that it will be employed by many teachers who have no piano-playing common sense, but merely teach exercises. These teachers almost always perform the superlegato improperly, make it a habit in place of an exception, and invariably acquire from it a stiff holding of finger and a stiff wrist. I get the superlegato from the broken thirds, where it legitimately occurs. Accordingly, I go back to the way in which Dr. Mason taught this exercise when he was an active factor in advanced teaching. The clinging legato is a melody function, and a precise articulation of tones and precise finger action are points which cannot be dispensed with and form good playing.

The second sin of mine is found in the third form of the combination, where I employ a hand motion to arrive upon the first tone and permit the hands to spring up at completion of the second touch. I do these two things simply upon the ground that both are desirable wrist conditions, much used later on. And the best proof of the value of the combination as a whole is its influence upon the elasticity of hand and finger when applied precisely as I have directed.

Upon one point I have myself advanced in theory, along a line upon which I have had no opportunity to compare notes with Dr. Mason. Piano playing goes very much by fashion, and the high fingers which were the fashion some years ago now tend to come nearer the keys. And especially it is an open question as to the condition of hand which will lead most quickly in a beginner to a musical and full-toned chord, free from all sorts of hardness and noise. This condition I now believe to be that of beginning the chord production with the fingers actually in contact with the keys. There is a trick of suddenly concentrating the hand and of producing a good chord by taking up the slack and simply playing the chord without preparatory motions or any kind of after motion, the fingers remaining in contact with the keys. It is necessary to learn how to get good chords by falling upon the keys and by springing up from them; but I now follow Leschetizky (or follow his tone exercise) and believe it safer and less liable to faults to begin chord study in this new manner. But there can be no question that in some way chords ought to be taught, for there are few elements in pianism which are so often faulty and unmusical as the chords. One player, himself principal of a large conservatory, told me when I called his attention to this in his interpretation of the theme in the Schumann *Etudes symphoniques*, that in all his education no one had ever before called his attention to the unmusical quality of his chords.

And whatever verdict may eventually be returned concerning the tone production as explained in this book, at least it will have to be ranked as a new, many sided, and honest effort to solve the vital and most central element in piano playing.

We come now to the Practice Methods,—the treatment which Mason adds to the standard keyboard tracks of arpeggio and scale, to add musical interest to the practice and to give the fingers a better pianistic quality in every direction. Here also I have been astonished at the things I see. For instance, it would be possible to bring together some five or six so-called systems of technics, published within the past ten years by prominent teachers, in which it is the same old story of the standard forms of scales and arpeggios without any intelligent handling of the practice for improving the results intelligently. I do not refer here to such books as the Joseffy *Technics*, because in that the great artist is after something very different from what Mason is after. Mason aims at the young pianist, the beginner, and the on-going pianist of the first five or six grades; Joseffy has in mind the advanced player, wrestling with the special difficulties of the great concertos and virtuoso pieces. For these he has invented a variety of useful preparation, more in the nature of additional material of like nature than of anything new in methods of practice.

Advanced piano teachers are just now in a peculiar position. The style of piano music has undergone a change since Thalberg, Chopin, and Liszt, and has conformed very much to the style of Schumann, in which no running work appears. Hence it is becoming more and more difficult to turn out young pianists with that elegance in running work and that pleasing salon quality in pianistic merit, which used to constitute the stock in trade of all players but the very greatest. The running pieces with which the work used to be done, along in the fourth and fifth grades, such as Osborne's *Shower of Pearls*, Wollenhaupt's *Whispering Winds*, Litolff's *Spinnerlied*, Weber's *Perpetual Motion*,—all these have rather gone out. The harmonic structure of all of them is too barren. Even the Chopin studies do not quite stand where they used to, as gems of harmonic mastership.

Moreover, there used to be a whole world of quasi-velocity practice which we do not now get. Czerny planned his velocity studies in such a way that the student himself changed his standpoint from the slow and small units of early practice to the large units, by means of which the mind handles velocity work. Litolff, for instance, in his study called *Spinnerlied*, which lasted through two generations of piano teachers as a veritable war-horse, runs with eight running notes to each tone of melody; and as these tones themselves are practically only the half pulses, he gets up a motion of sixteen tones to a unit, and this is the secret of the improvement in pianistic style which a thorough working at his piece promotes.

This which used to be obtained by a piece here and there Mason does simply and directly by means of his "Rhythmic Tables" and his Velocity exercises. In the latter he increases the unit of the velocity group by one note more at each repetition, always working it along familiar and standard keyboard tracks of scale or arpeggio. In the other he develops fast motions from a slow unit, by subdividing progressively by 2 as factor; or by 3, or by 2 and 3 alternately. In the first way a motion in quarters, running about one tone a second or a little faster, subdivides into eighth notes, then into sixteenths, and then into thirty-seconds, always at the same rate for units. Mason marks these at the rate of 100 per metronome, a speed of 800 notes per minute in the thirty-seconds.

Moreover, he means to have prepared rhythmic feeling long before reaching this point, by forming the habit of counting and playing scales and arpeggios in measure, with all sorts of units, such as 1, 2, 4, 3, 4, 6, or 8 tones to a pulse, and later as many as 12 to a pulse. Each form is repeated over and over, with a melodic accent at the beginning of each measure and no other accent whatever, until the accent returns to the place where it started. This means two very important improvements for the young player: First, the ability to carry measure along automatically in any kind of running track, and to persist in it until the rhythm completes itself by returning to the point where the accent first fell. This method of practice not only secures more manifold repetitions than are ever got in practice by other methods, but also keeps the mind awake and alert until the form is finished. Thus a mental technique is gradually developed, which is of the utmost possible use in all sorts of higher piano playing.

The same mental alertness is cultivated by his system of continuous changes upon the diminished chord arpeggio, whereby in the most extreme form the player sets out with fifteen chords in a series, following in an invariable and logical order, and carries each chord up and down through four octaves, proceeding to the next arpeggio of the series without any interruption of the measure and continuing the series of fifteen arpeggios over and over in rotation, until the accent returns to the first tone of the first chord. With fifteen chords and an accent of 9's, this requires no less than 135 times up and down the four octaves, changing chord each time. It is obvious that such an exercise teaches a player to keep the eye upon the gun. In fact it is a master exercise, and while in the two-hand form extremely useful to the fingers, it is primarily for mental technique, in which relation it takes a place which nothing else can take. And while these very long forms are applicable to advanced pianists only, the same principle, when applied to a rotation of three, four, six, or seven chords with hands singly leads to forms which are both interesting and highly educational to young players.

Among the other illusions I formerly cherished with regard to Mason's system, was that of supposing a general chorus of admiration would be awakened at his original idea of applying the canon principle to scale work, whereby the independence of hands is so greatly promoted; also to his multitudinous forms for scale practice, which when adequately treated with rhythmic principles give rise to a practically inexhaustible variety of scale work, adapted to every possible pianistic need in this department.

I am hoping that in the new book the fundamental principles of Mason's methods will be found so clearly set forth as to be available to the great majority of young teachers who have taken up the work of piano teaching with insufficient preparation. This condition of inadequate preparation for teaching is practically universal; for even when the young teacher has become a good pianist, this by no means certifies to his having also become a systematic and intelligent teacher, since as a rule he has had no exercise in selecting productive teaching material, nor any teaching in the underlying principles of the things he has learned to do for his own good.

Hence he has his art as teacher to learn in the expensive school of experience. And if I may be pardoned for saying so, I have had the idea that almost any young teacher, no matter to what system wedded, would find it a profitable exercise to read the revised Mason book quite through, because it gives in moderate compass this many-sided suggestion of Mason for practice material and method, and also because it includes practically the net results of my own close study and practical experience for forty years, in learning how to apply the principles and how to explain them.

Even this system, full as it is, does not provide for all elements of indispensable technical development. There are certain hand habits which if they are ever to be formed ought to be taken up and mastered in simple forms not beyond the third grade. The most important of these is the cantabile habit, the trick of a singing melody with a lighter harmonic accompaniment wholly or in part played by the same hand. Mason lays part of the foundation for this in the two-finger exercise with the clinging touch and the substituting fingers; but he nowhere adds to this the other element of treating the accompaniment at the same time with a contrasting method of touch. Such practice must inevitably be provided very early.

It is a question with many good piano teachers how far the old-time "studies" are valid for modern conditions. Do what are called "Etudes" do anything for a young player which could not be as well or better done by means of pieces? This is a question, and they add another. They ask why we should go on and practice scales, when the new music has no scales or rapid running work in it.

In my two sets of graded studies I have given considerable space to running work, because I do not quite see how we are going to raise up Chopin players without this preparation. Accordingly I rely in the fourth grade upon selections from Loeschhorn's Opus 66, Book I; and in the fifth upon the next book, which is about a year more difficult; and in the grade later we reach Cramer; who in turn gives place later on to Chopin. Now I am myself sure that Cramer (as Buelow says) does not stand necessarily in the line of virtuoso playing; but there are certain playing habits and certain methods of study which can be more easily promoted by studies than by pieces; yet pieces after all put the finish upon what has been thus gained.

The series of Graded Studies lately edited by Mr. Tapper will no doubt be the last word as yet upon these important questions.

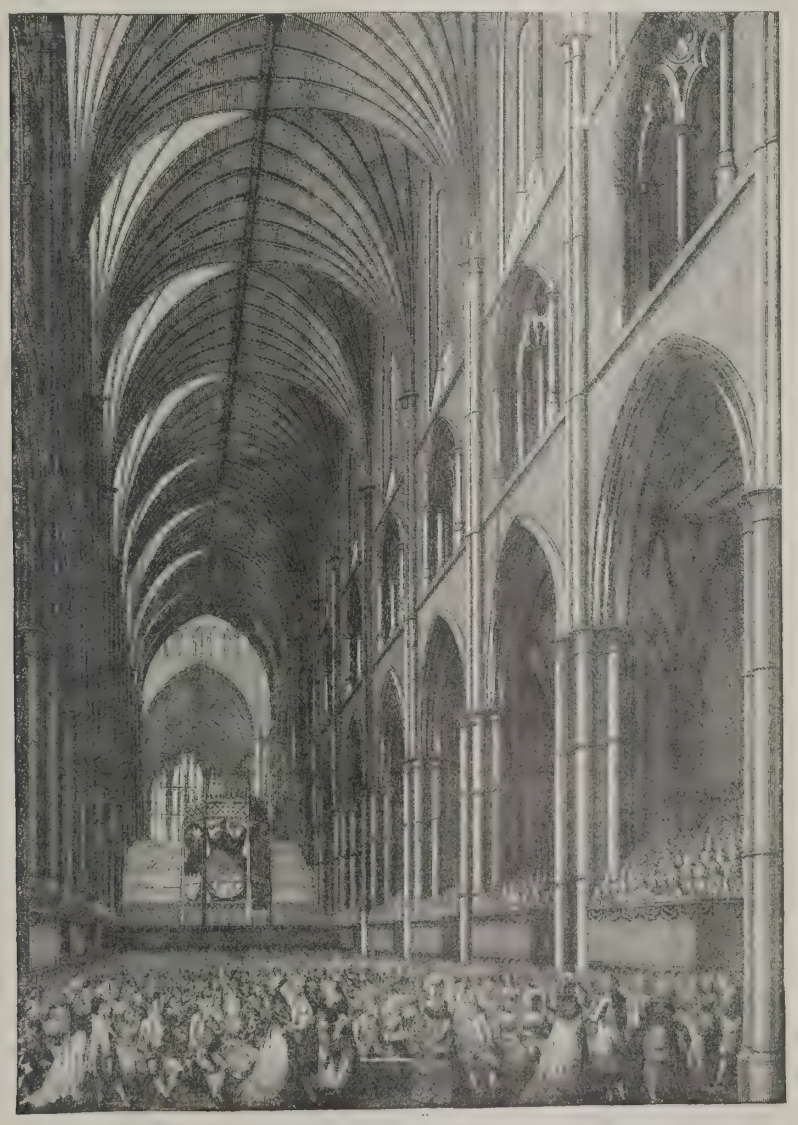
THE STORY OF "THE MESSIAH"

W. FRANCIS GATES

Little did the audience of seven hundred of the aristocracy of Dublin, Ireland, think on that April night in 1742 when the *Messiah* was given its first performance, that it was hearing a masterpiece that would outlast all the rest of its composer's works in public esteem.

The fortunes of Handel had risen and fallen. By his operatic compositions and his business ventures he had at one time made large sums; and yet, in a few years, he had come to the point, for him the text for an oratorio, *The Messiah*. Handel had been invited by the Duke of Devonshire, the viceroy of Ireland, to visit that country, and so he set out to visit "that generous and polite nation," as he himself described it.

This oratorio was begun August 22, 1741, and was finished September 14, as the dates on the autographed score show. Thus the monumental work was the product of but three weeks' time. Arriving in Ireland in November, Handel first conducted several miscellaneous concerts, and then announced a performance of *The Messiah* for "the benefit of the prisoners in the several jails." Shortly before the concert, a request was



VIEW OF MAGNIFICENT BOX OF HANDEL COMMEMORATION

through the same agencies, of being threatened with a debtor's prison, — and the Fleet jail was no idle threat in those days!

Handel was King George's favorite musician, and the instructor of the young princes. He wrote a quantity of operas; but gradually things went wrong, — his singers went to rival theatres, parodies of his works brought more money than the originals, the public became weaned from its worship of "the great Mr. Handel," and the composer was at the end of his wits and of his money.

His last opera was produced in 1740, and the next year his friend, Charles Jennings, selected issued that the ladies should come without hoops, thus adding much to the available seating capacity of the hall. The result of this performance was £400 for charitable purposes; and it might be added that the oratorio has brought in many times that sum in England for such purposes.

A year after this oratorio was first performed in London, and its success was so great that its composer immediately wrote other oratorios, and by them all established a fame that is undying, leaving a heritage that is equaled only by that of Bach. The oratorios enabled Handel to pay off his large indebtedness and to amass a fortune of £20,000 ere his death in 1759.

The oratorios of Bach and Handel marked the culmination of the contrapuntal style of composition for voices. Yet Bach thought only of his own ideals, while Handel continually had his public in mind; he wrote not down to his public, but in such a style as to lead it up to better things.

In *The Messiah* Handel blended the most inspiring of chorus effects with the most expressive of solo numbers, in the latter of which religious fervor and artistic sentiment are delicately adjusted. The work fits the English faith and temperament, and for this reason has always been immensely popular in English speaking countries. The highest Christian ideals are set forth in the text.

Handel wrote this oratorio in the midst of his misery and his bankruptcy; possibly had he written it when in the heyday of his operatic prosperity it would have lacked much of its sincerity and truth.

The text of *The Messiah* is taken from the Scriptures. This was not always the case in oratorio, for at times even pagan mythology is made to contribute. But Mr. Jennings made his selections with a careful hand. As one writer has said, "Bach's *Passion* is a religious service, but *The Messiah* is a sermon."

The Messiah is the greatest work of its kind. Its popularity with all grades of musical intelligences began with its first performance in that hall on Fishamble Street, Dublin, and extends over the whole civilized world. At Christmas time every musical city has its *Messiah* performances — sometimes two or more of them.

In America the oratorio was first performed in Trinity Church, New York, on Christmas Day of 1770. It is not known that this performance was a complete one; but that by the Handel and Haydn Society, of Boston, in 1818, was entire.

THE LOWEST CHICAGO PRICE ON A PIANO

Every one in Chicago knows that the way to secure a piano at the lowest price is to telephone, write, or call on Lyon & Healy. This firm exhibits the largest and most varied stock of pianos in the world. Over 1000 instruments are displayed side by side under their roof. All of these pianos are sold at low, fixed prices, which are the same to every one.

The foundation stone of Lyon & Healy's success is to have every piano they sell act as a missionary, that is, be instrumental in selling many other pianos for them.

Lyon & Healy now offer to ship pianos to persons at a distance at precisely the same prices they ask for the goods in Chicago. Furthermore, they make a specialty of selecting instruments for persons at a distance. Skilled pianists go over the stock and pick out exactly the tone quality the correspondent desires. This plan works so well that Lyon & Healy's shipments to the country are now very large.

The advantage of buying a piano from the great Chicago music house is self-evident. There is nothing to equal the pianos that Lyon & Healy offer at $150 and upwards. In the 20 great makes that Lyon & Healy sell you will, of course, find Steinways, Webers, Krakauers, Washburns, and, in fact, all the most desirable instruments of the day.

Write for their new and very beautiful catalog entitled "A Piano Book." Address Lyon & Healy at 10 Adams Street, Chicago.

LONDON LETTER

ORTON BRADLEY

A program of much interest has been heard here. It is the first occasion that Chadwick's name has appeared on the programs of the London, Oxford, and Cambridge Musical Club.

The club in question consists of former members of the sister universities who meet every alternate Thursday for a performance of chamber music. By the rules of the club no performers are allowed excepting the members themselves who are, with few exceptions, men whose occupations are other than that of music. However, the programs are always varied and interesting, and the performances frequently reach a very high level of excellence. The club house is at 47 Leicester Square, formerly the home and studio of Sir Joshua Reynolds. The chief attractions of the coming musical season will be the foreign visitors who have promised to appear and the annual crop of musical festivals. Of the latter the most important in London is of course the triennial Handel festival at the Crystal Palace, which is due this year. The dates are June 23, 26, 28, and 30. There was some difficulty in choosing the days, so that they should not clash with the Lincoln Festival, which is now to be held June 20 and 21 under the baton of Dr. G. J. Bennett, an arrangement which will enable some of the same soloists to appear at both festivals.

The Handel Festival program will be somewhat altered from its usual routine this year. *Israel in Egypt* will give place to *Judas Maccaœbus*, and several choruses will be performed on Selection Day which have not hitherto been included in the festival *répertoire*. The performers will number as usual about four thousand, and the back bone of the orchestra will be the London Symphony, with Frye Parker as *chef d'attaque*. Dr. Cowen will be the conductor, as usual, and Walter Hedgcock the organist. The soloists engaged are Albani, Agnes Nichols, and Perceval Allen, soprani; Clara Butt and Muriel Foster, contralti; Ben Davies and Charles Saunders, tenors; and Andrew Black, Kennerley Rumford, and the veteran Santley, basses. Miss Foster, by the way, is resting for the present to recover from an attack of *grippe*, but she hopes to be well enough to appear at Cincinnati long before the Handel Festival requires her services.

The band of the Garde Républicaine is to be among our earliest and will, after giving a concert at the Queen's Hall, proceed for a fortnight's tour to the principal provincial cities. The proceeds of their tour are to be given to the French Hospital in London and the Queen's Fund for the Unemployed.

Carreño is to be with us in February, and among her other numerous engagements is to play at the Philharmonic Concert, February 27.

Joachim and his quartet will be in London next April, and will give seven concerts, in two of which they will combine with Herr Mühlfeld and other wind instrumentalists for the performance of chamber music for wind and strings.

But of all our visitors none will command more interest than Dr. and Madame Grieg, who are coming to London during May by invitation of the directors of the Queen's Hall Orchestra. Their last visit here was in 1898, and their first in 1888, at the invitation of the Philharmonic Society. Grieg was also in London in 1889, when he appeared at a Philharmonic concert and at Chappell's Pops. This May there are to be two Grieg programs at Queen's Hall. The first, May 17, is to be orchestral, at which Grieg will conduct, and the second, May 24, will consist of chamber music, with the composer as pianist.

Kreisler, who remains unrivaled among the season's violinists, has begun a long tour in the provinces, but will give one recital in London during May.

Interest continues to be shown in the doings of the prodigies, although they are not occupying this season quite all the attention they had last year Two of the small performers stand out preeminently, — Mischa Elman and Vivien Chartres. The former is announced as having undertaken to give a concert May 3 in aid of the Royal Alexandra Hospital for children at Sydney, New South Wales. The latter is to play February 13 at the Royal Amateur Orchestra's concert, at which the king has signified his intention of being present, and will also give a recital on March 27. The next day an orchestral concert will be given by Aldo Antonietti and the Queen's Hall Orchestra. Aldo is now a man and a fine violinist. He was one of the prodigies twelve years ago, although he could not then have been called a little boy. He is over six feet tall now, but has stopped growing.

Of Continental news the most interesting is probably that there are no more tickets to be had for the first *Ring* cycle at Bayreuth. The *Parsifal* and *Tristan* dates are not yet so full, and there are still places left for the *Ring* in August. The principal singers for *Tristan* are to be Ernest Krauss and Mme. Marie Wittich. Knüpfer from the Court Opera, Berlin, and F. Krauss from Vienna will alternate in King Mark, and the other two principal rôles will be played by Théodore Bertram and Mme. Catherine Fleischer-Edel. One of the singers engaged for Kundry in *Parsifal* is Fraülein Fassbender from Carlsruhe. The engagement of Felix Mottl as conductor for *Tristan* and *Parsifal* is a matter for congratulation on all sides.

The date of the Munich Festival has been arranged so as to interfere considerably with the Bayreuth prerogative. What a feast of Wagner some enthusiasts might make by staying at Bayreuth from July 22 till August 20, if they could; then go to Munich and stay there for three weeks more. But unfortunately the Wagner Festival at Munich begins on August 13, so the gluttons must miss a week somewhere. The Mozart Festival at Munich is to begin on the second of August which perhaps accounts for the bookings for Bayreuth's *Tristan* and *Parsifal* being a little more slim.

Mozart is the composer of the hour, and especially just at present, when the musical world is celebrating his 150th anniversary. It seems curious that Ratisbon (Regensburg) is announcing some special performances of the *Magic Flute* in honor of Schikaneder, who was born there. Is it possible that in Regensburg the librettist of the *Magic Flute* is regarded as a great poet?

The clashing of the dates of Munich and Bayreuth is, however, not more serious than the frequent clashings in program items between the Colonne and Lamoureux Orchestras in Paris. Affairs reached a very bad crisis there at the beginning of January, when both organizations gave Berlioz' *Damnation of Faust* on the 7th, and repeated it, in accordance with their custom in the case of great works, on the 14th. This seems worse than just a little healthy rivalry between artists.

At the Opéra-Comique, in spite of all novelties and sumptuous mountings, *Carmen* remains the favorite opera, just as *Faust* draws the largest houses at the Opéra. No opera in the regular *répertoire* is played so often and no novelty ever draws such houses after the first few representations.

Of the making of new operas there is no end. *Aphrodite*, at the Opéra-Comique, by Camille Erlanger, is just on the point of appearing, and will be received with the most intense interest.

At Bordeaux has just been produced a new opera, *l'Anniversaire*, by Adelbert Mercier. At the Theatre des Arts at Rouen the lyric drama, *Les Girondins*, which was produced last March at Lyons, has just been given with great success. Milan has seen the production of Tschaikowski's *Dame de Pique* and two new works, *Jana*, by Virgilio Renato, and *l'Albatro*, by Ubaldino Colantuoni.

A new *Cinderella* has been discovered at Prague, with music by Léo Blech. It would be interesting to know how many settings of this story have been made for the operatic stage. *Cendrillon*, by Massenet, will be played during this year's carnival at Milan at the Teatro dal Verme. Rossini's *Cenerentola* was produced at Rome (1817), and Garcia produced another in New York a few years later, and there is record of the production of other *Cendrillons* at Paris, 1759, 1809, and 1810 by Laurette, Steibelt, and Nicolo. An *Aschenbrödel*, by F. Langer, was also given at Mannheim in 1878. But there must be many more, of which all trace has been lost.

Prague has also another new opera this season, which is being produced at the Theatre National Techèque de Prague. It is by Joseph Richard Rozkosny, and is entitled *The Black Lake*.

At Monte Carlo, in spite of the work involved in the preparations for an unusually busy opera season, Léon Jehin has not neglected his orchestral concerts and has produced several new works, among which the most interesting was Henry K. Hadley's symphony, *The Four Seasons*. A French critic writes of it: —

"Cette œuvre de forme magistrale est d'une haute et forte inspiration. La structure est solide, remarquable par son abondance mélodique et la science de son orchestration."

The troubles in Russia have driven many artists back from a country which has always been regarded as a happy hunting-ground for singers. Among others who have simply had to fly for their lives was Mme. Maria Gay, who was singing at Riga. Her escape was made in a coal barge under the cover of night. At St. Petersburg affairs never came to such a desperate pass, and the Marinsky Theatre has continued its performances as usual. The latest production there was Wagner's *Ring*, the whole cycle of which is being staged.

* *

A new opera entitled *Cinderella*, by Léo Blech, was recently produced at Prague, and met with fair success. The story of *Cinderella* has been set to music by Laurette, Steibelt, Nicolo, Rossini, and Garcia, while an opera on the same subject by Pavesi, but entitled *Agatina*, was given in Milan in 1814. Another *Cinderella* by Langer, was produced in 1878 at Mannheim, and finally there is the comparatively recent Massenet opera of the same name, which latter is to be heard again in Milan during the carnival this spring, at the musical festival given the author of *Manon*.

* *

Sardou has nearly finished his libretto for the Italian composer Giordano's new opera. It is entitled *The Feast of the Nile*. He has also rewritten an old libretto of his, entitled *The First Arms of Figaro*, for Leoncavallo.

* *

An odd performance took place not long ago in the theatre of a small Italian city. The opera *Lucia* was being sung, and the last act was about to begin, when the manager, stepping before the curtain, announced that the tenor had become suddenly indisposed, and an exceptional tenor would take his place, one whom the spectators could not fail to applaud. The artist appeared, and soon excited universal hilarity. Stalls, gallery, and even the director of the orchestra were overcome with mirth. The theatre commenced to empty, when the basso appeared upon the stage and announced that it had all been a joke, and that the act would be repeated with the usual singer. It was learned later that the improvised Edgardo was an army surgeon, one of the by no means unusual victims of a love for art not in keeping with their talents. He had so persisted in his entreaties, who can say of what kind, to be permitted to sing, that the manager had finally decided to grant his request, with the above result.

* *

Popular concerts have been organized in Rome to elevate popular taste and appreciation of music. They are held in the Argentine Theatre, the newly established Popular or National Theatre, and their success has surpassed all expectations. An enthusiastic crowd assembles for each performance.

* *

A concert was recently given in the Vatican for the Pope, who is a great lover of music. He attended in person, seated on his throne, and surrounded by his prelates, while the room was crowded with both priests and laity. The Daughters of Mary, the most aristocratic convent in Rome, sang a hymn written in his honor, two young girls sang an *Ave Maria*, and a third a prayer to the Virgin, written by Bertini, also in honor of the Pope.

The songs were accompanied by the piano, organ, and harp, played by teachers at the St. Cecilia.

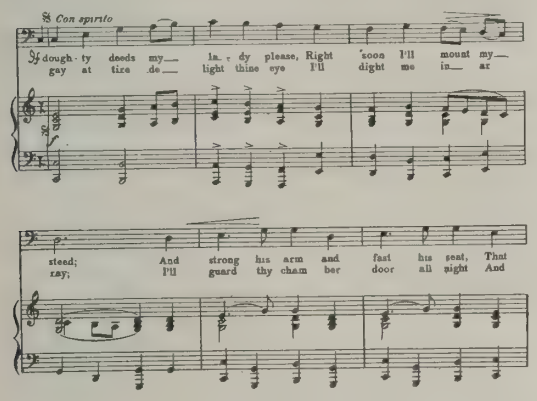
REVIEW OF NEW MUSIC

NEW SONGS

EUGENE COWLES

Doughty Deeds. Bass voice in C major (g to *d*).. .60

Here is a brave song of knightly deeds in days of chivalry, — of fair ladies and sturdy champions. The spirited melody in march rhythm adheres to the diatonic intervals; it moves through a range and employs effects which are grateful to the bass voice, — a singer's song in style and vocal quality. The beginning of the third stanza voices a tenderer sentiment, but increases in fervor to reach a ringing climax at the close. Words by Cunninghame Graham.

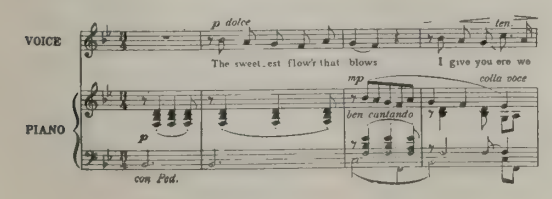


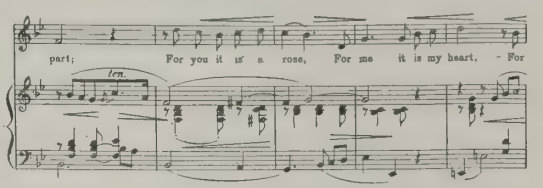
CHARLES FONTEYN MANNEY. Three Songs. Op. 17.

1. *Ere the Moon begins to Rise.* (Cradle Song.) Low voice in D (d to D)..... .40
2. *A Token.* High voice in B♭ (d to F). Also for medium voice in A♭ ..... .50
3. *A Song of April.* High voice in A♭ (E♭ to *g* or *a♭*) ..... .60

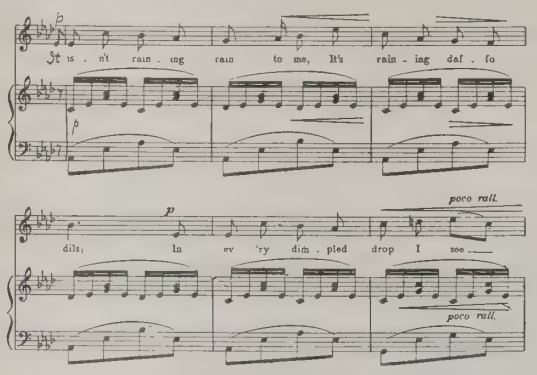
Three short songs which are marked by refinement of musical thought and careful workmanship. No. 1 is a gentle and tender sleep song to verses by Thomas Bailey Aldrich. Limited in range and of quiet emotion, it is available for teaching. The two stanzas are practically the same, although in the second a delicate figuration is applied to the accompaniment. A deeper emotional note sounded near the close is not out of character, however, and the song is both singable and appealing.

No. 2 (*A Token*) is warmly melodious and contains many an effective touch. It should gain wide favor with those who care for a love song which is tender in sentiment without being banal in expression. The accompaniment is effective without being difficult; a melodic line in imitation of the voice is used now and again with excellent result. The vocal part is grateful and offers scope for considerable emotional interpretation. Words by Frederic Petersen.





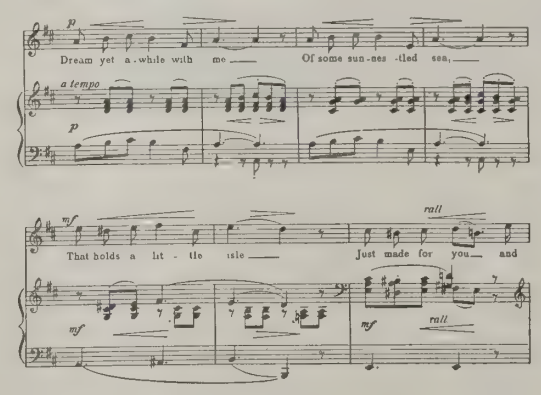
A Song of April (No. 3) strikes a note of happiness, of joyous optimism. It is light, vivacious, dainty in the expression of healthy, out-of-door spirit. The rippling figure of the accompaniment is broken by an occasional melodic phrase; and there is a happy climax near the close. The song should be welcome to singers who want a bright and cheerful number either as an encore or to add vivacity to a group. The very attractive and original verses are by Robert Loveman.



F. ORA GAMBLE

Heart Dreams. High Voice in D (d to *g* or *a*).. .60

A well-made, melodious, sentimental song of the type often assigned to the tenor in light opera. Though in a popular style, the song is well written; the piano part is effective and, though supporting well the voice, frequently independent, while the vocal melody is fluent and singable. Not in the form of stanza and refrain, there is a middle section in the key of B♭, which modulates back to the original key and melody, and closes with a ringing climax. The words, which are good, are by Walter Beverly Crane.



GEORGE B. NEVIN

Within the Roses Bloom. Medium voice in F (c to D)..... .60

A very simple and singable song of pleasing sentiment. It has the advantage of an unusually short range, making it available for both low and medium voices. The piano part is free from any difficulties and is agreeably harmonized. There are three stanzas set to the same music. The words, by Frances V. Hubbard, tell the tender messages for the beloved entrusted to the fragrant flowers.

NOCTURNE. Op. 13. William H. Griggs. Boston, White-Smith Music Publishing Co.

This is a song, 3 pp., for medium voice, with 'cello obbligato. An *ad libitum* violin part is also supplied. The first line of the text, "Rock-a-by baby upon the tree top," will suggest its general character. The voice part is tuneful, the accompaniment well contrasted without especial difficulties, and the 'cello obbligato adds much to the general effect.

THE MAID OF THE FLEUR DE LIS. Op. 14. William H. Griggs. Boston, White-Smith Music Publishing Co.

Song for medium voice, 4 pp., not especially difficult, and one that the average singer will find pleasing. Several changes in rhythm, with extended modulations to and from G to E, are characteristic features.

CASTE. Op. 15. William H. Griggs. Boston, White-Smith Music Publishing Co.

A song shorter than the two preceding, and also for medium voice. An easy and effective setting of a brief, yet characteristic poem.

REQUIEM. Op. 57, No. 1. George E. Whiting. Boston, White-Smith Music Publishing Co.

A funeral march for organ, with registration carefully indicated. While conventional in spirit, organists can add this to their repertory for special occasions, to good advantage.

POSTLUDE IN D. Op. 57, No. 2. George E. Whiting. Boston, White-Smith Music Publishing Co.

Organists will find this postlude brilliant and effective, suitable for many occasions, although it savors of the "routine" order, without much musical depth. Registration will suit either a two or three manual instrument.

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round.

IF YOU ARE RECEIVING LESS, WE CAN DOUBLE YOUR EARNING POWER.

THE TUNE-A-PHONE IN USE.

We teach **Piano Tuning, Action Regulating, Voicing and Fine Repairing,** all in one practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life.**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. Many professional tuners study with us to perfect themselves in their art. SCORES OF MUSICIANS take the course that they may be able to care for their own instruments. More take our course as a **sure means to money-making.** We fit our students to command splendid profits in the pleasantest of professions.

Read what some of Our Graduates Say about it.

NILES BRYANT, DIRECTOR

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos."—Joseph Gribler, Astoria, Oregon.

"I average $9 a day."—Simpson Thomas, Aquebogue, N. Y.

"I easily make an average of $5 to $6 a day."—John T. Hannam, Galt, Ont.

"I made $100.00 fixing two old pianos."—Mrs. S. A. Albertus, Los Angeles, Cal.

"I made $31.50 the first two weeks, and $5 to $12 per day thereafter."—Carey F. Hall, Coffeyville, Kan.

"I am earning good money since I began tuning, repairing, etc. Last week I took in $27.50, and next week I am sure I can raise that."—Ray J. Magnan, Manistee, Mich.

THE ACTION MODEL.

"This profession, I find, is one that is surely not over-crowded. At a place where there are several older tuners, I get more work than I can easily dispose of, from which I realize from $2.50 to $3 per instrument."—J. W. Unser, Tiffin, Ohio.

THE FOREIGN MAGAZINES

ARTHUR ELSON

Monthly Musical Record. How to Compose Modern Music.

The old-fashioned idea of waiting for inspiration, and composing only when the spirit moved, is now wholly out of date, according to the (anonymous) writer. He divides modern music into vocal and instrumental, and names two styles for each, — the artistic and the popular in songs, and the reminiscent and the up to date for orchestral and chamber works. He describes them thus: —

"In the artistic style (vocal) the voice part is a secondary consideration, and need only wander vaguely about, with plenty of chromatic progressions and a compass of at least three octaves. The chief thing is the accompaniment, which has to be made so difficult that only a professional pianist can play it. Moreover, any musical ideas (but these are by no means vital) are of course embodied in the instrumental part. It is usual for the words to be a poem of Heine's, preferably one already set by Schubert, Franz, Brahms, and others; but Tennyson's *Crossing the Bar* is also admissible.

"The popular style (vocal) is 'too well known to need description.' Any sort of melody, an easy key, as few modulations as possible, and (the essential point) a *forte* to *fortissimo* refrain with triplet accompaniment. In this style it is important not to choose words by any classical poet, something quite new and no matter how idiotic, being necessary.

"In instrumental music the reminiscent style can be easily achieved by playing over on the piano either a dozen gavottes and bourrées by Bach and Handel, or, at choice, half a dozen nocturnes by Chopin, and immediately afterwards jotting down on paper the mixed recollections; but it is not so universally popular as the last, or

"Up-to-date style. The best way to compose either orchestral or chamber music in this style is simply to look up a batch of old exercises in modulation left over from student days, and to string them all together without any connection whatever, avoiding a perfect close as one would the plague. If the composition is intended for the piano, it is as well to put in as many stretches of tenths as possible. An orchestral work requires far more preparation. The scores of Mozart, Beethoven, and other classical models must be well studied, and when the modern composer is quite sure which orchestral combinations they most affected, he carefully avoids them. Then should be taken Wagner's scores and some of Strauss's, and the instruments contained therein added together, making an effective modern orchestra. But if this is too much trouble, it is enough to remember the cardinal rule, — halve the strings, and double the brass and percussion.

"Surely, on some such lines as these," says our writer, "it may safely be concluded that most of our modern music is composed"; and as he purports to be connected with a large publishing house, his words ought to be *ex cathedra*.

In the same issue is an article on the *History of the Orchestra*, by J. F. Rowbotham. He cites ancient Roman orchestras that contained flutes, pipes, trumpets, large lyres, bagpipes, gongs, cymbals, castanets, shell cymbals, and foot castanets. There were orchestras with organ in Imperial Constantinople, but better medieval examples are found in the minstrel bands that accompanied the troubadours. Their instruments included flutes, viols, pipes, bagpipes, harps, guitars, psalteries, little organs, tambourines, sackbuts (trombones), and rebecks (bowed mandolins). Their skill in one form of entertainment caused the name of Jongleur to give rise to the modern term juggler. This condition lasted through the Middle Ages.

At the marriage of the Duc de Joyeuse, in 1581, we find also hautboys (oboes), cornets, and violoncellos. But Italy took a more important part than France in the early development of the orchestra. Cavaliere's first oratorio demanded two flutes, violin, bass lute, double lyre, and harpsichord, — a combination affording excellent contrast. Peri's opera, *Euridice*, required a similar orchestra. Monteverde employed larger forces with more modern effect, but the greater orchestra was not wholly popular, and we find Alessandro Scarlatti writing two violin parts one viola, and one 'cello part, — practically string quartet music.

Wind instruments came in gradually, their chief use with Lully and other early writers being to reinforce the strings. When given independent parts, they played by themselves, and were silent when the strings sounded. Any number played partly by strings and partly by woodwind was called "broken music," and was avoided.

Bach was the first to write real parts for woodwind instruments in connection with strings. Audiences were small in those days, so he never called for an overpowering orchestra; but he had an extraordinary variety of tone-color at hand. Besides the ordinary strings, he employed the *violino piccolo* (a minor third above the violin), the *viola d'amore* (a tenor viol with seven catgut strings and seven sympathetic steel strings), the *viola da gamba* (played like the 'cello), and the *violoncello piccolo*, as well as various flutes. The wind instruments included the old straight flutes, ordinary traverse flutes, various forms of oboes, bassoons, the cornetto (wooden trumpet), brass horns, and trumpets (sometimes with slides), and a whole quartet of trombones. The organ often replaced the harpsichord as continuous bass. Handel dropped some of these instruments, but included harps, and experimented with an early clarinet called the "Chalameaux."

Haydn, often called the "father of the modern orchestra," demanded fewer instruments, — the usual modern strings, also flutes, oboes, bassoons, horns, trumpets, and kettledrums. He added the clarinet, but Mozart was the first to give it due prominence. Beethoven experimented with the Trombone, and grasped its sombre, almost menacing effect; once, in fact, when he wrote an angry letter to a publisher, he added to the signature a trombone trill with the word *minacciando*. This instrument completed the so-called classical orchestra. In modern days we have added (or revived) piccolo, English horn, basset horn, bass clarinet, contrabassoon, tenor, bass, and contrabass tubas, harp, drums, cymbals, and gongs, to say nothing of the wind machine and the heckelphone; but in spite of this there are many who still aver that Beethoven's music sounds good.

Revue Musicale. The Alterations in the Trocadero. Gustave Lyon.

The subject of acoustics is a puzzling one and only imperfectly understood to-day. The architects of the Trocadero undertook to solve the problem by the theory of direct reflection. They constructed a model with mirrors, and built the hall on that model. As a result, they obtained a fairly well-defined echo, and one of the poorest auditoriums in Paris. It was to remedy these defects that M. Lyon's experiments were carried on. He determined, by means of scaffolding, which parts of the walls caused the trouble, and by covering these with some material that will not reflect sound, he hopes to remedy all defects. Hitherto, however, the authorities have remained inactive.

Another Paris hall, that of the Conservatoire, was built without any definite plan, and turned out to be a remarkable success; so excellent, in fact, that those in charge will permit no alteration, even though the room is in need of added ventilation. Another remarkable hall is the La Scala, of Milan. On the stage of this theatre a singer cannot make his voice sound loud to himself; but as it is all reflected toward the audience, he need not feel at all worried. The Mormon temple at Salt Lake City is another acoustical success. It is oval in shape, with a rounded roof that makes it seem exactly like half of a huge egg.

The theory of direct reflection of sound is of little value. The air is a fluid substance; sound waves spread outward from their source in spherical shells; but when they strike an obstruction they do not bounce back like so many rubber balls, but they curve around it and enfold it, as ocean waves do an isolated rock. Also, if they strike a surface diagonally, they rush along it, once again like the sea waves. When this fact is more thoroughly investigated we shall have fewer halls shaped like grocery boxes, with plain rectangular dimensions; but the sides and roof of the stage will sweep out toward the auditorium in graceful curves, and the back corners of the hall will show the same pleasing substitution.

FRANKLIN SQUARE HOUSE, BOSTON

A Special Article regarding Its History and Purpose will appear in *The Musician* for April.

THE FRANKLIN SQUARE HOUSE

HOME HOTEL FOR YOUNG WOMEN WORKING OR STUDYING

The Franklin Square House is probably the largest and best equipped place in the world exclusively for working girls and student girls. It accommodates four hundred. With a dining room seating 347, a concert hall seating 476, eleven small private parlors for private use, one large drawing room, a beautiful private dining-room, a reading-room and library, and a hospital suite for the care of the sick, well furnished rooms, amply lighted, thoroughly warm in winter,—it has an equipment nearly incomparable.

The Franklin Square House is designed to furnish at moderate cost the comforts and care of a real home for girls who must of necessity live away from home.

It should be of greatest interest to fathers and mothers whose daughters must come to Boston to work or study. Its ideal is to furnish a maximum of safety and comfort at a minimum of expense. Every girl who is ill is taken care of both as to nurses and physician free of cost.

There is also a transient department for young women traveling alone. Call upon or address Mrs. Alice Gray Teele, Superintendent, Franklin Square House, 11 E. Newton Street, Boston.

The
Village Blacksmith
A Short Cantata by
CHARLES F. NOYES

A TUNEFUL and bright yet musicianly setting of Longfellow's poem. It is for mixed chorus with piano, organ and anvil accompaniment. Numerous picturesque effects are appropriately introduced, such as the sound of the anvil, the church bells, the organ, and the voice of the smith's daughter singing in the choir. A short soprano obbligato is the only solo in the work. The chorus parts are easy to learn and grateful to sing.

This cantata is especially suitable for performance by grammar and high school choruses. The time required for performance is 15 minutes. Price, post-paid, 40 cents.

Copies sent for examination.

The orchestration in manuscript may be had on rental.

The Mechanics of Piano Playing
By ALBERT G. CARMIENCKE. Price, $1.25

AS A PROGRESSIVE TEACHER of Piano Playing this book will interest you. It deals with modern ideas in a modern way and the line of reasoning is logically and convincingly stated. The issue is made on the low wrist—now almost universally advocated—for standard Finger Action; an original grouping of the fingers over four keys instead of five; and Surface Practice at the start for undeveloped muscles, thus assuring proper and necessary relaxation.

The conventional Five Finger position was never designed to be used with the Low Wrist. On the contrary, the attempt to cover five keys and keep the wrist down, invariably results in tension. The position over four keys, which Mr. Carmiencke styles the Four Finger Grouping, is especially adapted to the Low Wrist. Its use instantly induces freedom from wrong conditions. Thus **The Mechanics of Piano Playing** is the only work that complies with this essential and fundamental requirement of modern technic.

Surface Practice—by which is meant the striking of the key without depressing it, insures the right order of teaching—preparation first and attack afterwards.

This book will be sent for examination to all responsible parties.

We are desirous of giving the book wide circulation among the teachers and to that end will, **until March 31st, '06,** supply one copy to any one address for 80c. postpaid.

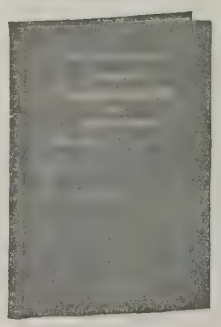
A Guide to

The Ring of the Nibelung

— BY —

RICHARD ALDRICH



DESPITE the existence of several handbooks to Wagner's great musical trilogy, Mr. Aldrich's new GUIDE TO THE RING OF THE NIBELUNG will commend itself to opera lovers as the most readable and compact work on the subject which has yet appeared. While it covers the ground in the most thorough manner, it avoids the unnecessary diffuseness, and awkward, involved construction which has made the authoritative foreign treatises in translation so unattractive. The student who wishes to make a close study of the score will find Mr. Aldrich a helpful and trustworthy guide; the average music lover who desires to enhance his pleasure by a knowledge of Wagner's aims, method of working, and achievement will delight in the author's entertaining manner of presenting the subject; and to the general reader the work is of value as an entertaining sketch of a colossal genius in relation to his greatest undertaking.

To the happy faculty of treating his subject in the most concise lucid fashion, Mr. Aldrich adds a charm of style, at once easy and elegant, which holds the reader's attention from cover to cover. His presentation of his material is comprehensive and logically planned. The book is divided into three parts:

PART I.—The Composition and Sources of the Trilogy.
PART II.—Wagner's Musical and Dramatic System.
PART III.—The Music and the Story.

Part I. touches upon Wagner, the man and composer, and the circumstances which led to the composition of the Nibelung Trilogy; and gives also a brief résumé of the various legendary sources from which Wagner drew his dramatic material, transforming and elevating it for his great purpose. Part II. is a sympathetic and authoritative essay upon the novel musico-dramatic system which Wagner created, and to the perfecting of which he devoted all his genius and energy. Part III. is devoted to a careful analysis of the story and music of each of the dramas composing the trilogy,—THE VALKYRIE, SIEGFRIED, and THE DUSK OF THE GODS,—and the introductory drama, THE RHINEGOLD. This part of the book is illustrated by reproductions in musical notation of all the leading motives or themes, with reference to their appearance in the dramas; and is happily free from technical terms.

For those who wish to read further along general lines concerning Wagner and his works, a bibliography is appended of interesting or instructive books, selected with care from the mass of literature which has grown up about this engrossing subject.

CANTATAS FOR LENT

The Seven Last Words of Christ

By THEODORE DUBOIS

A work abounding in beautiful melodies and stirring choruses. The accompaniments furnish opportunity for impressive support of the voices. There are solos for soprano, tenor, and baritone. Time of performance one hour. Price, post-paid, 75 cents.

The Story of Calvary

By P. A. SCHNECKER

A cantata for Holy Week services. The music is spontaneous, melodious, and varied, and the text is of a high dramatic order. The work is for chorus with narrative for baritone solo and a trio for women's voices. Price, post-paid, 40 cents.

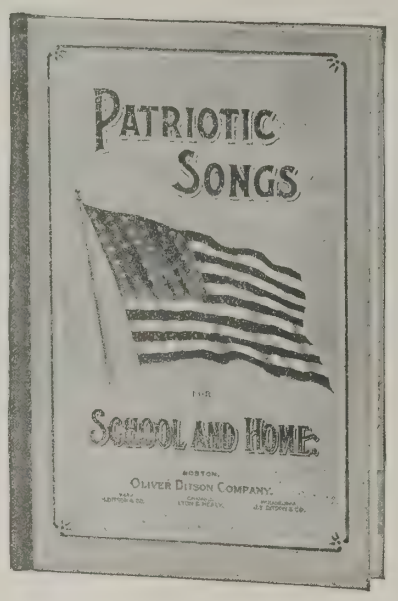
The Most Comprehensive Collection Extant



This volume includes the best patriotic selections from our large catalog, and a number of selections that have been especially arranged for it. Many of these have never appeared in any collection. There are songs to Our Heroes, Our Navy, and Our Homes, also several which are appropriate for Memorial Day celebrations.

Wherever necessary the music has been transposed into keys that will accommodate young voices, by avoiding high notes in the soprano part, and low notes in the bass part. The book comprises seventy-seven numbers, making in all one hundred and ninety-eight pages. It is substantially bound, and its title cover is beautifully printed in the national colors. Price, 60 cents, post-paid.

Elson's Music Dictionary

By LOUIS C. ELSON

Professor of Theory of Music at the New England Conservatory of Music

OVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation.* By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rachh-*mahn*-nee-noff.

In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music, are the following:

Rules for pronouncing Italian, German, and French.

A list of popular errors and doubtful terms in music.

A list of prominent foreign composers, artists, etc., with their chief works, the pronunciation of their names, and the date of their birth and death.

A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.

The book comprises 306 pages and is bound in serviceable cloth covers.

Books on the Operas

By ANNA ALICE CHAPIN

The Story of the Rhinegold

TOLD FOR YOUNG PEOPLE

It contains the four operas of Wagner's "Nibelungen Ring," The Rhinegold, The Walküre, Siegfried, the Götterdämmerung, woven into the form of a story, and thus adapted to the comprehension of children, although in great demand by older readers who desire an intelligent, consecutive, and concise guide to the Nibelungen circle, told with charming simplicity.

Illustrated. Post 8vo, $1.25

Wonder Tales from Wagner

Contents:—The Flying Dutchman; Tannhäuser; Lohengrin; Tristan and Isolde; The Meistersinger of Nuremberg. Planned upon much the same lines as "The Story of the Rhinegold," and forms an invaluable companion volume to that book.

Illustrated. Post 8vo, $1.25

Wotan, Siegfried, and Brünhilde

In her unpretentious study of these three principal characters, Miss Chapin, thanks to her sound knowledge and sympathetic insight, appeals as strongly to advanced Wagnerian scholars as to intelligent laymen.

Illustrated. Post 8vo, $1.25

HARPER & BROTHERS, Publishers, N. Y.

MUSIC PAPER

For years it has been impossible to procure MUSIC PAPER, from any source that did not blot or blur, but the march of progress has made it possible for us to offer what is without exception the most satisfactory and perfect Music Writing Paper ever sold; and we guarantee it to withstand climatic changes and absorb perfectly any ink used upon it.

The ARTIST PAPER is manufactured in America, and the DITSON IMPORTED PAPER is manufactured in Germany.

Secular Songs

HIGH VOICE

GAMBLE, F. ORA PRICE
Heart Dreams. [D] [d to *g* or *a*]..... 60
Melodious and vocal song of pleasing sentiment, with effective piano part.

MANNEY, CHARLES FONTEYN
A Token. Op. 17, No. 2. [B♭] [d to F]..... 50
A tender and appealing love song, not difficult, but very singable and winning.
A Song of April. Op. 17, No. 3. [A♭] [E♭ to *g* or *a♭*].. 60
A bright, happy lilt of spring and outdoor freedom. Good encore song.

MEDIUM VOICE

DIX, J. AIRLIE
Maureen of Ballinasloe. [E♭] [c to E♭]..... 60
Merry and melodious song in Irish tone of a peerless maiden.

MANNEY, CHARLES FONTEYN
A Token. Op. 17, No. 2. [A♭] [c to E♭]..... 50
(See above.)
Sparkin' by de Gate ('Vira). [G] [d to F]..... 50
A refined negro song of contagious melody, the attractive words with a touch of pathos as well as humor.

NEVIN, GEORGE B.
Within the Roses Bloom. [F] [c to D]..... 60
Simple and attractive love song. The range is short and the style singable.

LOW VOICE

MANNEY, CHARLES FONTEYN
'Ere the Moon begins to Rise. Op. 17, No. 1. [D] [d to D]..... 40
A tender song of sleep, dainty and appealing.

BASS VOICE

COWLES, EUGENE
Doughty Deeds. [C] [G to *d*]..... 60
A brave song of fair ladies and chivalrous devotion. Very effective in a virile style.

Sacred Songs

HIGH VOICE

FREY, ADOLF
In Thee, O Lord, do I put My Trust. [C] [c to F or *g*].. 50
Melodious church song, with dramatic contrasts and good climax points.

LOW VOICE

CHASE, CHARLES COLES PRICE
Like as a Father. [B♭] [b♭ to E]..... 50
Quiet, devotional song, excellently suited in style to low voices.

Piano Solos

GILDER, JOHN FRANCIS
Clematis. Op. 76. (Intermezzo.) [A♭]..... 60
Very melodious, rhythmic piece in the composer's happiest vein.

LARREGLA, JOAQUIN
Coquetuela. (Mazurka de Salon.) [A♭] [IV-V]..... 50
Very brilliant, but not difficult.

LEBIERRE, OLIVIER
Caprice Bohemien. Op. 20. (Morceau de Salon.) [C] [IV]..... 75
Varied in contents and brilliant in effect.

MÜLLER, JULIUS E.
Falling Leaves. (An Autumn Reverie.) [E♭] [III-IV]..... 60
Graceful in rhythm, with fluent scale and arpeggio passages.

WACHS, PAUL
Dancing the Schottische (Pendant la Schottische). [A♭] [III-IV]..... 60
Piquant rhythmic piece in light, happy humor.

OCTAVO EDITION

(Please Order by Number)

Anthems for Mixed Voices

BRACKETT, FRANK H.
No. 11,458. **I could not do without Thee.** (Hymn-Anthem, with Soprano Solo)..... 12
Simple, straightforward number, with pleasing solo.

BROOME, EDWARD
No. 11,462. **Sunset and Evening Star**..... 12
Devotional and spiritual setting, especially suitable for quartet.

LOUD, A. F.
No. 11,460 **Forward.** (Hymn-Anthem)..... 12
Well-rhythmed, spontaneous number, and very easy.

MALAN, D.D., REV. H. A. C.
No. 11,482. **O Lord, My God**..... 05
Devotional short anthem.

MARKS, J. CHRISTOPHER
No. 11,457. **Grant Us, O Lord, We beseech Thee.** (With Bass Solo)..... 12
Melodious and very effective short anthem in churchly style.

Part-songs for Men's Voices

CHESHAM, EDWARD W. PRICE
No. 11,500. **The Longshoreman.** (Four-part Song, with Piano Accompaniment. Baritone Solo.) (Arr. by N. Clifford Page)..... 12
Effective arrangement of a jolly nautical chantey.

DRESSLER, LOUIS R.
No. 11,465. **Parting**..... 10
Attractive, mock-serious number, with bright words.
No. 11,464. **Serenade**..... 10
Melodious and expressive part-song in lyric style.
No. 11,463. **Spring Song**..... 12
Sprightly, fluent number of cheerful spirit.

STORER, H. J. (Arr. by)
No. 11,470. **Off to Philadelphia**..... 10
Fine old Irish melody, effectively arranged for four parts.

Part-songs for Mixed Voices

LÖHR, FREDERIC N.
No. 11,494. **A Slumber Song.** (Four-part Song.) (Ed. by H. Clough-Leighter)..... 10
Well-written, smoothly flowing parts and a pleasing melody happily united.

MOLLOY, J. L.
No. 11,495. **Love's Old, Sweet Song.** (Arr. by N. Clifford Page)..... 12
A song of great popularity, effectively arranged.

NEW BOOKS

MONESTEL, A.
Sixth Mass, in C. (For Two Voices and Organ).... 50
Effective ease in writing, well-planned contrasts, and lack of difficulty unite to make this a very successful setting of the mass.

The Half Dollar Music Series

FOSTER, STEPHEN C.
Twenty Songs. (Edited by N. Clifford Page)..... 50
The best of Foster's world-famous songs collected and edited with scrupulous care.

Standard Edition

CLEMENTI
Gradus ad Parnassum. (Twenty-nine Selected Studies.) (Edited by Carl Tausig.) Paper..... 75
Flexible cloth..... 1 50
An excellent edition of this invaluable technical work.

Regarding Church Organs

And the Value of a Guaranty

THE WORTH OF A GUARANTY DEPENDS ON THE MAKERS

Financial Standing

If he is new to the business, but has plenty of money, perhaps you can make him give your money back if his guaranteed organ goes wrong.

Business Life

Some manufacturers are in business to stay; others move on after a few months. If your organ maker stops making and selling organs during the term of the guaranty, his promises will not do you much good.

Reputation

If your organ maker has been in business a long time and has always kept his promises to others, you have a right to rely upon his dealing fairly and honorably with you.

WITHOUT THESE HIS GUARANTY IS WORTHLESS

THE WORTH OF THE ESTEY ORGAN COMPANY'S GUARANTY IS KNOWN

By their well-known financial ability.
By their sixty years of past business life and growth.
By the fourth generation of Esteys now growing up to continue the business.
By their unbroken record for doing the square thing.

No matter how small or how large an organ purchase is contemplated, don't fail to write

THE ESTEY ORGAN COMPANY

A MONTHLY PUBLICATION

THOMAS TAPPER, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

SUBSCRIPTION PRICE

SINGLE COPY.....$ .15
PER YEAR.....1.50

Free of Postage in the United States, Canada, and Mexico.
Foreign Postage, per Year, 72 Cents.

The entire contents of this Magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

DISCONTINUANCE.—IF YOU WISH THE MUSICIAN STOPPED, AN EXPLICIT NOTICE MUST BE SENT US BY LETTER; OTHERWISE IT WILL BE CONTINUED. ALL ARREARAGES MUST BE PAID.

Subscriptions to this publication are not discontinued at expiration unless so ordered by the subscriber. The courts invariably hold a subscriber responsible to the publisher for the subscription price of all papers received until the paper is paid for in full up to date and ordered discontinued.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor, MR. THOMAS TAPPER.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed

SPECIAL NOTICE: The publishers should be notified of a changed address before the 18th of the month.

All REMITTANCES should be addressed and made payable to

OLIVER DITSON COMPANY
Publishers of THE MUSICIAN,
Ditson Building, 150 Tremont Street
BOSTON, MASS.

PUBLISHERS' NOTES

MUSICAL LITERATURE — Our Musical Literature offer for this month consists of eight volumes, as follows: —

Curiosities of Music	*Louis C. Elson*	$1.00
Sound and Its Phenomena	*E. Cobham Brewer*	1.25
Piano and Song	*Friedrich Wieck*	1.25
A Guide to Parsifal	*Richard Aldrich*	1.00
The Soprano: A Musical Story	*Jane Kingsford*	1.00
Student's History of Music	*Louis Frederic Ritter*	2.50
Music explained to the World	*Francis James Fetis*	1.50
The Symphony since Beethoven	*Felix Weingartner*	1.00

All of these are standard works. Mr. Elson's book treats on the music of ancient and savage nations. *Piano and Song* and *Music explained to the World* are intended to stimulate a keener enjoyment and more intelligent understanding of the meaning of music. The author of the former was Schumann's teacher. *Sound and Its Phenomena* is a scientific work dealing with vibrations, acoustics, and the cause and transmission of sound. Aldrich's *Guide to Parsifal* is the latest authoritative work on Wagner's great sacred festival drama. The author of the *Symphony since Beethoven* is almost as well known in this country as in Europe as one of the world's foremost musicians and an authority on the subject treated.

The price against each book includes postage. Copies of any will be sent for examination. We have in stock a few complete sets, of which one or more of the volumes are slightly shopworn, although otherwise in perfect condition. To dispose of these at once, we offer them at a special discount of 50 per cent, or $5.25 for the set. This price includes the cost of transportation. Such books belong in the library of every musician, music teacher, music student, and patron of music. They are among the most desirable of the comparatively limited list of works on music in the English language.

"CLUB PROGRAMS," BY ARTHUR ELSON — In answer to many inquiries from readers of THE MUSICIAN, we take pleasure in announcing that immediately after the appearance of the twelfth instalment of *Club Programs from All Nations* steps will be taken towards publishing the entire series in book form. Wherever necessary, the articles will be revised and brought up to date by the author. The book will be unique on account of being the only work prepared especially for the use of musical clubs. It will be of inestimable value to all who prepare concerts, as it is a comprehensive account of the present-day situation in the musical world.

A limited number of copies will be offered in advance of publication at a special price. The subscription price will probably be announced in the next issue of THE MUSICIAN.

THE ART OF VOCALIZATION — In Eduardo Marzo's new course of vocalises is included all the material necessary for the complete development of the voice. Vocal technique is required not only for coloratura singing but for the artistic rendering of the simplest song; and only through acquaintance with a wide variety of vocal material can a perfect tonal and technical control of the voice be acquired. There is probably no greater error made by vocal teachers than keeping a pupil at work on the studies of one writer for any great length of time. Each of the recognized masters has his peculiar merits, but it is only by the study of the works of the different ones that satisfactory results can be obtained. The feature which probably gives the course its greatest value to teachers is the extreme care that has been used in arranging the order of progression.

Mr. Marzo's Course will be called *The Art of Vocalization*. Three books for soprano are now in preparation. These will probably appear this month or in May. The price of each book will be 75 cents. The special introductory offer of 40 cents each, as announced in the March MUSICIAN, will remain open until publication.

THE TRAINING OF BOYS' VOICES — According to the testimony of prominent vocal teachers, many children's voices are irretrievably ruined before maturity. Schools everywhere, both public and private, are providing instruction in music reading, and the choirs of boys are constantly increasing. Excepting in the few choirs of cultivated boys' voices, however, children are almost universally permitted to sing without vocal training, and are urged to "sing out" until the strain upon them becomes a matter of grave vocal abuse. A correct knowledge of the child-voice, its capabilities and limitations, would enable singing teachers and chorus directors to prevent this wholesale injury and destruction. All children have some natural ability to use their voices aright and the majority can be taught to sing well. The artistic possibilities of boys' voices have been known for centuries.

Children's voices constitute a department of voice culture for which a special preparation is required. *The Training of Boys' Voices*, by Claude Ellsworth Johnson, has been designed to fill this need. The book will be one of the Music Students Library. It will consist of sixty pages, and will be bound in serviceable cloth covers. One of the most valuable features of the work will be the list of choir music and the two, three, and four part secular songs which are available for use by boy choirs and choruses. The price of the book will be 75 cents, but in advance of publication we offer copies for 40 cents, which includes postage when the order is accompanied by cash.

A NEW EDITION OF "JOUSSE'S CATECHISM" — Few works on music have shown such remarkable vitality or enjoyed such popularity as the little book commonly known as *Jousse's Catechism*.

The author was born in Orléans, France, in 1760, but spent most of his life in London, where he established himself as a teacher of singing and piano playing. He published several text-books, one of which was called *Lectures on Thorough-Bass*, the basis of the present Catechism. In the course of teaching, and musical progress in general, many new and valuable definitions have been evolved, and consequently the Catechism has passed through many editions. In the present edition, which has been edited by Thomas à Becket, all the material found in old editions has been carefully revised. Much that is new has been added. The book will contain eighty-eight pages, including a pronouncing dictionary of musical terms and Schumann's *Rules for Young Musicians*. The price will be 30 cents, but until published we offer copies for 15 cents, including postage, if paid in advance.

A NEW COLLECTION FOR THE REED ORGAN — *Reed Organ Selections for Church Use* is the title of a new collection which has been compiled and arranged by Hans Lichter, editor of the recently published *Popular Church Organ Pieces*. This book, on account of being suitable only for that instrument, will differ from many of the available collections of reed organ music. No attempt has been made to adapt the arrangements to the piano on the one hand or to the pipe organ on the other. Some of the pieces, however, are well-known pipe organ compositions, which heretofore have not been available for the smaller instrument. Pieces by Roeckel, Mann, and Dr. Vincent are included, and there are several numbers by Mendelssohn and Handel. While of not more than medium difficulty, the resources of the instrument are drawn upon to their fullest extent. The book will prove of exceptional value to organists in country churches.

The volume is in preparation. It will be one of the Half Dollar Music Series. In advance of publication, however, we offer copies for 25 cents, which includes postage if orders are accompanied by cash.

"THE YOUNG VIOLINIST," BY GEORG WICHTL — The principal object of this work is to teach pure intonation. The exercises in finger dexterity, staccato, shakes, and double stopping are also exceptionally practical. Special attention is given to rhythm, to facilitate which exercises on the open strings are employed, so that simultaneous movements of the bow and fingers are not required. This plan has proved to be the most effective method of teaching syncopation. The work is entirely in the first position. In his own preface we are informed by the author that *The Young Violinist* has won the approval of Louis Spohr, his greatest contemporary.

A new edition of the work, edited by John Craig Kelley, is in preparation, and will appear at an early date. It will be No. 91 of the Ditson Edition, and will be the most complete and practical of all editions. The price will be $1.00, but in advance of publication we offer it for 40 cents, which includes postage when cash accompanies order.

FOUR GRAND RENEWAL OFFERS

THE MUSICIAN and the *Choir and Choral Magazine*, both for one year, $1.60.

THE MUSICIAN for one year and *The Art of Vocalization*, by Eduardo Marzo, Soprano, Books I, II, and III (in press), $2.30.

THE MUSICIAN for one year and *The Training of Boys' Voices*, by Claude Ellsworth Johnson (in press), for $1.60.

THE MUSICIAN for one year and the eight books of Musical Literature mentioned on the opposite page, $6.25.

A second recital of the season was given by the pupils of Mr. Carl Sobeski of Boston, on February 27. Mr. Sobeski is an enthusiastic patron of the American composers. Their works were well represented on the evening's program.

TESTIMONIALS

TAPPER'S GRADED COURSE

After examining carefully the *Graded Course* for the piano by Tapper, I find it to be unsurpassed by any other method.

BLAUVELT WILLIAMS.

I cheerfully recommend Tapper's *Graded Course*, Vol. IV, also I, II, and III, to teachers and students. Grade IV is especially recommended.

MRS. ADA R. EMERY.

Tapper's *Graded Course*, Part IV, Pieces, are very satisfactory. I shall probably use them with a good many pupils.

MARION B. DAME.

The first three grades of Tapper's *Modern Graded Piano Course* are excellent in all points.

MARY ESPY THOMSON.

MUSIC IN THIS NUMBER

March from *Tannhäuser*. Richard Wagner.

This should be played with much breadth of tone, with motion, but not too fast. The passages, like the first three measures, known as "fanfares," should be forceful and somewhat sustained. Note the contrasting sections on pp. 2 and 4. The left hand octaves and chord passages, firm, yet avoiding a noisy effect.

Prelude to *Lohengrin*. Richard Wagner.

To reproduce the unique characteristics of the opening prelude to *Lohengrin* adequately requires the instrument to be in perfect tune in its upper octaves. A judicious combination of *both* pedals will be found essential in the opening measures, also the final six measures. The various indications for phrasing and accent are very important, and should be carefully observed.

Ride of the Valkyries. Richard Wagner.

This number demands of the pianist considerable technical attainment and especially freedom and independence between the hands. The principal theme is in the left hand, which is to be always played with decision and much motion. The accompaniment to this theme is unusually brilliant and forceful. With careful study this is a most effective number for concert or recital use.

Love is like a Bird — Rebellious. Georges Bizet.

This is the familiar *Habanera* sung by Carmen in Bizet's famous opera of that name. The coquettish, romantic character of the text is much enhanced by the musical setting, and the "mood" of the piece should be carefully considered as to the proper interpretation. The accompaniment should be mainly in the light staccato, to suggest the "string effects" called for in the original orchestral score, which heighten the general effect.

Even Bravest Heart. Charles Gounod.

This is the *Dio Possente*, the favorite cavatina sung by Valentine in Act II of *Faust*, the theme of which also appears in the orchestral prelude to the opera. It should be carefully studied for expression. In the accompaniment the so-called Gounod triplets should be played lightly, but firmly. The chords in the second section, *poco piu animato*, although short as to time value, should not be *staccato*, but more in the nature of a *non legato*. The tremolo effects in the final pages should act as a firm, yet quiet background to the voice, with the closing full chords *piano* and *sostenuto*.

Paul Revere's Ride

A Cantata

By CARL BUSCH

A spirited, musical setting for baritone solo and chorus of Longfellow's famous poem. Frequent allusions are made to the melody of the "Star Spangled Banner" which in its entirety forms the stirring finale. The dramatic effect is further heightened by a realistic imitation in the accompaniment of rapidly galloping hoofs. The work is a desirable one for patriotic and school celebrations and it can be given effectively with accompaniment of either a small orchestra or the piano. The time required for performance is twenty minutes. Price, post-paid 50 cents.

Copies sent for examination

The orchestral score and parts may be rented from the publishers.

Graded Pieces

For Violin and Piano

Compiled and Edited by JOHN CRAIG KELLEY

This graded series was designed to furnish the pupil with pieces from his very first lesson on the violin to the time when he shall have completed the study of the first five positions. The volumes are in no sense intended to take the place of any "Method" or technical exercises but to accompany and supplement such work and to make the task of the beginner a pleasant one. The Course comprises four books, as follows:-

Book I Fifty Easy Melodies in the first position
Book II Thirty Pieces in the first position
Book III Thirty Pieces in the first three positions
Book IV Twenty Pieces in the first five positions

Every experienced teacher of beginners on the violin has probably had much trouble in finding pieces which are exactly adapted to the young pupils. These books have been planned especially for the benefit of such teachers. Their contents cover a wide range of musical ground, from popular folk-songs to selections from the grand operas and short numbers from the classics. To the editor the source mattered not provided the selection was musically good and melodious, attractive to young people, and technically adapted to their needs. The fingering and bowing in each piece have been marked with the greatest care, not only in the separate violin part but also in the cued-in score above the accompaniments in Books I, II, and III.

The books are Nos. 40, 41, 42, and 43 of the Ditson Edition. **Price, each, $1.00.**

FLORA

OR

The May Queen Festival

A Cantata

By AGNES AMES WHEELER

A simple and melodious work, and one which will be of especial interest to those who prepare children's entertainments. There are four principal characters and parts for a number of girls and boys. If desired, as many as forty children, ranging from five to fifteen years of age, may take part. For those children who cannot sing but who are able to speak well there are recitations. The dialogue is of more than ordinary interest. The work closes with a May-pole dance forming a beautifully colored tableau.

The preface contains all necessary suggestions as to the rather simple arrangement of stage and costumes. Allowance is made, however, for the adaptation of original ideas to any variety of material which may be on hand. The time required for performance is 45 minutes. Price, post-paid, 25 cents.

TEACHERS! IMPORTANT TO YOU!

Student Violins

The Student is the violin par excellence at its price.

It possesses a smooth, rich tone, made possible only by our long experience and unrivaled facilities in violin making.

They are exceedingly easy to play, which the ordinary fiddle, at the same price, certainly is not.

Teachers and students of the violin have welcomed the "Student" as the one violin at a low price which fulfils their ideals.

Sold either for cash or installments.

Lyon & Healy Student, G 1018, of thoroughly seasoned wood, all measurements absolutely correct **$15.00**

Lyon & Healy Student, G 1022, artistically made, possessing great tonal power **$20.00**

Lyon & Healy Student, G 1024, G 1025. The first is Amati model, ideal for ladies' use; the second is a large Maggini model, a concert violin of high order **$25.00**

Above prices include cases and bows. Why not order to-day?

Write for a **free** copy of Lyon & Healy's Musical Handbook, fully describing the "Student" Violins, and thousands of other articles of interest to musicians. Address,

LYON & HEALY, 28 Adams Street, Chicago

New Easter Music

DRESSLER, LOUIS R. — **SONG**

Price

Christ is Risen. (With Violin.) High voice in F [E to *a* or *bb*]. Medium voice in D [c# to F# or *g*], .60
Pleasingly melodious number, with good points of climax, and an attractive violin part.

ANTHEMS

BRACKETT, FRANK H.

Solo Voices. Price

11,509. **Lift Your Glad Voices** (Carol-Anthem) 12
An easy, tuneful number, in pleasing rhythm.

CLOUGH-LEIGHTER, H.

11,515. **Break Forth into Joy** . . S .16
Dignified and strong, well knit and impressive.

MACFARLANE, WILL C.

11,517. **In the End of the Sabbath** S or T .16
Not difficult, musicianly, and with well contrasted episodes.

MARZO, EDUARDO

11,512. **Come, see the Place where Jesus Lay** . . . . . S & B .12
Attractive in melody and harmony, singable and not difficult.

NEIDLINGER, W. H.

Solo Voices. Price

11,511. **Welcome, Happy Morning** S .12
Brightly melodious, simple, and with pleasing solo passages.

SPENCE, WM. R.

11,513. **Come, sing We Loud Hosannas** . . . . . A or B .12
A jubilant, well-rhythmed anthem of moderate length.

SYDENHAM, E. A.

11,505. **Christ is Risen from the Dead** 05
An easy number in simple, melodious style.

WOELTGE, ALBERT

11,519. **Christ our Passover** . T & A .16
An effective number of moderate difficulty.

CAROLS

CLOUGH-LEIGHTER, H.

11,503. **Christ the Lord is Risen To-day** (Processional) 10
In well-sustained march rhythm, with inspiring melody.

11,504. **Hark, Ten Thousand Voices Sounding** (Processional) 10
A stately, yet vigorous carol, richly harmonized.

11,514. **Triumphant Bells** (Unison) . .10
A persistent bell-figure, ingeniously treated, is the basis of this carol.

MANNEY, CHARLES FONTEYN

11,502. **Ring out, Ye Bells** 10
Melodious and strongly rhythmed, and in bright spirit.

NEIDLINGER, W. H.

11,510. **Easter Chimes** (Unison) . .10
A cheerful melody in simple, straightforward style.

NEVIN, GEO. B.

11,508. **The Day of Resurrection** (Processional) 08
Vigorous march tempo with melodious part-writing.

STORER, H. J.

11,395. **Rejoice, the Lord is King** (Processional) 08
A spirited number, well written and direct.

THE TAMBOURINE MARCH	4 hands	*Treloar*	1.00
SLEIGHRIDE GALOP	4 hands	*Treloar*	1.00
RAIL ROAD GALOP	4 hands	*Treloar*	1.50

These piano duets are correctly written, instructive, and interesting, and are used by many prominent teachers preparatory to something more classical. They are bright, pleasing, and showy, and make most excellent exhibition numbers. We are certain they are just what you have been looking for and know you will thank us for calling your attention to them. They may be obtained at any first class music store, or all four duets will be mailed on receipt of introductory price, $1.00, by the publishers.

MAX WEIL, Director Weil Conservatory, Halifax
GILBERT R. COMBS, Dir. Broad St. Conservatory, Phila.
GILMORE BRYANT, Dir. Durham Conservatory, Durham, N. C.

THE AIM OF THE FLETCHER METHOD

FOR THE CHILD is to give the child a fundamental, systematic, and logical education in music in a way that is natural and pleasurable, and thus make it possible for music to develop the child physically, mentally, and artistically.

FOR THE TEACHER is to place in the hands of the teacher a thoroughly tested and endorsed system of teaching music which is in accordance with all the modern and psychologically correct methods of instruction.

My Dear Mrs. Copp:

My seventh year's work as a Fletcher Music Method Teacher has closed, and I wish to tell you that it has been each year an increasing success. I have found the Method to be all, and far more, that it claims to be. I have watched its working with the same pupils for four consecutive years and realize what a means of education music becomes when taught in this way. The systematic course in memorizing, or in modulating, or in ear-training, or any one subject in the Method has been worth the whole cost of the course to me alone. * * *

Sincerely yours,
EMILY A. STURGEON.

I have taught the Fletcher Music Method now for about three years, with increasing satisfaction as to results. It has helped me wonderfully, not only directly with my junior pupils, but in broadening and deepening all my work, and solving many knotty problems of teaching. There is nothing one-sided about it,—eye, ear, fingers, brain, memory, imagination, all are reached and made to contribute their share to the general musical culture. Further, it is a delight to the children, who learn easily, love their classes, and later on their practice, finding it no hardship, to the great surprise of their parents.

ROBERTA GEDDES-HARVEY, Mus. Bac.,
(Trin. College.) Organist of St. George's Church, Guelph, Ontario.

In answer to your question regarding the Fletcher System, allow me to say that it has my strongest endorsement. Every school where a course of music is pursued should adopt this Method.

Yours truly, ALBERT A. MACK,
Music Director at St. Mary's School, Raleigh, N. C.

Dr. William Mason says: New York.

The Fletcher Method seems to me well adapted to the rapid and thorough accomplishment of its purpose because of its tendency to immediately arrest attention, to arouse interest, and thus to promote a habit of mental concentration on the part of young children.

Evelyn Fletcher-Copp, the originator of the Fletcher Music Method, besides the broad musical education received in Canada and the United States, has had the benefit of five years' uninterrupted musical study abroad under such men as Dr. Hugo Riemann, Director Albert Fuchs, Wilhelm Sadony, Oscar Brückner, etc.

Since the originating of her System, Mrs. Fletcher-Copp has successfully introduced her System into London, Berlin, Leipsic, Dresden, and Brussels and goes to Europe every two years to conduct normal classes.

At home and abroad Mrs. Fletcher-Copp is constantly investigating all methods which are of psychological and musical worth, and her pupils have the advantage of being thus brought in contact with the latest European (as well as American) ideas.

They have further the advantage of the

Fletcher Musical Association established in 1898; also the

Fletcher Musical Association Bulletin

a paper edited three times a year for the benefit of the Fletcher Music Teachers; also the

Fletcher Music Bureau.

The demand for teachers has been so great that a bureau has been opened to which all teachers desiring situations, and all institutions desiring Fletcher Music Teachers, may apply. This system is not taught by correspondence.

Mrs. Fletcher-Copp will open a class for teachers in Brookline, July 1. During the past year there have been more calls for Fletcher teachers than could be filled.

E. A. FLETCHER-COPP, Home Address, Brookline, Mass. New York Address, 209 West 97th St.

Supervisors or Special Teachers

A SPECIAL TEACHER to successfully carry on her work must have *Special Training.* The only School in the country devoted exclusively to the subjects of Music, Drawing, Physical Training, Penmanship, Domestic Science and Art, and Manual Training, as taught in Public and Normal Schools, is the claim of this School. Students wishing to take up this line of work, address the Secretary for catalog, copy of School Magazine, and full information.

Announcement

THE School of Music of Northwestern University, located at Evanston-Chicago, on the shore of Lake Michigan, has inaugurated a Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

SARTORIO, A. Op. 174, No. 5. The Victor's Return. March. (2c)..... 1.25

There is hardly anything more entertaining to piano students of the earlier grades than participation in the performance of arrangements for eight hands on two pianos. In the case of many such students, it is the nearest approach to orchestral or concerted playing that they ever make. All the details of their practice together, and the effects produced by their combined execution, invariably prove delightful to the participants.

Aside from the pleasure which such pieces give to the ear, they are of great educational value in teaching the performer to keep strict time, and to keep his wits about him and preserve his calmness and self-possession under all circumstances.

TARANTELLE for PIANOFORTE
By CHARLES DENNÉE
Price 75 Cents

This Tarantelle is one of the most successful of the many brilliant compositions by Mr. Dennée. Of only moderate difficulty, it is, nevertheless, artistically constructed, and is extremely showy and effective. Very suitable for teaching purposes and for recitals.

☞*Its great popularity is attested by the fact that more than eleven thousand copies have already been sold.*

SIX MODERN SONATINAS
FOR THE PIANOFORTE
By LUDVIG SCHYTTÉ
Op. 76

No. 1. In C major. (2a)..... .65
No. 2. In G major. (2a)..... .65
No. 3. In D major. (2a)..... .65
No. 4. In F major. (3a)..... .65
No. 5. In C major. (2b)..... .75
No. 6. In A minor. (3a)..... .75

It is as true to-day as it was one hundred years ago that the sonata form is the best medium for grounding piano students well in the fundamental principles of correct musical expression. The form provides admirably for the most felicitous development of superior technic, intelligent phrasing, and all the graces of style, on the part of the performer. The peculiar educational merits of sonatas and sonatines are well known to all teachers.

These six Sonatines by Schytte are among the best that have appeared since the days of Clementi. Considered as compositions, they will successfully stand the severest critical tests, while as teaching pieces they cannot be surpassed. They introduce the pupil to all the various branches of elementary technic, and furnish an abundance of desirable effects in phrasing and dynamics. Each contains three movements, two fast and one slow, in the regular sonata manner. They are ideal pieces, of about equal difficulty.

A DISCUSSION WITH VINCENT D'INDY

LAWRENCE GILMAN

M. Vincent d'Indy is a most exceptional person; for he is both a musician and unassuming, a man of extraordinary gifts, yet wholly without self-consciousness or pose. A man of singular attainments, he is singularly without assertiveness, without the ambition that makes so many a successful musician the sort of person whom one crosses the street to avoid.

"What I write," said M. d'Indy to a friend, "is simply the reflection of thoughts that have interested me; and there," he says in effect, "I leave the matter; if they seem good to you, so much the better; if not, it cannot be helped." As he takes a dispassionate view of his own work, so he is remarkably catholic and unbiased in his views of his contemporaries. He holds emphatic opinions concerning the artistic status of his *confrères*, and he voices them emphatically; but he discriminates carefully and with thought, and he knows precisely why his convictions are such and such about Strauss, about Debussy, about Massenet.

But it is his views on the larger esthetic questions touching the art of music that particularly invite comment.

It is, as I have elsewhere remarked, a familiar and extensively diffused belief that the "Neo-French" school, of whom Debussy, Fauré, d'Indy, Dukas, and De Bréville may be considered representative exemplars, achieve the singularity of their effects by a radical departure from traditional musical designs; that, aside from their indifference to the established harmonic and melodic codes, they are experimentalists as well, so far as their form is concerned. The recent visit of M. d'Indy, and his performances with the Boston Symphony Orchestra of representative works by himself and his associates, have served, in a measure, to dispel that belief. M. d'Indy has made it known in various ways that he and his colleagues are not the ruthless iconoclasts they are commonly supposed to be. Instead of disdaining the constructive principles of the older music, they claim to be but perpetuators of the traditions established by the classicists. M. d'Indy claims, for example, that the basic form of his extraordinary B♭ symphony, which proved so formidable a stumbling-block to many of its hearers, is, so far as its fundamental design is concerned, as simple and severely logical as if the date of its composition was 1791, instead of 1903, and that its novelty of effect proceeds from the new harmonic, melodic, and orchestral substance which is superimposed upon old and familiar forms. And then M. d'Indy will sit at the piano and play for you, in skeletonized form, the several movements of the B♭ symphony, analyzing and commenting as he proceeds. According to him, it is very plain sailing indeed; he has, one is to infer from him, adhered faithfully to the old and, as he calls them, "fundamental" forms,—allowing himself, he admits, occasional diversions, harmonic and rhythmic, but holding constantly in view the traditional requirements of the classic molds. He claims for his own music and for that of his artistic kinsman, Debussy, for example, that its structural basis is essentially diatonic rather than chromatic; and he repudiates the conception of a tone-art built consistently upon a scale of semitones.

I did not, and I shall not here, presume to dispute M. d'Indy's contentions regarding his own art, nor shall I call into question for a moment the accuracy of his own analysis of it. The point of larger interest, I take it, is his position upon general matters of artistic principle, and more particularly his attitude toward the question of the possible abrogation of the older forms.

VINCENT D'INDY

Do M. d'Indy and those who are in accord with him occupy an impregnable position when they assert that the diatonic scale is the only one upon which music that is strictly undramatic — music which has no organic association with words — can be built? That, as I understand him, is M. d'Indy's position. He will not for a moment admit that undramatic music may proceed from a basic use of the chromatic scale; for he holds that the traditional diatonic relationships so long sanctified by use and custom find their justification in some subtle and inviolable correspondence with the laws of the natural world. Such a work as Wagner's *Tristan* is, he holds, structurally justifiable only on the ground of its essentially dramatic character — for here the movement and contour of the play itself supply the formal justification for the music, permitting the composer to proceed as he likes, so long as he adheres to the requirements of text and situation. But a purely symphonic work built upon a similarly shifting tonality is, he argues, altogether anomalous. Thus his criticism of a certain very modern work was that it had too many harmonic alterations; and he smiled in his exquisitely amiable and gentle way when it was pointed out to him that the characteristic to which he objected was an intended consequence of a tonal plan deliberately selected and reasoned.

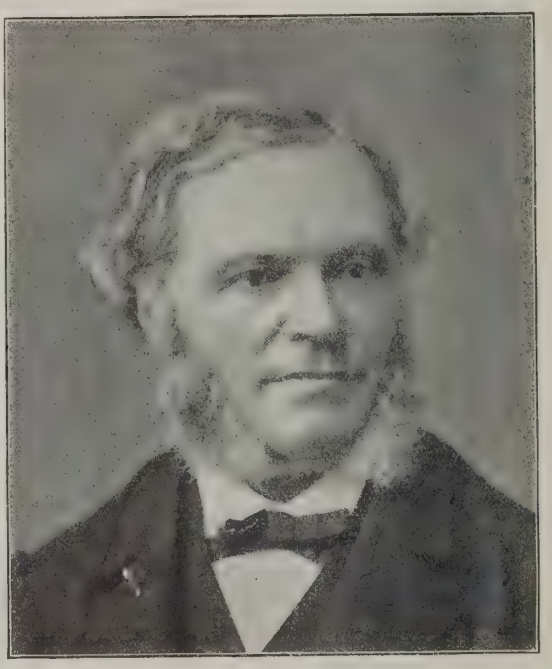
For him it was *impossible* — a violation of the immutable laws of music. "If," he observed, in effect, "we admit such a constructive method, then whence shall we derive those moments of heightened and intense expression which proceed from the dissonant use of chromatic progressions? If our music is to be largely a fabric of dissonances, erected upon a chromatic scale, whence shall we derive our points of repose as well as our moments of vivid contrast?"

He listened, it must be recorded, with admirable good temper and with that inveterate courtesy of his to the argument that was opposed to his, and which cannot be more admirably crystallized than in the dictum that Mr. Rupert Hughes has put into the mouth of that engrossing and vivid creature of his, — Zal, of Poland and New York: —

"There is only one key, and that is all keys in one. The dominant is no nearer to the tonic than the tonic to the key of the leading tone. There is only one scale — the chromatic."

For M. d'Indy, that were a conception of incredible wrongness — as iconoclastic as egregiously mistaken. But then, as he will tell you with a kind of whimsical pathos, there are not a few young men in his Paris school whose procedures altogether confound his understanding, — who go as far beyond him in theoretical and practical daring as he himself went beyond his immediate predecessors. Perhaps some day in Paris one of these pupils of his may offer to him such an explanation as this, in an attempt to justify seemingly unreasoned and reckless practices. He may say — and M. d'Indy should listen considerately and without impatience: "Is the diatonic order the only righteous and justifiable one? Must tonic-dominant-subdominant relationships form the groundwork of a musical plan? Must a composition end, at any cost, in the key in which it began? Are these things essential to an organically consistent, homogeneous, and symmetrical plan, or is another and vitally different order capable of justification?"

It is not likely that our supposititious young iconoclast, if he be a composer, will worry his brains over an attempt to account for his procedures by any process of esthetic reasoning; it is more probable that he will expend all of his energy in molding his dreams into actual and definite substance, leaving the task of their justification to his exigetical brethren of the schools. But for the sake of our present purposes, let it be imagined that he is prepared to play the rôle of expounder; might he not then, perhaps, justify himself somewhat in this wise: "Consistent and symmetrical design is as possible to an order of musical structure which derives from the chromatic scale as to one which proceeds from a diatonic basis, nor are



CÉSAR FRANCK

contrast and variety of accent precluded by the use of a tonal fabric whose fundamental stuff is dissonance chromatically derived; for, instead of starting from a diatonic and normally concordant basis, and using dissonant effects as a heightened mode of expressive utterance, I start from a basis of dissonance, chromatic in derivation, and proceed thencefrom to dissonances still more eloquent and poignant. I hold before my mind the thought of an art from which all crass and formal outlines, all constrictive and lifeless patterns, shall have been deleted — in which everything shall be plastic, fluent, and untrammelled: music without rigid shape or outline — wavering, meditative, cloud-like in its shifting and evanescent forms, its perfect fluidity of movement. In it I imagine no cadences, no modulations, in the obvious and familiar sense of the terms. Succeeding tone masses dissolve, merge into one another, as water flows into water."

It is a conception which M. d'Indy would doubtless reject as bordering upon complete disorganization; yet he would do well, in that event, to read and ponder the words of a luminous and persuasive exponent of musical modernity: "Form [he means traditional, not elemental, form] is a thing of the grammarians, to be discussed behind closed doors by persons who believe in musty counterpoint and the rules of the game, . . ." and M. d'Indy is anything but a grammarian.

CHATS WITH GREAT SINGERS

W. FRANCIS GATES

Mme. Emma Eames

To talk with some of the great artists is a task for the interviewer, whatever it be for the artist; with others, it is a pleasure for the interviewer — no matter what it is for the subject.

Mme. Emma Eames Story comes under the latter category. The writer has conversed with great pianists and singers, violinists, actors, railroad presidents, war heroes, and commanding generals, and out of the whole group two stand in happy memory, the pleasant hours spent with Madame Eames and with Richard Mansfield.

Experience with artists proves them to be but ordinary mortals,— their specialty being subtracted,— simply human beings with one spot in the brain having unusual development. The interviewer soon gets to seeing beyond the coating of pretension or reserve and learns to discount sham in a moment. And it may be said right here that the greater the artist, the more simple the personality; it is only the mediocrities that feel it necessary to enamel themselves with a veneer of austerity or unapproachableness.

Madame Eames is a person of ideas, and many of her ideas have nothing to do with art, for she thinks independently. She has a quick wit and a vocabulary that seldom stops for an adequate phrase.

She is an individualist and stands for the expression of personality in so far as correct conventionalities will permit — not absurd conventionalities. In speaking of her art she said, "Gounod once said to me, 'Don't ever tell a lie with your voice,' and I do not think I ever have. I always do the best I can. I have tried to keep my life and my music undefiled, and present to the public the best art I am capable of.

"I have just begun to enjoy life, because I don't ask too much of it. My whole soul is in my art and the enjoyment I can give others through my expression of it. What I have done has been by the hardest of work; I am painfully conscious of that. I believe in every one doing the best his nature and his fate will permit."

"Then you are a fatalist, madam?"

"Yes; to a certain extent. I think it is not only what we make of life that counts, but what life makes of us; there is no use in our discounting inheritance and environment."

"But you know Ex-President Grover Cleveland wrote in an article not long ago that the place for woman is in the home and that she is transgressing her true functions when she goes into public life. What do you think of his dictum on this matter?"

"The older I grow, the more tolerant I become of the individuality and the tendencies and beliefs

of others. You know I was raised in Maine, and I was surrounded by and imbibed the straight-laced way of looking at things. I suppose I had some of the Puritan intolerance; it was to be expected; but my views have gradually broadened until I now have the widest tolerance.

"Because most women find the true expression of life in home making and child rearing, there is no reason why others, with different cast of mind, should be shut out from opportunities and the evidently intended path. The home life is the natural one for perhaps eighty per cent of the women of the civilized world. I agree with Mr. Cleveland in that."

"But how about the other twenty per cent?"

"That's just it," answered the prima donna in her vivacious manner; "how about the rest? God

EMMA EAMES AS THE COUNTESS ROSINA

knows more about it than Grover Cleveland. God placed in the minds and hearts of these others different aspirations and surrounded them with other environments. He seems to have set them apart for other things, even if one cannot say better things.

"Shall they, then, crush out their individuality? No, I believe in a woman following her own inclinations, but not rushing into public life at the first opportunity or at the first desire for applause or flattery, not leaving the home life unless driven to do so by circumstances or by talents that will not be crushed into the background. The women who go before the public have a mission besides making a living or gaining applause. They give the public esthetic enjoyment and add to the sum-total of public culture."

I was industrious when my companions were at play. I used to take my little clavier under my arm and go off to practice. When I sang a solo the baker near St. Stephen's yonder always gave me a cake as a present. Be good and industrious and serve God continually.—JOSEPH HAYDN.

INDIAN MUSIC

"Imagine sounds that carry to your mind the wondrous waters of Niagara, fading in their brightness and beauty to be forever renewed, also a weird melody, the strangest and most impressive, in a sense, that ever greeted human ears, and you have certain prominent elements in the native music of the North American Indian."

Thus spoke Dr. Walter Hough, the anthropologist of the Smithsonian Institution, who has for years been studying the racial traits of the Indians, and who recently returned from an exploration of the pueblo region of Arizona and New Mexico.

"Unlike most music of savages," he went on, "the music of the Indians is not monotonous in character. It expresses sometimes infinite gayety, again wailings that bring before you the Gregorian chant, and even the fantastic creations of Paganini.

"Indeed, the melodies that accompany the snake dance of the Hopis is, I believe, the most weirdly, strangely enthralling that can be heard. It is enough to make a man's hair stand on end, and send a nervous quivering throughout the entire frame.

"In the summer of 1896 I had the good fortune to observe, with Dr. J. Walter Fewkes, the flute ceremony of the Hopi pueblo of Walpi, Ariz. In the course of the ritual, which is an invocation for rain, a series of songs are repeated each day for several days.

"It was the first time I had ever heard Indian music, and the sensation was quite novel. The chorus of priests, rattle in hand, sang in unison before the flute altar, in a narrow, low room without windows, greatly augmenting the volume of sound.

"The time was set by the speaker chief, who uniformly shook his rattle eight beats in five seconds for all the songs and for each day's songs with the accuracy of a metronome. There were three beats in each measure.

"The pitch was low, the range limited, and the deep, vibrant voices seemed to portray the winds, thunder, rain, the rushing of water, and the elemental forces of nature, interwoven with human passion, and those emotions called forth by the exquisite melodies of modern civilization. At times the music resembled the operatic beauties of the Italian composers.

"The notation of Indian music is chromatic, not capable of expression on any instrument save the violin or the specially constructed flutes, which later accompanied the singing. These flutes, by the way, marred the effect of the voices. They were played in unison on the octave above the voices.

"In general effect the music is minor, but frequently major motives of great beauty spring out of dead-level monotonous minors. Sometimes a major motive is followed by a minor counterpart of the same.

"There is much slurring and an occasional reduplication comes in with great effect. A number of songs are monotonous, with once in a while a strong staccato movement. The closing song was spirited and might truly be called beautiful.

"It consisted of several legato verses, each closing with a turn, a rapid vibration of the rattle, and a solemn refrain. In structure and melody it resembled a Christian hymn. The music, indeed, reminded me of the Gregorian chants, and to me some of the motives seemed quite equal to those upon which Handel built his great oratorios.

"The Hopi are noted far and near over the pueblo region as song makers. It is a matter of surprise to travelers to find a cheerful, happy, music-loving people amid the arid wastes of Tusayan.

"Dr. Fewkes, who was with me, remarked: 'I have heard nothing more effective than this singing of the priests at the flute ceremony. It is a concert to which the most cultivated could not take exception. It would be well to judge the musical capabilities of the Indians by these weird and characteristic songs, not by imaginary war-cries and discordant noises, which form the basis upon which Indians have too often been criticised in this regard.'"

AN ELEMENT FOR SUCCESS

FAY SIMMONS DAVIS

Perseverance is stimulating and cumulative, and sharpens the creative powers; it makes us resourceful and puts energy out at compound interest.

Perseverance wins the only kind of reward worth winning — wholly our own, and a part of our very being.

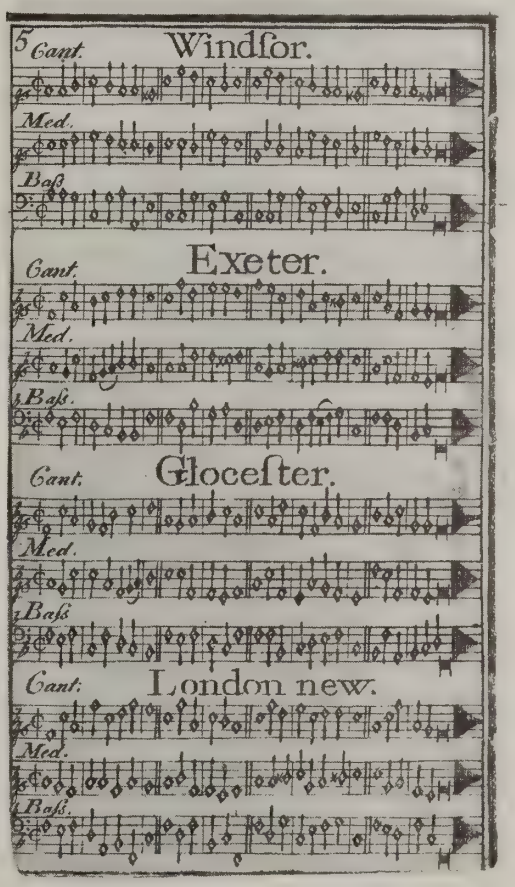
Perseverance includes aspiration, as well as ambition; it maintains a code of high ideals in the pursuit of a worthy object. "The day is always his who works in it with serenity and great aims."

Perseverance makes men and women of might. It is also infectious; it sheds a reflective power of determination on those around us.

Perseverance enables us to give two bounds forward for every fall, and cultivates a discriminating power to avert a similar mishap when it again threatens. The effects of the fall are lost in the stimulating efforts of the forward bounds. "Perpetual pushing and assurance puts a difficulty out of countenance and makes a seeming impossibility give way."

Perseverance gives a glow and a zest to life: it clears the vision. Tenacity of purpose gives self-respect, and surrounds every living thing with interest. Through power of his own effort a man grows to appreciate — more than fine gold — the brains and refinement of his neighbors.

Perseverance leads men to absorb that most nourishing of all foods, experience, which contains



A BEAUTIFUL EXAMPLE OF EARLY AMERICAN MUSIC ENGRAVING

life-giving ingredients for success. "Mere genius darts, flutters and tires, but perseverance wears and wins." The steady, industrious worker makes the best citizen, and, by his example and personality, the greatest power for advancement

in any community. The life of activity is the life of growth, and impels a man onward to the ultimate unfolding of himself.

"Who first consults wisely, then resolves firmly, and then executes the purpose with inflexible perseverance (undiscouraged by those petty difficulties which daunt a weaker spirit), that man can advance to eminence in any line."

A TALK ON TEACHERS' ADVERTISING

JOSEPHINE TOZIER

The young teacher having started out on his chosen career, finds a difficult problem presented in the question of advertising properly. In a strictly commercial country so much competition exists, even in the professions, that unless wares, be they tangible or intangible, are spread out at the purchaser's door, they will be passed by unnoticed for others cleverly recommended by more enterprising sellers.

The timid, the poetical, and high-strung enthusiast, who has prepared to devote his life and his energies to a muscial mission, wishes to announce this fact, yet he hesitates to put his adored and respected art in the same category with breakfast food, patent medicine, and laundry or toilet soap. To advertise that you are the *only* person who can teach a celebrated teacher's touch or voice production is a very poor compliment to the celebrated teacher. I should fight very shy of the man who makes such a statement. He might be able only to produce a successful class of *one* himself, and I would run serious risk of not being that *one*. This is the seamy side of musical advertisement, on which I hope no reader of this article will ever be so ridiculous as to venture; but with the overcrowded state of the profession in the larger cities, and the great amount of competition among many young teachers, all equally good, some way must be evolved to bring an instructor into notice, if he or she is to be prosperous and influential.

The first launching in the career is most successfully done by the aid of the master who has prepared the teacher for his work. Those who are lucky enough to get occupation in a school need only prove competent in their duties and the future is assured. But schools are hard to get; such places have a long waiting list. The master, after giving the first helpful push, is occupied assisting other pupils who are ready for work — so what then? Friends are good advertisers, but they sometimes fail to inspire confidence. But the interest of the pupil in a land where little Sammy and Miss Jennie not only have a forcible say about the teacher with whom they wish to study, but can induce most of their young friends to follow their lead, — in such a country Sammy and Jennie must be interested and led to help the good cause.

The amount of invention necessary to do this differs according to the tact and imagination of the teacher. After inserting a proper and modest card in as many musical papers as it is possible to afford, that your address may be known, and the special branch of teaching pursued, something must be done with the class. The following work of a teacher who in five years firmly established herself may be worth reading. While the main idea is by no means new, the development had many charms of novelty, which after a few months appealed very strongly both to the pupils and the parents. She discovered very early in her teaching career that schoolgirls seldom go to concerts, and are perfectly ignorant of any musical literature beyond that which they themselves or their closest friends may learn by the few pieces played in the course of a year. She stipulated at the beginning of the second season that every member of her class should appear once in two months at an afternoon tea party, in the course of which she gave some entertaining facts about the art of music as distinct from the playing of pieces, and then called upon one or another to illustrate her remarks by playing a phrase or two. As she knew perfectly well the work of each pupil, she likewise knew just what phrases to choose. She required no one to play an entire piece, — indeed, would not allow it. There was therefore none of the time, so disastrous to advancement, spent in practicing wildly for a musicale. After the second musicale the children or grown girls perceived that they would not be required to stumble nervously through a passage uncertain to their fingers, they brought no music, for the teacher kept what she needed on the piano, and gradually each and every one acquired a certain confidence when asked to play. The teacher made the event as entertaining as possible, and varied her subjects so successfully from the foundations of musical language to its rhetoric, that the pupils were rarely absent on these occasions, and only too glad to come season after season to the "Class Teas." Outsiders were rigorously excluded, but no advertisement ever devised had a more successful return. The fame of this class attracted both scholars and parents, and now the pupils of her underteachers being admitted, she has the assistance necessary to make these gatherings a very delightful social function. Much more skill is required to conduct this enterprising means of enlarging a class than is needed to write flamboyant notices of the teacher's perfections, while it possesses the greater merit of being alike reliable and useful.

Let the dates of these meetings be submitted to the parents at the beginning of the term or season. Have it clearly understood with the parents that attendance is required, so that there may be no interference by dancing school, riding school, or the various other schools frequented by overeducated young persons who have all their accomplishments crammed into their young minds between November and June.

This brings us to the circular which should go each season to the parents. It should be modest, clear, but very decided, and direct. It requires care in the composition, a tactful discernment of the persons to whom it is addressed, and it should not be distributed indiscriminately, or carelessly sent out broadcast. That process is undignified and unworthy of an artistic profession, a waste of money, and useless as an advertisement.

SUIVEZ-MOI, BEAU JEUNE HOMME
(WAGNER CARICATURED AT THE TIME OF THE FIRST PERFORMANCE OF "LOHENGRIN" AT PARIS)

UNDER THE CHESTNUT TREE

Practical

"Why do you teach your children to recite and sing?"

"Well, answered the practical woman, "there has to be some way of starting people who come to see you and forget when it's time to go home."—*Washington Star.*

* *

Why He Left

"What has become of the big man who used to beat the bass drum?" asked the private of the drum major.

"He left us about three months ago."

"Good drummer, too, wasn't he?"

"Yes, very good. But he got so fat that when he marched he couldn't hit the drum in the middle." — *New York Evening Sun.*

* *

Mozart's "Twelfth Massachusetts"

Cardinal Gibbons was facetious when the Irish ladies' choir of Dublin called on him. Turning suddenly, he asked: —

"Which one of you is the oldest?"

None claimed the honor and all blushed.

The talk drifted around to Gilmore and his band, and Cardinal Gibbons told of how Gilmore, at Coney Island, hearing that the Cardinal was in the audience, played *Maryland, My Maryland*, and how it pleased him.

"Gilmore," said the Cardinal, "was famous for his playing of Mozart's *Twelfth Mass.* Once he played it in a North Carolina town and next day the local paper announced that he rendered with great effect Mozart's *Twelfth Massachusetts.*" — *Pittsburg Dispatch.*

* *

Novel Effect

Knicker. — "So Jones has a new idea for opera?"

Bocker. — "Yes; his notion is to have the house sing and the stage talk."

* *

"You are to produce *Rienzi,*" said Siegfried Wagner to the conductor of the Leipzig Opera House the other day.

"Yes," said the conductor. "We will give *Rienzi* next month."

"I suppose you will use mama's version?" suggested Siegfried, referring to his mother's audacious "editing" of *Rienzi.*

"No, Mr. Wagner," replied the conductor, dryly, "on this occasion we will use papa's."

* *

Once upon a time a certain pianist, whose name must remain a secret forever for the sake of his family, which thinks him a respectable burglar and not a mere musician, was asked why Moritz Rosenthal did not come to this country this season.

"He heard that I was coming," answered the pianist in question. That's all!

* *

Not Anxious to Please

Neptune. — "I say, Boreas, if you keep on blowing like that you'll get yourself disliked."

Boreas. — "What do I care! It isn't my business to furnish popular airs." — *Modern Society.*

* *

Many would like a Copy

Mr. Stoplate. — "That song always moves me."

Miss Tersleep. — "If I'd known that, I'd have sung it an hour ago." — *Cleveland Leader.*

No Doubt about It

The Press Agent. — "That girl is just full of talent."

The Manager. — "She must be. I've never seen any come out."

* *

Composer. — "What do you think of my compositions, Mr. Curtis?"

Critic. — "My dear sir, they will be played when all the great masters have long been forgotten."

Composer. — "Really!"

Critic. — "Yes, but not before."

* *

Editor. — "In what sort of metre is Scribbler's poem written?"

Assistant. — "Gas meter."

Editor. — "How so?"

Assistant. — "So many unnecessary feet."

* *

Years ago, when Madame Nordica was not as famous as she is to-day, she was keeping house in her home in Maine. One cold day in January a tramp knocked at the front door.

"What!" said Madame Nordica — then Miss Norton — "you here again?"

"Yes, ma'am," said the tramp, respectfully; "I want to know, ma'am, if you will be kind enough to give me the recipe for that mince pie I had here yesterday."

"Why, what do you want the recipe for?" asked the future prima donna.

"To settle a bet, ma'am," replied the tramp, edging away. "My pardner says you use three cups of Portland cement to one of molasses, but I claim it is only two and a half."

* *

Too Dashing

"I have heard a great deal about the 'Subway Air,'" said the caller at the New York music store; "are there any words that go with it?"

"There are," responded the salesman, "but they are unsuitable for publication."

* *

"Did you hear Kubelik play? They say he has a Stradivarius."

"Mercy! Has he? Where did he get it?"

"In Europe, I believe."

"Too bad! And can't the doctors do anything for it?" — *Cleveland Leader.*

* *

How, Indeed?

The poor musician 'gan to cry.
And this is what I heard him say:
"How can I lay a little by
When none will buy my little lay?" — *Judge.*

* *

Patience. — "That long-haired man with the diamonds, at the piano, I just heard, started life as a poor musician."

Patrice. — "Well, he's that yet." — *Yonkers Statesman.*

* *

She said she'd sing some songs for him,
And he was sore beset;
She meant it as a promise, but
He took it as a threat. — *Houston Post.*

* *

"So your daughter has become a soloist?"

"Necessarily," answered Mr. Cumrox, wearily. "Perhaps I ought to be thankful that she isn't a trio or a quartet." — *Washington Star.*

Nell. — "Miss Scharp tells me she is going to learn to play the harp."

Bell. — "What nonsense! She hasn't any talent for music."

Nell. — "Oh, she knows that; but she has lovely arms."

* *

David Warfield, whose wonderful performance in *The Music Master* has stirred New York for the last two years, does not have to act the rôle, for he is an exceptionally fine musician. At a recent social function, at which he was the unfortunate attraction, one sweet, young thing, of the feminine persuasion, buttonholed him and murmured softly: —

"How strange it is, Mr. Warfield, to see you play the music teacher in such a realistic way, when actually you do not know anything about music. That is the way with actors, I suppose. They seldom are really the characters they represent."

Then she induced him to give an imitation of himself as the "music master," and Warfield did so. Suddenly he stopped, dropped his hands on the keyboard, and swept into a Chopin nocturne, playing it with the execution and expression of a master. He held his audience spellbound, and when he had finished, said quietly to his tormentor,

"Sometimes an actor does know music, you know, after all."

* *

Small Girl. — "Mother, do all the ladies who wear birds on their hats sing?"

Mother. — "No, dearie; but the man who pays for them sometimes whistles."

* *

Economy

First Maid. — "The Missus must be economizing these days."

Second Maid. — "Why, what makes you think that?"

First Maid. — "Because her two daughters are playing on the same piano."

* *

Silence

A. I. — "Did you ever sing that beautiful little song called *In Silence?*"

I. T. — "No; I never heard it."

* *

Illiterate

Wigwag. — "Hello, Scribbler. Writing any music these days?"

Scribbler. — "Only enough to keep the wolf from the door."

Wigwag. — "Great Scott! The wolf can't read music, can he?"

* *

John Philip Sousa is the new musical Joan of Arc. He has started a crusade against the hackneyed themes and names utilized by composers. In order to show proof to be used in his reform movement, he has quoted statistics which are now made public for the first time. According to his records there are: —

Songs about spring, 1,263,842; about love, 954,626; about bygone days, 823,437; about flowers (pansies, roses, hyacinths, daisies, forget-me-nots, and lilies), 749,211; about romanzas, 672,843; cradle songs, 547,738; nocturnes, 521,266; reveries, 479,143; songs with violin obbligato, 422,001; serenades, 366,242; aeolian murmurs, 133,009; rippling cascades, 102,112; variations on *Yankee Doodle*, 96,424.

THE ENGLISH VOLUNTARY

CHARLES W. PEARCE

I

The recent issue by the Vincent Music Co., Ltd., of a series of old English voluntary movements (edited by Edmondstoune Duncan) as a continuation of their series of pieces known as *The Octavo Organ Book* paves the way for a common sense consideration of the claims of this old-fashioned art design upon the organ performers and listeners of the present day. That the old English voluntary as a musical form has survived both the style and period which called it into existence, there can be no doubt; the six organ "sonatas" of Mendelssohn (Op. 65) — never since equaled as pure organ music, and certainly never surpassed — would prove this fact down to the ground, were any proof needed. For Mendelssohn, during his visits to England, had heard English organists play voluntaries, and in spite of his modest assertion (in a letter dated Aug. 29, 1844) that "he did not precisely know what the term *voluntary* meant," he had himself extemporized voluntaries in more than one English church, and he commenced the composition of Op. 65 with this term full in view, even though he afterwards substituted the word "sonatas" for voluntaries in his title-page. What, then, is the essential points of difference between a voluntary and a sonata? Both may, and generally do, contain several movements contrasted alike in length, intensity of tone, rhythmical character, pace, and key; but while the sonata contains at least one important movement (or division), which is constructed more or less in the "first movement" or "sonata" form inaugurated by Emmanuel Bach and Haydn and perfected by Mozart and Beethoven, the voluntary proper, avoiding this modern design, contains movements cast in the "Ancient Simple Binary Form" used by Handel and J. S. Bach in their suites, etc. The chief advantage to be gained by the use of the older form in cyclic organ music may be stated in one word — *brevity*.

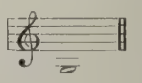
II

This is an important point. Brevity *must* be desirable in all movements written for any musical instrument, the tone production of which is removed from the personal effort or controlling touch of the performing artist by a series of more or less mechanical devices, and is consequently less human, less emotional, less psychical than the tones which come to the listener direct from the actual contact of the player, as in the case of the piano, and every orchestral instrument in existence. The organ, necessarily a *mechanical* tone producer, cannot be listened to at a stretch for anything like a considerable period of continuity, without engendering a feeling of aural weariness. It is true that organ tones can be varied both in quality and intensity to an almost bewildering extent, but how? Only by changes which are *lacking in gradation*, being more or less lumpy, sudden, and artificial; conveying to the listener's mind notions of energetic control over vast quantities of inert matter, which is movable only by the aid of powerful machinery. And the mission of the Swell Box itself! "*Faked*" expression, shall we say? Not a *real* (*i. e., artistic*) increase or decrease of tone production at all; but merely an unchoking or choking of sounds which never

ORGAN IN THE FRELSERKIRCHE, COPENHAGEN

vary in their intensity, by means of the opening and closing of the Swell shutters — exactly as a naughty boy might *cres.* or *dim.* the buzz of a "blue-bottle" fly by uncorking and recorking the vessel in which he has imprisoned the angry insect.

This is stating the very obvious truth in a somewhat brusque way. It can, however, be expressed more gently. My old friend, Dr. E. H. Turpin, in comparing the orchestra with the organ, says that the former may be described as "the *sunlight* of music, full of power, warmth, and vitality, glorying in its vast surging harmonies." The organ, on the other hand, is "the *moonlight* of music, exercising an influence characterized by calmness and reflected power, endowed with less emotional force, and perhaps heard at its best as an exponent (both as regards sustained power and tone clang) of the interwoven lines of contrapuntal thought, which may be largely regarded as an exposition rather of mental than emotional activity." Here, then, are the reasons why organ movements (to be successful and long-lived) should be comparatively brief, as viewed in connection with orchestral or even piano music. And there are considerations which affect ourselves as much as they affected our ancestors of a century ago; they will also influence our posterity as long as organ tones are produced mechanically, and are controlled by the efforts of a single performer. Efforts! Yes, indeed, the organ mechanism of a century ago required efforts of muscular power and agility which we find difficult to realize. What was the English organ of a century ago, for which so much beautiful music was written? I shall hope in a subsequent article to describe this instrument rather fully. Suffice it to say now, that the Great and Choir organ keyboards ran down to GGG, so that the manual Double Diapason (when there was one) ran into the 32 ft. register. The Swell manual was more or less incomplete, beginning as a rule on Fiddle G

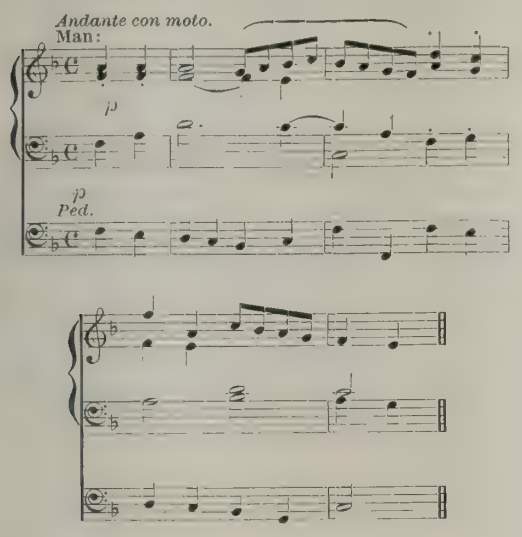


as its lowest note; so that practically the Swell was only fit for melodic purposes, the bass being supplied by the stops of the Great or Choir organs. A pedal board (even without "pedal pipes") was a comparatively rare luxury; and where it existed, it was placed in such an uncomfortable position with respect to the manuals, that when the organist did venture to play some slow bass notes with his feet, he had to use his thumbs as a support to his body, by pressing them against the point of the keyboard he was at the moment manipulating. There were no "overhanging keys" in those days! Roughly speaking, the organist of a century ago had a great organ with fine, rich, mellow diapason tone, brightened by 4 ft., 2 ft., and "plenty of mixture work," colored by a few reed stops of a thin and very often harsh quality of tone. The Choir organ can be best described as a kind of *miniature Great*, the stops of which could be made as useful for solo as for accompanimental needs. The Swell (as we have seen) was largely used as a *solo* manual. Voluntaries were played at three different stages of divine worship: (1) at the very beginning, as a musical introduction or "introit"; (2) in the middle, between the Psalms and the Lessons (in order to afford the minister a rest); and (3) at the very end, as a conclusion to the service. The character of the Introductory Voluntary can very well be gathered from these lines in Keble's *Christian Year*, written in 1827: —

> "The door is closed: but soft and deep,
> Around the awful arches sweep
> Such airs as soothe a hermit's sleep.
> From each carved nook, and fretted bend,
> Cornice and gallery seem to send
> Tones, that with seraph hymns might blend."

We can well imagine the following beautiful voluntary by Samuel Wesley (1766–1837) con-

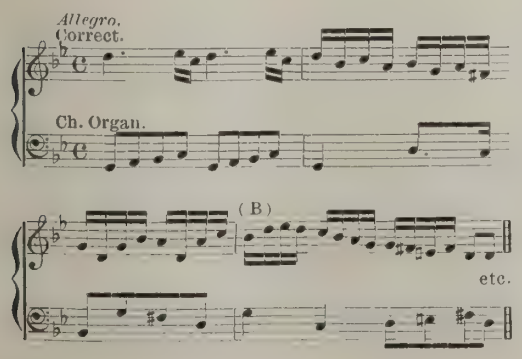
juring up such thoughts as these of Keble's given above: —



The Middle Voluntary, which (unlike the other two) was undisturbed by the more or less noisy movements of an assembling or departing congregation, gave the organist the most favorable opportunity for displaying his skill: it was generally the Middle Voluntary in which brilliant solos upon the "Cornet" stop were heard. The Cornet was a mixture stop generally of V ranks (viz., Stop Diap., 8 ft.; Prin., 4 ft.; 12th, $2\frac{2}{3}$ ft.; 15th, 2 ft.; and Tierce, $1\frac{3}{5}$ ft.), the pipes being of "enormous scale and voiced flutey," without a break in the compass, which, as a rule, extended from middle C to the top of the keyboard. Writing in 1831, the Rev. John Antes La Trobe in his *Music of the Church*, quotes the following lines from Pope's *Essay on Criticism* to describe the but too often *disturbing* character of the Middle Voluntary: —

> "But rattling nonsense in full volley breaks;
> And never shocked, and never turned aside,
> Bursts out, resistless, with a thundering tide."

"The constant changing of the stops," writes Mr. La Trobe, "with combinations frequently abrupt and whimsical, as though the assembled congregation were a company of professors, met together to decide upon the powers of the instrument, — the fanciful use of the Swell — the introduction of long, straggling cadenzas — profusion of 'ornament' — arpeggio and pianoforte passages may be noticed among numerous faults of manner." Here is the beginning of a *good* specimen of "Cornet Voluntary" from the pen of a musician (John Marsh, 1752–1828) who, in the Preface to his Voluntaries, says that "the cornet should be but sparingly used, especially in the major key."



"The style of the Concluding Voluntary, which accompanies the retiring congregation, is generally of a loud and *stunning* character," continues Mr. La Trobe. Nevertheless, it often had the effect of bringing people into the church who had not been there during service time. "It was no uncommon thing," writes a critic of a century ago, "when the service in S. Andrew's Church, Holborn, or at the Temple Church was concluding, to see forty or fifty organists at the altar, waiting to hear the Concluding Voluntary played by John Stanley (1713–1786). Even Mr. Handel has been frequently observed at both of these places." It was the Concluding Voluntary — unlimited to a large extent by the time allowed for it — which was cyclic in form, and which furnished Mendelssohn with models for his immortal six sonatas for the organ. Sir Walter Parratt considers Samuel Wesley, William Russell, and Thomas Adams as the last and greatest of the old voluntary players. If we study the written voluntaries of Samuel Wesley, we find that he favors the old French overture form of Lully: —

(1) A dignified slow movement, either for great Diapasons or for Swell and Choir stops.

(2) An Allegro for Full Organ, or for great to 15th.

(3) *Sometimes* another short, slow, and *soft* movement [leading to]

(4) A Fugue or Fugato movement.

Although Samuel Wesley knew exceedingly well how to write movements in modern "Sonata form" (having produced an admirable one in D major in May, 1788, *before* Mozart wrote, in that same year, his three great symphonies — the G minor, the E♭, and the *Jupiter*), he does not write a single movement of any one of his Voluntaries in this form, choosing rather the ancient, simple binary form used by J. S. Bach and Handel in their suites, etc. Russell did very much the same thing, and so, too, did the organists of an earlier epoch, such as Stanley, Roseingrave, Green, Worgan, Battishill, Arne, Dupuis, and others. In the Vincent *Octavo Organ Book* volumes before me I see that Mr. Edmondstoune Duncan does not include a single specimen of a cyclic voluntary: he merely gives either selected movements from longer works, or single short pieces of a separate and detached character. But any organist who obtains these volumes and uses their contents cannot fail to "ask for more"; and luckily, for the compilation of future selections, there is a large and ample store to draw from. The great point of these delightful old pieces is this: whilst admiring the heroic way in which their writers surmounted the obstacles and limitations of the terribly inefficient organ mechanism and tonal balance they had to make the best of, the organists and writers for the organ of to-day may well reflect upon the advisability — in cyclic works — of preferring (as Mendelssohn did) the older and shorter form of sonata design, so as not to run the risk of overdoing the *length* of their movements. For although the organ, with all its recent improvements, etc., can never take the place of the orchestra as an emotional exponent, it can, nevertheless — in its own way, and in its own idiomatic language — say a very great deal which is dignified, grand, noble, and even "touching."

CORRESPONDENCE

Organ Pipe Metal (Continued) — Zinc

The use of zinc for the basses of organ pipes was introduced in the United States about 1847. When received from the rolling mills at the mines it is in the form of sheets of various thicknesses, about three feet wide, and is shipped in cylindrical iron boxes, in long rolls. In this state it is hard rolled, and before it is used in organ pipes it is annealed by being baked by the organ pipe maker, before it is cut up. This is done usually by placing the roll in the casting kettle and covering it, and then heating it carefully without melting until it is so softened that it will bend without breaking, and stay in place when it is formed into pipes. Hand-rolled zinc is very brittle and springy. It is generally used below Tenor F in 8 ft. stops, while some builders use it from Tenor C downward. It should be used thicker than is generally customary, otherwise the tone is light and not pervading. This deficiency is very marked when used in 16 ft. Pedal stops as compared with wood pipes of the same pitch. The upper lip and language of a zinc bass should be very thick and solid, being usually of heavy pipe metal. Cheap builders simply flatten the upper lip in the zinc itself without inserting thick pipe metal. There is also an insertion of pipe metal at the top of the pipe for the slotted tuning roll. Zinc is used for the stems of reed pipes which are topped with pipe metal. Large zinc pipes are frequently clamped around the bodies with thick zinc collars to make the vibrations firmer. Concerning the thickness and solidity of an organ pipe, it should be firm enough to resist any tremulous vibration of the material of which it is made, otherwise the musical vibrations do not give their requisite firmness, as there would be conflicting sound waves between the aerial and material vibrations.

English Parish Organists

A. M. R. — "The position of an organist at a well-worked parish church is usually more satisfactory than in a cathedral. Here there are no meaningless traditions and red-tape usages to correct. A vicar who desires his services to be rendered in an efficient manner secures the best musician he can, and then gives him a free hand to work to the best of his abilities. He supports without interfering, encourages without dictating. Nevertheless, though things are as a rule better managed in parish churches than in cathedrals, there is still no closing our eyes to the fact that there is commonly a feeling of misunderstanding between the clergy and organists, and, remembering the work upon which they are both engaged, this is most deplorable.

"The feeling may perhaps be traced to a notion commonly held on the one hand by organists, that the clergy lack appreciation of the artistic side of church worship and keep sufficiently in mind the religious point of view.

"I believe that a good deal of this feeling is groundless. I am not going to criticise or find fault with the clergy; that is a task for one of their own cloth. Every organist has known of cases of hardness, injustice, lack of sympathy, or even worse, but we shall not remedy these things by talking of them.

"Speaking as an organist to organists, I would say that our concern is to set our own house in order. If there is no ground for the suppositions to which I have referred, let us prove it by our deeds. It is expected of a parish organist that he should show himself a real churchman. This is certainly a reasonable demand, and the more organists show themselves ready to respond to it, the more they will enlist the sympathy and support of the clergy as a body."

Comments. — A talented organist who constantly exercises the spirit of good will to all in his adaptation to his environments, constantly manifesting unselfishness without complaining of conditions which he must make the best of, and who faithfully performs his part in adapting himself to all circumstances, has an influence for good upon all with whom he is professionally brought into contact.

HALFDAN KJERULF — THE PIONEER OF NORWEGIAN MUSIC

CARL HANSEN

I

Modern Norwegian music has three splendid exponents in Grieg, Svendsen, and Sinding, and on this side of the Atlantic they have obtained some measure of recognition, particularly Grieg. But what of that man without whom this triumvirate perhaps never would have attained its greatness, — the pioneer of Norwegian music, Halfdan Kjerulf?

Many who admire the music of the intensely Norwegian Edvard Grieg, of the more cosmopolitan Johan Svendsen, and of the ultra-modern Christian Sinding, very likely know Halfdan Kjerulf only by name or through a few piano compositions. These, although of much beauty, are rather insignificant as compared to his songs, and do not reveal the real Kjerulf. Perhaps he is known only by the ballad *Last Night*, or *Sehnsucht* as the German title is, by no means the prettiest of Kjerulf's songs. It must have been introduced into this country by some strange accident, and thus been given a place in song folios.

The songs of Kjerulf — there are very nearly a hundred of them — deserve a far greater popularity in America than is theirs. They possess a beauty of which one never tires. The Norwegian color, although ever present, is kept in the background and does not force itself upon the listener as in the music of Grieg.

Norway has to-day undoubtedly a larger percentage of composers than any other country. With the possible exception of Agathe Backer Gröndahl, who, by the way, was a pupil of Kjerulf, none manifest the influence of Kjerulf in any marked degree. The innovations made by Grieg have appealed to them more strongly, and his ascendancy is ever in evidence. The influence of Kjerulf should, however, not be underestimated; but that influence was rather upon the musical people of Norway at large, in shaping their tastes and awakening an interest in the music of the masters of the German romantic school. Although the later composers in their music do not betray the influence exerted by Kjerulf, because it is only indirect, his life work is of vast importance. He was the original pathfinder, the first one who tapped that wealth of musical material which the Norwegian folk songs presented, and gave it a truly artistic form.

When Grieg emulated Kjerulf and gave to the world his masterpieces, his music was no more artistic than that of Kjerulf, but his style was more dashing and daring. Consequently he became the one to whom the lesser lights looked for inspiration and received veneration as the father of the Norwegian school, — a title which properly belongs to Kjerulf.

The hold which Kjerulf still has upon the musical people of Norway may in a measure be ascribed to his sympathetic personality. It is really strange that the pioneer of Norwegian music should have been so reserved and unassuming an individual. In everything he undertook he was unostentatious to a fault. His genius all his life was hemmed in by obstacles and adverse conditions.

II

A biography of Halfdan Kjerulf would be incomplete without some comments on the esthetic development of Norway, musically and otherwise, through that period of fermentation which followed her attainment of independence.

By way of introduction, it is necessary to mention that Norway prior to 1814, the year it became an independent sovereign state, had been practically untouched by the currents of European culture. For some time it had not produced a single man whose fame penetrated beyond the borders of the land. After the declaration of independence came an awakening of the dormant artistic spirit. The high place which Norway to-day holds in the realm of literature and music as well as in other branches of art and science, is due to that period of *renaissance* which followed the stirring events of 1814.

The year after this memorable year — 1815 — Halfdan Kjerulf was born in Christiania, in a home of culture. His father was a high state official. He received a liberal education, studied law, and became clerk in the department of finance. Music, however, occupied a good deal more of his time than the reading of law. He obtained his early musical training from the best piano teacher of the Norwegian capital, and was also made familiar with the rudiments of harmony.

At the age of twenty-five he was thrown on his own resources through the death of his father. The music which he loved and which hitherto had been play to him, he would have had to give up, if he wished to devote his time to the legal studies which he disliked. To continue to indulge in music would be to vacillate between two diametrically opposite interests. He chose music as a livelihood.

It must be borne in mind that the surroundings in which he had grown to manhood had not been such as would tend to develop his talent. Christiania at that time had practically nothing to offer in a musical way, and it was only in a few private families that a real musical atmosphere existed.

The years of Kjerulf's early manhood were, as already has been mentioned, a period of fermentation. The Norwegian national spirit began to assert itself, and under these circumstances it was only natural that a group of extremists should appear on the scene. They maintained that nothing in art would suffice unless it bore the genuine Norwegian stamp, whereas others, insisting they were no less Norwegian, held that Norway must receive and absorb new ideas from the centres of European culture and especially from Denmark, a country which in many ways had common traditions with Norway. In the field of literature this war was waged most fiercely. The foremost champions of the two factions were the poets Wergeland and Welhaven, — the former representative of the Norwegian extremists, the latter of the moderate element. Kjerulf allied himself with the Welhaven group.

When Kjerulf adopted music as his profession he became a piano teacher. That same year he wrote his first song, *Nokken*, to words by Welhaven. This song is still, though composed three quarters of a century ago, one of the gems of Norwegian music. *Nokken*, or the "nix," is a water-sprite, who on summer evenings arises from the depth of the waters and on a harp of gold plays most beautiful melodies. Kjerulf caught the mystic spirit of this legendary poem, and the true Norwegian color was there, though subdued.

The young composer felt that in order to continue along this line he must have a more comprehensive knowledge of the technical side of composition, but it was not till in his thirty-second year that he actually began the study of counterpoint under Arnold.

In 1850, when he was thirty-five years old, he received a stipend from the Norwegian government, went to Leipsic and spent one year in earnest study. The ascendancy of Schumann and Mendelssohn was then at its height, and Kjerulf was swayed by it. He drank deep draughts of what the German romantic school had to offer.

III

After a year in Leipsic he returned to Christiania, where he spent the remainder of his life, with the exception of a few short trips abroad, as a piano teacher. In the later fifties, with the assistance of J. G. Conradi, he introduced Beethoven's symphonies and other great works to Christiania audiences. His time was divided between teaching and composing. Although he knew not how to manage things so as to occupy the centre of the stage, his influence on Norwegian music gradually became dominant.

Kjerulf had for many years been in poor health, and Aug. 11, 1868, he died. Four days later he was laid to rest in Christiania. On the twenty-third day of September, 1874, a monument to him was unveiled at Christiania with elaborate ceremonies. Grieg composed a cantata for the occasion.

It was the good fortune of Norway that its pioneer composer was a man like Halfdan Kjerulf. He perceived the beauty of the Norwegian folk songs, and, thoroughly imbued with the tastes and sentiments given him by the German romanticists, he transplanted the romantic school on Norwegian soil, where that school has brought forth some of its fairest flowers. Kjerulf sought no new forms, but molded his songs in the forms which the German romanticists had employed, albeit giving them the stamp of his originality and of his nationality.

In most of Kjerulf's romances the melody is beautiful, and the treatment of the accompaniment is excellent. There is a strain of sadness and of longing in all of them. When he sings of joy and happiness, the music has not a genuine ring. Kjerulf never married, yet he sang of the happiness which true love brings, but which was denied to him. At one time he had said something of a pair of blue eyes which he could not forget, and all his romances seem with this in mind, to recall an unhappy lot, not that they contain the sentiment of "lovesickness," for they are never insipid or morbidly sentimental. In one way Kjerulf excelled almost every composer who has lived, — he knew his limitations, and he never ventured beyond the borders to which he had confined himself. When Björnstjerne Björnson once suggested that they cooperate and produce something great in the form of a song cycle or music drama, Kjerulf shrank from the undertaking.

Most of Kjerulf's early romances were composed to words by Welhaven. The Norwegian patriots of the first part of the past century gradually came to acknowledge the genuine character and purely national color of his music. Björnson, who later became the leader of this faction, caused his early poems to be set to music by Kjerulf.

A male quartet, which Kjerulf organized, gave him some of his happiest hours. For this little band of singers he composed many songs which are the gems of Scandinavian quartet music. If what Kjerulf produced of quartet music never had been written, the male choruses of the Scandinavian countries would not have attained their present high standing. It is due to the efforts of Kjerulf and a few others that male chorus singing has become a power in the lands of the North. Had Kjerulf left nothing but the music he composed for his little band of singers, his memory would still be cherished like that of no other Norwegian composer.

With his *Brudefærden* the students of Upsala, Sweden, scored a triumph in Paris in 1867; likewise the Norwegian student singers in 1876, also in Paris. Many of his male chorus works have been given in this country by Scandinavian singing societies, and lately they have received a particularly fine interpretation by student singers from abroad. When the Swedish students visited this country during the summer of 1904, they gave no concert without at least a couple of Kjerulf's songs on the program. Last spring a chorus of fifty Norwegian students from the university of Christiania gave about thirty concerts in the United States in the short space of five weeks, and Kjerulf proved everywhere to be the favorite composer.

JOHANN PETER SWEELINCK

Club Programs from all Nations

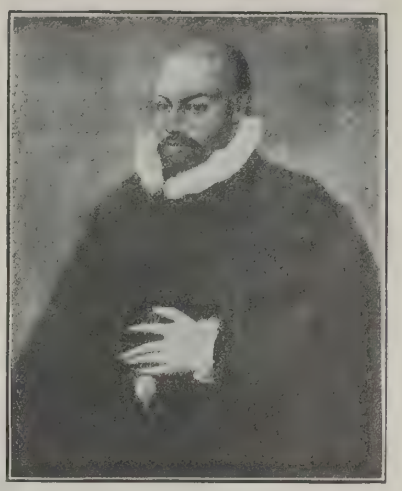
XI. THE NETHERLANDS

ARTHUR ELSON

In every issue of THE MUSICIAN this department will present an elaborate study of a national school. The purpose will be to give a correct chronologic summary of the school, its principal representatives, to indicate a practical club program, and to review the presentation of the subject by means of a list of queries.

Clubs planning to use this material may address correspondence concerning any feature of the work to the EDITOR OF THE MUSICIAN.

Every assistance will be given to clubs, classes, and private students. The editor will be glad to lend help to those desiring to secure speakers on topics relating to music.



ORLANDO DI LASSO

I

When "Music, heavenly maid, was young," her appearance was far different from what it is at present, and she evinced an unusual devotion to mathematics, in the shape of counterpoint. The origin of counterpoint is lost in obscurity, and it may, very likely did, develop independently in different countries. Its essential feature, the support of melody by melody instead of by chords, could come about naturally wherever men sang together, and while the most important schools developed in the Netherlands and Italy, yet France and England were both skilled in the art before the rise of the first Flemish school.

The earliest French contrapuntist seems to have been Jean Perotin, who flourished in about the year 1130; yet one of his successors, Jean de Garlande, writes that double counterpoint was known before that time. The French writers soon developed two, three, and four part styles. The *fauxbourdon* of this time was a three-voiced chant in parallel motion, the two lower voices a fourth and a sixth below the upper. The motet was a form in which each voice had a sacred text of its own, while the *rondeau*, like the later madrigal, was secular, and the so-called *conduit* often instrumental.

In England Walter Odington wrote a learned treatise on counterpoint as early as 1217, and he is sometimes credited with being the author of the old canon, *Sumer is icumen in*. That famous song, with its pleasing melodic effects, indicates that English music must have been remarkably well developed at that time.

It is probable that the early Netherland school developed from the French, for both show a dry, mathematical character, unlike the English style. The first great Belgian master was Dufay (1350–1432), who probably followed French models. In his works, as in all others of the school, the tenor part held the melody (*teneo* meaning "I hold"), while the other voices wove their parts around it. Dufay did not always employ imitation of parts, but many of his immediate successors devoted themselves to the art of writing intricate canons, — musical puzzles that could be sung forward or backward, or with one part beginning in the middle, and in many other devious ways. While all this was not musical according to our ideas, it gave an excellent technical training, and later writers used this skill in a more euphonious fashion.

The Netherland school is often divided into four periods, of which the first contains Ockeghem, Hobrecht, and Brumel, besides Dufay and Binchois. Ockeghem entered the service of Charles VII, and became a favorite of Louis XI, who made him treasurer of St. Martin's Church at Tours. He grew renowned as a teacher, and many of the later masters studied under him. The compositions, though sacred, often introduced popular songs, so that all singers could join in the tenor part without difficulty. One of the most common of these songs was *L'Homme Armé*, and it is no exaggeration to say that it was included in hundreds of masses; in fact, it became almost a point of honor for every composer to set this tune, using it as the tenor part and weaving counterpoint around it.

In the second period (1455–1525) the foremost name was that of Josquin des Prés. At this time composers began attempts at euphony as well as intricacy; and we find Luther saying of Josquin "He is a master of the notes; they have to do as he wills; other composers must do as the notes will." As the first great master of tonal expression, he became known and admired in the whole of Western Europe. His chief pupil, Jean Mouton, was another gifted composer.

The composers of the third period went still farther along the same path. Adrian Willaert, the greatest, settled in Italy. Hearing one of his own motets sung in Rome as the work of Josquin, he promptly claimed its authorship, whereupon the papal choir refused to sing it again. Disgusted with this treatment, he left the city at once. His later years were spent in Venice, where he became chapelmaster of St. Mark's, and taught many famous organists. Cyprian de Rore followed Willaert, and became his pupil and successor. Clement Jannequin and Jacob Arcadelt were two other masters of this time. The former wrote actual program music, and his *Cris de Paris* gives a tonal picture of the calls and noises in the streets of the French capital.

In the fourth and final period counterpoint was made definitely subservient to emotional expression. The one great master of this time, the flower of the entire school, was Orlando di Lasso. Born at Mons either in 1520 or 1530, he began the study of music at nine. Study in those days meant sacred singing, so he became choir-boy in the Church of St. Nicholas. He attracted such attention by the beauty of his voice that he was twice kidnaped, but recovered both times. The third time he consented to remain permanently with his captor, Ferdinand Gonzague, Viceroy of Sicily. After various posts in Italy, France, and Antwerp, he grew so famous as a composer that he was called to Munich in 1557 by Duke Albert of Bavaria. He remained in that monarch's service all his life, and never left his dominions except for a brief visit to Paris. At Munich his wide knowledge, courtesy, and bright conversation made him a favorite with all, and the rest of his career was passed in honored activity until his death, in 1594. The Latin pun on his gravestone certainly pays an appropriate tribute to his fame :—

" Hic est ille Lassus, lassum qui recreat orbem."

Lasso was one of the most prolific composers of all time, having written no less than twenty-five hundred works. Many of these have been preserved and a large number republished in modern form. Like the works of his great contemporary, Palestrina, their greatness lies in the fact that counterpoint is not only mastered, but made to serve in the cause of emotional expression. Lasso's music was perhaps more pleasing, Palestrina's more lofty, and Ambros has stated the difference excellently when he says, "The one [Palestrina] brings the angelic host to earth; the other raises man to eternal regions, both meeting in the realm of the ideal."

II

In the rise of secular music, after the notable year 1600, and in the classical orchestral period, the Netherlands contributed no name of renown to the world's list of great composers, — though the "van" in Beethoven's name bore witness to his Dutch ancestry. But the nineteenth century, so prolific in national movements, was destined to see the rise of a new Flemish school.

The leader of the new Belgian movement was Pierre Leonard Leopold Benoit (1834–1901), better known as Peter Benoit. As favorite pupil of the great Fétis, pensioner of the government and afterwards director of the Flemish School of Music at Antwerp, he exercised a constantly growing influence on the art. His massive figure and flowing locks were soon well known in his adopted city, and his intelligence and enthusiasm carried everything before them.

His first success was the opera *Het Dorp in t' Gebergte* (*The Village in the Mountains*), which quickly made a name for him at Brussels. While traveling on his pension, he produced many songs, motets, and piano pieces, also a *Messe Solennelle*. Another opera, *Le Roi des Aulnes*, was accepted by the Theatre Lyrique, in Paris, but never performed there. Other works by him are a sacred *Quadrilogie*, the choral symphony *De Maaiers* (*The Reapers*), the opera *Isa*, and incidental music to *Charlotte Corday* and *Willem de Zwijger*.

But the especial form in which Benoit excelled was the oratorio cantata. His many worthy works in this field include *Oorlog* (*War*), *Lucifer*, *De Schelde*, *De Rhyn*, *Promethée*, the Ruben's Cantata, and the unfinished Van Dyck Cantata. These are all thoroughly modern and dramatic in effect. They have been aptly described as "great decorative pictures in tone, suggesting vistas of grand palaces, armies in battle array, rich fields of grain, mystic visions of the spirit world, or gorgeous triumphal marches."

Paul Gilson (1865–) is another prominent Belgian composer. A graduate of the Brussels Conservatory, he obtained the *Prix de Rome* with his cantata *Sinai*. Since then he has shown activity in nearly all the large forms. Of his fifty or more songs, many have orchestral accompaniment, while his instrumental works include a score of violin and 'cello pieces. His larger works include a Festival Overture, a Dramatic Overture, a Fantasie on Canadian melodies, another on those of Ireland, several suites, the set of symphonic sketches entitled *La Mer*, the *Bucolics*, after Virgil, three *scherzi*, a fanfare march, and many smaller numbers.

His activity in the vocal field is shown by an Inaugural Cantata, the oratorio *Moses*, the more dramatic *Francesca*

da Rimini, and several sets of *a capella* works. He has made some interesting experiments in declamation with orchestra, such as *Le Feu du Ciel* (Hugo), *Christine* (Leconte de Lisle), and *Satsuki*, a Japanese fable. *Prinses Zonnenshiju* is the most successful of his four operas.

Best known in America is *La Mer*, suggested by a poem of Levis. First comes a picture of the many-colored splendors of sunrise at sea. Then follows some bright

JULIUS ROENTGEN

sailors' music, in which the lively songs and dances of the mariners are suggested with decided animation. The third movement depicts a love scene between a sailor and his sweetheart, idyllic at first, but ending in sadness and departure. The piece closes with a storm at sea, and the sailors' choruses are repeated in mocking irony as the ship goes down.

Guillaume Lekeu (1870–1894) was cut off by an early death from what would undoubtedly have been a career of great achievement. A pupil of César Franck, who was himself of Belgian birth, Lekeu soon developed under the elevating influence of good teaching, and in 1891 took second prize, in the Belgian national competition, with his cantata *Andromède*. For the three remaining years of his life he worked steadily at composition.

His Fantasie on Angevin airs was performed in his native town, with due enthusiasm. Of his two *Etudes Symphoniques*, one is a *Chant Triomphale*, while the other is divided into two parts, *Faust* and *Hamlet*. A *Poëme* for violin and orchestra and an *Adagio* for violin, 'cello, and strings show exquisite beauty. Lekeu wrote no opera, but his incidental music to Hugo's *Burgraves* and de Musset's *Barberine* is of excellent quality. His *Chant Lyrique* is an ambitious work for chorus and orchestra, while many of his songs are remarkable for their elevated melodic style. His chamber music includes an *Epithalame* for strings, trombones, and organ; a wonderfully effective violin sonata; and a posthumous piano quartet, finished by d'Indy.

Lekeu's prose writings, like much of his music, show a pervading spirit of melancholy and gloom, — almost a premonition of his early death. A true disciple of the French school, he showed the freedom from form and the refined delicacy of harmony that we expect from Franck's best pupils. If some of his music is immature, his melodic inspiration and fertility of invention mark him as a man of rare gifts, and one whose loss should be deeply regretted.

Edgar Tinel (1854–) is another earnest devotee of music. His first studies were much hampered by poverty, and some of his early practice hours were devoted to making and mending his own clothes. By the advice of Raff he persevered, and in 1877 we find him winning the *Prix de Rome* with his cantata *Klokke Roland*. This is a song of the great bell of Ghent, which gave warning of war and fire or resounded the triumphs of Flanders. During his travels he became an earnest advocate of reform in sacred music, and his work in this direction has been of great value.

Tinel's best-known composition is the oratorio *Franciscus*, telling the story of St. Francis of Assisi. It is in three parts. The first shows us the worldly life of the saint and the pleasures of the court of Assisi. After the festival comes a scene of quiet in pastoral lanes on a moonlit night, and the wanderer hears a voice from heaven which bids him renounce the world. The second part shows him as a monk, and introduces a hymn to poverty that is almost a literal translation of his own words. The work ends with his death and apotheosis. The music shows a varied style, sometimes austere and contrapuntal, sometimes rich in orchestral color.

Sainte Godelive, another oratorio, is not so strong a work. Other vocal compositions are *De Drie Ridders* and *Kollebloemen*, while the music for *Polyeucte* is purely orchestral. The school of sacred drama, in which Tinel won such success, has interested many modern composers, who have created works of the utmost variety. Liszt's *Saint Elizabeth*, like Tinel's *Franciscus*, may be classed as an oratorio in the modern vein. Massenet goes farther, and presents very worldly effects in his *Marie Madeleine* and similar works. Rubinstein's *Moses* and *Christus* are definite operas, while Strauss has reached the extreme, or

RICHARD HOL

perhaps gone beyond it, with his *Salome*. Assuredly the modern sacred form is rather an indefinite affair.

Jan Blockx (1851–) was started on a musical career by accident. While learning the upholsterer's trade, he received a bad fall one day, and in order to show that he was not seriously hurt he went to a piano and began playing. He gave such evidence of musical talent that his employers advised him to pursue the art seriously.

Blockx has made opera his chief work. He began in 1877, with his one-act *Iels Vergeten*, and in the same year won a prize over twenty-one competitors, at the Rubens festival, by his cantata *Ons Vaterland*. His orchestral works include an *Inauguration March* and the *Triptique Orchestrale*, consisting of the *Jour des Morts*, *Noël*, and *Paques*. He too wrote a *Klokke Roland*, this one a dramatic work for mixed chorus and children's voices.

The ballet *Milenka* and the *opera-comique Maître Martin* were well received, but a great national success was won by the *Herbergsprinses* (*Princess of the Inn*), which has been a favorite for ten years. Its plot is a rather melodramatic tale of love and jealousy, but the music, in spite of its polyphonic character, is delightfully fresh and charming. *Thyl Uylenspiegel* treats of the wars against the Spanish oppressors, while *La Fiancée de la Mer* is a later success. Blockx is now at the head of the Antwerp Conservatory.

The national movement led by Benoit brought many other composers into public view. Lenaerts, leader of the Flemish theatre at nineteen, gained attention by his cantata, *The Triumph of Light*. Keurvels, director at the same theatre, has produced the operas *Paris*, *Rolla*, and *Hamlet*. Wambäch, famous as a violinist, composed a symphonic poem, two oratorios, and the drama *Nathans Parabel*. Mortelmans is responsible for the cantata *Sinai*, the symphony *Germania*, a later *Homeric* symphony, the symphonic poems *Aspiration* and *Helios*, and the cantata *Lady Macbeth*. Vleeshouwer, a pupil of Blockx, has entered the operatic field with his *Ecole des Pères* and *Zrinyi*.

Van den Eeden is credited with a prize cantata, *Faust's Last Night*, also the opera *Numance*, and several oratorios. Van Duyse, son of a well-known poet, has composed the prize cantata *Tassos Dood* and seven operas. Emile Mathieu, director of the Ghent Conservatory, has devoted himself to incidental music. Waelput has produced four symphonies, several cantatas, and the lyric drama *Stella*. Huberti and Mestdagh have worked in the choral field. Raway's sacred drama, *Neon*, and the two-night lyric opera, *Freya*, are ambitious creations, while his symphonic poems are also highly praised. Dupuis, of Liège, is another operatic aspirant. Among the women, Juliette Folville, prominent as a violinist, has composed the opera *Atala*, a march, a violin sonata, and many songs. Ysaye and Marsick have both written concertos for their instrument — the violin.

For many years Richard Hol (1825–1904) was the recognized leader of the Dutch composers. If he had written nothing else, his fame would have been assured by the patriotic hymn, *Comme je t'aime, O mon pays*. His long life of activity was of the utmost value to the cause of music. After studying in Amsterdam and Germany, he became a piano teacher, but exerted a far greater influence as leader of choral and symphony concerts. His hundred and fifty published works include four symphonies, several masses, the sacred opera *David*, the cantatas *Floris* and *Le Hollandais Volant*, and many pieces in smaller form. For many years Hol was critic of the *Cecilia*, and afterward editor of the *Messager Musical*.

Julius Roentgen (1855–) was born at Leipsic, but of Dutch parentage. His studies brought him under the tuition of Reinecke and Lachner, and he became composer as well as pianist. At twenty-two he came to Amsterdam, and made it his home. He taught in the music

OTTO NICOLAI

school, aided in founding the Conservatory, and soon became known as a composer. His works include *Das Gebet*, for chorus and orchestra; the operetta *Toscani Rispetti*, a piano concerto, and many smaller compositions.

Amsterdam has become an important musical centre, and its festivals bring out many excellent native works. Among the Dutch composers thus heard, Van t'Kruys is credited with five symphonies, as many as eight overtures,

and an opera, — *De Bloem van Island.* Cornelius Brandt-Buys and his three sons have written much excellent organ music. Hendriks is another prominent organist, while Averkamp is a vocal writer and leader of singing societies. Gottfried Mann's opera, *Melaenis*, shows much charm, while Van Milligen has the two dramas *Brinio* and *Darthula* to his credit. Other opera composers are Schey, Wagenaar, and Grellinger. Dirk Schaefer's piano concerto was well received, while Martinus Sieveking is another pianist-composer. The best of the younger men, however, are Alphonse Diepenbrock and Bernard Zweers, while Verhey has written some good concert pieces.

Holland has its women composers also. Catharine van Rennes and Hendrika van Tussenbrock have written children's songs of unusual excellence, and the works of Cornelia van Oosterzee, if somewhat too ambitious, still show some mastery of the larger forms. Cora Dopper has entered the operatic field with *Ratcleft*. All these names show that the national movement in Holland, as well as in Belgium, is assuming ample proportions and producing excellent results.

Questions

1. What is counterpoint, and what is canon?
2. Explain the terms fauxbourdon, motet, conduit.
3. Name the first great Netherland composer, and name some of his predecessors in England and France.
4. Into how many periods is the old Netherland school divided, and what was the character of the music in each?
5. In which period does Josquin des Prés belong?
6. What was the first important piece of program music?
7. Give a short account of Orlando di Lasso's career.
8. What difference, if any, was there between his style and that of Palestrina?
9. In what musical form did Benoit do his best work?
10. What is Gilson's chief orchestral work?
11. What is the character of Lekeu's music?
12. Name and describe the chief work of Tinel.
13. What are some of Blockx's operas, and which one gained the most success?
14. Name as many Belgian composers as you can.
15. Name as many Dutch composers as you can.

EDGAR TINEL

Pastorale Impromptu.....*Verhey*

GUILLAUME LEKEU

TOMMASO SALVINI

Tommaso Salvini, the illustrious Italian tragedian, contributes a brief article to the *Deutsche Revue*, in which he speaks of the compensations and drawbacks of his art, and endeavors to explain the real source of the fame and influence of a great actor. He begins his remarks by citing the fact that so many artists, singers, and actors, after a brilliant career and equally brilliant receipts, become instructors in some music or dramatic school, — glad to obtain even such positions,—while others, of like fame, have to resort to their colleagues for assistance or become burdens upon charitable institutions. The roving life, the thousand acquaintances made in various lands, the flattery, and so on, incident to an actor's career, readily account for his light-mindedness and lack of foresight. It takes an earnest, steady character to withstand such a host of temptations, but, as Salvini says, consequent ill-fortune should not be imputed to fate or to special mischance.

The great Italian actor lays special stress upon a man's personality as regards histrionic success. He thinks that if an actor betrays lack of culture in social intercourse it will militate against him as an artist. The general public, consciously or unconsciously, with or without justice, as a rule, confounds the two, the artist and the man.

It is not sufficient to have oneself heralded as a skilful artist and to elicit flattering criticisms in order to interest the public; one must arouse their enthusiasm. How that is to be achieved we cannot say; for that no rules can be laid down, and it is doubtful whether any school of declamation could produce the desired result.

It depends simply and solely upon the native talent of interpreting character, a special gift of communicating emotions by the aid of play of features, expression of the eyes, gestures which fitly convey the given thought, in conjunction with clear, precise, and emphatic utterance, and an organ, penetrating and capable of modulation; finally, the ability to throw the more important members of a sentence into bold relief.

Sustained by such means, the artist attains absolute control over his audience, which acknowledges him a genius. A mutual, tacit sympathy is awakened between public and actor, a magnetic attraction which reacts upon both and carries them away with irresistible force. "A desire, consequently, is aroused in the public to witness plays more frequently in order to experience anew sensations which, stamped upon mind and heart, thus become irresistible and enduring." But, alas! exclaims the great tragedian, how fleeting is the actor's renown.

What does he leave to posterity of the gifts with which genius has endowed him? Nothing! This thought is a constant sting to the artist who loves and respects his art. Be his contemporaries ever so lavish toward the elect in applause, material gifts, or evidences of honor, they cannot indemnify them for the fact that they practice an art which leaves no trace, no example, no model to be imitated, — and therein lies its disconsolateness. And yet they devote themselves to it conscientiously, passionately. It arouses so many exciting, joyous emotions, which, though fleeting, fall to the share of those only who dedicate themselves to the stage. But when the actor is compelled to leave the scene of his triumphs he is overcome by a profound depression. The plaudits cease, and with them the artistic stimulus which somewhat tempered the ever-haunting thought that with his passing all would be over. This thought ages him before his time, disheartens him, leaving him a body without animating force. — *Review of Reviews.*

FIRST PUBLIC CLOCK WITH BELLS

One of Wonders of Fourteenth-century Clock of Château d'Anet

In primitive times a man was stationed at the top of the belfry to ring the bells at the indicated hours, day and night, writes Alfred Beillard in *L'Horlogere.* This watchman was called the horoscopus, that is to say, the observer of the hour. He had recourse himself, in order to fulfil his duty, to the study of the astral system, to the number of prayers he was to recite, to the quantity of wax a candle had consumed, to the clepsydra, or water clock, and to the hour-glass. The trade of the horoscopus was inevitably one of the first which the progress of mechanism was to cause to disappear.

The first clocks with bells known in France date back to the fourteenth century. Particular mention is made of one which was established at Caen in 1314, by Beaumont, and that of the Palais de Justice in Paris, which King Charles V had constructed in 1370 by the German clock-maker, Henri de Vic. This machine seemed so marvelous that the inhabitants of Paris, so goes the legend, asked permission of the King to go on guard at the door of the tower to assure themselves that it was the clock and not the watchman that rang the hours.

This astonishment of the people at a period when mechanism was but just born may well be conceived in presence of a machine capable of calculating and striking the hours, without the assistance of any human being, with the same precision that could be exercised by the most vigilant horoscopus. The custom was perpetuated until the seventeenth century, and still exists in certain cities of Europe, of placing alongside of the clocks various automatons which ring the hours. It is due to nothing else than the thought of recalling to memory the recollection of the ancient watchman. And also the clocks with automatons catered to the popular taste of that epoch. The people of that period preoccupied themselves but little with the more or less exact measurement of time. Railroads were not in existence and the exigencies of life were not so great as they are now. A cock which crowed and flapped his wings, some apostles who marched by, striking a blow for each hour, filled them with admiration, and in this respect no other clocks aroused so much enthusiasm as those of Lyons and Strasburg. It was a clock of this character that Henri Deux placed over the superb portal of the Château of Anet.

Nevertheless this timepiece was distinguished from other clocks with automatons by the originality of the figures that it set in movement. Here no longer was a woman or a man who struck the hours with rusty arms. It was a majestic stag, standing erect, surrounded by four blood-hounds of natural size, which appeared to be holding it at bay, that one saw on the summit of the portal. One of the stag's legs was movable, and as it was lifted it seemed to strike the hours. The four hounds opened their jaws at each striking of the quarters, and their voices were imitated by bells of different notes, whose clappers were connected by wires with their lower jaws, causing them to open and shut as long as the bell ringing mechanism continued.

This curious clock exists no longer. It was sold at auction with its finest dials for the sum of 505 francs when the Château of Anet was confiscated as national property and sold with its furniture in Year Two of the First Republic.

This ancient clock was replaced in 1856 by one entirely modern and made by Wagner. The stag and the hounds in bronze were also carried away. Those seen to-day are in bronzed terra cotta, and play no other part than to recall to memory the ancient ones, and to add to the decorative portion of the portal of the château, whose architecture, the work of Philibert Delorme, is one of the purest and most delicate constructions of the Renaissance.

Besides the functions that we have enumerated, the clock of the Château of Anet possessed, on the side of the court of honor, a magnificent dial, which indicated the position of the signs of the zodiac, the months, the days of the month, and the moon's age.

On this dial, adorned with gold and enamel, was engraved the following curious couplet: *Cur Diana Oculis, Labentes, Subjicit Horas? · Ut Sapere Adversis Moneat Felicibus Uti.*

SAID BY MENDELSSOHN

Progress is made by work alone, and not by talking.

A man with fine capabilities has the absolute duty imposed on him of becoming something really superior.

An opera, like other music, cannot be written to please other people, but simply as one's conscience dictates.

The man who attains perfection in the line he has marked out for himself has accomplished all that can be desired.

If the composer can only move the imaginative power of his hearers, and call forth some image, some one thought, — it matters not what, — he has attained his object.

HECTOR BERLIOZ BY GUSTAVE DORÉ

All things that we do are but first attempts. Woe to the artist who sits down to his labors with the conviction that he is a master.

I can never bear to hear people able to appreciate Beethoven only, or Palestrina only, or, again, Mozart or Bach only — give me all four or none at all.

I consider the publication of a work as a serious matter (at least it ought to be so); for I maintain that no one should publish unless they are resolved to appear as an author for the rest of their life.

Greet every fir and every nut for me, but most of all the brooks, which bubble and splutter, as I do when I want to describe anything beautiful. I believe that is the reason I am so fond of hearing them. Sometimes they hickup too.

True though it be that we are powerless to help one another in the most important matters (God alone can do that), yet there are many subordinate matters, which, when put together, make up a very important part of our happiness or misery.

THE VOICE

Conducted by WILLIAM SHAKESPEARE

All communications regarding the Voice Department of THE MUSICIAN should be sent directly to the Editor-in-Chief. Students who follow the work which is outlined in this Department may write freely regarding any further helps and hints that they need. If there is any point in your study or teaching which you desire to have discussed here, please communicate with us about it.

In acting for a time as Editor of the Voice Department of THE MUSICIAN, *I feel that I must first express my admiration of the earnestness of purpose and high standard of this journal, in which I have read with the deepest interest many valuable articles.*

With warm regards

Yours truly Singing

W. Shakespeare

WHAT IS VOICE PRODUCTION?

WILLIAM SHAKESPEARE

In summing up the last two articles it all seems to amount to this: that even if we had prepared rightly the control of the breath, the first rigidly produced note demands a greater pressure than we can possibly control, and now until the end of the phrase we must sing wrongly, or become breathless. Further, a right note speaks fully to the least breath, but can be intensified by all the pressure possible to the student as long as he is master over its control. Again, we are *forced to press a bad note*, but cannot govern it, whilst the good note speaks fully to little pressure, and then the greater the pressure the greater is the singer.

The increase in the pressure on this perfect note not only produces an increase in the *intensity* of the sound, but it can also increase the *power* of the note by calling into play a larger vibrating area of the vocal cords.

The questions which now suggest themselves to the student are: —

1. Have I, before singing, silently taken in and prepared a full and balanced breath without stiffening the points of the shoulders; and did I then endeavor to sing by floating the voice upon the breath?

2. Am I singing with my throat so free that I *must* hold the breath with my ribs and diaphragm, and am therefore compelled to observe this balanced pressure?

3. Or has my note or notes carried away the feeling of hold-back so necessary to good singing?

Now the voice may be said to consist of four elements: —

1. The breath.

2. The note and its tuning, including the register changes.

3. The pronunciation; and

4. The expression of the face.

If we hold the breath by the use of the muscles which stiffen the points of the shoulders, we shall have to *give up its control or hold-back* whenever we sing with a *loose throat*. The freedom of the note, of the pronunciation and of the facial expression, compels us to command the breath by the use of the back muscles and the diaphragm which do not fix the vocal instrument. The freedom of the larynx, and of the placing muscles which govern the tuning of the voice, permits complete freedom of the jaw and of the upper lip. The freedom of the pronouncing muscles demands the independent action of the tongue and also of the upper lip, and finally the expression of the tone demands the freedom of the upper lip, face, and eyes.

Let it now be noted that in the same register a high note requires more breath than a low note, yet it holds back the breath more than the low one; we must, however, whilst accepting this assistance, not *rely* upon it. A low note in any register lets out the breath. It does *not* assist in the hold-back or control, indeed it is improbable that we wilfully hold the throat when singing the low notes of any register; it would be an unnecessary act and therefore we should not do it. However, as the notes of the same register ascend we are inclined to stiffen the hold over the instrument and gradually the notes become more and more intolerable and uncomfortable. So the art of the good singer is displayed, as much by his skill in controlling the pressure required for a high note *without* a rigid hold of the instrument, as it is in intensifying a low note, which without some right control, would let the breath slip out by reason of the slackness of the vocal cords. On this account every good master commences his lesson on the lower notes of the voice and trains the registers down rather than up, for by this practice, it is more obvious to the pupil that he must attempt some control over his muscles of respiration.

It is now time for a few words on the registers.

Much has been written in attempting an explanation of the fact that every voice possesses different and distinct kinds and qualities of tones. Some writers have endeavored to show that these different series of sounds are the result of the vibration of a longer or shorter condition of the vibrating vocal cords; others have described a thicker or thinner condition of the same, some have said that it is entirely a matter of resonance.

Without entering into these interesting questions (for I have written a great deal about this in my *Art of Singing*, Part I., page 36, and in Part II., page 100), there are certainly three kinds of notes which can be used by all voices, although male voices would not display the so-called head voice which would be too effeminate.

These three registers have been named (1) the chest register, (2) the medium register, and (3) the head register. I discard here all consideration of that series of sounds used by men in Cathedral choirs and when singing glees, viz., the *falsetto*. This is either the use of the effeminate head register or a distortion of the voice, unpleasing and not often listened to with any respect for the individual.

The chest voice may be described as that grand and manly series of tones which not only is felt vibrating in the chest by the singer, male or female, but conveys likewise the same sensation to the listener.

The medium voice is a series of notes which is felt by the singer, male or female, to be vibrating in the mouth and reverberating, as it were, on the teeth. The mouth is full of sound.

The head voice is that delightful series of notes in the mezzo-soprano-contralto, the high mezzo-soprano, and the soprano voice, which is birdlike in character, most womanly in quality, and of surpassing loveliness. These notes are felt farther back than on the teeth, reverberating, as it were, at the back of the head.

The male voice consists of the chest and medium register, but the head register is rudimentary only, and markedly effeminate in quality, as before stated.

The deep contralto is often deficient in head voice as the tenor is in the powerful chest voice, but mezzo-soprano-contraltos and mezzo-sopranos and a few sopranos possess notes in the manly chest register as well as in the medium and head voice. The high soprano is often deficient in the chest register and should practice only the notes of the medium and head registers.

On page 47, Part I., of my *Art of Singing* I have inserted a list of the registers of the different voices and of the approximate limitations which should be observed by the student.

I venture to present here an additional sketch of the relative values of the registers for bass, baritone, tenor, contralto, low mezzo-soprano (or mezzo-soprano-contralto), and soprano voices. The limits indicated may be exceeded by the mature artist, but the student should rather practice to extend the different registers *downwards*, until with further experience the higher notes of the lower registers reveal themselves unconsciously.

A suggested chart of the registers and their approximate force as they reveal themselves when we sing to the rightly controlled breath. See next page.

For diminuendo and crescendo pass occasionally from one register to the other.

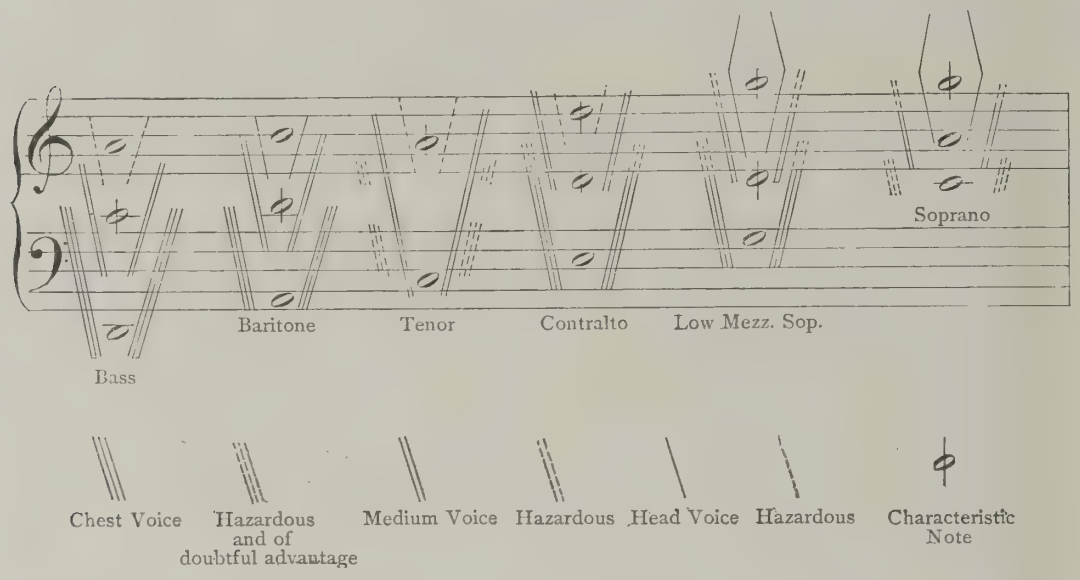
A bad singer, because it assists in controlling the breath, forces up the chest voice with squeezed throat when he ought to have entered unconsciously with controlled breath and open throat into the medium register; reserving great effects for further experience and maturity. This also happens in the case of women's voices. They also force up the medium voices with squeezed throat when they should have used the head voice. Thus we have

in men, shouting, bawling, or howling, and in women sounds as of boys shouting in the streets, and in the higher notes, screaming and shrieking and other angry distortions instead of the lovely head voice.

The so-called "breaks" which occur especially in young voices are in reality the result of the forcing up of the chest voice. The deeper notes of the medium register are often lamentably weak. If these notes were strengthened by proper exercise,

In all the scales exercises in Part II. of my *Art of Singing* I have endeavored to describe this by the accent > and the join ⌒.

The accomplishment of this *legato style* is of the greatest importance as providing another test of the voice being rightly produced.



F, E, and E♭, the lowest notes of the medium register would join unconsciously with D in the chest register; whereas by forcing up the chest notes to E, E♭, and F an inequality displays itself whenever the singer attempts to join these unnaturally produced notes with the register above. For similar reasons, sopranos find difficulties with their head voice, and tenors, baritones, and basses are troubled with the so-called, but really unnecessary, "break."

The notes of a bad singer sound as though they were too high, but there are no such sounds in the good singer, who seems to have a reserve of force and range.

The great advantage of a right manner of singing is the freedom of the larynx, which enables us at will to commence any note in any register, with *absolutely unerring tuning*. All the scoopings up to or searching for the note are now obviated. (See Part I., page 31.) Here, indeed, is a foundation study for the student.

Experiment.

Place the forefinger of the right hand between the first two knuckles of the left hand, then pass it over the rest of the knuckles. The finger will have slipped over the rounded forms with a sort of switchback effect. This joining yet separate knuckling describes in a sort of way the joining yet free movement there should be in passing from one note to another in the so-called "legato style." The notes are "like pearls on a string," round, joined, yet separate, and the string is the breath. Most of us feel a jolting movement while singing scale passages or a smearing, uncertain groping among the notes. *This is not the legato style*, like passing the finger over the knuckles.

ANSWERS TO QUERIES

W. V. U., New York City.

In the passage you quote from *The Sylphs*, in the November issue of The Musician: —

a natural (or cancel, ♮) is placed before the lower C, because the flat before the C in the upper part would imply that every C, in every register, was affected by that flat. Strictly speaking, such an accidental affects only the note before which it stands, and therefore the additional accidental, in another register, is not absolutely necessary. But if, as here, C♭ is required in one part, and C♮ at the same moment in another, it is considered a wise precaution to be explicit and use both accidentals. The same precaution induced the writer, wisely, to place the natural signs before the D and A in the next measure of the upper part, to check a natural disposition to carry over the flats of the preceding measure. These are not misprints. They are safeguards that have been found desirable, if not exactly necessary.

Miss C. Evans, Islington, Canada.

Your query, concerning the embellishment in the first of Bach's *Six Little Preludes*, was explicitly answered in The Musician of last May, page 199. As to simplifying it for a child, there is no better way than simply omitting it — and all other unusual or difficult embellishments — until the child has become able to perform them properly.

Gustav B., Topeka, Kan.

1. The term "semitone" is rapidly falling into disuse, in favor of the term "half step." The reason is obvious: tone is not a material substance, and does not admit of division. There is really no such thing as a semitone (which means a half tone), if you put a careful, accurate construction upon the terms used in music theory; nor is there a "whole tone." The relative location of the tones, their distance apart (so to speak), in a theoretical scale, is best indicated by the terms "step," "whole step," "half step," — also by the interval names, major and minor second, and so forth, which imply distance.

2. There is a difference between the diatonic half step (or semitone) and the chromatic half step. From C to C♯ is a chromatic half step (or semitone); from C to D♭ is a diatonic half step. Observe that the chromatic half step is merely an inflection of the *same letter*, while the diatonic half step passes from one letter to the next higher or lower letter. The chromatic half step does not occur in any natural scale; the diatonic one does. For instance, C–D♭ occurs in A♭ major.

The chromatic half step is *smaller* than the diatonic one, the difference being the extremely small (but real) interval between C♯ and D♭ (vibratory proportion 125: 128), which is the same at all of the enharmonic tones, — such tones as represent the same pitch *on the keyboard*, but are written with different letters, because belonging to different keys.

The minor second, found between the 3rd and 4th, or 7th and 8th steps of the major scale, is a diatonic half step, and therefore the larger "semitone."

L. G., Simpsonville, S. C.

The conditions you describe are by no means singular; they exist in every community and every teacher of music has to encounter them and treat them with judgment and patience. The pupil who loves music and studies the best kind most eagerly, happily exists everywhere; but so does the victim of his parents' wishes, who is either compelled to study music against his will, or to play a class of music at which his nature revolts.

It is not easy to advise wisely; you must exercise your own sense of what is necessary in your particular surroundings. Make a rule of one thing: if, after persistent and fair trial, you find that the pupil takes no pleasure in music, do not encourage him, no matter what his parents may desire. And if you know that a pupil loves and appreciates music, let him have none but the best (or a good) class to feed upon, no matter what his parents' tastes may be. Consider your pupil, rather than his parents, as a rule. At the same time, do not ignore the parents altogether. There are ways of reaching and influencing their ideas of music. By a wise compromise between the popular and

HENRIETTA SONTAG

the classic styles of music; by selecting the better class of popular pieces, and occasionally venturing to give a simple classic piece; by playing, *yourself*, programs discreetly arranged to include a wise proportion of each kind, both in an occasional public recital, and in visits to your pupils' homes; you will gradually awaken the slumbering sense which every human being possesses of what is truly good, in your community, and will find your difficulties daily diminishing.

As to the way to teach, remember the three things needful, knowledge, patience, and sympathy.

MUSIC GROWTH AT WELLESLEY

EDITH A. SAWYER

In making annual report of matters at Wellesley, President Hazard speaks with much appreciation of the growth which the college has achieved, in the past year, along musical lines. The addition of Billings Hall, an ideally perfect building, has enabled the Department of Music to realize a long-cherished plan, — that of giving a series of weekly recitals by students and faculty, which offer encouraging opportunity for putting to practical test the study of the season. Fortunately for music study, says President Hazard, music is an art in which the student may assist by reproducing, by re-creating the work studied. This gives especial significance to the erection of this building in connection with a college of liberal arts.

Billings Hall, which has been in use a little more than a year, proves in every way an adequate and delightful place for the study of music. The small hall, seating four hundred and twenty-five persons, and containing the organ, the gift of Mr. Grover in 1878, rebuilt by the class of 1903, is a very delightful auditorium; and the library, forty-five feet long by twenty feet wide, is one of the most beautiful rooms on the college grounds. The classrooms and offices are ample for their needs, and, to quote President Hazard's own words, "In every way we can congratulate ourselves on having a well-equipped and charming building for the study of music." The address of President Faunce, made at the opening of Billings Hall, may be briefly recalled. In setting forth the objects and aims of the building, he contrasted the classical education of the elder day, the scientific education of yesterday, and the breadth of view of the more modern method which endeavors to combine both, giving a better and fuller opportunity for the study of the arts than either of the educations which preceded it; and pointed the way for the development of the art of music, to which Billings Hall is especially consecrated.

BILLINGS HALL, WELLESLEY COLLEGE

Associate Professor Clarence G. Hamilton, who finishes his first year of work at Wellesley, has devised a system of pianoforte class instruction quite out of the ordinary, from which excellent results have already been gained. The plan is susceptible of development, and it is hoped that the near future will show even more noteworthy results. He has also added a course in the general history of music, open to all undergraduates (except freshmen), designed to take the place of similar courses offered in almost all colleges.

For the first time, this year, the opportunity for original work has been taken and several interesting compositions in the overture form have been written. Emphasis has also been laid on the writing of sentences, hymn-tunes, and short songs, with gratifying results. Another long-cherished plan, President Hazard states, now seems in a fair way of successful accomplishment, namely: to send out students in the more technical courses able to write music, much as the English Department trains students in English composition.

Professor Hamilton C. Macdougall, the head of the Department of Music, has during the year published four compositions for women's voices, and has made contributions to periodical literature. He also delivered an address before the Religious Education Association on the *Place of Music in Worship*. Associate Professor Hamilton is co-author of a new text-book on *Music History* contributing nine chapters on the development of the pianoforte and its music, through the time of Beethoven.

THE LIBRARY

With reference to the musical part of the college chape services, President Hazard notes a steady growth in fitness and value. The Sunday vesper service has always been attractive to the students from the fact that its musical portions are combined in a very intimate manner with the devotional — the musical portion forming an integral part of the service; not, as is too often the case in a service which is largely one of praise, being confined to the postlude. The perfection of the singing of the choir — at the Sunday morning service and at the fifteen-minute morning service on other days, as well as at vespers — and the reverent and devout spirit of the choir-members, have made its portion of the service particularly helpful and inspiring; while the very effective organ music which Professor Macdougall gives at these services is an added element of power. The most casual observer cannot but feel the devout spirit which pervades the whole musical portion of the service. The President and the Professor of Music work together over each service to have it present some unity of thought, and the Wellesley vesper services have grown to be an important feature in the college life. Opportunity of attending the chapel services is generously open to outsiders, and the large attendance from Wellesley village and surrounding places shows the appreciation of this kindness on the part of the college authorities.

An additional service which the Professor of Music is able to render the college is through the organ recitals during examination time, for fifteen minutes after morning prayers; especially during the "mid-year's," held in the early part of February, is this privilege prized by the students.

A series of very interesting experiments, conducted by the Professor of Music and by Miss Eleanor A. McC. Gamble, Associate Professor of Psychology, on the effect of music, have been brought to a conclusion. The results are largely negative, but interesting from the point of view of narrowing the field of investigation. A report of these experiments is soon to be published in the *American Journal of Psychology*, by Miss Gamble and Professor Macdougall.

THE PAY OF MUSICIANS

The strike of the chorus singers at the Metropolitan Opera House has called attention, among other things, to the wide disparity between the earnings of those at the bottom of the operatic ladder and those on the top rung. A year or so ago Mme. Emma Calvé made a public protest against the inadequacy of the remuneration received by chorus singers in grand opera; yet, so far as known, she did not offer to have part of the demanded extra payment deducted from the $2000 she received for every performance in which she appeared. Mr. Conried, no doubt, would be happy to pare the highest salaries on his list for the benefit of the lowest, but he naturally hesitates to add to his managerial expenses $1000 a week. That increase, in an uncertain season, might wipe out all profits, and more.

He has certainly a grievance in this case. The singers had, of their own free will, individually signed contracts to perform specified duties for a certain number of weeks. They wantonly broke their contract — a proceeding for which employees ought to be liable to some punishment as well as employers — and they aggravated the offence by doing their best to destroy one of the gala events of the season and mar the pleasure of nearly four thousand persons who had nothing whatever to do with their quarrel. But this is the usual union method. The audience was keenly alive to the situation, and when Mr. Conried came forward and announced that he had "firmly and absolutely refused to be dictated to by the chorus as a labor union," there was an outburst of applause such as usually follows only the song of some favorite tenor or prima donna. The public was overwhelmingly with the manager.

Before the chorus took its altogether indefensible step, Mr. Conried had signified his willingness to meet it halfway on the salary question and other points in dispute. After the total disregard of the artistic side of the question shown by the chorus singers this winter, he might question their right to be considered as artists. Yet he will no doubt see the justice of granting them at least as much as the chorus girls get in the theatres where operettas and musical farces are performed, which is $18 a week. Even that is little enough, considering the hard work to be done; yet the supply far exceeds the demand. When Mr. Savage advertised for a flower-girl chorus for his production of *Parsifal* in English, more than a thousand young women applied.

The incident at the Metropolitan will, no doubt, lead to considerable discussion of the general question whether music pays as a profession, and whether the thousands of girls who yearly flock to New York from all parts of the country had not better stay at home, help their mothers, and get married, following the advice of Hans von Bülow. The vast majority of those who prepare themselves for a career as opera singers or concert-givers end by becoming teachers very soon after their first appearances in public. After having had a training costing years of hard work and thousands of dollars, they find that it is extremely difficult to get a chance for an appearance at an entertainment which the public and the critics are sure to attend. Managers and conductors are besieged by young musicians, most of them mediocrities, who jostle the better ones and crowd them out by sheer numbers. Most of these are glad to play or sing for nothing, for the mere chance of appearing in public; some of them even pay for the privilege of showing off their accomplishments at Sunday concerts or others.

After all, the profession of teaching, to which most of the students of music are condemned, may be a source of as much happiness and emolument as a stage career, with its many worries, uncertainties, and disappointments. There are teachers of the piano or the voice in this country who earn $10,000 or more a year, and command as much respect in the community as any pianist or singer. Many earn half that sum. The rank and file, to be sure, work for much less; but that is the case in all the professions. If we may accept the estimate of a writer in *Harper's Weekly*, "the average earnings of qualified and certified doctors of medicine in the United States do not exceed $600 a year"; that is, the average American physician earns only $300 more in a year than Mr. Conried's chorus singers do in five months; and he has had a much more expensive education. As regards teachers in public schools, it has been found that in a list including 467 American cities, there were 53,554 positions with annual salaries of $600 and over, besides 14,193 of $500 to $600, and 17,728 annual salaries below $500. Commenting on these figures, Commissioner W. T. Harris has remarked that "No teacher has a right to complain, on a socialistic basis, if he is receiving a salary for his annual services of $600." From this point of view, music pays probably as well, on the average, as most vocations.

Every chorus singer has a chance to become a Sembrich, an Eames, or a Nordica, a Caruso or a Knote. The rewards of success in music are, indeed, so great that it is a wonder that so few men compete for them. In some departments women have things almost entirely their own way; yet a prominent woman teacher complained, not long ago, that musical students of both sexes seemed more and more inclined to go to men for lessons. In London, the members of the orchestras used to be largely Germans; now, the German visiting conductors have to address them in English, which shows that the prejudice which so long kept men out of music is passing away. In view of the fortunes won by such artists as Paderewski, Jean de Reszke, Tamagno, Johann and Richard Strauss, Arthur Sullivan, and Victor Herbert, American men may well ask themselves whether music does not pay better than they had supposed. — *New York Evening Post, Jan.* 4, 1906.

ARTHUR JOHNSTONE'S BOOK*

This attractive volume contains a decidedly interesting collection of little essays on music and musicians. The young critic who wrote them was attached to the staff of the *Manchester Guardian* during the years 1896–1904. Within this comparatively short period he made an excellent reputation. As an example of the intellectual popularity he enjoyed, it may be mentioned that Sir Edward Elgar drew prominent attention to this volume, remarking that he would place its author "very high among the highest." Elgar also wisely paid a tribute to the *Doyen* of English musical critics, Mr. Joseph Bennett, the record of whose work in this direction covers half a century. He is to-day one of the best-known writers of the *Daily Telegraph*, and is everywhere admired. His generosity and good will towards young artists are notorious — amounting almost to indulgence. Numberless musicians have benefited by his good word.

Arthur Johnstone approached musical criticism from the opposite pole. He was young, and (without unkindness) one may add inexperienced. His literary gift was great. All this is seen in this little book of reprints. It is doubtless a risky thing to challenge the value and importance of the press to music. Nor shall I attempt anything of the kind. But the following expression of opinion by one of England's greatest intellects is worth consideration. I leave my readers to recognize the authorship as they may: —

"The authority which in former times was lodged in universities now resides in very great measure in that literary world, as it is called, to which I have been referring (The Press). This is not satisfactory, if, as no one can deny, its teachings be so offhand, so ambitious, so changeable. It increases the seriousness of the mischief that so very large a portion of its writers are anonymous, for irresponsible power never can be anything but a great evil; and, moreover, that, even when they are known, they can give no better guarantee for the philosophical truth of their principles than their popularity at the moment, and their happy conformity in ethical character to the age which admires them."

Some of the evils which a too egotistical press can inflict, are increased or lessened according to the town or city where they appear. In London no one voice dominates the city. Nor has it been so since the time of Davison, and I much doubt if it was so then. In provincial towns, such as Manchester, where the late Arthur Johnstone ruled musical opinion for some years, the case is widely different.

The *Manchester Guardian* holds a unique position. Its influence has been paramount for many years — ever since the extinction of the *Manchester Examiner* and some years before. What the *Manchester Guardian* says to-day, Manchester musicians say to-morrow. Using this intrenched position for all it was worth, Arthur Johnstone meted out his praise and blame in as autocratic a manner as that of any sultan. Established positions were rarely attacked. Everything that was small looked smaller still through Mr. Johnstone's spectacles. His best work was done when writing of really exalted art; and that such a man should be compelled to make daily records of the music of an English provincial town brings with it its own penalty. As a book writer he would probably have left much lasting work. These records of concert notices and other essays are invariably clever and interesting, but in the nature of things, they cannot be of any permanent interest. Books would have had a better chance.—EDMONSTOUNE DUNCAN.

*Musical Criticism, Arthur Johnstone. Sherratt & Hughes, 1905.

NOTES

Madame Etelka Gerster is now one of the principal teachers in the Institute of Musical Art, New York City, directed by Frank Damrosch.

* *

A Schumann Festival will be held in Berlin, May 22–24, under Joachim's direction. This is earlier than the anniversary date, which is July 29, the fiftieth since the composer's death.

* *

Hans Winderstein and his Leipsic orchestra will edify visitors to Bad Nauheim this coming summer.

* *

The life of Marie Antoinette is the basis of the text of a new opera, music by Giuseppe Dalli.

THE ADONAIS AND THE PATHETIQUE

LILLIAN L. BISSELL

A recent article by Mr. Newman, entitled *The Essential Tschaikowski*, says so well and so interestingly what can be said about Tschaikowski and his *Pathetic Symphony* that it seems almost needless for any one to add a word. After reading Mr. Gilman's article in the August, 1903, number of the same publication on *Strauss, Tschaikowski, and the Idea of Death*, however, it seems pertinent to call attention to the former article and to emphasize the meanings that the *Adonais* and the *Symphony* have for some of their readers and hearers.

Every one knows how unfair it is to judge any literary work by an isolated idea, which so often may have been expressed by the author merely for argument, contrast, or artistic effect; and it is also a well-known fact that every historian, poet, novelist, painter, and musician sends forth his message to receive as many interpretations as there are types of mind with which to grasp it. It is approved by those in sympathy with its author, repudiated by those of opposite opinion, and made to mean, generally, whatever any individual chooses to read into or out of it.

The *Adonais*, to some of "those of us" who have read it, presents one of the strongest contrasts of mortality with immortality to be found in poetry; working up, as it does, from the lowest plane of human feeling through the most artistic crescendo to its climax on the highest plane possible; beginning with selfish grief — the purely mortal view — and closing with eternal peace standing forth as the true idea.

Grief is but a natural emotion, which, if kept within proper bounds, does not develop a morbid spirit, and is not necessarily incompatible with true happiness. Surely, he who through ignorance tries to escape the serious or sad in life, loses the truth it might bring him, and then he is in danger of becoming a moral and spiritual coward. Only by facing the unpleasant with love in the heart can it be made to roll up like a scroll and vanish like a cloud.

The first thirty-seven stanzas of the poem seem to express Shelley's grief at the loss of his friend and his indignation at what seemed to him its untimely cause, which, though now considered a mistaken idea, was perfectly justifiable to his understanding. Taking this in connection with the rest of the poem, there is no morbid idea of death expressed. A little consideration of even the third stanza shows how he voices his belief in Keats's more exalted condition.

III

" . . . let thy loud heart
Keep like his a mute and uncomplaining sleep,
For he is gone where all things wise and fair
Descend."

His indignation at the critics break forth in the thirty-eighth stanza: —

XXXVIII

"Nor let us weep that our delight is fled
Far from these carrion kites that scream below.
He wakes or sleeps with the enduring dead;
Thou canst not soar where he is sitting now.
Dust to the dust! but the pure spirit shall flow
Back to the burning fountain whence it came,
A portion of the Eternal, which must glow
Through time and change, unquenchably the same
Whilst thy cold embers choke the sordid hearth of shame."

In the next stanza he compares the mortal state with the immortal, into which he evidently believes Keats has passed.

XXXIX

"Peace, peace! he is not dead; he doth not sleep —
'Tis we, who lost in stormy visions keep
With phantoms an unprofitable strife;
And in mad trance strike with our spirit's knife
Invulnerable nothings. We decay
Like corpses in a charnel; fear and grief
Convulse us and consume us day by day,
And cold hopes swarm like worms within our living clay."

Ghastly, indeed, is his form of expression, but does not its very ghastliness discover its cause for being! Can anything but absence of truth permit such ideas to come into existence? Is he not trying with most vivid imagery to show the falseness of such thought and so arouse the *fleshly* mind from *its* cowardly terror at the unknown? But the poem's true message is not despair or gloom.

A little later he says: —

"What Adonais is, why fear we to become?"

And again: —

"The One remains, the many change and pass;
Heaven's light forever shines, Earth's shadows fly.
Life, like a dome of many-colored glass,
Stains the white radiancy of Eternity,
Until Death tramples it to fragments, — Die
If thou wouldst be with that which thou dost seek!
Follow where all is fled! Rome's azure sky,
Flowers, ruins, statues, music, words are weak
The glory they transfuse with fitting truth to speak,"

which is simply another expression of St. Paul's idea in "It is better to die and be with Christ." From the last-quoted stanza to its close, the poem is one grand song of life-triumphant, steadily rising in rhapsody until the final lines: —

"Whilst, burning through the inmost veil of heaven
The soul of Adonais, like a star,
Beacons from the abode where the Eternal are,"

leave one contemplating everlasting harmony in the presence of the Eternal.

The *Symphony* certainly is minor, solemn but most impressive. As has been suggested above, however, one should not seek to avoid the sombre in life, for although it often subdues, it does not necessarily hold the cause of misery or despair. That must be found in the mind of the individual himself. To quote Mr. Newman: "Tschaikowski does not have to attack the nerves." He whose nerves are so affected would perhaps do well to seek the cause of their unsoundness in his own soul.

This wonderful symphony, full of solemn dignity touching one's deepest feeling, even thrilling one with exultation at times, does not leave one, whose thought naturally passes beyond, in the physical grave. The repetitions of the final chord certainly have an awe-inspiring effect upon the listener; but instead of symbolizing the "coffin" and "dust to dust," why may they not represent as truly life's many recurrences of perfect harmony, concluding at last in everlasting unity?

Tschaikowski's *Trio*, in memory of Nicholas Rubinstein, also portrays sorrow and seriousness, but does not suggest despair or cowardice. Again Mr. Newman says: "Some of us like our art as gloomy as we can get it, and rather like to ponder on the interior of graves. It does not make us depressed in the least, for artistic emotion and real emotion are two very different things."

Whatever Tschaikowski's personal ideas may have been, his work does not necessarily reflect them. It is more than probable that he, with many other authors and composers, has written better than he knew, even in this self-same symphony. Certainly so much pleasure and inspiration could hardly otherwise have been afforded to so many hearers.

Here a thought regarding the legitimacy of the existence of so-called horrors suggests itself. Although neither the expression of physical horrors in Verestchagin's paintings, nor of those of the soul in the truly gloomy *Trio* in memory of Tschaikowski by Rachmaninoff may agreeably appeal to a certain few, they, nevertheless, may have a mission in awakening some minds from a callousness to the causes of evil, so often found among the more highly civilized, or cultivated, peoples, to a realization of the awfulness of savagery still found in the human heart. Therefore, would it not be well to hesitate a bit before relegating such works to the realm of silence or of shade?

Mr. Gilman says: "For those of us to whom this world seems not wholly ill-designed, who find no shuddering horror in the thought of death, but rather a surety of promotion and fulfilment, — for those of us, I say, who so incline, this music overwhelms with the sense of an immense and futile pathos, and a tragic falsity as maleficent as it is complete."

But here are some of "those of us" whose idea of eternal life is just as strong, — some of us realizing its presence and power even now — and in whom the fear of death is just as absent, who do not find "futile pathos" or "tragic falsity" in this music.

Since, then, the same composition can arouse such totally different emotions of such totally different shades in the minds of several listeners, is it just, or even possible, to arbitrarily claim the predominant existence of any one in the music itself?

PRETEXTS AND MOTIVES

"In looking over recently an old scrap-book belonging to a past generation, I find the following clipping of two stanzas, entitled *Pretexts and Motives:* —

I

"'Dost think those gilt and hollow cones
That *front* an organ, cause the tones?
Not so! — those pealing notes proceed
From tubes of baser metal, hid.

II

"'This same remark, we might advance,
Holds good in life's mysterious dance.
In front the pompous pretext find,
But the mean motive skulks behind.'

"Can you inform me in regard to these lines, and what is meant by the 'hollow cones'?"

The exceedingly pessimistic writer of the verses you have quoted probably attended church where there was an organ which contained false or dummy front displayed pipes. The cones referred to were the inverted conical feet of the pipes, which suggested the metaphor. The speaking pipes hidden within must have been very poorly voiced, to have suggested baser metal and mean motives. Very likely there was a superabundance of Sesquialteras and buzzing reeds which obscured the harmonies of the more heavenly "tubes."

A THRUSH SINGING

Perched on the topmost branch of yonder tree,
Emblem of joy and its epitome,
From his green minaret, in the noon's hush,
Listen! — the song of the muezzin Thrush.
Music wherein the sweetness of the day
Is all transformed in some transcendent way —
Fragrance and color, glint of grass and dew
Changed into melody and born anew;
The Earth beneath him, Heaven's blue above,
And Allah leaning to his lyric love.

— Clinton Scollard.

MUSIC BOOKS

New Books — Books for Violinists — Books for Young Musicians

HELPFUL BOOKS FOR THE YOUNG TEACHER OF THE PIANOFORTE

JULIUS REHN WEBER

In these United States young women are coming more and more to the front as teachers of the pianoforte, — hundreds of them from necessity, who do more or less earnest, honest work; but many, also, who, having good homes, yet feel the need of a little pin money; these latter drop out of the race, sooner or later, as they should do, but this paper has to do with the first class only.

Take the individual case of a young girl, with perhaps more than the average amount of musical talent and opportunity; for, let us say that she has studied for a reasonable number of years with the foremost teacher in some large city, or at one of the many conservatories, with, perhaps, a year or two besides in Europe, under one of the many "foremost" masters,—where, by the bye, she may have dreamed rosy dreams of becoming a concert pianist, unless her teacher has been honest and kind enough to put the questions to her: "How many worthwhile artists before the public to-day are women?" "How many, even among the men, do you know who could make their living on the concert stage?" To be followed by the advice: "No, my dear young friend and pupil, play in concert if you must, but fit yourself to become a thorough teacher, if it is to be a matter of earning your own living."

After some years of study, the young woman in question, being at last forced to recognize the inevitable, settles down to her real work, — *i.e.*, to teaching.

Has all this previous training made her pedagogically fit to undertake the serious training of the young intrusted to her? For this is the most difficult problem a teacher has to solve, when one considers the solid, enduring foundation which is to be laid.

No one can honestly answer this question in the affirmative, for it is a perfectly natural thing to say that every young teacher gains her first years of experience only at the expense of the pupil; but, after that, what must she do to keep from sinking into the rut of dull routine? Study and read — read and study; but what?

A close reader of the musical journals published in this country is impressed by the overwhelming flood of books connected with pianoforte teaching advertised from month to month, not only reprints and translations of books first published in Europe, but works by American writers, especially designed for the young and inexperienced teacher as well as student. At first blush this output seems so progressive, so much a part of the giant strides we, as a nation, are making in all directions, that it seems as if we ought to be congratulated on the achievement; but when the weighing and sifting process begins there appears a sad falling off, in quality, at least; for, in reading through one book after another, the thoughtful teacher is impressed with two facts: First, the majority of writers on the subject of pianoforte teaching have little to say that is new or compelling, little that has not been better said by the great masters of the past; and, second, by the astounding number of books which in their content are too superficial to be taken seriously, — for instance, some of the books on the kindergarten system of teaching the pianoforte, which, figuratively speaking, keep a child in the musical nursery far beyond the age limit, really hindering legitimate and intelligent musical progress. To admit that there are a few noteworthy exceptions in the books of this class, does not mend matters. It is true that there are hundreds of young teachers in this country, honest women, who are doing good work in the way of awakening the musical perceptions of the young by the use of kindergarten methods; but when a child, more or less gifted, is fed on a musical *Mother Goose* diet after it has reached, for example, that point in its public school career when it has mastered the first rudiments of reading, writing, and arithmetic, it is time, on the part of both parent and teacher, to call a halt, and supply the young musical mind with more substantial food than *Dickery, Dickery, Dock, The Bell rings for Pussy,* and *Jack be Nimble.*

It has been repeatedly said of us abroad, as a nation, in matters of art, especially in music study, that while we are talented, quick of comprehension, and eager of achievement, we are lacking in stability and perseverance; that we rush madly from one teacher to another, from one "method" to another; and for one thing the undigested output of books on pianoforte teaching seems to bear out such a criticism, so that while the teacher of routine looks on calmly and listens, perchance with a smile, to all this hullabaloo about "method," the young teacher, being in dead earnest, reads one book after another in feverish haste, only to find, if she is wise enough, how much dead fruit there is in most books, — or, if she is not, she accumulates and disseminates a mass of conflicting testimony hardly beneficial to her young pupils.

In literature there are certain books which contain eternal truths forcibly, authoritatively expressed, which have never been seriously disturbed by the onslaughts of critics and iconoclasts; and so, in a narrower sense, there are a number of books on the science of pianoforte teaching which contain unassailable truths, and it is to such books as these that the young teacher should turn in time of need to supplement and strengthen her experience.

In mentioning a very few of these, by way of illustration, the writer purposely avoids all methods and graded courses, excellent as they may be, as not being within the province of this article.

Young teachers, especially, should read books on the subject of pianoforte teaching, which are both stimulating and practically helpful, by such authorities as command our utmost respect, — teachers of experience, who treat their subject from the broadest point of view and whose conclusions have received the universal stamp of approval. Many of the late books are little more than copies of such books, but in weak dilution. How much better to go at once to the clear fountain head, instead of drinking from a muddy stream!

It is a great pity that there is no translation of the text of Dr. Hugo Riemann's fine comparative system and method for the pianoforte, for in it he refers to nearly all of the great authorities in making his comparisons in reaching the best results in good pianoforte practice. In this work he refers warmly to Adolph Kullak's *The Esthetics of Pianoforte Playing* (Schirmer, N. Y.), and in truth it cannot be too highly recommended to every earnest teacher, for in a rare degree, while never neglecting the practical, it shows that technique is only the servant to the real thing, a means to an end, and that end a poetic refinement in interpretation, without sentimentality. The young teacher should own and seriously study it. The same writer's *Art of Touch* is an interesting, practical supplement to the above work. Dr. Riemann speaks also at length of another much neglected book, Lussy's *Musical Expression* (Novello Ed.). It is extremely suggestive, particularly on the subjects of accents, nuances and tempo, in both vocal and instrumental music, with many a precious hint on the subject of phrasing. The question of rhythm is treated with a fulness rarely found elsewhere, and there are few books so truly helpful in explaining all the regular and irregular accents in music, presented so clearly and fully as to immediately impress the reader. To those who cannot read German, the translation of Dr. Riemann's *Catechism of Pianoforte Playing* in the Augener Edition, especially the very helpful chapter on "Art Work," is warmly recommended. The book contains much in a little compass, appertaining to most of the practical and esthetical questions which may come up in the science of teaching.

SOME GREAT COMPOSERS

In the group may be recognized Meyerbeer, Berlioz, Donizetti, Auber, Thomas, Rossini

An indispensable book is Christian's *Principles of Expression* (Harper Bros.), dedicated to Franz Liszt. Few books on the subject are so stimulating and inspiring. It is of the greatest help, with a wealth of beautiful examples so amply illumined by enlightening text. It is one of the sanest guides to all that is fine in accentuation, expression, and phrasing.

Heinrich Germer's *Manual of Tone Production* (Ed. Schuberth & Co., N. Y.) is a little book that every teacher and student may read with profit. In progressive order it builds up all sides of the pianoforte touch from the first technical exercises to mature artistic accomplishment, together with many pages of practical exercises illustrating each chapter. All the many works of this indefatigable teacher and editor deserve the attention of all serious teachers.

Of course, no young teacher should be satisfied until she has fully mastered the contents of Hans Schmitt's *The Pedals of the Pianoforte* (Presser Ed.), and in connection with it, by way of practical demonstration, Gorno's two masterly books of *Pedal Studies* (John Church & Co.)

should be worked out. Schmitt's book is the pioneer, and, although small in compass, is exhaustive as to good pedal usage

In conclusion, there is the late book of Mathays, *The Act of Touch* (Longmans Green & Co.), which goes exhaustively into every detail of pianoforte touch, dwelling especially on the singing pressure touch. It must be admitted that there is much needless repetition in the

MONUMENT TO CÉSAR FRANCK (PARIS)

book, and that it might be condensed at least one third, but nevertheless it is a book to challenge the interest of every sincere teacher. (Since writing the above, an abridged edition has been published.)

These few titles are given as samples of the kind of books young teachers should read and absorb, to help give stability and courage to their hard and sometimes discouraging work; they are worth a wilderness of stuff which is offered to the teacher and student year after year, under the guise of kindergarten methods, Leschetizky methods, and all the get-there-quick methods foisted upon a gullible public. No one at this late day disputes the greatness of Leschetizky as a teacher; but it is a deplorable fact that his disciples have absolutely nothing really new to say, and it is doubtless a fact that Leschetizky disclaims the establishment of any definable "method," knowing full well that as soon as a "method" is established petrifaction has set in.

In addition, it is pertinent to say that every teacher should own Scribner's Musical Literature List (it may be had for the asking), and from it now and then should add a worthy book to her library; for every teacher should own a good working library, even though it be a small one, and in case she has not the means, the free libraries in every large city have many of the books on music in the Scribner list.

To those who may be interested, the following additional list of books may be suggestive: —

First and foremost, every teacher should own a dictionary of music, and for those who cannot afford Grove's *New Dictionary*, Dr. Riemann's smaller copy (Presser Ed.) in one volume is accurate and quite up to date.

A very full history of the pianoforte and its players is the one by Oscar Bie. The books on the same subject by Weitzmann and Fillmore (Presser Ed.) are also good, and less expensive.

A clear idea of music form is essential, and for those who may find Prout's exhaustive book too serious, the *Lessons in Music Form*, by Percy Goetschius (Oliver Ditson Company), will be found helpful.

Ridley Prentice's six small volumes, *The Musician* (Presser Ed.), graded from the standpoint of the beginner up to the gateway that leads to the artist's career, are full of helpful suggestions to teacher and student alike, containing a fine list of good music in each grade, with interesting instructive comments.

Schumann's two volumes on *Music and Musicians* (Oliver Ditson Company) should be read by all means to kindle enthusiasm in matters musical, even if they are a little behind our strenuous times.

Tapper's *First Studies in Music Biography* and his *Students' Handbook of Music History*, Fillmore's *Lessons in Music History* (all Presser Ed.) are all calculated to awaken a keen interest in the young, and should be used and recommended by all teachers.

Dr. Riemann's two small volumes *Catechism of Music History* (Augener Ed.) are most thorough.

Of later books, helpful to both teachers and more advanced students, the following list of titles may be of interest: —

Huneker's *Chopin — the Man and His Music*, also his *Mezzo Tints in Modern Music* (Scribner).

Lavignac's *Music and Musicians* and his *Musical Education* — two fine books.

Dr. Wm. Mason's *Memories of a Musical Life* — a chatty, genial book.

Of interpretative value are Riemann's *Catechism of Musical Esthetics* (Augener Ed.), Marx's *Introduction to the Interpretation of Beethoven's Piano Works*, and Harding's *Analysis of Form as displayed in Beethoven's Thirty-two Pianoforte Sonatas* (Novello).

Perry's *Descriptive Analysis of Piano Works* (Presser) is imaginative and calculated to awaken poetic sentiment.

Mees, *Choirs and Choral Singing*.

There are about a dozen volumes of the lives of the great composers edited by Hueffer, at small cost.

Riemann's *Catechism of Musical Instruments* (Augener Ed.)

There are also three volumes by Upton on the standard operas, oratorios, and symphonies.

The more such books are read by the general public, the more hopeful will be our future musical outlook, and it is the bounden duty of every music teacher to awaken an interest in the reading of such books among his, or her, more advanced pupils.

A GROUP OF PIANISTS

Standing: Rosenhain, Döhler, Chopin, Dreyschock, Thalberg.
Sitting: Wolff, Henselt, Liszt.

SOME RECENT MUSICAL BOOKS

FRANK H. MARLING

Finck's Life of Grieg

At last we have a life of Grieg in English, — something which has been badly needed for a number of years. How many persons have earnestly sought for information regarding this gifted composer, only to be told that little or no material was available. This fact and the growth of interest in the Scandinavian school, and its rise in artistic importance, makes the new volume by Mr. Henry T. Finck on Grieg, in the Living Masters of Music Series, a very welcome addition to our musical literature. A very good piece of work has been done in it by Mr. Finck, who is, in many ways, admirably fitted for such a task. For years he has been an ardent admirer and champion of Grieg's music, and writes therefore with a whole-souled and genuine enthusiasm that the reader, however cold, is constrained to catch something of its contagion. In a previous work on *Songs and Song Writers*, Mr. Finck had already a beginning at such a task, devoting considerable space to Grieg, which has formed up to this time the best account of the composer in the English language.

For the music-loving amateur there is a feast of books offered on the Scribner list. Among them may be specially mentioned Henderson's *Story of Music*, Hannah Smith's *Music: How It came to be what It Is*.

The series called the Music Lover's Library contains up to the present date: —

Henderson's *The Orchestra and Orchestra Music.*
Finck, *Song and Song Writers.*
Apthorp, *The Opera, Past and Present.*

Mr. Finck tells us that he was under the impression when he began to write his biography that very little material for it existed, but he soon found his mistake, and persuaded his publisher to enlarge the original dimensions of the book by one half. Speaking of the fact that no elaborate biography of the composer has appeared, he says that brilliant offers have been made to Grieg for an autobiography, but he has never, through disinclination or

A CARICATURE OF ADOLPHE ADAM'S OPERA
"SI J'ÉTAIS ROI"

persistent ill health, been able to accept them. Mr. Finck is a trained newspaper writer, and whatever may be thought of his opinions, he always commands a vivacious and forcible style, and never leaves the reader in the least doubt as to what he means and where he stands. He never shrinks from controversy, but, on the other hand, has a large measure of the courage of his convictions, and though some may think he ranks Grieg too high, he supports his contention with vigorous arguments and telling facts. Most interesting accounts are given of Grieg's personality and that of his wife, which are especially valuable, as Mr. Finck has visited the composer and has gained much of his knowledge at first hand. The keen and intelligent analysis of his compositions, also included, will be most useful to the numerous admirers and students of the Scandinavian composer's work. The work is considerably brightened by numerous portraits of Grieg, his residence, friends, and facsimiles of his scores and handwritings, etc.

Gilman's Life of MacDowell

A companion volume to Mr. Finck's *Life of Grieg* is Mr. Gilman's monograph on Edward MacDowell in the same series, aptly called *Living Masters of Music*. Mr. Gilman has come to the front in musical circles within a few years, and his volume, *Phases of Modern Music*, gave him a place among our leading critical writers on music. In treating of Mr. MacDowell and his work, he admits that he has taken up the difficult and delicate task of achieving a just appraisal of the work of one who is not only a contemporary composer, but a fellow countryman. He feels that there is more likelihood of "the undervaluation of such an artist, and a too cautious attitude towards excellences which otherwise would unhesitatingly be acknowledged." The work is somewhat slight in texture, and could have been elaborated with considerable advantage and corresponding usefulness, but we presume the author felt bound by the enforced limitations of the space, and should be judged leniently on this score. His estimate of MacDowell can be well summarized by quoting his concluding paragraph: "The MacDowell of to-day, then, is an artistic figure of commanding stature — a musical creator who has brought to an impressive development a singular gift of beautiful and forceful utterance. His chief claim to perpetuity is, . . . that he has awakened in music that sense of the invisible, of the hidden wonder and enchantment behind the manifest presences of the world, which it is the signal privilege of the Celtic imagination to discover and enforce. He has evoked an incalculable spell, has opened a door into a new and shining world. This is what I believe is essential and individual in his art, — the disclosure of an immemorial magic in familiar things."

Some idea of the attractiveness and dignity of Mr. Gilman's powers of expression may be gained from this extract. He has a poetical insight into the larger meanings of music, and is therefore thoroughly equipped to treat of its ideal qualities in Mr. MacDowell's music. He has wisely not attempted much biographical detail, but has given us a glowing and sympathetic analysis of MacDowell's characteristics as a composer, which is highly creditable both to the composer and his critic.

There is a perennial charm about the personality of Chopin, and anything that promises to throw any new light upon it is sure to receive eager attention. Such will be the lot of a little Chopin brochure, just issued, called *Chopin as revealed in His Diary*. It is written by a fellow-countryman of Chopin's, Count Stanislas Tarnowski; is translated by Natalie Janotha, and presents some remarkably interesting and new material on the composer. These notes were written under the direction of Princess Marceline Czartorgska, from whom the author received many engaging details, and to a large degree consist of bits from the letters of Chopin, in which he mentions his own compositions and the circumstances under which they were written. The eight portraits in the book are a great addition to its other attractions.

An English musical critic, Mr. Joseph Goddard, who has contributed several volumes to the discussion of musical esthetics, has recently brought out a work which reproduces his matured views on music as an art. He has called it *The Deeper Sources of the Beauty and Expression of Music*. In his twelve chapters the author advances some original theories, which are carefully analyzed and illustrated by musical examples. Such subjects as tonality, contrast in scenic effects and in music, Darwin's hypothesis of music, and others, come in for thoughtful and intelligent discussion.

BOOKS ABOUT VIOLINS

FRANK WALDO

I

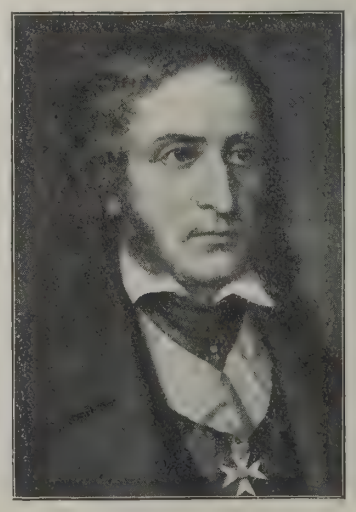
Die Geigen und Lautenmacher. Willibald Leo Freiheenn von Lütgendorf. Published by Heinrich Keller. Frankfort a. M., 1904, pp. 810 + XX.

This book gives the list of violin makers to whom the author finds reference, first in alphabetical order, irrespective of country, place, or time of working; and second, grouped alphabetically under the place where each worked. The time of birth, death, the peculiar characteristics of the instruments, in many cases reproductions of labels, and in some few cases illustrations from photographs of violins are given under each maker's name in the first list. This list is valuable for the study of individual makers. But the second list is valuable for the study of schools, of violin making, and is a most impressive object lesson on the difficulty of acquiring a really authoritative knowledge of violins.

It is with amazement that we see the list of three hundred and twenty-eight names of Paris makers, and the two hundred and forty-eight London makers; and the Italian makers, too, are far more numerous than most of us have been accustomed to think.

Perhaps the most valuable feature of von Lütgendorf's book is the information that he gives concerning the army of violin makers of the great centres of violin making, — Mittenwald, Schönbach, Klingenthal, Markneukirchen, and Mirecourt.

It is these men who have made 99 per cent of the old violins that are in dealers' hands to-day, and that are owned



NICCOLÒ PAGANINI

by the professional violinists and amateurs who are so fortunate as to possess a genuine old violin.

Other lists of violin makers will perhaps contain mention of a single member of a family which has handed down this craft through half a dozen generations. Take, for instance, the Hornsteiner family of Mittenwald. Hart's

book on violin makers mentions only two Hornsteiners, while von Lütgendorf gives the eighteen makers of this name working between 1730 and 1890. This shows that it is little more to say that a violin was made by Hornsteiner than merely to say that it was made in Mittenwald.

There is no question about von Lütgendorf's book being the most valuable list of violin makers that has yet been published; in fact, so far as completeness is concerned, it is a long, long step in advance of any other book, and subsequent writers will be able to add but slowly to this list. In this book about seven thousand names are given, and it is a question of considerable interest how many more makers were there, not below the lowest grade mentioned in this list, who still remain uncatalogued. There can be little doubt but that the addition of unlisted names would bring the sum total up to ten thousand.

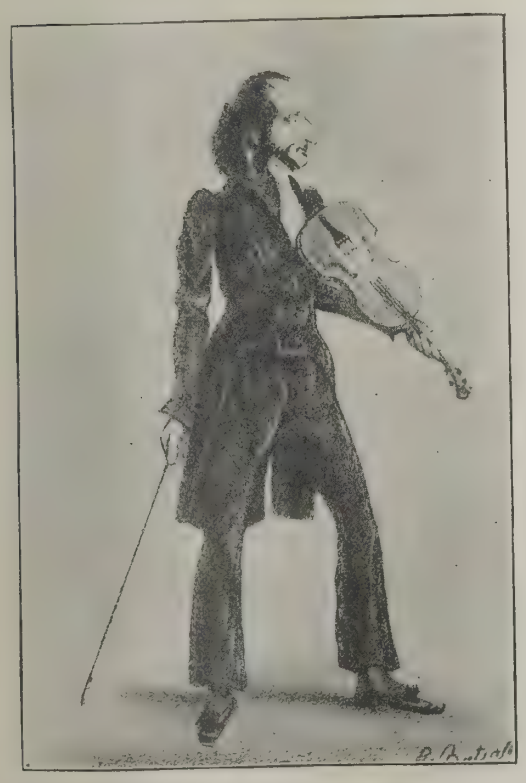
Von Lütgendorf has the advantage of himself being a violin connoisseur, so that comparatively few errors of statement have entered into his book. He deserves the thanks of every violin lover for sharing with them his great knowledge of violins and for the years of labor which he has devoted to the preparation of this monumental work. This book should find its way into every musical library.

II

The Hawley Collection of Violins. Published by Lyon & Healy, Chicago, 1904.*

The sum total of violin literature is quite large, but we have in this monograph the first real contribution made by America to this literature, and Mr. T. C. Freeman, who prepared the text for the brochure, as he so modestly styles it, has earned the thanks of violin lovers the world over for the satisfactory way in which he has performed his task.

Just a word in regard to the story of these violins. About three decades ago Mr. T. R. Hawley, a merchant of Hartford, Connecticut, had aroused within him a desire to own some of the violins of the greatest makers. Through the



NICCOLÒ PAGANINI

aid of that great connoisseur dealer, Mr. George Hart of London, Mr. Hawley secured some of the choicest specimens of the luthier's art in existence.

The excellent judgment and taste shown in the preparation of this volume will work greatly for the uplifting of the violin art to its proper level in this country.

The very arrangement of the violins in the order given displays a knowledge that only the expert can fully appreciate. This arrangement is as follows: —

The Healy "Strad"; the Earl "Strad"; the "King" Joseph Guarnerius; the "Jarnowick" Joseph Guarnerius; the "Goding" Nicola Amati; the "Hawley" Maggini; the "Tariseo" Carlo Bergonzi; the "Hawley" G. B. Rogeri; the "Hawley" G. B. Guadagnini; the "Hawley" Joseph fil. Anor. Guarnerius; the "Hawley" Stainer; the "Hawley" Lupot.

The colored illustrations are remarkably fine and give front, back, and side views of each instrument. These pictures serve the purpose of making widely known the exact proportions and appearance of the genuine instruments of ten of the greatest luthiers, — a knowledge which is greatly needed in this country.

In 1902 these violins came into the possession of Lyon & Healy, and since it was recognized that they could not be kept together, but that they would probably be sold one by one, it was a most valuable conception that the instruments should be carefully described and photographed before their dispersal, and these results laid before the violin world.

The text is remarkably well written and serves as an excellent setting for the descriptions of the individual instruments that are the subjects of special remark. We have not space to call attention to the various opinions given by the author in the text, but there is one that is so important and, so far as I know, is here published for the first time, that it deserves special mention here.

In commenting on the work of Joseph Guarnerius del Jesu, the author calls attention to the strong resemblance to the work of Giovanni Graucino of Milan, who was making instruments during the whole of Guarnerius' early life. Having had in my possession for some years a very fine specimen of the work of Giovanni Graucino (a violin dated 1704, and which is now owned by May F. Waldo), I was enabled to study Graucino's work very thoroughly, and was strongly impressed, not only with the strong resemblance to it of the Guarnerius outline, but of the sound holes as well; but I had not seen this idea voiced until I came across it in the present memoir.

* Printed in a limited edition of two thousand copies.

FELIX WEINGARTNER

Felix Weingartner, the eminent German conductor, has been directing symphonic concerts in this country. He has written much for the orchestra, and a considerable amount for the operatic stage. It has not been generally reported on this side, however, that just before his departure for America he produced, at Antwerp, in German for the first time, an opera or music-drama, which he had finished some years since, — a drama on Wagnerian lines and on a subject as unusual as it is rich in dramatic and musical possibilities. Mr. Weingartner's music-drama is called *Genesius*, and is based on a work entitled *Geminianus*, from the pen of H. Herrig, whose theme is the martyrdom of the Christian converts in Rome in the third century. In the book, as in the opera, there is portrayed the awful struggle between decadent paganism and the young, rising Christian religion.

The production of this work was under the composer's personal direction, and a full account of it is given in *Le Figaro* (Paris) by its musical critic, Robert Brussel. He praises the sincerity, the elevation, the impressiveness, the brilliancy and the beauty of the work, and while he finds Wagner's influence in the poem (or libretto), written by Weingartner himself, in the atmosphere of the opera, and in its general scheme and underlying conception, he says that in the melodic and harmonic features of the opera the composer was distinctly original.

A recent number of the *Literary Digest* furnishes an abridged translation of the Paris critic, which reads: —

"The action is simple enough. A young Christian girl named Pelagia is in love with a pagan comedian, Genesius, of the court of Diocletian. Genesius had sought to gain admission into the ranks of the Christian converts and had been rejected by the priest, Cyprianus. Enraged at this exclusion, Genesius avenges the insult by informing the authorities of the missionary activity of the priest. The latter is imprisoned and, like all Christians at that time, is to be subjected to cruel torture and martyrdom. Pelagia hears of this, and demands that she, too, be punished as a heretic. Genesius had not foreseen such a consequence of his monstrous deed, and tries to save Pelagia.

"Diocletian, struck with terror at this supernatural manifestation, loses his reason. All the victims, all the blood he has caused to be shed, haunt his mind; his strength leaves him, and he falls to the ground almost lifeless, conquered by the piety of the simple girl.

"Later, to exorcise these phantoms, the emperor orders a spectacle, in the course of which Genesius is to appear in the part of Apollo. But during the actor's performance the truth suddenly dawns upon him, and he startles

FELIX WEINGARTNER

everybody by celebrating in ringing terms the splendors of the new faith. Of course, he is at once seized, thrown into prison, and condemned to share the fate of the other Christian heretics.

"In the third and final act we see the Christian martyrs on the eve of their execution. All sleep; Genesius alone is wakeful. When Pelagia, disturbed in her slumber, wakes, Genesius comforts her and, for the last time, eloquently pictures to her the rare beauty of religious martyrdom."

For this drama, the critic continues, the composer has written one of the most remarkable scores the modern German school has produced. The *leitmotif*, or leading theme, is at the basis of the whole musical structure; the score, however, is intensely lyrical and reveals a melodic talent of rare richness. The musical ideas which serve to characterize the various personages are distinct and definite; at the same time they are plastic enough to permit of endless combinations and abundant orchestral color. The opera is full of movement and contrast, the Pagan scenes and those depicting the faith, courage, and sufferings of the Christians serving to heighten each the others' effects, the whole being marked by vigor, grasp, mastery of musical expression, and genuine power.

TWO MUSIC AUTOGRAPHS

A NEW AMERICAN COMPOSER—FREDERICK S. CONVERSE AND HIS CAREER

EDWARD BURLINGAME HILL

While the output of the American composer in the direction of piano music, chamber music in different combinations, songs, choral music, and orchestral music has been considerable, American opera has remained an exotic in spite of some notable attempts to maintain the contrary. The causes which have conspired to render native opera not only a questionable but an absolutely prohibitive luxury, are so obvious and so inseparable from the present conditions of our musical life as to render an explanation entirely unnecessary. Serious opera in English, to a public that for the most part has listened complacently for years to Italian, French, or German opera in partial linguistic darkness, is so much of a shock as to be almost a new form of musico-dramatic art. It is still so much of a novelty as to be in the experimental stage. When, therefore, a young American composer is moved not only to compose an opera to a poem (also by an American) of great imaginative and symbolic beauty, but to produce it on his own responsibility, that fact is of itself sufficient warrant for a connected review of his previous career.

Frederick Shepherd Converse was born in Newton, Mass., Jan. 5, 1871. He graduated from Harvard in 1893 with highest honors in music, having taken the music courses given by Prof. John K. Paine. After leaving college, he went into business. Six months, however, established in his mind the undesirability of a business career, and for nearly a year and a half he continued his musical studies with Carl Baermann and George W. Chadwick. After two years' study under Rheinberger at the Royal School of Music in Munich, from which he also graduated with honors, he returned to Boston. He has taught harmony at the New England Conservatory; since 1902 he has been an instructor in the Musical Department at Harvard; in 1905 he was appointed assistant professor.

Mr. Converse's career as a composer has been one of consistent growth and artistic progress. His individuality is not the result of precipitate crystallization, but of gradual and firmly grounded evolution. It would prove instructive both for the music-lover and for the student to assimilate the lessons therein contained. Mr. Converse's "thesis" for honors at Harvard was a sonata for violin and piano (since published as his Op. 1); it may serve as the point of analytic departure. This sonata, while eminently "musical," adheres closely to tradition, not only in matter of form, but of content; but it displays evident resolution to master and make thoroughly his own the fundamental laws of musical construction in a degree seldom manifested by a college student. His second published work, a suite for piano, seems content to remain within the limits of conventional style, although the third movement "quasi una fantasia" foreshadows decidedly the later development of the composer's individuality, both as regards freedom of form and romanticism of substance. A string quartet, Op. 3, written before Mr. Converse studied in Europe, was performed after his return in a revised version. A concert-overture, *Youth*, also written during the period of study with Mr. Chadwick, was performed at Munich, July 14, 1897, in a version rigorously pruned to suit the academic standpoint. Although it has never been performed in this country, it does not take the spur of actual hearing to observe that the composer was setting himself tasks of progressive difficulty. In the spring of 1898 he completed a symphony in D minor, Op. 7 (performed at Munich, July 14, 1898, by the Boston Symphony Orchestra, Jan. 14, 1899, and also at the Worcester Festival in the same year). This symphony adheres stoutly to tradition from the harmonic standpoint, in form, in orchestration, and in its normal and wholesome musical style. As in the violin sonata, but to a far greater degree, it is soundly and thoroughly wrought with the same patient willingness to profit to the full from every opportunity to master the secrets of constructive technique. It forms the keystone in the arch of Mr. Converse's technical training. Henceforth he was ready to listen to the call of individuality.

Without apparent intermediate step, Mr. Converse soon appeared as a composer of symbolic poems, handling the larger and less conventional poems with surprising surety and with striking control of the modern orchestra. This was undoubtedly the result of his self-restraint and discipline as a student, and his unquestioning acceptance of the technical tasks imposed on him. *The Festival of Pan*, Op. 9, a romance for orchestra (first played in Boston, Dec. 22, 1900; in Cambridge, London, Cincinnati, and elsewhere), deals with certain aspects of Keats's *Endymion*, depending, however, for its appeal entirely upon its subjectively musical qualities, without suggestion of realistic "tone painting." *Endymion's Narrative*, a second romance for orchestra, Op. 10 (played in Boston, April 11, 1903), applies the same order of musical treatment to other parts of the poem. In it the composer handles an extended form and a more complex orchestra with increased mastery; the psychological element is more palpable, and the attempt to project subtlety of word more evident. More clews are indicated by the composer in explanation of the emotional contents of this romance, but it continues his purpose to let the dramatic character of the music tell its own story without additional excitation of the imagination. While this same standpoint was prescribed by the composer in the poems for piano and orchestra, *Night* and *Day*, Op. 11 (first performed by the Boston Symphony Orchestra, Jan. 21, 1905), they must be given especial attention because of the fact that the piano is used as an orchestral instrument rather than the appanage of a virtuoso, and because of the sharper characterization of mood, and the consequently greater vitality of individuality from the psychological point of view. The very mottoes chosen respectively for the two poems, "This is thy hour, O Soul, thy free flight into the worldless," and "Day full-blown and splendid — day of the immense sun, action, ambition, laughter," both by Walt Whitman, show an increased tendency towards specification of mood while still relying entirely on the intrinsic expressive quality of the music. It is impossible to pass over the greater freedom and plasticity in respect to form without the slightest sacrifice to coherence or constructive logic. The ballade for baritone and orchestra, *La Belle Dame sans Merci*, Op. 12, was given by the Boston Symphony Orchestra, March 3, 1906; the Violin Concerto, Op. 13, has not as yet been performed.

The String Quartet, Op. 18 (first played by the Kneisel Quartet in Brooklyn, Oct. 27, 1904, also played in New York and Boston), is a shining example of Mr. Converse's artistic self-restraint. Turning from works which demanded the full resources of the modern orchestra, it would have been not unnatural if he had found himself unable to shake off the orchestral style. On the contrary, the distinguishing characteristics of this quartet are its conformity to a normal quartet style, the simplicity by which effects are gained, and the economy of resource shown. At the same time it is inventive, thoroughly original, and genuinely expressive, in spite of the self-imposed restrictions. Here, again, by curbing his impulses, Mr. Converse has only prepared a surer foundation for a more ambitious effort in the future.

In *The Mystic Trumpeter*, an orchestral fantasy after Walt Whitman's Op. 19 (performed by the Philadelphia Orchestra in 1905, and announced for performance in Cincinnati), Mr. Converse shows an advance in the technique of construction and psychological expression that can scarcely be accounted for adequately by the experience obtained in the intervening works, the ballad, Op. 12, or the violin concerto, Op. 13. Certain verses in the poem of Whitman's are poetically translated in corresponding sections of the fantasy. Thus, the first three verses give the words of the first section: —

I

"Hark, some wild trumpeter, some strange musician
Hovering unseen in air, vibrates capricious tunes to-night.
I hear thee, trumpeter, listening alert I catch thy notes
Now pouring, whistling like a tempest 'round me,
Now low, subdued, now in the distance lost.

II

"Come nearer, bodiless one, haply in thee resounds
Some dead composer, haply thy pensive life
Was filled with aspirations high, misformed ideals,
Waves, oceans musical, chaotically surging,
That now ecstatic ghost, close to me bending, thy cornet
echoing pealing,
Gives out to no ears but mine, but freely gives to mine
That I may thee translate.

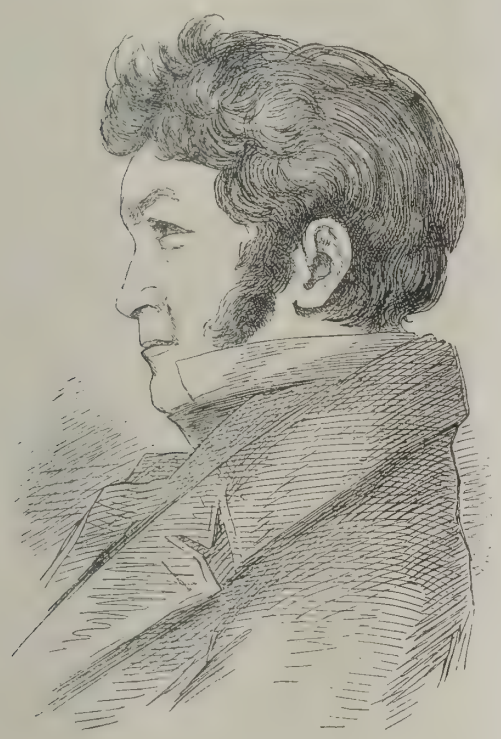
III

"Blow trumpeter, free and clear, I follow thee,
While at thy liquid prelude, glad serene,
The fretting world, the streets, the noisy hours of day
withdraw,
A holy calm descends like dew upon me,
I walk in cool refreshing night the walks of Paradise,
I scent the grass, the moist air, and the roses;
Thy song expands my numbed imbonded spirit, thou
freest launchest me,
Floating and basking, upon Heaven's lake."

* * * * * *

The opening theme and its subsequent development exceed in subtle psychological rendering of atmosphere and in poignant human expressiveness any previous work by Mr. Converse. The succeeding stanzas used, dealing with love, the horrors of war, and the wrongs of humanity, are in their turn translated eloquently and graphically; the final stanza with its prophecy of a future epoch of universal joy leads musically to an intensified return of the "trumpeter" theme, with a conclusion based on modifications of the love theme, and the war theme ending in a triumphant apotheosis. The scheme of musical treatment is very free, following the symbolic essence of the poem, but not its letter, yet the strictly musical development and constructive logic are transparently forceful and persuasive. This fantasy apparently is the most apt illustration of what Mr. Converse has been working towards; by means of a long and faithful apprenticeship to the accepted means of expression, at length to acquire, through gradual experience of greater liberty both in form and expression, such sway over his technical media as to obey only his innate sense of coherence and symmetry. By means of a skilful gradation of his problems, he has passed from each successful solution to the point where he was fully equipped for his task. Thus *The Mystic Trumpeter* represents not only his most convincing achievement in point of construction, orchestration, and emotional expressiveness, but also the essence of his artistic individuality. The very deliberateness of its growth has insured the ultimate force of its message. If Mr. Converse's songs have not received consideration, it is because of preoccupation with tracing the larger outlines of his artistic evolution. The present is not the time for an estimate of Mr. Converse's work in comparison with other Americans, or for prophetic utterance as to his work in the future; but to have established a foundation of such scope and quality at his age, is in itself an achievement worthy of wide recognition Keeping in mind his instinct for dramatic effect, his skill in wielding the modern orchestra, and his insight in reproducing a psychological atmosphere, it is not surprising that Mr. Converse is drawn irresistibly toward opera, and the performances of the *Pipe of Desire* in Boston, January 28, 31, March 6, gave full evidence of his capabilities in this direction.

There are aspiring American composers who strive to write characteristically American music; there are many more who seem to consider that originality of sentiment should take precedence over the mere rudiments of technique in composition. At present it must be confessed that the one essential for the American composer is to strive to escape the stigma of a virtual technical illiteracy, to master not only the text-books in musical theory, but the principles that underlie them. This may seem a trite recommendation, but experience proves the contrary. Those who shirk this drastic test of their creative vitality, may be invited to consider the various stepping-stones of Mr. Converse's career.



BEETHOVEN
(Julius Schnorr)

BEETHOVEN ANNIVERSARY

Bonn celebrated the 135th anniversary of the birth of Beethoven. Exercises in which the prominent officials of the town and the professors in the university took part, were held in the historic house in the Rheingasse, in which Beethoven lived.

An important feature of the celebration was the unveiling of the new bronze of the composer made by Sculptor Aronson, a work of vigorous imagination. The artist is a Russian, who won the first gold medal recently at the International Exposition at Liège. A description of his work was given in a recent issue of *Musica*, the writer saying:—

"How did he execute the model for his Beethoven? In the open air, in the very garden of the Musée de Bonn where it is placed, and in less than one hour, right under the amazed eyes of the heights of the town. Such dexterity in execution explains itself by the patient researches of an artist who did not neglect a single document, and knew how to get at every source before he conceived the definite form of his achievement. In this way, he tells us, he came to the conviction that the physiognomy of the great musician did not express that bitterness which is visible in the sculptures of 1812 and 1827, in which the wrinkles droop from the corners of the lips.

"There was in one case a deformity, due as much to death as to the surgical operation that he had undergone, and in the other, a grimacing malformation, due to a delicate operation performed by the sculptor, Franz Klein.

"Beethoven, says Sculptor Aronson, was a being possessed of a kindness which misfortune affected but could not embitter. And the countenance of Beethoven expressed this kindness, just as it did his creative energy, with all its force. And the bronze before our eyes is convincing."

THE METAL FOR ORGAN PIPES

Pure Tin

A few brief articles on this subject will be of interest to those who are intending to contract for new organs. At present it is customary to mention in specifications that spotted metal shall be used for all the pipes, and often certain stops of the Gamba class are specified to be either of pure tin or of 50 per cent tin. Now it is of more importance to have the metal of sufficient thickness so that the pipes shall give a firm, resonant vibration, than to have the composition of the metal of the richest and most costly substance. Builders often make the assertion when they use a high percentage of tin that a better tone is produced by using thin metal. This is a false statement, and is made simply to cut down the expenses of material used. I have the testimony of a reliable workman who was in the employ of such a builder, that it was customary in that factory to use for the regular organ metal only 12 per cent of tin, 85 per cent of lead, and 3 per cent of antimony! In order to make a satisfactory casting of the metal in sheets, so that the particles will not separate in cooling, the Pure Tin which the organ builders use has 10 per cent of lead amalgamated with it. This gives the hardest and toughest, as well as the most costly, metal used for organ pipes. Even this strong composition should be thick enough to be unyielding to the most intense grasp of the hands when made into the treble pipes. But 50 per cent tin and lead each is just as serviceable. Such is the composition of the pipes of the old Haarlem organ, built in 1738, which are yet in use. The German, Belgian, and French builders have in past years used a higher percentage of tin than English and American builders. When an organ builder specifies tin, about 75 per cent of tin is used, while pure tin has 90 per cent of tin, as before stated.

Spotted Metal

When 50 per cent tin and lead forms the proportion in casting the sheets of metal from which organ pipes are made, as the metal cools the exposed surface becomes indented with a pustular appearance having a bright lustre. When 40 per cent tin is used, the surface is more dull and the crystallization shows itself in large mottled spots of a somewhat symmetrical appearance. This is considered the standard quality for organ pipes, and is of sufficient richness for all purposes, providing the metal is thick enough. In order to save in the cost of metal, some pipe makers plane the cloth side of the sheets so that when the pipes are made the top of the pipe is thinner than at the mouth, which is not commendable, as the metal should possess the same resistance throughout in order that the vibrations shall be firm. Where the metal of a stop like the Open Diapason is too thin, the tone lacks solidity and resonance. When this metal is first cast, it is somewhat tough and springy, which becomes mellowed and softened after a few months' exposure to the air, and with certain delicate toned pipes this springiness affects the tuning and voicing of pipes made directly from new metal. For this reason it would be better to make such stops from metal which has been cast a year, which is not done by builders. The use of spotted metal, in itself, does not affect the quality of tone, providing there is no scrimping in the thickness of the sheets.

It may be set down as a rule which all builders of experience acknowledge, that it is not the percentage of tin used which enriches the musical value of organ pipes, but the firmness of the metal, whatever the combination, united with a scientific scale of proportion and artistic voicing. This may be illustrated by the use of common gum shellac from which bric-a-brac articles are made in various forms and colors. Some of these are made with such skill that they are sold for fabulous prices, not for the value of the substance from which they are formed, but on account of the highest art which they embody as representative of the talent of the designer.

Plain Metal

Having made the statement that the quality of the tone does not depend upon the intrinsic cost of the substance, but upon the firmness and durability of the metal, a few words may be said in regard to plain metal This composition varies with different builders from 5 to 25 per cent of tin, the majority of pipes having 5 per cent of tin, or even type metal, or fillings composed of the sweepings or waste cuttings of the metal department. Many builders purchase all the lead lining of foreign tea chests and melt it for the plain metal.

In the four-manual organ in Tremont Temple, Boston, which was burned in 1879, there was a mellow-toned Stopped Diapason in the Swell made of lead only. Lead alone is not suitable for organ pipes, as its weight and softness causes pipes to crush down at the mouth and feet. Nearly all organs made in the early part of the last century which had the display fronts made of plain metal, exhibited this crushing, and when zinc was brought into use they were replaced. Some builders are so careful to guard against the crushing of the feet that even where 40 per cent tin is used, all the inside Open Diapason pipes below Tenor F are made with zinc feet, where the spotted metal is carried below this note. Plain metal pipes are generally planed on both sides of the sheet to give a smooth surface externally and to take off the roughness caused by the ticking marks of the cloth on which it is cast. Antimony was formerly much used to give hardness to plain metal, but was discarded when tuning by the use of the slotted rolls was introduced, as it was so brittle that the rolls broke off easily, and even in coning the metal would break off. Tuning slides are now superseding the roll method of tuning, even where the pipes are slotted. Firmness and thickness are the essential points in securing a solidity of tone, the scale and artistic voicing determining the timbre, as previously stated.

OPENING ANOTHER BURR

Some amusing instances of French "bulls" are given by "T. P." The following sign is said to have been observed on a Paris shop: —

"Fabricant des Meubles Anciens," and not far from it, on the same street, the sign: —

"Réparation des Bébés Incassables."

The following verbal "bull" is credited to a Frenchman who, while promenading with a friend, noticed a passing cab drawn by a pair of horses, one black and the other white.

"Look," said one; "you don't often see a pure white horse and a pure black one harnessed together."

"That's so," was the response. "Do you know why the black horse is on the near side?"

"No."

"Why, they always put the horse that isn't the same color as the other on the near side."

* *

Painful

Jorkins. — "My dear, I wish you would not sing that song about *Falling Dew*."

Mrs. Jorkins. — "Why not?"

Jorkins. — "It reminds me too much of the house 'rent.'" — *Puck.*

* *

Quite Different

First Pupil. — "And you say he is a popular song writer?"

Second Pupil. — "Oh, no. I said he was a writer of popular songs."

* *

First Critic. — "Were you present at the last Wagner presentation?"

Second Critic. — "No, but I wrote an excellent criticism of it."

* *

"Aren't the acoustic properties of the opera house magnificent?"

"They certainly are. You can hear every word that's said by the Blank's party four boxes away." — *Brooklyn Life.*

A UNIQUE UNDERTAKING

FRANKLIN SQUARE HOUSE

What is It?

The Franklin Square House has been aptly called a "Home Hotel" for working girls and student girls with moderate incomes. The attention of Mr. John C. Haynes was called to the fact that every year vast numbers of young women flock to Boston either to work or to study. Besides the large numbers of transient girls in need of such a temporary stopping place as the Franklin Square House furnishes, there are probably not fewer than 10,000 girls in Boston living in the boarding and lodging houses, many of these houses having no reception room in which girls may receive their callers. If one were to include the suburbs, the number would probably reach 15,000. In six department stores and three schools 855 girls were found with no regular homes in the city.

These girls come as strangers to Boston with nowhere to live except the ordinary lodging-houses, and many of these badly kept and some of them positively dangerous. When these conditions were called to the attention of Mr. Haynes by Rev. George L. Perin, he at once heartily, and with characteristic generosity, went into the scheme of building up a great Home Hotel where these young women might live with the largest possible comfort and safety and the smallest possible expense.

The Organization

The idea once conceived and thoroughly thought out, steps were taken to embody it into organized form, and a corporation was formed under the laws of the Commonwealth relating to philanthropic and educational institutions, under the name of the Franklin Square House. This corporation almost immediately purchased the property which had been originally built as the St. James Hotel, but which had been occupied for twenty years and more by the New England Conservatory of Music. The Conservatory moved from the building in July, 1902. The Franklin Square House Corporation immediately took possession of the building, renovated it, and opened it for its new object.

Where is It?

The Franklin Square House, for many years known as the New England Conservatory of Music, is one of the most conspicuous buildings in the whole South End region of Boston. It is located on the corner of East Newton and James Streets. The beautiful Franklin Square lies directly in front and a large, open space filled with trees in the rear. Probably no hotel in the city of Boston is so well located for light and air. It is within easy walking distance of the business section of the city, and ideally located for the accommodation of either the regular resident or the transient visitor.

It is probably, on account of its location, one of the coolest hotels in the summer to be found in the city, while in the winter every part of it is kept absolutely warm. The Franklin Square House Corporation go upon the assumption that what is worth doing is worth doing well.

The Plant

The building has its own steam and electric light plant, and a well-equipped hotel kitchen and a good steam laundry, a large dining hall seating 347, and a reading room and library. A fine hall, amphitheatre in style, seating 476 people, and containing one of the finest grand organs in the city; another hall seating 200 people, and equipped with stage, lights, scenery, etc.; a large reception room and eleven private parlors, to say nothing of a printing office, where all the work of the house is done. Besides all this, there are 302 sleeping rooms, with accommodations for about 400 young women. As we go to press, there are at the present time 396 young women actually living at the Franklin Square House.

Since the Franklin Square House took possession of the building seven rooms have been set aside for a hospital department, and have been furnished in a thoroughly sanitary way and skilfully filled with all modern hospital equipment. Indeed, the whole plant could hardly have been more admirably adapted for the purpose if it had been made to order.

The Name

Some discussion arose when the house was opened as to the name the enterprise ought to bear. The phrase "Working Girls' Home" was immediately rejected for two or three reasons. First, because it is a place for working girls only on a very broad interpretation of the phrase. The house is constantly open for student girls as well as working girls, and in fact to all girls entirely or largely dependent upon their own resources and with small incomes.

As applied to large enterprises, the sweet word "home" has become so warped from its original meaning that we at once think of it as relating to some sort of charitable institution; whereas it is the fixed purpose of the Franklin Square House to keep as free as possible from the ordinary institutional atmosphere. Therefore the word "home" was rejected.

It was the purpose of the founders of the Franklin Square House to make it homelike in some of the nobler meanings of the word. They certainly desire that every resident shall find many of the comforts, much of the liberty, and surely the sympathy of home life. It is also the purpose of the managers to keep it as free as possible from all the petty rules and restraints found in many institutions. It is a home for women and not for children

But what about the name "hotel"? Well, that is not fairly descriptive either. It is not satisfactory, because the Franklin Square House is far more than a mere hotel enterprise. It is a hotel plus recreation rooms, plus the care of nurses and physicians when the girls are ill, plus an educational department; but, above all, plus the sympathetic human interest of the management in every girl who becomes a resident, without placing her under any obligations for charity.

It did not take long, therefore, for the projectors of this enterprise to settle down upon the simple name "Franklin Square House." Needed as this great work is, it should be no discredit to a name already rich and honored with noble associations.

Small Incomes

Very many of the girls who have no homes have to pay out too large a proportion of their weekly wages in board and lodging. With many it is difficult even to live. The very smallness of the margin between income and necessary outgo becomes a new peril. The attempt is being made by those who are interested in the Franklin Square House to furnish board, lodging, heat, light, nurses' and physician's care when girls are ill, to working girls, student girls, and other girls with moderate incomes, for the smallest possible price consistent with comfort and health.

Not for Profit

While the Franklin Square House is conducted on thorough business principles, it is not run for the financial profit of any individual or any set of individuals. It is a corporation organized under the laws of Massachusetts to carry out definite work for the general good. It is an attempt to furnish homeless young women an opportunity to live in the best possible way that they can live, for a very moderate cost.

Not a Charity

On the other hand, the purpose is to make the Franklin Square House in its practical operation entirely self-supporting. The philanthropic part of the enterprise will be the purchase of the property. It will be as if four hundred girls should club together and pay for their own living in a house whose rent is given to them. The residents of the house are not to be regarded as objects of charity. Every self-respecting girl is sensitive on this point, and justly so. They are to pay their way, and pay for all they get; but, at the same time, they are to have a great deal for what they pay. In this regard, the relation of a resident in the Franklin Square House is not greatly different from the relation of a student to his college. Its property, its endowment, if it have endowment, may be called a reserve to secure the success of the enterprise. In other words, it is a philanthropy based on business principles, but not a charity in the humiliating sense of the word, and every girl in the house is absolutely independent and self-respecting, — free to come and free to go.

Self-Governing

The management of the Franklin Square House was recently asked about its principles and methods of government. The answer was: "The government is based entirely on principles of mutual trust. We aim at the smallest possible abridgment of personal liberty consistent with the good reputation and the comfort of all. It is our settled conviction that girls old enough to earn their own living are capable of self-government when associated together. Therefore, while there should be a few rules, they should be such as approve themselves to the girls themselves. The real blessing of the house should come not through restraints, but through the sweet and wholesome influence of the place, and the charm which it has for the residents." During the three and a half years of its existence the Franklin Square House has acted upon these principles of self-government, and the management sees no reason for a change of policy.

Nonsectarian

The Franklin Square House is entirely nonsectarian. Its doors swing wide open to Protestant and Catholic, to Jew and Gentile. No tests of creed are made, and no efforts to proselyte. In its social and educational departments no end of ethical influences are available, but no effort is made to bring a girl of one creed under the influence of another creed. In all such matters entire liberty is the ideal. The Franklin Square House is in no sense a church annex. Its purpose is ethical and economic and not religious.

Cost of Living

In the average lodging-house of Boston a girl must pay for a small side room, often containing no heat, $1.50 a week. She must then pay $3.00 for a 21-meal ticket in a third or fourth class restaurant, the food of which is often unpalatable and unwholesome. She has in these two items a weekly expense of $4.50. If instead of the side room she rents a square room in the ordinary lodging-house she will pay from $3.00 to $4.00 a week for the room alone. The Franklin Square House gives board, lodging, heat, light, nurses and physician when girls are ill, and free use of the reading room and library, one entertainment each week, not to mention the many social advantages and privileges, for the average cost of about $4.75 per week. There are, however, a number of rooms for which a higher charge is asked for girls who can afford to pay. It will be seen, therefore, that the Franklin Square House aims to give the girls the largest possible comfort at the smallest possible cost.

Unique Features

There are at least three unique features of the Franklin Square House. One is the care of the sick. Every permanent guest of the Franklin Square House is entitled to free care, both as to nurse and physician. If she is ill for a week or for six weeks, she is cared for in the house hospital as tenderly and far more scientifically than she would be in her own home.

The second unique feature is the provision of eleven private parlors for the private use of the girls who have company. These have been beautifully furnished and are for the free use of permanent guests.

The third unique feature is the large entertainment hall. It is amphitheatre in style, seats 476 people, and contains a grand organ which cost $8000. Here is given, each week, under the auspices of the house, one free entertainment. We have called these unique features, but the truth is, the whole enterprise is so unique that it is difficult to particularize.

A Transient Department

In addition to the home department for regular residents, there is a transient department maintained for girls who are looking for work, for students coming to the city but not yet settled, for young women spending a day or two in the city, and others passing through or stopping for a few days. While the plan of the House has in mind especially the girl who will stay many weeks or months, the service rendered to the transient is often greater.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

MODERN EDITIONS OF THE CLASSICS

(*Continued*)

JULIUS R. WEBER

I

In this sonata* Riemann and Klindworth have not a single pedal sign, which is an easy way out of the difficulty, leaving everything to the teacher, but not so good for the student who may be left to his own devices. Every experienced instructor knows what that implies.

D'Albert marks the pedal in two places in the Adagio, and considering the slowness of the movement, and the low pitch of the thirds in the alto voice, such usage does not make for beauty, and is hardly to be recommended to the young as an example. In the Prestissimo movement, he places the pedal only eight or nine times in the most obvious places. Where is the helpfulness to the student in such scant marking of the pedal? Why not present a clean page as Riemann and Klindworth have done, and leave the use of the pedal frankly to the teacher and pupil? But, then, such editions have no right to be called "critically revised," when they all but ignore one of the prime essentials. The Lebert edition has but seven pedal signs at the very end of the sonata. Germer and Buonamici, however, recognizing their duty to the artist in embryo, use pedal signs copiously and, in the main, accurately, although in the case of Buonamici's employment of the pedal in many places in the Adagio, objection might be taken, by the punctilious, both from the standpoint of euphony and phrasing. Take such an example as this, for instance, in the eighteenth measure: —

Such a use of the pedal seems indefensible for several reasons — first, on account of the slowness of the movement, which would cause a blurring of the thirds in the alto voice; second, a somewhat slighter blurring of the octaves "D" and "C♯"; and third, the improper ending of the phrase, making the "C♯" a quarter instead of an eighth.

As a rule, however, Buonamici's marking is that of the artist and teacher of routine. In this sonata Germer's marking of the pedal is certainly the best, the most consistent and systematic for practical purposes, based on sound artistic principles, although there is a slight tendency to blur in the Adagio. The discriminative touch of an artist might warrant such usage in a slow movement, but the more clumsy manipulation of a pupil would now and then commit sad havoc.

To sum up with a single question: Which is the best all-round edition of the Beethoven sonatas for the pupil, teacher, and artist?

Considering the fullest exposition of the three essentials, comprehensive, yet conservative phrasing, modern fingering, together with accurate and sufficient pedal signs, the answer can only be in favor of Heinrich Germer's academic revision in the Litolff edition. It is to be regretted that only the popular sonatas are published separately, as the three volumes are rather bulky, although inexpensive; yet, on the other hand, every lover of Beethoven should own this complete edition of the sonatas.

* See THE MUSICIAN for February, 1906.

II

All this is but preliminary to the real object of this paper, which is an attempt to present, according to the writer's opinion, a list of the best modern editions of the classics, no matter where published. It is probably the experience of many teachers who really investigate that even in the larger cities, the music dealers are few who offer a variety of editions from which one may choose. As a rule, this is not because they are unwilling to so increase their stock; the fault lies with the majority of teachers who are indifferent, who are willing to use whatever happens to lie on the shelves of the music dealer. It is to the younger generation of teachers, whose receptive minds are ever open to what is new and progressive, provided that it is good, that we must appeal; let them demand only the best editions, and few dealers will have the courage to refuse to keep them.

III

Let us begin with Bach's *Well-tempered Clavichord;* besides the unrivaled Tausig revision, there are those of Germer (Litolff), Bischoff (Steingraeber), Busoni (Schirmer), and Riemann (Augener). Of these the editions of Riemann and Germer are consistently phrased, which is more than one can say of the others. Typographically, Busoni's is the clearest of all, and is especially fine for serious study, because of the many excellent suggestions and difficult preliminary exercises; also for the appropriate dynamic signs, indicating an interesting musical interpretation. Riemann is to be likewise commended, although some will think that he has overloaded his text. Germer is as usual more moderate in this respect, and certainly Bach gains in the reading by such treatment.

Hans Bischoff has edited a complete Bach in seven volumes, with painstaking care; but while his tendency

SCHUMANN

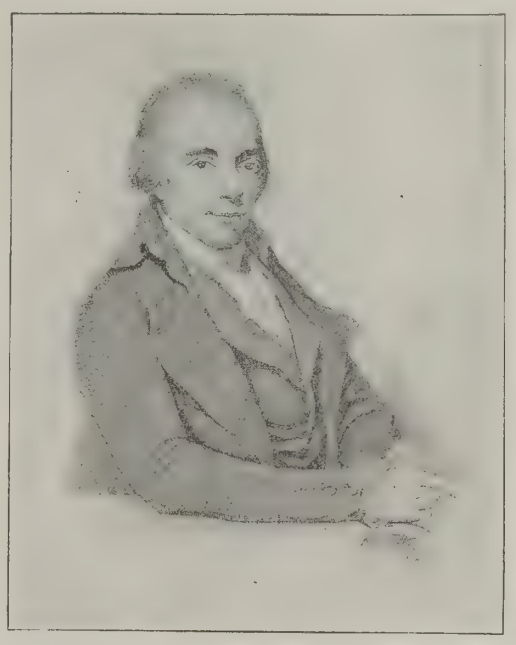
in phrasing and fingering is along modern lines, he is not always consistent and systematic, although his is certainly the best complete Bach.

Of the two and three part inventions, the best issues are those of Germer (Litolff), Klindworth (Church), Busoni (Breitkopf and Haertel), and Riemann (Augener). There are also volumes of selections from Bach (Litolff), edited by Germer and Kuehner, which are excellent, and Riemann has edited the concertos, not only of Johann Sebastian, but also those of his sons, Karl Phillip Emanuel and Wilhelm Friedemann Bach.

Wilhelm Krueger (Stuttgart ed.) has issued a fine revision of the Haendel Suites in single numbers. Buelow's selection of the easier pieces in the Augener edition is well known, and Buonamici's Album (Schirmer) is good, but without special distinction.

The Haydn Sonatas may be had in Lebert's revision, and a fairly edited and inexpensive collection is that of Speidel's (Pohle, Hamburg). The best edition of the complete works, however, is one prepared by Riemann and just issued by Augener & Co. of London. The editing of Ludwig Klee is not as distinctive as that of others mentioned in this paper.

The two best editions of Mozart are by Riemann (Simrock) and Germer (ed. Schuberth & Co.), the latter in



MUZIO CLEMENTI

three volumes perhaps preferable, for the student at least, on account of the added pedal markings, which are entirely left out in Riemann, and because of the addition of many instructive pieces, Riemann having only revised the Sonatas, but splendidly.

The Lebert edition is not to be compared with these two, being far behind in fingering, phrasing, dynamic, and pedal signs.

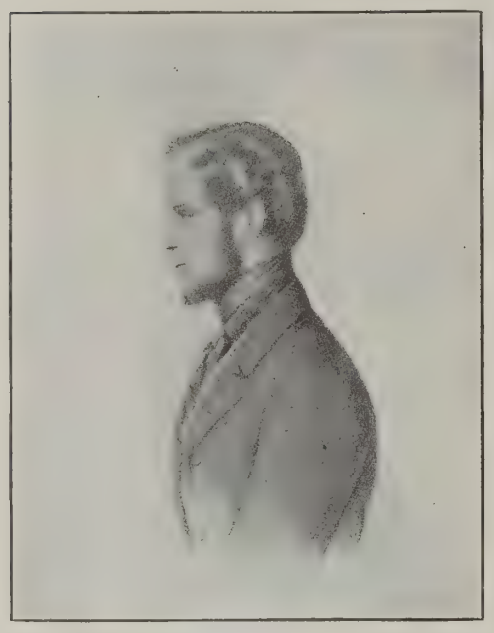
Clementi is only to be found in the larger selection in the Cotta edition, although Germer (Breitkopf and Haertel) has issued two usable volumes of single movements from the sonatas.

Dussek, so far, has only appeared in Lebert's revision, with the exception of a stray album here and there of selected pieces, of which the one by Willy Rehberg (Litolff) is very good.

Hummel appears in Peters and Cotta, of which the latter is the better, but there are two volumes of graded pieces selected and edited by Roessler (Litolff) which come up to the best modern standards in editing, especially in excellent phrasing.

Weber, in Cotta, has been the recognized edition, but Germer has worked out a fine selection of the best pieces in Litolff, and there is also a similar volume by Dr. William Mason (Schirmer), who, however, makes little attempt at modern phrasing. Germer's academic edition (Litolff) of Schubert's Sonatas, together with his Jubilee edition containing the *Impromptus* and smaller pieces (ed. Schuberth & Co.) give the best that is necessary for selection. An excellent revision of the *Impromptus* and lesser pieces has been prepared by Riemann (Litolff). The Cotta edition is antiquated in comparison with either of the above.

Theodor Kullak's edition (Peters) of Mendelssohn in three volumes is faulty in every respect, when judged by modern standards. The Cotta edition, revised by Percy Goetschius, is certainly better, but it is a matter of surprise, that while Mr. Goetschius has written so masterfully about phrasing and the construction of musical compositions, that he has not discarded the use of the slur as a legato sign, for with all the care he otherwise shows, there is no consistency in this respect between



THEODORE DÖHLER

theory and practical demonstration, as far as showing a clear punctuation goes. Without doubt, the best edition of Mendelssohn's *Songs without Words* is Germer's (ed. Bosworth), together with three small books of pieces selected by him and published by the same firm.

When we come to Schumann and Chopin, there is an embarrassment of riches as far as good editorship is concerned.

Of Schumann complete, the Doerffel and Schmidt revision (Peters) is masterly in phrasing and fingering.

TSCHAIKOWSKY

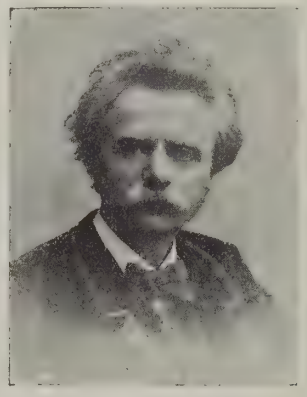
The edition of Dr. Otto Neitzel (Tönger) is equally good, with perhaps still more care as to dynamic signs and good pedal usage, while Hans Bischoff (Steingraeber) follows a close second. Conrad Kuehner (Litolff) has also prepared a good working edition. Vogrich (Schirmer) and Edouard Schuett (Universal ed., Vienna) have also worked out Schumann complete, but are not up to those mentioned above in any respect.

Germer has issued three graded albums in the Bosworth edition of the easier and shorter pieces which every teacher should use, also the *Jugend Album*, Op. 68 (Petersen, Leipsic). Riemann has three fine volumes in the Siegel edition., Leipsic.

When we seek for a complete Chopin, it is not easy to realize what a wordy war arose at the so-called daring innovations of the earlier editions, such editions as are now avoided by those who know. The Mikuli (Schirmer), Klindworth (Jurgenson), and Kullak (Schlesinger) revisions, while still much used, are no longer to be considered by the side of the editing of Schaltz (Peters), whose fingering, pedal signs, and phrasing are far in advance of either. Edition Merbke (Steingraeber) has also brought out Chopin complete, well-phrased and fingered, with ample pedal signs, and interesting remarks about variations in the text, fingering, etc., in the different editions. Buelow's two volumes of the studies are familiar, but were issued at a time when he, and every one else, was groping about as to phrasing. His general remarks are helpful, of course, and the fingering is modern, but he uses very few pedal signs. Ravul Pugno has also edited all of Chopin's works in the Universal edition (Vienna), but one fails to see where the editing comes in, as everything is left as in the first editions, with but slight exception.

Riemann has edited the Etudes and Preludes in Steingraeber, and the indefatigable Germer has put forth three fine books of the best-known compositions in an Academic edition, published by C. F. Leeds in Leipsic, and Riemann's three books (ed. Siegel) are also noteworthy. James Huneker is the editor of a fine collection of Chopin in one volume, sumptuously published by the Oliver Ditson Company, which contains an interesting preface by that most delightful "raconteur."

Grieg is his own editor, and a good one at that, who is one of the few composers who gives his readers a clear



EDVARD GRIEG

idea of his intentions in all three directions, phrasing, fingering, and pedal signs. Germer, in the Bosworth edition, has prepared half a dozen excellently edited volumes of this composer.

Tschaikowsky's pianoforte pieces have been ably edited by Riemann (Steingraeber), Germer (Bosworth), and Klindworth (Litolff). The beautiful set of children's pieces, Op. 39, have been separately issued in Germer's revision. If anything, the large collection of Tschaikowsky by Riemann is the most comprehensive.

IV

In conclusion: This article would be incomplete without mentioning the really superb collection of single pieces in the Academic edition by Heinrich Germer, and just published by the Gebrüder Hug, Leipsic. Here are 120 masterpieces, graded from the middle to the upper grade, the pick and flower of the classics, beginning with the Bach family and ending with Schumann and Chopin. A fine, monumental piece of work, as far as phrasing, fingering, dynamic signs, and abundant pedal marks can make it. No teacher should be without knowledge of it, the collection is invaluable.

MUSIC IN JAPAN

I

While some Western customs, if not Western ideals, are being rapidly assimilated in Japan, it is not at all likely that our musical art will ever find anything more than the most superficial and perfunctory acceptance. Japanese music is so radically and fundamentally different from ours, that European music is as distasteful and unendurable to Japanese ears as their performances are discordant to us.

Musical art has had no standing in Japan, having been left largely to women, whose status, as everybody is aware, is inferior to that of man in the Mikado's empire; in fact, the art was largely left to blind women, and those of questionable moral standing. Until quite recently no Japanese gentleman could reconcile the practice of music with his dignity. Travelers who have been privileged to listen to the very best performers of Japanese music have only one opinion of it: that to Europeans it is harsh, unmeaning, and painfully discordant.

II

Like most of the Japanese arts, Japanese music has a Chinese and Korean origin, and like all Chinese sciences and arts, is most fantastic in its theories and rules. Since all sounds are classed with natural forces and phenomena, which are considered to be based upon the number *five*, there must be only five tones. These tones or key-notes stand in a definite relation to the months of the year, and in each month a separate key rules. It will easily be realized that what we understand as "harmony" is something vastly different from the Japanese conception. What the Japanese think of our music may be gathered from Dr. Muller's statement: "If I am asked what impression our music makes upon the Japanese, I am sure I shall not be far wrong in saying that they find it far more detestable than we do theirs. A prominent Japanese said, not to me, indeed, for his politeness would forbid it: Children, coolies, and women may find pleasure in European music, but an educated Japanese can never tolerate it!'"

Japanese instruments of music are simpler than ours, no complicated keyboards, valves, etc., being used. Many of them are very ancient, the *koto* being known to have existed for fifteen hundred years; this is a stringed instrument, often six feet long, with thirteen silk strings, and, of course, only five notes in its scale. The *sho* is a wind instrument of seventeen pipes inserted in a wind chest. Among other instruments are flutes of various kinds. The *samisen*, a peculiarly female instrument, somewhat resembling our guitar, is played by striking the strings with a piece of ivory.

In many things Japanese art has profoundly affected and influenced Western taste, but it may be safely stated that the golden art of music, as we understand it, has nothing to learn from the Land of the Sun's Origin.

"ORDER" AND "TIME"

IMPORTANT FACT PRINCIPLES IN PIANO TECHNIC

A. D. JEWETT

I

Just as soon as the three Fundamental Principles of Technic — Position, Condition, and Action — are well grounded in the pupil's mind, the cultivation of a "Sense of Order" and "Time Sense" should be begun. The necessity of this is apparent to every thoughtful teacher and pupil.

The ability to go straight through a program or even one composition makes a large demand on this "Sense of Order," and it is safe to say that if one cannot go through the simplest exercise one cannot through the composition; and furthermore, it is impossible to get much good out of any technical exercise until its form is thoroughly mastered in each detail, so that the entire attention can be given to the accomplishment of a definite result.

The desultory playing over of a large number of Etudes is not only valueless, but pernicious, because it is invariably making more binding the habits of carelessness of detail, both as regards technic and sight reading.

If the attention has to be given to the order, it cannot be at the same moment to Position, Condition, and Action. How is this "Sense of Order" to be developed? "The first essential element of Instruction is clearness; the first essential element of Clearness is simplicity; the first essential element of Simplicity is singleness."

Some very simple and familiar exercise should be taken first, as, for instance, the scale names: 1–2–3–4–5–6–7–8 8–7–6–5–4–3–2–1; then the pitch names of all the major scales, Scale of C,—C–D–E–F–G–A–B–C–, C–B–A–G–F–E–D–C–, letting the others follow in order of fifths, — Scale of G, of D, etc.; then in chromatic order, — Scale of C, of D♭, of D, of E♭, etc.

The pupil should first be allowed time silently to think the order, looking at the keyboard if necessary, but not playing, and preferably not even pointing to the keys. The second step should be recitation, and care should be taken to see that the recitation is perfectly steady; then the same thing with the metronome starting at a slow tempo and keeping absolutely with the ticks, one letter with each tick, and until this can be done perfectly with no skips or unsteadiness do not increase tempo. M.M. 50 demands more concentration of thought than would a rapid tempo. When scale can be recited correctly and steadily at M.M. 50, increase the tempo. A short time ago I heard a class of a dozen little girls (none of them over twelve years of age) recite every major scale forward and backward at M.M. 160, absolutely correct, and the value was practically demonstrated in the assurance with which they played a musical program which followed.

The Triads may be taken next; then some simple composition treated in the same way. The ingenious teacher will select the material to suit the case, and the wise teacher will not omit this from any lesson.

When the pupils show any lack of clearness in any composition, see that they take their hands off the keyboard and recite the obdurate passage.

II

By "Time Sense" I do not mean Rhythm. The study of Rhythm is a large subject and has a technic of its own, but in the study of finger technic it is absolutely essential that a strict metronomic "Time Sense" should be cultivated: First, steadiness for the unit of count; then the division of this unit into its integral parts, — 2–3–4–6–8; and knowing that the pupil cannot only change at will to any grouping, but is able to select any grouping and play absolutely sure. Great care should be taken in group of 3 — triplets — first, to make them know, and then to be able to change from group of 3 to group of 4 and back, perfectly. Often the pupil can fall into the grouping of 3, after two or three counts, but this is not enough; they must be able to make the very first group correct as they change from one to another.

By the way, this is one of the fact principles of the subject of Rhythm, but that is not the reason why it belongs in this article. This "Time Sense" is of value in study of technic as an aid to the equalization of finger action, — for to have an equally balanced finger action both the lifting and dropping of the finger must be at some definite time — quick and prompt, and the rest at both ends of the journey clearly defined; otherwise it deteriorates into a meaningless swing with a consequently meaningless tone, or worse still, into a pernicious punching of the keys.

The cultivation of this "Time Sense" corrects also a very prevalent slovenly habit of ignoring rests; for many pupils look upon rests as a chance to do nothing, instead of recognizing that it should be the releasing of the key, quickly and promptly at just the right instant.

"Time Sense" is also of value in acquiring velocity, and I doubt if great velocity can be acquired without it. While a few pupils may have a certain amount of finger virtuosity naturally, most of them have to work for it, and often accomplish little. With the fundamental principles of Position, Condition, and Action, and a well-developed "Time Sense," velocity comes easily and as a natural consequence.

There are so many things that grow out of these two fact principles that one does not know where to stop, but I have tried to select some of the most important reasons for the early and careful study of Order and Time.

The next articles in this series will take up the additional principles necessary in study of scale playing.

MUSIC AND THE BOY

JEAN URQUHARDT

I

Country boys are fond of music, but are shy and often ashamed to study it because their boy friends over on the next road, or across the creek, will think it is effeminate, — "sissy" is the approved term. And no other insulting word carries with it quite the sting that this one does. For, before the country boy is out of dresses himself, he has absorbed, from the soil perhaps, a lofty disdain for any created creature that wears skirts. For he early discovers that the hand that rocks the cradle is not the one that holds the horse-lines or guides the plow. Therefore, the mild contempt that saturates him, and makes him doubly despise that name of all names, — "sissy."

But it would be a long step in the right direction if parents could only realize that a love for good music will do more than any one other thing to make growing boys and young men self-respecting, and to keep them out of bad company and other mischief.

Once upon a time the writer knew a wise New England mother who had three sons. The boys liked music, and were near enough of an age to like to be together; so much so, that they all wanted to practice at one and the same time. One patronized the piano, one had a guitar, and the third a violin. Unfortunately for the neighbors, each musician was playing a different "piece." It was the real thing in the shape of a medley. Had it occurred in Papa Haydn's day and generation, no doubt he would have seized on it as an inspiration for the chaos of his *Creation;* but for twentieth-century neighbors, — we liked the parents, and we liked the boys, too; so we gritted our teeth, and held our peace. The wise mother was slightly deaf, which was a mercy; and beside that, she kept quiet, and remained out of earshot as far as possible. But we all rejoiced together when the discord began to get on the nerves of the boys themselves, and they began to invest their spare pennies in selections that had proper parts for their several instruments. The whole block breathed easier, and the parents felt that the moral effect was all that could be desired, even for Sons of the Revolution, because the more pocket money they spent on music, the less there was left for mild orgies with the other boys, — possible cigarettes and the like.

Those boys have grown since, in stature and in music. At this date they have a very creditable collection of part-music. The parents do not know what it is to have one uneasy hour as to their associates or whereabouts; for the boys have a club of musical boy friends, among others, and if they are not at home, the father and mother have comfortable assurance that they are not idling around a corner with unprofitable companions.

II

Teach the girl music, parents; but teach the boys, too; for it may happily be the means of saving you many bitter hours. The age we live in is one of temptation for youth, and a feather seems to turn the scale.

I remember a W. C. T. U. lecturer who once said that the society had decided to discontinue the use of any stimulant, even in cooking, because the same brandy, in the same mince pie, that accompanied the girl to prayer-meeting was supposed to drive the boy out to the saloon on the next street.

If trifles weigh so heavily, we grown-ups cannot afford to run any risk of neglecting a tithe of our whole duty. And if music is a powerful lever for good, let us administer to the boys, also, the same allopathic dose which we are too apt to reserve for their sisters.

THE ART OF COMPOSITION

THALEON BLAKE

It is no uncommon sight for even a teacher to seat himself at the piano when wishing to alter a composition, or create one. And no more pernicious habit was ever indulged in than this, — composing at the piano. There is a freedom and exhilaration experienced in composing away from the piano, and this is the only proper way to compose. I know that it is asserted that some very eminent composers have been accused of composing at the piano — the great Chopin, for one. But it should be remembered that these men of surpassing ability could, and did, compose equally as well, and very likely better, away from the piano. And this illustration is no proof of the unsoundness of the argument, that it is better for the young composer to stay away from the piano, because few who are addicted to the habit of composing there can compose anywhere else, and without the instrument's imaginary aid they are helpless, and very unfortunate composers indeed. So that it is in truth much to be preferred to learn to compose without an instrument.

To think of, or entertain a tune, and then to sit down to the piano and attempt to play it before writing it down, is inevitably to mar its beauty, or destroy its effectiveness altogether. For composing at the piano cramps the individuality of a composition by limiting the freshness of the inspiration and the flexibility of the modulations to the manual dexterity of the fingers; and especially by limiting one to the memory of the fingers.

It need not be written of more, here and now, but that the fingers have a muscular memory is an established fact, and that this assists our skill in using our fingers the way they are accustomed to go, but impedes our endeavors when we use them in unaccustomed or varied employments, is both reasonable and capable of positive proof.

Let me haste to return from the digression. An experiment — these experiments were undertaken by a band of teachers who sought for the most efficacious ways of doing things — was made with piano students already advanced in the study of harmony. With them practically the same system was tried, but, in addition, — and I consider it to be of extraordinary significance, — each one was required to copy daily from the classics. There being little time available for this, they copied only shorter extracts; those, however, were chosen which were as nearly complete themes in themselves as possible. Those eloquent and fine passages which have thrilled the heart of mankind, which the students had often heard, and often, perhaps, had essayed a trial of their budding skill to bring the magical melodies and cadences to live again in the ear — those they began to copy, applying to the task all the intelligence to understand which they possessed, all the love and enthusiasm which the congenial task excited in them.

So far as I know — and my knowledge of these things is more from reliable hearsay than from actual witness — the students who pursued this course of study, especially this daily copying of the masterpieces, with which, of course, they had previously been made well acquainted, were permanently benefited beyond expectation. Undoubtedly, a most intimate relation with a masterpiece may then be brought about. Who has not copied some favorite passage of poetry, or eloquent prose, to know it better? The habit is as old as civilization.

Thus by such simple expedients, — call them makeshift expedients if one will, — certain students of music, not one of whom laid claim to

IMPROVISING

genius or even great talent, were enabled to write simple themes, such as occur to every one at intervals, not only easily and quickly, but accurately as well. Thus, also, being brought into contact with the masters from a new approach, they felt a more intimate association with them.

Thus, finally, they discovered something which was greatly encouraging, — that even as Shakespeare had to learn to preserve, by writing down his first haunting cadences, so even Mozart, though he of all was born the full-fledged composer, had to acquire the art of making permanent for all succeeding time, by jotting down the melodies which perpetually entertained him. They might not see gorgeous celestial visions overtopping the clouds on the horizon of some summer sea; harps of angels might not strike tone glories for them, nor symphonies of hallelujahs resound through all the firmament, because they chanced to take up the pen.

What they did see was of utility to them, inasmuch as by copying a masterpiece they arrived at a true conception of what is the mechanical labor of creative work, of what time is needed merely to write down that which the master's mind conceived full born.

This discovery, that composing is in part patient drudgery and in part a purely mechanical and time-serving operation and not altogether a speaking for the gods, was, I dare say, a revelation and also an inspiration to the experimenting students.

THE DOMESTIC SYMPHONY

ISRAFEL

The Alake of Abeokuta in a top-hat, a zebra harnessed to a governess-cart, a Celtic poet writing occasional verse: all were seemly and happy compared with Richard Strauss penning his *Domestic Symphony*, a fine piece of conventional music. I heard it as conducted by himself.

Though it was free from the sentimentally domestic ring peculiar to the works of Schumann, and it had splendor of sound and beauty of spirit, it didn't quite do. But what was wrong with it? The love scene languished and glowed in the customary manner; the climaxes did not lack for brazen brilliancy; the drumsticks were handled as if by negroes. Yet, though it was magnificent, it was not Richard Strauss. That intangible something (I call it Nature) which in Art is everything, was missing from the *Domestic Symphony*.

* * * * * *

The art of Strauss is by nature a diamond split up into a myriad sharp, glittering fragments (note in *Don Juan*, *Don Quixote*, and *Ein Heldenleben* how the articulated chromatics, veritable diamond-dust, sparkle with prismatic colors); in this particular symphonic poem it is a round crystal. I daresay the fault of the thing was really an unusual and undesirable homogeneity. And perhaps the title falsified the music, which contains passion, wit, ugliness, sweetness, indeed most things other than domesticity. Strauss, the Howling Dervish of Romanticism, was not meant to express the Domestic: he can't do it, and he shouldn't try to do it. Why, after all, should the Swan and the Queen of Spain wish to waltz? Let them leave waltzing to the Andalusian dancer and the Adjutant stork!

* * * * * *

And now a word about Nature in Art. The artist who is natural and non-artificial will move amid the most amazing words and ideas with the careless ease of an Egyptian donkey trotting over the ruins of a necropolis; while the artist who is artificial and non-natural will flounder and stumble continually as he picks his way down the stony path of Rhetoric. I would give examples of what I mean — but I dare not!

FABLES FOR MUSIC TEACHERS

JOHN H. GUTTERSON

Once upon a time there lived a little girl who was the proud possessor of a beautiful string of beads. Gold beads they were, and *very* heavy and *very* old. Her mates hated her because she had them, and called her "stuck-up," — behind her back, of course, for to her face they admired and *admired*, turning up their eyes until nothing could be seen but the whites. However, one thing they *did* say to her face. "What a pity!" they said, "such *bé-au*-tiful beads on such a coarse (here they would attempt to suppress a shudder), horrid string."

The string was coarse, for the beads were valuable, and the girl's great grandmother, as well as her grandmother and mother, had all worn them with great care.

Their remarks and their shudders set the girl thinking.

"*Was* the string too heavy?"

"Had the beads hung together so long that they would hold with only 'a pretty silk ribbon?' A *pr-e*-tty ribbon the girls had said."

Mother would not like it, but then p'raps mother *was* "fussy," as they said; certainly there were cases in which she and her little daughter had a difference of opinion.

A ribbon was found, — a "*b-e-autiful*" ribbon; and the exchange from the string was made. Mother did not know it — at first; when the slender (but *beautiful*) ribbon parted, and most of the beads slipped into the open well, she *had* to be told!

Righteous indignation on her part, tears and tardy repentance from their late wearer, and Job's comforting and ill-concealed satisfaction on the part of the young ladies who "advised."

Hear, then, the reading of the fable! Thou and I, dear teacher, are the parent who, with toil and care, have produced, either vocal or upon an instrument, tones like crystal-clear gold beads; the scholars are the proud, but not always appreciative possessor of those tones; and the children who "shuddered" are those who have become "artists" without the hard work some of us are still foolish enough to consider necessary, and which work I would liken to the stout, coarse, but *indispensable* string.

They say it is "the homely things that make Home," — the sweeping and dusting, the washing and scouring, and the putting on of coal; in short, the things we must *have* done, but in which we do not want to have a *part*. Therein we make a mistake; did the average man know more of the mysteries and chemistry of a well-cooked dinner, he might be more kindly disposed when things are sometimes "underdone"; however, the Girl with the Beads: —

Fortunately our *education* must be the result of our *personal effort, under supervision*, and not until a scholar becomes *himself* a *teacher* will he have any conception of the dilemma of the would-be *faithful educator* under the fire of "String *vs.* Ribbon."

I know there are some who virtuously, and aggressively, use STRING the size of a ship's cable; that is not necessary for "gold beads." Others preside at a ribbon counter and jubilate over "the Lost C(h)ord" in three or more keys!

Of course, the happy medium is the better and even the *best* way, and right here let me say I *do* think that it pays to explain patiently and clearly just *why* you are choosing the cord rather than the certainly more "*b-e-autiful*" ribbon. Confidence begets confidence; the scholar who is treated as a creature of mental capacity will have an incentive to live up to the intellectual rating and will much prefer such a consideration to being treated, like a pine board, to a mahogany veneer.

Methods are like clothing handed down through a large family; the time comes when they have lost all trace of adaptability to anything or anybody. Do *not* try to "fit" methods; *do*, however, keep to the string. Many a good singer is attempting in vain to replace the golden notes she lost, when, having given up the string of continual, uninteresting, tone producing, and tone retaining work, the ribbon substitute broke under a strain.

Enough said! Let us hope that they took a mirror and threw the rays of the sun into the well, locating the missing beads! How careful our little girl will be after that experience!

THE BREATH IN SINGING

I

It would seem that all had been said on this subject that could possibly be of use to the student, but perhaps a few ideas from another point of view than that which generally obtains may help some one who is struggling with that first great bugbear of the singer, — the control of the breath.

It has been my experience with pupils who have conquered the tendency to raise the shoulders and "lift up" the breath, and have learned that the lungs will fill quietly if given a chance, that in their enthusiasm they take in such quantities of air that no human power could, at once, control it and sing. It becomes an effort to balance the breath and the voice. Instead of an elastic, well-poised tone, full of resonance, a weak, tremulous sound results, and the pupil looks at you reproachfully, saying, "I was holding my breath at the waist, and still it got away."

Of course it got away.

II

Then one goes patiently to work to teach that a small column of breath, properly controlled and balanced by the breathing muscles, will result in a full, resonant tone, without any effort of the throat. A good way to illustrate this is to have the pupil exhale, emptying the lungs thoroughly; then without taking more breath, attempt to make a soft tone. It is surprising to find that tucked away somewhere is motive power enough to make quite a respectable tone. This proves that one need not swell up like the proverbial toad in order to carry through successfully an ordinary phrase. A little breath well balanced, that is, controlled by the muscles above the waist in the back, and at the waist in the front, gives one motive power enough for quite a long phrase.

III

One of the worst faults of beginners is that of blowing, or breathing on or through, the tones. This can often be overcome by speaking slowly in a natural voice a phrase of a song. One notes the absence of the flow of breath through the tones in speaking, and that elasticity of tone and repose of breath should be extended to the singing voice. In fact, if we would realize more fully the close connection between singing and speaking, many of the difficulties confronting beginners would disappear. For instance, a pupil reads in a smooth voice the words "Hear my prayer." The pronunciation is distinct and brings out properly the "e" in "hear," the long "i" sound in "my," and the "a" in "prayer." But the moment one sings the same phrase, what a change! Something like this happens: "Hrrrrr myeeee prrrrrr." The vowel sounds in "hear" and "prayer" are lost entirely, and one detects only an indistinct "brrr" as the "r's" come forth, produced by the tongue doubled up in the throat. The word "my," an inoffensive little thing of one syllable, has become a long-drawn-out dissyllable, with the "e" sound after the "y" exaggerated beyond all proportion to the fundamental sound of the vowel.

If the pupil had prolonged the primary sound of the vowels, instead of blurring them and trying to make tone on the consonants, the result would be obtained that comes from reading the words, — clear, distinct pronunciation and uninterrupted tone.

IV

Too much stress cannot be laid on keeping the vowel sounds open through a note or phrase, and pronouncing the closing consonants quickly and distinctly at the end of the tone. Too many singers allow the vowels to shade off before the tone or phrase is finished, thereby changing long "a" to "aee long," "i" to "iee," and so on. In words where a vowel is followed by "r," the tone is shut off by a too early attack of the "r." This is a little aside from the subject of breathing, but is none the less important.

Teach pupils to sing *on* the breath, using it for a foundation, for the tone a sounding-board, a resonator. Teach them to sing phrases as one tone, with the words falling clearly from the lips; not blown from the throat explosively by escaping breath. Teach them that a *crescendo* should be made, not by pouring more breath against the vocal cords, but by an added elasticity of the breathing muscles, a more relaxed throat, a spreading of sound waves over the whole trunk and head, as a stone thrown into the water spreads its circles wider and wider. We do not realize enough the importance of using the column of breath and the whole trunk and head as a sounding-board when singing. By placing the hand on the chest during ordinary speech, the vibrations can be very plainly felt.

Let us not disturb this vibration when we sing by pouring the breath through the throat faster than it can be turned into tone.

THE FINANCIAL RESULTS OF A SUCCESSFUL TEACHER'S LIFE

W. FRANCIS GATES

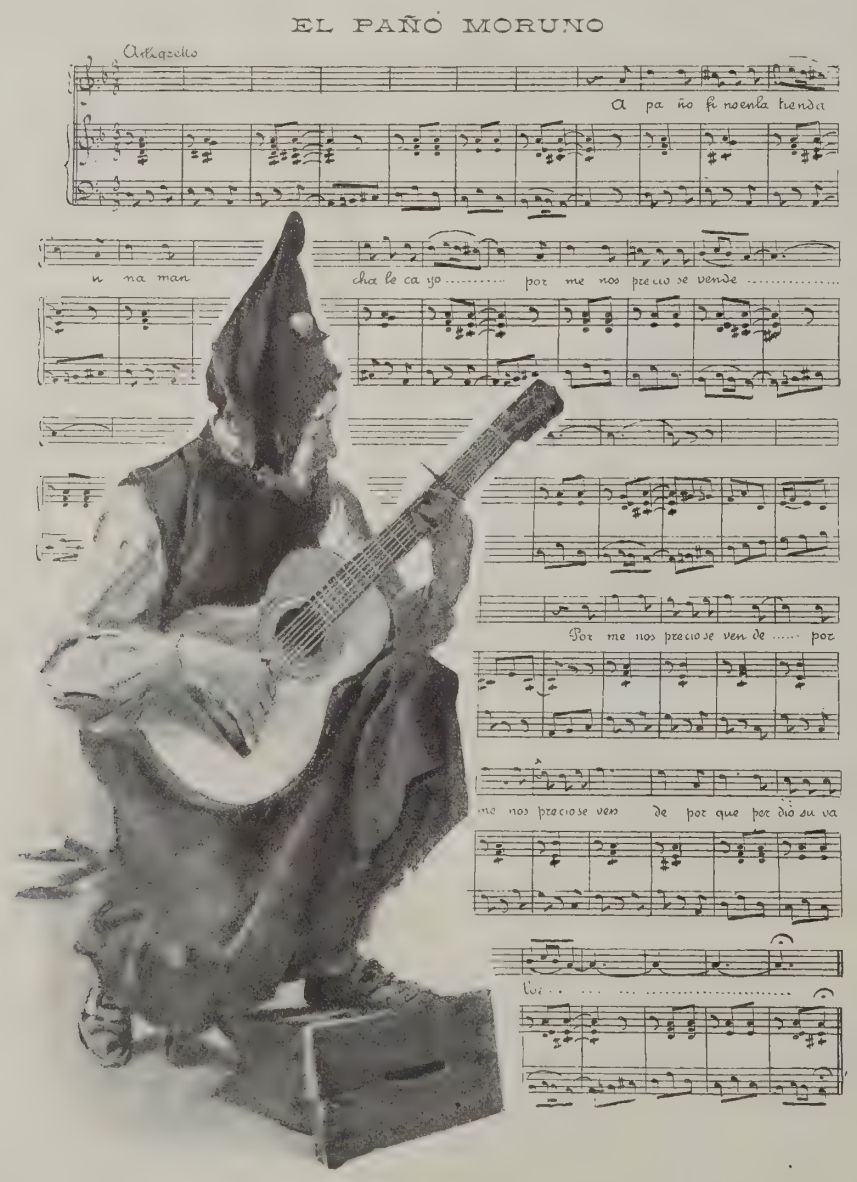
The great problem of the last century in America was the accumulation of wealth; the problem of the present century is the distribution of it. The political and labor conditions of the past fifty years have enabled the financial magnates to pile up fortunes until they have become money-mad. Not content with their own millions, they began combinations that would control billions. A man cannot use sensibly more than $50,000 a year, which is the income from a million dollars. Yet a one-millioned individual is looked down on by the growing crowd of money-grabbers whose one excitement is to accumulate for the love of excelling some one else in the money race.

The present century has as its duty the curbing of such monstrosities, the division of wealth, and the turning of it into general channels where it will be of service to humanity. The primary step is seen in the tread of the President on the tail of the trust. It howls and snarls, but the mandates of the people will have its effect in time.

The musician has little to do with all this, save as he takes interest in current sociologic and financial conditions. In the nature of things, a musician can never become a rich man through the increment from his profession. It might be well to state this in large type in every number of THE MUSICIAN, that no false hopes be aroused on the part of ambitious young men.

Let us look at the possibilities: It takes a man until he is twenty-five years of age to secure his preparation for teaching — providing his study is sufficient to give him a reasonably good place among musicians. For the first five years his income is light; at fifty-five his powers are waning; at sixty he discontinues active work. In all, he has thirty-five years of active life. It is only the rare successful man who will make more than $40 a week from his teaching and church work. There are but forty — or less — teaching weeks in the year, his income must be placed at $1600 per annum.

As this musician will probably have encumbered himself with a family by the time he is thirty or thirty-five years of age, it is safe to say his expenses for the average year are $1200, if he is economical, leaving a net income of $400 for the year. Continue this for the full period of thirty-five years and his total savings will amount to $14,000. There will have been an accumulation of interest on this, on the one hand, and possible sickness, loss of money by bad bills and poor investments, and the like, on the other; so it may be well to let those two accounts balance each other.



At sixty our musician retires from active life. Though his intentions are as good and his knowledge as great as ever, the public patronizes younger men — the young female, especially, prefers to study with one nearer her own age — and the old man is left with but small resources. He has a property of $14,000, which at a safe investment and an average rate of interest will bring him about $900 a year, an amount equal only to supplying the bare necessities of life.

Here, then, is the financial story of the life of a successful musician. It is not a prospect to look forward to with pleasure. And it must be remembered that this individual was far more successful, financially, than many of his co-workers. Many a capable man thinks himself fortunate to make $25 a week through the teaching period of the year. His expense account may be lowered so that he can save from his life's work three of four thousand dollars!

Is this picture painted in too gray a color? It must be remembered that it is drawn to suit the average condition, not that of the "bluffing" vocalist in a large city who plucks his birds to the tune of $5.00 or $6.00 an hour; even such a man generally spends his income in proportion to the ease with which it is made and the end may not be much better, though there has been more "splurge" during the process.

Compare this with the manufacturer, the large merchant, the stock manipulator, the railroad man. Yet does not the man with the insignificant bank account enjoy his life as much as the one whose continual regret is that he permitted to escape an opportunity to wring from some business associate, or from the public at large, another thousand or ten thousand. This is no false picture, for the ideal of these men is not "to enjoy" but "to get," and as to aiding others to enjoy, such a thought is almost unheard of, save as it gives them opportunity for free advertising and for a classification among the "broad-minded and public-spirited citizens of our community."

In practical life the musician is little affected by the question of the so-called "high finance"— a polite term for robbing your competitor or your associate of a million — or the related question of breaking up financial combinations that are inimical to the public good. It comes down to a struggle for the necessities and comforts of life, for a home and an income in declining years. To this end he should not shut himself up in his art-shell and leave all knowledge of practical financial management to his neighbor who runs a bank or sells hogs; he should learn the means by which moderate savings are made to increase by proper investment; he should keep his eyes open toward the betterment of his financial condition; he should acquire the ability to distinguish between a "fake" proposition and a solid enterprise, between a "get-rich-quick" scheme and a sensible business venture. Let him learn that six per cent on real estate is better than twenty-five per cent on chattels; that town lots are better than mining stock; in short, that artistic moonshine will not take the place of business sense. If he has more of the former than the latter, let him rely on the judgment of honest business men who have no irons in that particular fire.

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"Knowledge is power" (*Bacon*).
"Knowledge is more than equivalent to force" (*Johnson*).
That is, *accurate* knowledge.
"A little learning is a dangerous thing" (*Pope*).
That is, *inaccurate*, superficial knowledge, thoughtlessly acquired, with inattentive haste, and carelessly applied.

A COURSE IN LISTENING

E. B. HILL

I. What do We Hear?

It is not impossible that we may have studied music in the average way for several years, and even made some attempts at teaching without reflecting as to what we hear when we listen to music. That is, few of us have had the curiosity to analyze our impressions. We know by experience that some music pleases us at once without explanation or introduction, our pleasure is spontaneous and involuntary. We know also, to our cost, that music cannot only leave us profoundly indifferent, but both sadder and wiser for having exposed ourselves to it. Such music has upon us the confused effect of a foreign language which we do not understand, and which seems hardly worth an effort towards comprehension. If music can produce upon us effects so widely at variance as enthusiasm and loathing, it would seem profitable to investigate the element which makes so positively for enjoyment or the reverse, to discover if it be not possible to increase both our pleasure and our understanding through knowing how to listen more intelligently, and if we are students to learn how to help ourselves to improve through a more accurate correction of our shortcomings.

Hans von Bülow's immortal saying, "In the Beginning was Rhythm," disclosed for all time the most primitive and elemental quality of music. The instant we are conscious of hearing music, we cannot help taking account of the manner in which the notes succeed each other in point of time. This very succession constitutes the pulse and heart-beat of music, — its rhythm. Without a vital rhythm no music can live, and no performance of it can enthrall us without an observance of its quality. For it permeates music as thoroughly as the circulatory system of arteries, veins, and capillaries enmeshes the human body. The first aim, therefore, of the listener should be to observe attentively the rhythmic character of a piece of music. For grasp of the rhythm is not only a passport to its comprehension, it is also closely associated with the second most important element — that of melody.

As the succession of notes measured by time constitutes rhythm, so the succession of notes as regards pitch forms those steps which we term intervals. A pleasing sequence of intervals forms a melody, although the precise meaning to be attached to the qualifying adjective has been undergoing constant changes, and is still somewhat fluid. From the very fact that we borrow from other arts, and speak of the "melodic outline" or the "curve of melody" in order to describe its character, shows that melody in music occupies a position relative to that of "line" in drawing, painting, etching, or sculpture. As "beauty of line" is the highest abstract quality in the graphic arts, so beauty in melody remains the quintescence of music. Yet in order that this element should attain its full significance, it must not be concentrated; it must be diffused. This diffusion of the melodic element leads directly to a third essential quality. For the character of "melodic" intervals depends not only from their relative position as to time and pitch, but upon a certain support or accompaniment which we call harmonic, in much the same way that a figure in a portrait demands a background in order that its outlines may gain in intensity through contrast. A melody owes its distinctive character and its emotional quality largely to the modifying influence of this harmonic background, which, so to speak, colors it. Without attempting to enter into the conditions which may cause that background to be simple or complicated, it should be evident that listening in the fullest sense of the word must comprise attention to the *harmonic* import of music as to the rhythmic and melodic.

The definition of music as "frozen architecture" may be unspeakably trite; nevertheless it is hard to find one which illustrates better still another important element — its structure. It must be plain to the most unreflecting listener, that any piece of music goes through a process of extension and development of its original phrase that suggests the constructive idea very definitely. The nature of this constructive element may depend on the scope and calibre of the piece. Thus, in a short piece the development of the opening musical thought corresponds more with the treatment of a lyric poem, while the sonata or symphony movement is usually a sort of drama in which two important musical ideas engage in a virtual emotional contest, while lesser ideas or personages (carrying out the notion of a play) take part and contribute their share of the result. On the other hand, a sonata or symphony movement (the second or third) may retain the simplicity of development that we find in the short piece, merely on a larger scale. The entire object of the constructive conventions, which we call "form," is not to fetter expression but to aid it. Each of the well-known forms, such as the fugue, the suite form, the sonata form, or the small piece form, are the product of individual epochs whose artistic purposes best found expression in that direction. The symphonic poem form is just as logical and natural an outcome of musical conditions affecting the latter third of the nineteenth century and the present, as the fugue or the suite as Sebastian Bach treated them. There is no reason why it should not serve its object equally well. The test of form is not its inherent correctness so much as its capacity as a vehicle of coherent and logically developed expression. To the listener, then, the question should not assume the attitude: Is the construction of this piece correct and in accordance with tradition? but merely: Is it coherent, is it clear, and is it symmetrical? The task of the player should be to contrive his emphasis so adroitly that the outlines, both of melody and development, shall fall into place.

In summing up, then, we find that our considerations on the nature of music will fall into two categories, — those affecting the emotional side; namely, rhythm, melody, and harmony; and the indispensable, intellectual side, the constructive aspect, which we call form. In order to hear what there is to hear in music, we must be responsive to these several elements; their significance must be real and tangible to us. Let us therefore take them up more in detail.

THE ELEMENTS OF COUNTERPOINT

PERCY GOETSCHIUS, MUS. DOC.

Lesson XIII

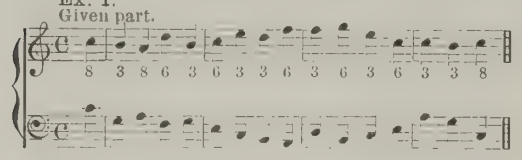
In our preceding lesson the association of three melodic parts was explained and conducted upon the basis of the chords which the individual tones of the given melody suggested or required. This is, strictly speaking, the only correct manner, because chords constitute the proper basis of all harmonious music; the inharmonious effects which are more or less plentifully interspersed, in an effective and interesting musical sentence, are merely modifications or embellishments of the chords, and neither can nor should be accounted for in any other way. No matter how freely the dissonant particles are intermingled, the *general* impression must be a harmonious one; for no music may be called good, or may be expected to produce an agreeable and acceptable impression, unless it is harmonious as a whole. Inharmonious music is really not music at all, in the sense in which our reason, our instincts, and the judgment of the whole civilized world, compel us to regard it. The chords are the "accordant" tone bodies, which guarantee this necessary prevalence, or at least preponderance, of harmonious effect. And therefore the association of parts, even when individual and melodically independent of each other (as is the case in genuine counterpoint), must be determined, fundamentally, by reference to the chords.

But there are other modes of arriving at a good harmonious result, more convenient and more distinctively contrapuntal in character than the simple harmonization of the given melody. When the student has cultivated his sense of chord succession sufficiently, and has reached that stage of progress at which the chords have become a part of his nature, and perform their functions automatically, he will find it possible and natural to centre his attention upon the *melodic* movements of the parts, and will achieve a good result more quickly and surely from this point of view.

In Lesson XII we learned that one of the three parts was likely to assume, *temporarily* at least, the importance of a leading part, to which the others appear to be added as contrapuntal associates. The method we are to test

in the present lesson consists in counterpointing one new part at a time, to this leading part. This division of labor may prove very desirable and convenient, until the student has gained enough proficiency to lead all three parts together, at once. For illustration, the given melody is placed in the *upper* part, and to this the lower part is first added, alone, according to the rules of strict two-voice writing, — but also with constant reference to the principles of good chord succession, and correct melodic movement: —

Ex. 1.
Given part.



To these two outer parts the inner part may then be added, in such a manner as to complete (or confirm) the chord that is suggested at each beat, but with unfailing regard to good, smooth, melodic progression. Thus: —

Ex. 2.

It will be observed that the chord forms are not always complete (in measure 1, beats 2 and 3, for instance, where both chord fifths are omitted). This is by no means necessary, as long as the chord impression is distinct and the melodies good.

In the following experiment the same given melody is placed in the *lower* part; to this the upper part was first counterpointed (alone) according to the indicated intervals; and to these the inner part was last added: —

Ex. 3.

Given part.

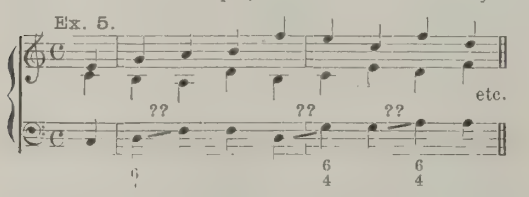
In the following example our given melody is placed in the *inner* part; the upper part was first added, alone, and then the lower part: —

Ex. 4.

Given part.

Rule. — When, as here (in Ex. 4), the *lower* part is last added, much greater caution is necessary. Wide leaps must be avoided — excepting, as usual, during chord repetition; and care must be taken not to use the chord fifth too frequently (that is, the 6–4 chord), — never twice in succession. For example, this bass would be faulty: —

Ex. 5.



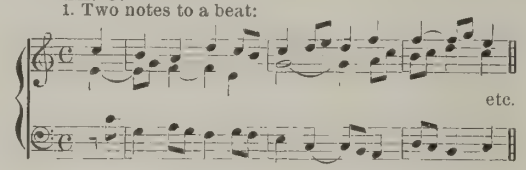
Hence it is wiser, as a rule, *not* to leave the lower part unfinished, but to add, as final part, either the inner or upper.

The method of this lesson may not appeal to every student. It has unquestionable merit, but is given merely for what it is worth. The student is urged to make it at least a matter of experiment.

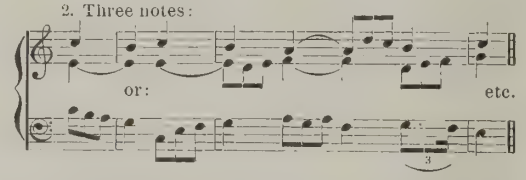
It must be remembered that it is not necessary to adhere to the *same two parts throughout* in making the first contrapuntal addition. At any point — in case of difficulty — the attention may be shifted from one part to another. For instance, in Ex. 4, after counterpointing first the *upper* part (and adding the lower) during the first measure, it may be found more convenient, in the second measure, to counterpoint the *lower* and add the upper.

Further, the advantages of *rhythmic treatment* may be obtained, as soon as the fundamental form is fixed, by adding embellishing tones, in some uniform adopted rhythm (two, three, or four notes to a beat) precisely as explained in Lesson X. If a moderate grade of rhythmic movement is adopted (only two notes to a beat), it may be applied to an *occasional beat* — as well as constantly; the rule being, as usual, to divide the lighter beats. If the rhythm is accelerated to three or four notes to a beat, it will probably be necessary to make it constant (preferably, of course, in *alternate* parts). For illustration, Ex. 2 may be elaborated as follows: —

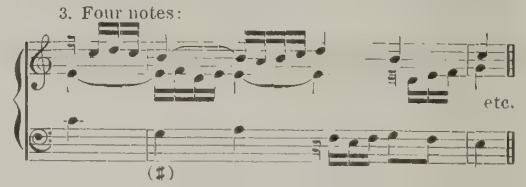
Ex. 6.
1. Two notes to a beat:



2. Three notes:



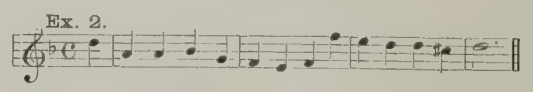
3. Four notes:



Exercise. — Manipulate the following given melodies, in the manner illustrated above. Each one to be counterpointed as upper part in at least two different ways (also with modulations). Experiments may also be made with each melody as lower, and then as inner part. When finished, each version is to be transformed into the three rhythmic forms shown in Ex. 6: —

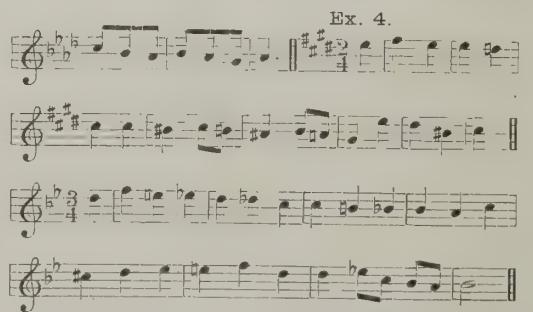
Ex. 1.

Ex. 2.



Ex. 3.

Ex. 4.



To these may be added some of the melodies of former lessons, and also a number of original melodies.

CHOOSING A SINGING TEACHER

ELISE LATHROP

I

It is a much-discussed question whether, in order to teach pupils to produce beautiful tones, the teacher should or should not be capable of doing the same. It is hard to believe that one may teach tone production, unless able to produce good tone, but beautiful tones imply the possession of a beautiful voice, not a necessary qualification for a successful teacher, who may have lost the quality of his voice through age or illness, or may never have had a fine voice, yet accomplish most satisfactory results with pupils. The most important qualifications for him are the knowledge of how beautiful tones are produced, and the gift of imparting this knowledge, not always the case with those who try to teach.

After giving a teacher a fair trial — no one's work, unless hopelessly bad, can be judged in two or three lessons — if breathing, tone production and rudiments are ignored, or taught merely by mechanical appliances, which must never be depended upon for aught but assistance in very stubborn defects, if the throat aches, and muscles of neck and throat are very tired, the sooner one leaves such a teacher, the better for the voice. But be sure these sensations come in trying to carry out his wishes, at a lesson, for with the best intentions, it is quite possible for the young, inexperienced student to misunderstand directions, and practice quite the reverse of what was intended. On the other hand, if you are "losing your high notes," a complaint often heard from beginners, that need not alarm you in the least. No one ever lost high tones actually in the voice, while studying under a good teacher. The quality and range of the voice may and often does change with cultivation but tones natural to it only await development. It is natural that you do not find it as easy to sing high tones when the mind is occupied with trying to take them correctly, instead of as in the old way, without reason or method, but cultivation of the voice under careful teaching adds to, rather than takes from the range. If a teacher shows a marked disinclination to allow the pupil to use high tones, so much the better, provided he does not resort to forcing the voice down, quite as dangerous as straining it up. If attention is concentrated for the first six months or longer, almost entirely upon the middle voice, the after results will be most satisfactory. If difficult arias are given during the first six months of study, that teacher is not the one for the beginner, however satisfactory for advanced singers.

II

Another point upon which the good teacher insists from the first, is the cultivation of vocal technic, quite as important to the singer as piano technic to the pianist, though often neglected. Nowadays, when the modern school of music has almost wholly superseded the old, with its trills and runs, this part of vocal training is rarely insisted upon. No matter what the ambition of the student, whether to sing the heaviest dramatic roles in Wagner's operas, or songs of any school, she cannot use her voice properly if unable to sing the florid arias suited to the range of her voice of the old Italian school. Agility exercises are of the greatest help in placing the voice, securing resonance and breath control.

As for the trill, its study should be begun almost from the very first, for to acquire a beautiful trill is the work of years, and therefore should not be left until the latter part of one's vocal education. Many singers are unable to execute a true trill, and compromise on something half tremolo, half shake, yet there is no voice however stiff or heavy, that with study and hard work, may not learn to trill properly and well. No singer of the old school but was trained in this manner, yet too many young singers neglect such study, giving as a reason that they do not care for, and have no intention of singing *coloratura* music. A more mistaken idea never existed.

III

At the end of a year, the student should be able to notice a marked improvement in his voice. Tones difficult to take properly at first should be easier, there should be little trouble with breath control, and longer phrasing should be possible. The ear should be trained to more critical judgment of tones, though the improvement in one's own voice will probably be more perceptible to others, yet some ability to judge it should have been acquired. After several years of study with a careful teacher, if, as is often the case, that teacher proves unable to give the style, finish, and authority necessary, there will be little danger of harm to the voice from any one capable of imparting these qualities. She should know for herself by that time, what her voice can stand, and be able to avoid straining it with music too high, too low, or unsuited to the quality of the voice. One of the so-called finishing teachers is not apt to interfere with a really good method of tone production. He is only too happy to have that work already accomplished for him, and be able to devote himself to the more congenial work of interpretation.

LONDON LETTER

ORTON BRADLEY

At this moment of writing, the *entente musicale* has seized hold of us in London, and we have got it badly. The band of the Garde Municipale of Paris is giving a series of twenty Promenade Concerts at Covent Garden Opera House. The profits of the undertaking are to be devoted to charity. So it was with the utmost good will that the band was greeted and entertained at supper after their first successful concert, by the band of the Coldstream Guards, and a few evenings later by that of the Grenadiers. The speeches were made mostly in French, but the proceedings terminated in Scotch — that is to say, *Auld Lang Syne* was sung by the combined bands. Now all this is very well and quite delightful, but it is no sort of excuse for the fact that some of our English singers have been invited to give their services during this series of concerts. It was a step which might have jeopardized the *entente*, which up to now has been most cordial in all quarters. It is to be hoped a similar welcome is prepared to receive the "Italian" band of Mr. Creatore, which he is bringing from America at the beginning of March. They are to give a week of concerts, five evenings and two afternoons, at the Queen's Hall.

The arrival of Mr. Safonoff in London is at the same time creating considerable interest in the question of baton or no baton. His first appearance will be at the next concert of the London Symphony Orchestra, at which Léon Delafosse will also appear as piano soloist. He has just given an orchestral concert with the same organization, at which his skilful playing has served to deepen the good impression he has made in former visits to London.

During the forthcoming opera season we are to have two complete performances of the *Ring* Cycle, May 4, 5, 7, and 9, and May 12, 14, 16, and 18, both under the direction of Dr. Hans Richter. Among the artists engaged are Mesdames Wittich, Knüpfer Egli, and Kirkby Lunn, and Messrs. Burrian, Conrad (from Cologne), Lieban, Whitehill, Gador, and Van Rooy.

The Crystal Palace Saturday afternoon concerts are now being resumed after a long pause, during which the Palace was devoted to the more popular entertainments of the winter holiday season.

The Philharmonic Society has also just begun their annual series of concerts. Among the artists who are playing at both series is little Mischa Elman, who still holds his supremacy in the world of prodigies. On May 17 the program of the Philharmonic Society will include the Beethoven *Choral Symphony*, with the assistance of the Bradford Festival Choral Society, and during the season two new works by British composers will be heard, a piano concerto in one movement, by York Bowen; and a set of orchestral variations on an African theme, by Coleridge-Taylor. The conductor of the series is, as usual, Dr. Cowen, and the soloists include Gleeson-White, Marie Brema, Clara Butt, Kennerley Rumford, Andrew Black, Franjo Naval, Marie Hall, and five pianists, — York Bowen, Richard Buhlig, Ernest von Dohnanyi, Raoul Pugno, and Emil Sauer. The first concert was lent additional interest by the presence of Weingartner, who conducted the first performance in London of his own *Symphony in G*, Op. 28.

The thirtieth season of the Bach Choir is to be celebrated by a Bach Festival at Queen's Hall, April 2 and 4. The B minor Mass is to be given at the second concert. Dr. Walford Davies is the conductor of the society, and the soloists for the festival are Gleeson-White, Ada Crossley, Gervase Elwes, and Torrington. It must not be forgotten that the triennial Handel Festival is due again this summer at the Crystal Palace. Albani is the prima donna, and will be obliged to somewhat curtail her Canadian tour, which she is now making, in order to be back in time for the London season, which begins rather early this year.

During May an interesting series of four concert recitals is to be given by Albert Mallinson at Bechstein Hall, the programs of which will consist entirely of works by Mallinson. The singers will be Ada Crossley and Mrs. Mallinson.

As soon as the winter season of French plays is finished, and the Drury Lane pantomime has ended its run, — that is to say, about Easter, — we are to have a new comic operetta in two acts, at the Royalty Theatre, of which part of the music will be composed by Harry Fragson, who is to play the chief rôle himself. The music will of course not be serious, but to judge by other compositions of Fragson it will be eminently pleasing.

Looking still farther ahead, lovers of music will hear with pleasure that Sarasate and Bertha Marx will be giving a series of concerts in England next autumn.

A most interesting biography of Leschetizky, by Annette Hullah, has just been published by John Lane. It gives vividly many details of his career that are unknown even to his admirers, and is illustrated by numerous photographs of the great master of the piano.

By a curious coincidence, the number of *Die Musik* which was devoted to American music appeared during the week of which the Incorporated Society of Musicians devoted a Saturday evening to the same subject. It is a subject in which a very keen interest is felt among all the music lovers of the old world.

London has the reputation of being an unmusical place. This week there are thirty concerts to be given exclusive of Sunday concerts and the series of the Garde Republicaine Band at Covent Garden. The number includes nine orchestral or choral and orchestral concerts. It would seem that there really must be some musical people among us.

From Paris comes the news that at the "New" Salon (the "Champ de Mars," as it is called) of the *Société Nationale* there is to be a musical section this year, of which Dr. Camille Saint-Saëns is honorary president, with a special jury to help his selection. The works which are passed by the jury will be performed on Tuesday and Friday afternoons during the exhibition of pictures, which is kept open for two months.

At the opéra the rehearsals of Massenet's new opera, *Ariane*, have begun, and in the meantime, before this production is ready, *l'Etranger* of Vincent d'Indy is to be revived, and the *Meistersinger*.

Sonzogno's competition for librettists produced five hundred and sixty-two aspirants. The first prize is to be 25,000 lire, and the second 10,000. The jury in whose hands lies the verdict are Arrigo Boito and Amintore Galli, to represent the musical point of view, and three authors, — Giacosa, Stechetti, and d'Annunzio. When the librettists are chosen, Sonzogno reserves to himself the selection of a composer, but he promises to produce the works.

Leoncavallo, who has become his own impresario for the production of his latest opera, *Chatterton*, will shortly bring his company to Vienna to the Jubilee Theatre. In the operatic world there have been several other novelties recently. At Lyons' "Grand" Theatre the very successful first performance has taken place of *Tiphaine*, an opera written by Pagen and composed by V. Newville, and later a new ballet, *Riquet*, by Flou, the conductor of the opera, which was no less successful.

The opera house at Nice has produced Xavier Leroux' *William Ratcliff*, a very ambitious work, but worthy of the ambition, and with a good plot set to a magnificent score. At Toulouse a young composer, André Gailhard, son of Pierre Gailhard, the director of the Opéra Paris, has made his début with *Amaryllis*, at the Theatre du Capitole. It is a work of very great promise, if not of the highest originality. Yet another new opera, *la Dogaressa*, by Sinadino, has found its first performance at Alexandria, Egypt. Report speaks of a new opera on which Eugen d'Albert is now at work. It is in four acts, and the librettist is Rudolf Lothar. Siegfried Wagner also is writing a new fairy opera, and Franchetti has just finished a setting of the d'Annunzio tragedy, *da Figlia di Jorio*, in three acts. At Kieff the *Démon* of Rubinstein has been revived at the Municipal Theatre. It is an opera which has never held the stage very successfully, but its revival is interesting, if only as the work of so celebrated a musician.

If it is true that *Salomé*, by Strauss, is really to be produced at Berlin, let us hope that at last the composer will get his full orchestra, for which he has hitherto begged in vain. It would appear that he needs 110 musicians, — namely, 14 first violins, 14 second violins, 10 violas, 10 'cellos, 8 double-basses, 3 flutes, 1 piccolo, 1 "céleste," 2 B♭ clarinets, 2 in A and 1 in E♭, 1 bass clarinet, 2 oboes, 1 cor anglais, 1 heckelphone (at last we know what it is, — a sort of cor anglais, an octave lower in pitch), 3 bassoons, 1 double bassoon, 8 horns, 5 trumpets, 4 trombones, 1 tuba, 2 harps, and 15 instruments of percussion, including a xylophone, bells, five timpani, and a big drum.

VARIOUS NOTES

Leoncavallo's American tour in the autumn of this year will direct attention to his latest opera, *Roland von Berlin*, parts of which he will conduct. He will also lead performances of excerpts from his *I Pagliacci*, *Bohème*, *Zaza*, and *Chatterton*.

* *

At a recent meeting of the Providence (R. I.) Round Table, interesting papers were read on the subject "My Problems as a Music Teacher with Suggestions for their Solution." Florence E. Armes is the Secretary of the association.

* *

It is said that effort is being made to induce Hans Richter to become permanent conductor of the London Symphony Orchestra.

* *

The London Philharmonic Society has issued its list of works to be performed during the coming season, the only absolute novelties (*i. e.*, played for the first time anywhere) being a new set of variations *On an African Theme*, by Coleridge-Taylor, and a piano concerto by York Bowen. Weingartner's first symphony will receive its initial London performance. The other numbers are a Bach motet (to be given by the Bradford Festival Chorus), Beethoven's fifth and ninth symphonies, Berlioz's *Romeo and Juliet* (excerpt), Brahms' first symphony, Max Bruch's *G minor concerto* (Marie Hall), Cowen's second set of old English dances, Dvorák's *Husitzka*, Elgar's *Introduction and Allegro;* Franck's morceau symphonique, *Redemption;* Glazounow's violin concerto (Elman), Goetz's overture, *Frühling;* Von Holst's scena, *The Mystic Trumpeter*, Liszt's *Tasso*, Mozart's *Zauberflöte* and aria, *Un aura amorosa*, Schumann's second symphony and *Manfred* overture; Stanford's second Irish rhapsody; Sullivan's overture, *Macbeth;* Tschaikowsky's fifth symphony, the closing scene from *Götterdämmerung*, and *Wotan's Farewell* (*Die Walküre*).

* *

The list of singers engaged by Madame Wagner for the coming Bayreuth Festival include Kraus of Berlin and Marie Wittich of Dresden, who will sing *Tristan and Isolde*, Paul Knupfer of Berlin and Dr. Felix von Kraus of Vienna to appear alternately as King Marke and Kurwenal, and Frau Fleischer-Edel of Munich will be the Brangane.

A PIANO AT A NOMINAL PRICE

Chicago's largest music house, Lyon & Healy, announces a Clearing Sale of Pianos. Several hundred splendid instruments are offered without reserve until all are sold. In this stock are a number of Steinway and Weber pianos and new and second-hand pianos, including instruments of the following well-known makes: Sterling, Huntington, Vose, Knabe, Washburn, Fischer, Kimball, Chickering, etc., etc. In upright pianos neat instruments at $100, $120, $140, $150, $165, $190, $200, and upwards. This is an opportunity that will not occur again. Any piano not proving entirely satisfactory may be returned at their expense. Address Lyon & Healy, 26 Adams Street, Chicago. Distance is no obstacle, for in proportion to the saving to be made the freight charges are insignificant. Any banker will assure you of the entire responsibility of Lyon & Healy, and their record of 41 years for honorable dealing. Write to-day so as to avoid disappointment.

TEACHING A SPARROW TO SING

A series of interesting experiments in which English sparrows have been taught to sing sweetly is recorded by Dr. Conradi. The aim of the experimenter has been to determine what are the conditions under which birds learn and cling to their traditional notes. For this purpose he has taken very young birds of non-musical species and kept them entirely with songsters, to determine whether they would thus acquire the musical notes.

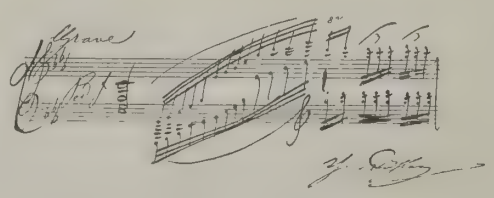
In July, 1893, he put four fledgling English sparrows into the nest of a pair of singing canaries. Three of them died, but the fourth survived. This one had already acquired a sparrow chirp; but, hearing thenceforth only the notes of the canary, he went no further with the language which was his birthright. Instead, he came gradually, when among the canaries, to give notes different from sparrow talk. Even when he was silent, if the canaries were singing, he could be seen moving his throat, as if he were trying to form the sounds, much as a person often inaudibly follows a song which another is singing. At last these sounds began to be audible, and increasingly so. He began to give notes in rapid succession, three or four tones up the scale, and then repeating the top note five or six times.

Growing bolder with practice and the sound of his own voice, he soon indulged in three or four runs in succession, with eight to twelve notes in each; and in the last days of September, when three months old, he went up and down and up the scale, all in one run.

All this while his voice had been changing. At first it was harsh, as is natural with English sparrows; but gradually, with the effort or with the subconscious influence of the sweeter sounds about him, it became softer and acquired something of the canary quality.

At first he sang on a low scale and tried the top notes vainly; but, as his voice became milder, he went higher more easily. He was three months old when, growing bold, he essayed his first trill. It was short, but musical, and he evidently liked it, for he repeated it, and continued steadily to practice it. It was done modestly, and after each trill he sat still and appeared to be listening. A year later, however, when the report was being written by the experimenter, he had grown to be quite an adept in canary song, and would trill and sing continually, punctuating his song with complete circles and semicircles on his perch.

To try the effect of association upon him, Dr. Conradi removed him for a time, in his first year, from the canaries, and put him where he heard only sparrow chatter. Gradually he ceased to sing and began to return to the neglected sparrow tongue, but when he was again hung with the canaries he regained all he had lost in less than a month. — *American Journal of Psychology.*



AUTOGRAPH OF THEODORE DÖHLER

CORRESPONDENCE

Pedal Reed Stops

J. W. — "How large should a pedal organ be into which was planned to introduce a 16 ft. Reed stop such as the Trombone? The organ I play has four pedal stops, viz.: 16 ft. Open Diapason, 16 ft. Bourdon, 8 ft. Violoncello, and 16 ft. Trombone. I seldom use the latter in the Full Organ. The tubes are of wood in the inverted pyramidal shape, and the tone is smooth and powerful. It does not, however, blend well with the other tones. When I have used it, people after the service have remarked upon the blatant noise they heard during the congregational hymns, showing its effect upon unmusical persons. The question naturally arises: Why should we have a costly stop in an organ when it is of no practical use? Could this stop be replaced by a 32 ft. Sub-Bourdon? If not, what stop would you suggest? Would the Trombone be of any value to an organ builder in exchange?"

Comments. — Nearly fifty years ago it was customary to insert a 16 ft. Reed stop in a pedal section of four or five stops. The effect was not good, because the tonal proportion was not balanced. Being an expensive stop, it should not be included in an organ having less than eight or nine pedal stops. Any stop which is not of practical value in the service is useless.

In exchanging this stop for another, do not select a 32 ft. Sub-Bourdon, for there would not be room enough on the chest. A 16 ft. Draft Beard Violone would be serviceable. Even an 8 ft. Stopped Flute would be used constantly. An old Pedal Trombone would be of no pecuniary value to an organ builder.

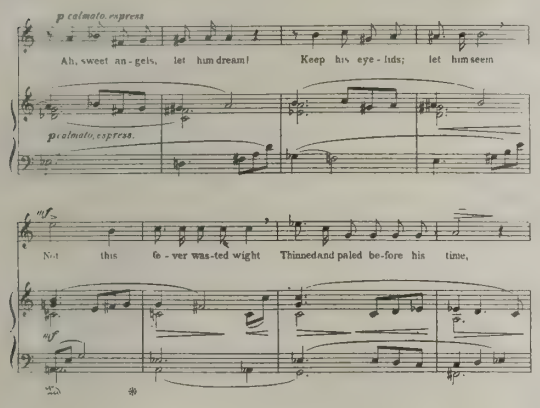
NEW MUSIC

NEW SONGS

ADOLPH M. FOERSTER. Op. 60.

Tristram and Iseult. High voice in C (d♭ to *a*).
Also for low voice in A..... .60

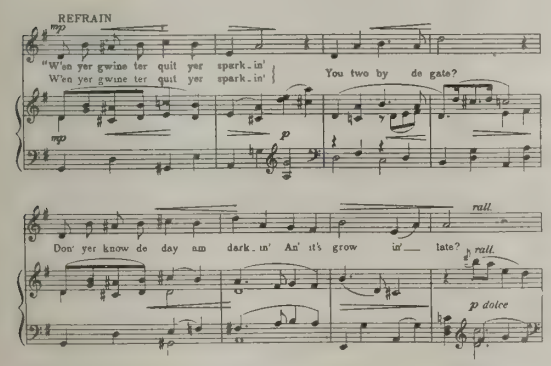
In structure and scope this composition is properly a dramatic "scene." The words are selected from Matthew Arnold's poem, *Tristram and Iseult*, and give in a few lines the story of the hapless lovers. The piano part is thematically constructed, and follows the text graphically; the voice part is in melodious and expressive recitative. This is a fine concert number for a dramatic singer; it is modern in feeling, planned on large lines, impassioned in utterance, and has the advantage of an original English text.



CHARLES FONTEYN MANNEY

Sparkin' by de Gate ('Vira). Medium voice in G (d to *E* or F♯)..... .50

The winsome spirit, bright and piquant melody, and simplicity of this little negro song assure it a wide popularity. The refrain is especially pleasing and "catchy." The verses, by Julie M. Lippmann, are a potent factor in the song's success, being quaintly humorous and tender by turns, and in the last stanza containing a touch of pathos. The song will please all — singers, amateurs, and listeners.



NEW PIANO MUSIC

PAUL WACHS

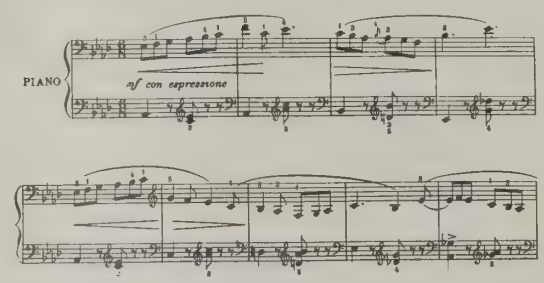
Dancing the Schottische (*Pendant la Schottische*).
In A♭ major, 4–4. Tempo di Schottische.
Grades III–IV. Five pages..... .60

This is a captivating salon piece by one of the most popular French composers. The theme is so brightly rhythmed, so animated, that it breathes the very spirit of festivity. A middle section in D♭ major affords contrast by a differently balanced phrase, although no less animated in effect. Refined in style and well written for the piano, yet of a popular quality, this piece is a welcome addition to study or recreation.

JOHN FRANCIS GILDER. Op. 76.

Clematis. (Intermezzo.) In A♭ major, 6–8.
Moderato, ma non troppo lento. Grade IV.
Six pages..... .60

The fluent melody and easy style of this popular composer are seen at their best in his latest composition, which has the added attraction of being less difficult than much of his writing. The principal melody is an expressive *cantabile* theme, given out in different registers, and enriched by subordinate melody and imitation. The contrasting section is more vigorous in style and livelier in tempo. The expressive first theme returns, slightly varied, as a third part.



FOUR GREAT SINGERS

Olive Fremstad, contralto, was born in Norway of Scandinavian parents in 1872. She apparently showed more than usual talent for music, for it is said that she appeared in public as a pianist at the age of five years. Miss Fremstad removed to America with her parents about 1884, and the family settled in Minnesota. A few years after she went to New York to perfect herself in singing, as she was already possessed of an exceptional natural voice. Her first public appearance is stated to have been at a concert conducted by Anton Seidl. She sang considerably during the early nineties in concerts, and appeared at Boston in 1892 as soloist in Bruch's *Armenius*, given by the New Bedford Choral Society. Mme. Lilli Lehmann became interested in this rising singer and gave her much valuable instruction. As a result, Miss Fremstad went to Europe, and after further study appeared for the first time at Bayreuth, in 1896, as one of the "Rhine Daughters." From this she became successively a member of the opera companies at Cologne and Munich and frequently appeared in London. She became a member of the Metropolitan Opera Company of New York in 1903, her initial appearance being November 25 of that year.

Miss Fremstad has, in this country, made her greatest success as Sieglinde in *Die Walküre*, although she has won much favor in other Wagnerian rôles. She is a versatile and convincing actress, as well as a contralto of exceptional powers.

* *

Mme. Lillian Nordica (Lillian Norton) was born at Farmington, Me., in 1859. Her parents were musical. She studied in Boston, and before she was twenty was not only a well-known church soprano, but had sung in the *Messiah*, with the Handel and Haydn Society. The late tenor, Brignoli, advised her to go to New York and study for opera with Max Maretzek, which she did. She sang with P. S. Gilmore in many concerts, not only in America but in Europe as well. This was in 1878. Madame Nordica this same year studied in Paris, and soon afterward made her advent into opera at Brescia, Italy, in *Traviata*. In 1880 she appeared in St. Petersburg, with great success, in *L'Africaine* and other works; then at Paris, returning to America in 1885 as a member of the Mapleson Company. But the New York stay was brief, and she returned to London, where she remained nearly seven years, returning to America in 1890. Since then, Madame Nordica has won triumphs not only in her own country, but in Bayreuth, Munich, and other leading operatic centres. In Wagnerian rôles she has become preeminent in later years, and her portrayals of such characters as Isolde, Brünnhilde, Elsa, and Venus are world famous. Madame Nordica is still in the prime of her artistic powers, which at present evince no sign of being on the wane, and her career has been not only an honor to herself but to the operatic stage as well.

* *

Enrico Caruso, who is among the shining lights in Grand Opera, was born at Naples, in 1871. In early life he was a mechanic, until it was found that he had an exceptional tenor voice, when he gave up his trade and studied singing with Vergine. His first appearance in opera was in *Traviata*, at Naples, in 1896; but his success began at La Scala, in Milan, in Giordano's *Fedora*, in 1898. Afterwards he appeared in other parts of Italy, Russia, England, and South America.

In the autumn of 1903 Mr. Caruso became a member of the Metropolitan Opera Company, New York, during the first season, under the management of Heinrich Conried, continuing with that company in 1904 and also the present season. His success in the favorite tenor rôles of the Italian masters was instantaneous, and has continued unabated from the first. Mr. Caruso has an extensive repertory, and his histrionic abilities are a valuable adjunct in making his various portrayals authoritative and convincing. He is an admirable caricaturist, and versatile in many ways besides his art. He married the opera singer Ada Ciacchetti, in 1901, and between seasons lives in his native country on a country place of much magnificence.

* *

Madame Josephine Jacoby, contralto, is a native of New York City. Her vocal abilities were much in evidence at an early age, and after some years' study with eminent teachers, she appeared with success in concerts, and also in church work. Several years ago she became a member of the Metropolitan Opera Company, under Maurice Grau, and has achieved an enviable reputation in many rôles. Madame Jacoby has appeared frequently in oratorio, also in concerts of the Boston Symphony Orchestra, as well as with other similar organizations.

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round

THE TUNE-A-PHONE IN USE

We teach **Piano Tuning, Action Regulating, Voicing, and Fine Repairing,** all in one, practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating, and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life.**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. We fit our students to command splendid profits in the pleasantest of professions.

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos."—Joseph Gribler, Astoria, Oregon.

THE DAMPER PEDAL

ELEANOR P. SHERWOOD

I

After touch has been disciplined to respond to every desirable sort of manipulation, there remains still something lacking for complete satisfaction in regard to tonal effect. And it is exactly at this point that the damper pedal should be permitted to "step in."

An indiscriminate use of this much-abused factor of tone-color is among the most nerve-wearing miseries attendant upon piano practice; since, while covering numerous defects of an undeveloped touch, it does this utterly at the expense of accuracy, clearness, and purity of tone, befogging and blurring outline and harmony to a degree unpardonable, unless music may create a tonal atmosphere of extreme impressionism to the verge of freakishness.

This is far from desirable, although a too literal accuracy of detail has often to give way before the legitimate impressionism, which results from adjustment of conflicting claims and conditions for their effect in the whole.

These facts do not alter the principle that the pedal is to be studied with reference to purity and contrast, so that vibrations of strings intended to sound in alternation, will not mix and combine beyond the degree requisite for legato effect.

As in touch legato one finger holds its tone until the next begins to sound, so in pedal legato, with gaps of touch necessitated by transfers of position, the foot should keep the pedal down until the next instant of touch and lift precisely then, dropping back again before next break of touch, and so on throughout the series of touch separations. In this way, the tone, by means of foot mechanism, bridges the chasm of touch, and the latter gains in muscular freedom.

This legato pedal method is somewhat troublesome to acquire, but once mastered, the independence secured between arm and foot action is most useful in all pedal work.

Where touch is all-sufficient to the tone, as it often is in quiet, uneventful, placid legato in close position, without leaps in bass, the pedal, even though admissible, theoretically, is apt to be a clumsy intruder. There is considerable taste to be exercised as to where it may be omitted with impunity as superfluous, if not actually meddlesome.

It is not a bad idea to first make the touch responsible for all it can develop, and then see what is necessarily left to the pedal, from the nature of things. Quite enough will be left, and in this way the pedal becomes most truly complementary and efficacious.

It is generally to be avoided in scales, trills, turns, etc., unless these lie in the higher octaves where the resonance is too thin and light to cause disturbance. It must be used very sparingly in polyphonic writing, since some voice will be almost certain to have running notes that should not mix. It is often desirable to exclude it from diminuendo.

On the other hand, in addition to its legato use, the pedal is indispensable in crescendo, sostenuto, and syncopation, in organ point, and to hold the low bass in harmonic accompaniment during the leap across the keyboard.

II

In all these cases it should be used; but *when* to take and remove it, that is the question—*precisely* when, for the infinitesimal fraction of an instant makes or mars the tone. This is especially the case with regard to lifting the foot; there is often some option as to when to take the pedal. Thus, in case of long tone, whether to add pedal reinforcement *immediately* after the touch accent, or later, would depend upon especial conditions too numerous to mention.

Should the touch retain its hold, a somewhat late addition of pedal support is most beautiful, provided no other "parts" interfere.

In "organ point," if long continued, and unassisted by the isolating "tone sustaining," middle pedal, lacking to many pianos, the damper pedal must make some sort of compromise between blurring upper voices or not retaining the organ point its due length. However, with rapid, light, flexible use of foot, in continuous up-and-down motion as adapted to contrasts in progressing parts above, an organ point will sometimes *re*-sound from the extreme predominance of its heavy-stringed vibration, imparting at least enough of its mighty influence to leave an *impression* of continuity even after it actually ceases. This method of foot agitation—a light, rapid shaking of pedal, two or three times to the *same* chord, to clear its sound from any remnant of the preceding harmony—is often necessary in *ff*.

As to pedal *lifting*, generally, it must be at the precise instant of contrast in tone or accent having sufficient force and duration to jar without such relief.

The function of the pedal is never to *meddle*, but to enter and exit entirely *à propos* of the service to be performed, like a well-regulated butler.

Melody, harmony, rhythm, tempo, phrasing, shading, all have their influence; and "suspension" and "resolution" must be clarified by cessation of pedal at the latter.

Theoretical knowledge is enlightening; but *ear*, and that sixth sense which saves one from the incongruous, are required to test and apply such knowledge, before the player attain to all the refinements of tone of which the pedal is capable.

As ever, "knowledge is power" only in connection with insight and the sense of fitness.

SOMETHING FOR THE CHILDREN

A MUSICAL SPELLING

RACHEL FRANCES SHARPLESS

"Come, let us have a spelling bee,"
Said the teacher to May and Irene.
"Carefully write the words for me,
Upon your slates nice and clean."

They made five lines for each staff, you know—
For each letter they put down a note.
Can you guess how they did it? look! below
Is a list of the words they wrote.

MUSICAL GIFT BOOKS

These books comprise the best of our extensive catalog, and are especially appropriate as gifts. The price against each includes postage to any address

Piano Collections for the Children

Young People's Classics, Vol. I

Fifty-one compositions by thirty-five composers, comprising one hundred and twenty-eight pages of music.
Price, in paper, $1.00; in cloth, $2.00

Young People's Classics, Vol. II

Forty-eight compositions by twenty-six composers, comprising one hundred and twenty-eight pages of music. Price, in paper, $1.00

Two collections of piano pieces of moderate difficulty and youthful spirit by such composers as Behr, Gurlitt, Lange, Lichner, Oesten, Reinecke, and Streabbog.

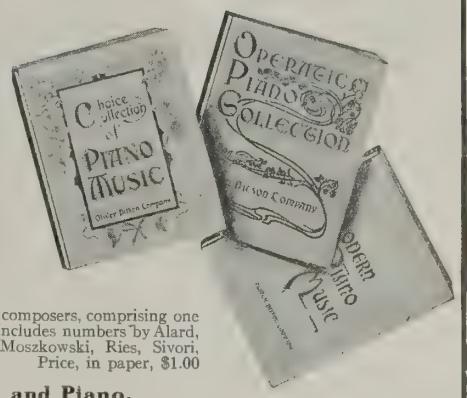
Young Players' Popular Collection

Fifty-one pieces by twenty-seven composers, comprising one hundred and forty-three pages of music. A good variety of easy pieces, popular in style, including ten for four hands. Price, in paper, $1.00

Mother Goose Songs without Words — By L. E. Orth

In this unique collection the author has chosen seventy favorite rhymes from *Mother Goose*, and has provided for each a characteristic melody in the same rhythm to which, if desired, the words may be recited. Price, in paper, $1.00

Violin Collections



Classical Collection for Violin and Piano, Vol. I

Twenty-four standard compositions by twenty-two composers, comprising one hundred and ninety-five pages of music. Among the composers represented are Bohm, Braga, Gounod, Haydn, Henselt, Mendelssohn, Raff, Rubinstein, Schubert, Schumann, and Tchaïkovsky.
Price, in paper, $1.00

Classical Collection for Violin and Piano, Vol. II

Twenty-four compositions by twenty-three composers, comprising one hundred and ninety-five pages of music. Includes numbers by Alard, David, Dancla, Eichberg, Gade, Gurlitt, Moszkowski, Ries, Sivori, and Wieniawski. Price, in paper, $1.00

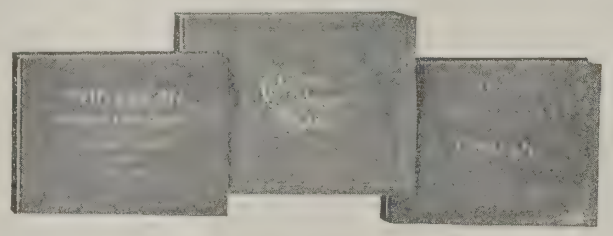
Classical Collection for Violin and Piano, Vol. III

Eighteen carefully edited compositions by eleven composers, comprising ninety-four pages of music. Bohm, Dancla, Devrient, Gounod, Massenet, Schubert, Thomé, and van Westerhout are represented.
Price, in paper, $1.00

Classics for the Violin

Twenty compositions of a high order. Each number has been carefully edited. Among the composers are Beethoven, Chopin, Godard, Grieg, Handel, Ilyinski, Piérné, Ries, Schubert, Schumann, Spohr, Svendsen, Tchaïkovsky, and Wagner. Price, in paper, $1.00

Piano Collections



Choice Collection of Piano Music

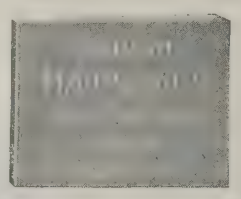
Twenty-seven compositions by twenty composers. The music is of moderate difficulty and in salon style, by popular composers, among them Bendix, Geibel, Goerdeler Holst, Phelps, and Loumey. Price, in paper, $1.00

Operatic Piano Collection

Fantasias by Beyer, Cramer, Dorn, Leybach, Spindler, and others, on nineteen of the best-known operas,
Price, in paper, $1.00; in cloth, $2.00

Modern Piano Music — Edited by Heinrich Kiehl

Thirty-two piano solos by twenty-two composers, most of whom are still living. Among them are Borowski, Chaminade, Godard, Grieg, Karganoff, Liadow, Massenet, Nicodé, Paderewski, Rachmaninoff, Schuett, Tchaïkovsky, van Westerhout, and von Wilm. Price, in paper, $1.00; in cloth, $2.00



Piano Classics, Vol. I

Thirty-nine classical compositions by twenty-nine eminent composers. Among the composers represented are Beethoven, Chopin, Godard, Grieg, Jensen, Moszkowski, Raff, Rubinstein, Scharwenka, Schumann, and Tchaïkovsky. Price, in paper, $1.00

Piano Classics, Vol. II

Thirty-one compositions by twenty-three composers. The contents are similar in character to Vol. I, though perhaps somewhat lighter in style. Price, in paper, $1.00; post-paid

Piano Classics, Vol. III

The modern spirit dominates this volume. Among the composers are Chaminade, Dvorák, Grieg, MacDowell, Orth, Paderewski, Scharwenka, Schumann, and Schytté.
Price, in paper, $1.00; in cloth, $2.00

Popular Piano Collection, Vol. I

Twenty-six compositions of moderate difficulty. The music is in salon style, and by such men as Behr, Bohm, Eilenberg, Gautier, Gillet, Hoffmann, Lange, and others. Price, in paper, $1.00

Popular Piano Collection, Vol. II

Twenty-four compositions similar in character to Vol. I, including numbers by Bachmann, Beaumont, Czibulka, Dorn, Geibel, Goerdeler, and Holst. Price, in paper, $1.00

Classic Four-hand Collection, Vol. I

Nineteen compositions by fifteen composers. They include numbers by Beethoven, Brahms, Krause, Lachner, Moszkowski, Scharwenka, and Wagner. Bachmann, Behr, Bohm, Delibes, Gillet, and Godard are also represented. Price, in paper, $1.00

Classic Four-hand Collection, Vol. II

Twenty-two compositions by seventeen modern composers. Among the composers are Chaminade, Gade, Grieg, Henselt, Kirchner, Paderewski, Tours, and Volkmann. Price, in paper, $1.00

Popular Four-hand Collection

The salon style characterizes this volume. Many of the numbers are in dance rhythm, and by such popular writers as Baker, Baumfelder, Goerdeler, Jungmann, Kéler-Béla, Ludovic, and Oesten.
Price, in paper, $1.00

Classics for 'Cello

The contents of this collection were chosen because of their musical charm, and acceptability to players of average proficiency. Among the composers are Arensky, Bach, Davidoff, Gabriel-Marie, Handel, Hauser, Kjerulf, Massenet, Popper, Scharwenka, Schubert, Schumann, Thomé, and Wagner. Price, in paper, $1.00

Classical Collection for Mandolin and Piano

A compilation of the works of the best composers; Gounod, Haydn, Mendelssohn, Moszkowski, Rubinstein, and others are represented. The style of this book is quite different from that of most collections of mandolin music. Price, in paper, $1.00

Organ Collections

The Organ at Church and in Concert — Compiled and Arranged by J. W. Simpson

A collection of seventy-two short selections and arrangements on two staves for either pipe or reed organ. Price, in cloth, oblong, $2.00

Whitney's Organ Album — Edited by S. B. Whitney

Thirty-three numbers by twenty-three composers. Every piece may be played either on a two or three manual organ. Some of the composers represented are Bach, Boëly, Benoist, Chauvet, Clark, Dubois, Handel, Lachner, Mailly, Rheinberger, Salomé, Smart, Thomas, and Tours.
Price, in cloth, oblong, $2.00

Concert Pieces for the Organ — Arranged and Edited by Clarence Eddy

This collection of approved concert numbers is the outcome of years of experience by an editor of international eminence as a concert organist. Chopin, Deshayes, Gounod, Goldmark, Haupt, Krebs, Lemaigre, Mascagni, Mendelssohn, Merkel, and Wagner are represented.
Price, in cloth, oblong, $2.00

Parish Harmonies — Arranged by J. W. Simpson

These seventy-eight short pieces for church or parlor use are engraved on two staves, and may be used on either a pipe or reed organ. The book contains lyric pieces, preludes, voluntaries, marches, offertories, and postludes. Price, in cloth, oblong, $2.00

Thirty Postludes for the Organ — Compiled and Edited by William C. Carl

The editor of the volume, with the assistance of Mr. Alexander Guilmant, has chosen these thirty postludes from the works of Best, Calkin, Callaerts, Cappelen, Chauvet, Duncan, Frost, Guilmant, Lemmens, Loret, Mailling, Polleri, Ropartz, Salomé, Tours, West, and others. Registration and pedaling are fully indicated and a biographical sketch of each composer is included.
Price, in cloth, $2.00

Modern French Organist

Edited by HENRY M. DUNHAM with the purpose of representing the best thought of the more prominent modern French composers for the organ. The composers represented are Boëllmann, Deshayes, Dubois, Franck, Gigout, Guilmant, Lemaigre, Salomé, and Widor.
Price, in heavy paper, cloth back, $1.00

New Studies for the Piano

Melodious and Technical Studies

For the Pianoforte

For Strength and Independence of the Fingers

By ARTHUR WHITING

Price $1.50

There are six Studies, each devoted to a certain problem in technique. Each is preceded by several exercises, designed to practice the fingers in the particular feature of the study. Both hands are treated alike in these.

The Studies are melodious and interesting to practice, and there are notes and directions for the best methods of work upon them.

Octave and Chord Studies

A Supplement to Wrist and Forearm Studies for Pianoforte

By FREDERICK A. WILLIAMS

Price $1.25

MR. WILLIAMS' Wrist and Forearm Studies have been so well received as to make a continuation of the methods and principles there employed a natural result. These studies carry on the work of developing strength and flexibility in the wrist and forearm muscles, by giving octave work in a more difficult form.

There are Studies in staccato octaves in various combinations of the two hands; then Studies in staccato chords; then interchanged chords and octaves; Studies for producing evenness in playing octaves for both hands in chromatic and slurred octaves and skips of large intervals.

The above will be sent for examination to responsible parties.

The Genius

BY

MARGARET POTTER

A novel of striking plot, and unusual musical atmosphere. It is a study of temperament, based on the life of one of the most famous and most misjudged of Russian composers. His career is a strange and deeply moving tale of shifting fortunes, dramatic episodes, and final artistic triumphs.

Anton Rubinstein, his brother Nicolas, Wieniawski, and other famous musicians figure in the story, and the struggles, jealousies, and hard-earned successes of these men are depicted with remarkable insight and ability. The novel not only enlarges information and intensifies sympathy for what may truly be called the land of genius, but it is also a valuable contribution to the psychology of art.

We have improved the quality of our KINDER SYMPHONY INSTRUMENTS, in a very marked degree, and they will be found in tune with themselves, and with each other.

A Catalog of CHILDREN'S SYMPHONY MUSIC is issued by us that takes in every known subject published with which CHILDREN'S SYMPHONY INSTRUMENTS may be used, giving the author's name, the kind of instruments to be used, and their prices.

This Catalog will be furnished FREE upon application.

The Instruments mentioned above will be sent by mail, or express paid, upon receipt of the price as given. These prices are strictly net, and without discount.

In addition to KINDER SYMPHONY INSTRUMENTS, we have in stock a complete line of DRUMMERS' TRAPS, among which may be found many novelties that can be used in connection with CHILDREN'S SYMPHONIES.

FOLIO EDITION—SHEET MUSIC

Compass shown by letters in brackets [ ]. First letter is lowest note; notes below the staff indicated by small letters; on staff by CAPITAL letters; above staff by *italic* letters.

Secular Songs

HIGH VOICE

FOERSTER, ADOLPH M. PRICE
Tristram and Iseult. Op. 60. [C] [d to *g* or *a*]..... 75
Matthew Arnold's concise version of the legend set to music on broad lines; in style and effect a dramatic *scena.*

SMITH, ROY LAMONT
Gifts. [G] [d to *g*]..... 60
A melodious yet animated song, with a touch of passion, and very singable.

LOW VOICE

CADMAN, CHARLES WAKEFIELD
Could Roses Speak. Op. 26, No. 1. [E♭] [b♭ to D]..... 50
Warm harmonic color and sensuous melody characterize this very grateful number for contralto or baritone.
My Lovely Rose. Op. 26, No. 2. [D] [a to D]..... 60
The graceful curves of the voice line lend themselves to rich vocal effects in this song of quiet sentiment.

FOERSTER, ADOLPH M.
Tristram and Iseult. [A] [b♭ to F♯]..... 75
(See above.)

Vocal Duet

TRACY, GEORGE L.
Love in May. (Soprano and Alto.) [A]..... 60
A graceful tripping melody, and the simple association of the voices bids fair to render this number very popular.

Sacred Songs

HIGH VOICE

DRESSLER, LOUIS R.
Christ is Risen. (With Violin Obbligato.) [F] [E to *g* or *a*]..... 60
Pleasingly melodious number, with good points of climax, and an attractive violin part.

MEDIUM VOICE

DRESSLER, LOUIS R.
Christ is Risen. (With Violin Obbligato.) [D] [c♯ to F♯ or *g*]..... 60
(See above.)

Piano Solos

ALETTER, W.
Three Salon Pieces for the Piano:—
Forever. (Nocturne.) [F] [III]..... 50
A sensuous melody employed in various registers characterizes this wordless song.
Pomponette. (Intermezzo.) [C] [III]..... 60
Brightly rhythmed staccato effects, relieved by more sustained passages.
Valse des Pirouettes. [B♭] [III]..... 60
A most attractive salon waltz, marked by melodic grace, piquant effects of rhythm, and facile structure.

CADMAN, CHARLES WAKEFIELD PRICE
A June Rose. (Reverie.) Op. 25. [F] [III]..... 50
A decidedly lyric number, composed of two contrasting but equally songful melodies.

STRAUSS, RICHARD
Reverie (Träumerei). Op. 9, No. 4. [B]..... 30
A modern classic of great intrinsic charm, helpfully edited.

Popular Piano Music

BOREL-CLERC, CH.
La Sorella. (The Celebrated March on Spanish Themes.) [D]..... 50
Piquant and fascinating quick march, attaining enormous popularity.

OCTAVO EDITION

(PLEASE ORDER BY NUMBER)

Easter Choir Music

Anthems

CLOUGH-LEIGHTER, H.
No. 11,515. **Break forth into Joy.** (Introit Anthem, with Soprano Solo and Mixed Voices)..... 16
Dignified and strong, well knit and impressive.

MACFARLANE, WILL C.
No. 11,517. **In the End of the Sabbath.** (With Soprano or Tenor Solo and Mixed Voices)..... 16
Not difficult, musicianly, and with well-contrasted episodes.

MARZO, EDUARDO
No. 11,512. **Come, see the Place where Jesus Lay.** (Hymn-Anthem, with Soprano and Bass Solos and Mixed Voices)..... 12
Attractive in melody and harmony, singable, and not difficult.

NEIDLINGER, W. H.
No. 11,511. **Welcome, Happy Morning.** (Soprano Solo and Mixed Voices)..... 12
Brightly melodious, simple, and with pleasing solo passages.

SPENCE, WILLIAM R.
No. 11,513. **Come, sing We Loud Hosannas.** (Alto or Bass Solo and Mixed Voices)..... 12
A jubilant, well-rhythmed anthem of moderate length.

SYDENHAM, E. A.
No. 11,505. **Christ is risen from the Dead.** (Short Anthem for Easter, Mixed Voices.) (Edited by H. Clough-Leighter)..... 05
An easy number in simple, melodious style.

WOELTGE, ALBERT
No. 11,519. **Christ, Our Passover.** (Tenor and Alto Solos and Mixed Voices)..... 16
An effective number of moderate difficulty.

Carols

BRACKETT, FRANK H.
No. 11,509. **Lift Your Glad Voices.** (Carol-Anthem for Mixed Voices)..... 12
An easy, tuneful number, in pleasing rhythm.

CLOUGH-LEIGHTER, H. PRICE
No. 11,503. **Christ, the Lord, is risen To-day.** (Processional for Mixed Voices)..... 10
In well-sustained march rhythm, with inspiring melody.
No. 11 504. **Hark! Ten Thousand Voices Sounding.** (Processional for Mixed Voices)..... 10
A stately, yet vigorous, carol, richly harmonized.
No. 11,514. **Triumphant Bells.** (For Mixed Voices).. 10
A persistent bell figure, ingeniously treated, is the basis of this carol.

MANNEY, CHARLES FONTEYN
No. 11,502. **Ring out, Ye Bells.** (For Mixed Voices).. 10
Melodious and strongly rhythmed, and in bright spirit.

NEIDLINGER, W. H.
No. 11,510. **Easter Chimes.** (Voices in Unison).... 10
A cheerful melody, in simple, straightforward style.

NEVIN, GEORGE B.
No. 11,508. **The Day of Resurrection.** (Processional for Mixed Voices)..... 08
Vigorous march tempo with melodious part-writing.

STORER, H. J.
No. 11,395. **Rejoice, the Lord is King.** (Processional for Easter or General Use)..... 08
A spirited number, well written and direct.

Anthems for Mixed Voices

BORCH, GASTON
No. 11,468. **O Great Creator of the Light**..... 10
A dignified number, not long, but in broad style.

MATTHEWS, H. ALEXANDER
No. 11,469. **Save Me, O God, for Thy Name's Sake.** (With Soprano Solo)..... 10
Simple but melodious and useful anthem of devout spirit.

STAINER, JOHN
No. 11,485. **And All the People saw the Thunderings.** (For Whitsuntide or General Use.) (Edited by H. Clough-Leighter)..... 05
A superb anthem in festal spirit, elaborate, dignified, and of generous length.

Part-song for Men's Voices

HARRIS, VICTOR
No. 11,466. **This is the Moon of Roses**..... 10
Very melodious, warmly harmonized, and effective lyric number.

Part-songs for Mixed Voices

FORD, JAMES S.
No. 11,489. **The Three Wise Men of Gotham**..... 16
Well-written number to bright words, whose humor is reflected in the musical setting.

GOLDMARK, CARL
No. 11,518. **Festival Chorus from "The Queen of Sheba"**..... 16
Splendid climaxes and impressive effects mark this excerpt from a spectacular opera.

PUBLISHERS' NOTES

FRADEL'S STUDIES IN PHRASING — In the Ditson Edition, of which nearly one hundred numbers are ready or in preparation, will only be found books printed from newly engraved plates. Strict adherence to this rule will be maintained. Every number will represent in typography and printing a uniform degree of excellence. The prefaces alone will give every volume a distinct pedagogical value possessed by no other edition. One of the most important additions to the Ditson Edition will be Charles Fradel's *Six Studies in Phrasing*, Op. 509. These studies have already passed through two editions, the second of which has been edited by Hans Lichter. The plates are in first-class condition and as good as any in the Ditson Edition. The fingering is carefully indicated and very complete, and all that is necessary to bring the work up to the Ditson Edition standard is the addition of a preface and a change of cover. A limited number of the present edition are still on hand, and while they last will be disposed of at a special reduced price.

Fradel's *Studies* are not only valuable from a technical point of view, but are really interesting as compositions.

Each study has an appropriate title and will make an admirable recital number. They are of about medium difficulty and are intended as an introduction to Heller's *Art of Phrasing*.

Phrasing is the subtle art of bringing into due prominence any figure, tone group, or phrase by the contrasting of its melodic and rhythmic characteristics with other tone groups, either correlative or independent. Such differences in melody and rhythm are emphasized by touch, dynamic intensity, and variations in tempo.

The price of the book is $1.00. The special price on these copies will be 25 cents, which includes postage if orders are accompanied by cash. This offer will be withdrawn as soon as the copies now on hand are sold.

THE ART OF VOCALIZATION — The three books for Soprano of Eduardo Marzo's *Art of Vocalization* will be issued this month. The first book will contain forty vocalises, with special instructions for practicing scales arpeggios, grace notes, the mordent, detached notes, syncopation, trills, etc. Book II will contain thirty-six vocalises, and Book III twenty-four vocalises, each comprising eight-four pages. None of the vocalises are transpositions. Each is in its original key and was written especially for the soprano voice. The order of progression has been carefully arranged so that the vocalises may be taken up consecutively.

The Art of Vocalization is a complete course for the voice. The price of each book will be 75 cents. Until publication, however, the advance offer of 40 cents each, including postage if cash accompanies order, will remain open.

THE TRAINING OF BOYS' VOICES — The difficulties which teachers experience with boys' voices are usually to be accounted for by their lack of knowledge of vocal physiology; but many cases of failure have been due to inability to recognize the tone qualities of the different registers. The secret of success in beginning with children's voices consists in the immediate production of their middle and upper register tones. Schools which provide time for daily singing lessons could afford ample opportunities for training children's voices. Vocal music in schools without voice training is a constant source of friction. It is a fact that the books now in use in many schools are arranged for singing almost wholly in the chest register. Only the most careful vocal teachers should be trusted with children's voices.

The Training of Boys' Voices, by Claude Ellsworth Johnson, treats authoritatively on this important subject. The work also contains a list of sacred and secular choruses, the soprano and alto parts of which may be sung by boys. The book is in preparation. It will be one of the Music Students Library and will be bound in serviceable cloth covers. The price will be 75 cents, but in advance of publication we offer it for 40 cents, which includes postage if paid in advance.

REED ORGAN SELECTIONS FOR CHURCH USE — This collection contains thirty numbers by nineteen different composers, among whom are, Mendelssohn, Handel, Batiste, Schumann, Tours, Marchant, Roeckel, Sidney Smith, Merkel, Gounod, and Wagner. Eight of the numbers are preludes and six are postludes. There are five offertories, five communions, two wedding marches, two festival marches and two funeral marches. Metronome marks and fingering have been provided for each selection by the editor, Hans Lichter.

The book will be one of the Half Dollar Music Series. In advance of publication we offer it for 25 cents, which includes postage if cash is sent with orders.

MEMORIAL DAY AND FLOWER SUNDAY — On page 256 of this issue of THE MUSICIAN is a list of Memorial Day selections which are suitable for performance in church, in school, and at Grand Army services.

On page 257 is a list of songs and choir numbers for Flower Sunday. Our complete catalog of both kinds of music will be sent to any address. Music published by us will be sent for examination. On request we will make selections ourselves of such numbers as we can especially recommend.

In the *Choir and Choral Magazine* for May are Leo R. Lewis' *Memorial Hymn for Men's Voices* and *Jesus, King of Glory* by Frank H. Brackett. The latter is a Children's Day anthem for mixed voices. The price of the *Choir and Choral Magazine* is 10 cents. The subscription price is 50 cents per year.

IN CONSTANT ORDER BY WEBER — One of Weber's best but least-known choral works is his hymn, Op. 36, entitled *In Constant Order works the Lord.* The following description of this work is from Grove's Dictionary:—

"Another hymn of Rochlitz's, *In Constant Order works the Lord*, is a fine work of art. It was composed in 1812, and dedicated to the Musik-Gesellschaft of Zürich, which had elected him an honorary member. At first the composer has evidently had a difficulty in warming to his work, on account of the half-dogmatic, half-descriptive nature of the words; and the hearer, though occasionally interested, is not carried away by the earlier movements. The introduction of the Chorale *Then let Me learn to trust Thee* (to the tune of *O Haupt voll Blut und Wunden*) is scarcely to be justified on esthetic grounds. But then comes the chorus *All Praise to God*, and all that has hitherto failed to please is forgotten, and the hearer swept away in the rushing torrent of foamy music. The fugue of this chorus, *When Storms are Loud, when Waves are Strong*, is a character-piece of the first rank. To criticize each detail of this polyphonic movement would be pedantic; it is a work of genius, and its flashing enthusiasm bears comparison, at a distance, of course, to certain parts of Beethoven's Ninth Symphony."

The work requires four solo voices, and may be given with either orchestra, piano, or organ accompaniment. It is not too difficult for performance by a fairly proficient choir or chorus. The work will also interest those students, whether singers or not, who desire to become acquainted with the best music.

The price of the vocal score of *In Constant Order* with piano accompaniment is 60 cents, but in order to dispose of a large surplus stock, we are offering copies for 25 cents. This price includes the cost of postage if cash accompanies order.

CANTATAS AND OPERETTAS — As publishers of choral music we rank second to no other house either in America or Europe. Our octavo editions comprise over ten thousand separate numbers. We publish also over two hundred sacred and secular cantatas, and operettas. These represent a large variety of subjects and include works suitable for almost any occasion. There are operettas for children and for girls, operettas and cantatas for school choruses and for amateurs, cantatas for special occasions, such as Christmas and Easter, and choral works suitable for performance by musical associations and societies. The last mentioned are particularly suitable for such gatherings as teachers' conventions, and for chorus training in summer schools. These works may be performed with piano accompaniment. Orchestrations of a number of them are also available.

Our "Descriptive Circular P" is a classified list of cantatas and operettas. It contains a description of each work, and a complete index of the contents of some of them. Copies of this catalog will be sent to any address on request. Any work contained therein may be had for examination. Liberal discounts are allowed on such publications, especially when purchased in quantities.

WICHTL'S YOUNG VIOLINIST — In the one hundred exercises of which Wichtl's *Young Violinist* is comprised will be found sufficient material for a thorough foundation in violin playing. The work contains also an explanatory text, a list of musical terms with their definitions, and eight reproductions of photographs showing the correct position for holding and playing the instrument.

A new edition of the *Young Violinist*, edited by John Craig Kelley, is in preparation, and will probably appear this month. It will be No. 91 of the Ditson Edition. The price will be $1.00, but in advance of publication we offer copies for 40 cents, which includes postage, if cash accompanies orders.

RECEIPTS FOR SUBSCRIPTIONS — We are frequently requested by subscribers to send receipts for subscriptions or renewals, or are asked to inform them whether or not their subscriptions have expired. Occasionally we hear from some person who has concluded that because a receipt was not sent by return mail the remittance could not have reached us.

On every mailing wrapper is indicated the month and year of the expiration of the subscription. Renewals are entered on our mailing list as soon as received. The wrapper, therefore, serves as a receipt and will also supply information as to the time when a renewal of the subscription is due.

THE MUSIC IN THIS NUMBER

Piquancy. Charles Vincent.

This is a "Rhythmic sketch" in form of a mazurka with a brief introduction *Lento quasi Recit*, about 100 to the quarter note metronome; the marking for the main body of the piece being 138 rather fast, with motion. Notice the second section on page 4, third brace. The sustained notes should have proper emphasis, while the accompanying harmonies should be as soft as possible. The combination of both pedals judiciously employed will aid materially to the desired effect. Similar measures occur elsewhere in the piece. The final measures should be firmly played with decided rhythm, accelerating to the end. There are many marks of phrasing that should be carefully observed.

Badinage. Henry Lincoln Case.

This is for violin and pianoforte, the piece being simple in form, in two contrasted periods. The first (G major) offers a recreative study for the violinist in the light staccato. The accompaniment should be of the same crisp character, always subservient to the solo instrument. In the second period (C major), the accompaniment contributes a secondary melody a third below that of the violin, and here a proper tonal balance between the instruments is important.

The long hold on the sixth page should not be more than the time value of two measures in duration.

This would I Do. William R. Chapman.

A song for baritone, the text furnishing a decided romantic mood, which calls for considerable study in expression on the part of the singer. The technical difficulties, however, are few, and will be found comparatively easy to master. The accompaniment demands a sustained singing tone, with a judicious employment of the pedals, often in combination.

A Token. Op. 17, No. 2. Charles Fonteyn Manney.

Another song of the romantic type for medium voice, preferably for tenor or high baritone. The mood is now tender, now passionate, and the musical setting is especially effective in the hands of the vocalist who can adequately

"sense" the text. The accompaniment demands a fair amount of technique, but above all a sympathetic performer who can appreciate the mood and furnish the proper background that will assist in creating the atmosphere the words suggest.

Light of Heart. E. Ferrati.

An effective, yet not technically difficult, *salon* piece for two performers. The *primo* naturally demands the most study, but the easier *secondo* is not without measures that need a certain attention. The time is moderately fast, with motion, and the two performers, besides cultivating the necessary *ensemble*, should make the general interpretation brilliant, graceful, and animated. Herein lies the strength and character of the piece.

NEW SONGS

S. Coleridge-Taylor. Two Songs.

1. *Once Only.* Low voice in D (b to E)..... .60
2. *She rested by the Broken Brook.* Low voice in E♭ (b♭ to E♭)..... .60

Rare indeed are such beautiful songs for low voice as these recent compositions by the distinguished English writer; and rare such verses as those by Stevenson which he has chosen for his musical settings. *Once Only* bears as a subtitle "Rhapsody for Voice and Piano," and in form it is dramatically free rather than lyric, following with graphic force the vivid lines of the poem. The culmination of the idea is reached in a superb climax. The song demands of the interpreter virility, temperament, and imagination; and will amply repay study.

She rested by the Broken Brook is in strophic form and of lyric character. The stanzas are treated rather freely, and the accompaniment is significantly enriched in repetition. Simple and genuine in emotional expression, this song makes warm appeal, and is vocally very grateful and effective.

Frederic Field Bullard.

My Wife. Medium voice in D♭ (c to F).

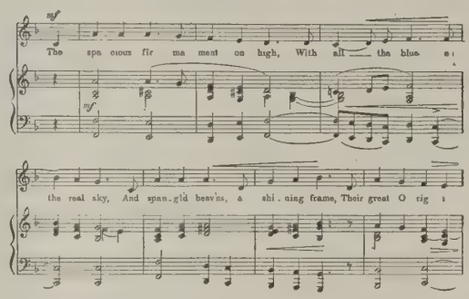
Also for low voice in B♮..... .60

This superb song, written shortly before M. Bullard's death, shows his creative gift in its most matured aspect. Logical in structure, strong and close knit in harmony, vigorous in melody, it gives virile and noble interpretation to Stevenson's unforgetable tribute. Music and verses are welded in true union. This song is earnestly recommended to all who care for the higher type of modern lyrics.

Eugene Cowles.

The Spacious Firmament on High. Low voice in F (f (♭a) to C or E or F)..... .60

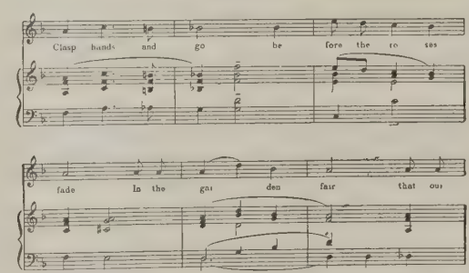
A broad and dignified setting of the well-known hymn by Addison. The form is strophic, though the stanzas differ slightly. The melody is strong and clear-cut, in even, stately rhythm; and the choice notes adapt the song, in range, for both medium and low voices.



J. L. Roeckel.

In Love's Garden. Medium voice in F (d to F).... .50

A simple, cleanly written lyric with words by Florence Hoare. The vocal line is very singable, neither difficult nor taxing; the accompaniment makes but slight demands. This song may be used advantageously in teaching, and will give pleasure in performance.



PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round

THE TUNE-A-PHONE IN USE

We teach **Piano Tuning, Action Regulating, Voicing, and Fine Repairing,** all in one, practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating, and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life.**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. We fit our students to command splendid profits in the pleasantest of professions.

THE ACTION MODEL

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River Oregon.

"I made $36 last week, and $21 the last two months, tuning and regulating pianos.'—Joseph Gribler, Astoria, Oregon.

PIANO PLAYERS
AND PIANO TEACHERS

Do you realize the important part a perfect action plays in the production of the tone and touch of your piano?

It is the merchanism through which you transfer your thoughts and feelings to the strings, and thus interpret the great masters.

To accomplish this, your action must be perfect in touch, perfect in repetition, perfect in power.

If your piano contains a

Strauch Bros. Piano Action

it is perfect in these essentials, as this action is found only in pianos of quality and merit.

STRAUCH BROS.
30 Tenth Avenue, New York

FLORA
OR
The May Queen Festival
A Cantata
By AGNES AMES WHEELER

A simple and melodious work, and one which will be of especial interest to those who prepare children's entertainments. There are four principal characters and parts for a number of girls and boys. If desired, as many as forty children, ranging from five to fifteen years of age, may take part. For those children who cannot sing but who are able to speak well there are recitations. The dialogue is of more than ordinary interest. The work closes with a May-pole dance forming a beautifully colored tableau.

The preface contains all necessary suggestions as to the rather simple arrangement of stage and costumes. Allowance is made, however, for the adaptation of original ideas to any variety of material which may be on hand. The time required for performance is 45 minutes. Price, post-paid, 25 cents.

Copies sent for examination

The Village Blacksmith
A Short Cantata by
CHARLES F. NOYES

A TUNEFUL and bright yet musicianly setting of Longfellow's poem. It is for mixed chorus with piano, organ and anvil accompaniment. Numerous picturesque effects are appropriately introduced, such as the sound of the anvil, the church bells, the organ, and the voice of the smith's daughter singing in the choir. A short soprano obbligato is the only solo in the work. The chorus parts are easy to learn and grateful to sing.

This cantata is especially suitable for performance by grammar and high school choruses. The time required for performance is 15 minutes. Price, post-paid, 40 cents.

Copies sent for examination.

The orchestration in manuscript may be had on rental.

TWENTY SONGS

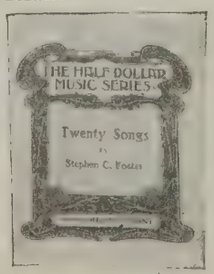
By

Stephen C. Foster

Edited by

N. CLIFFORD PAGE

Those persons who assert that America has no folk-music fail to take into consideration the importance of Foster's Melodies. Of the 164 or more songs by this composer scores are sung in every American household. "Old Folks at Home," which is also known as "Swanee River," is sung all the world over. As a token of the esteem in which he is held by Kentuckians, a statue of Foster, paid for by popular subscription, will be unveiled at Louisville in June. Kentucky thus bestows upon the author of "My Old Kentucky Home" a greater honor than ever paid before to an American musician.



This collection contains the twenty best-known songs by the founder of American folk-music. The refrain in most of the numbers is arranged for chorus, but, if desired, the songs may be sung throughout by a solo voice. The accompaniments, which in the original editions show evident marks of hasty composition, have been carefully revised by the editor so as to better adapt them to the modern piano.

The words and music of Foster's songs are most happily wedded both in meaning and spirit. Their simple but inimitable style has given them a permanent place in the hearts of the people.

Paul Revere's Ride

A Cantata

By CARL BUSCH

A spirited, musical setting for baritone solo and chorus of Longfellow's famous poem. Frequent allusions are made to the melody of the "Star Spangled Banner" which in its entirety forms the stirring finale. The dramatic effect is further heightened by a realistic imitation in the accompaniment of rapidly galloping hoofs. The work is a desirable one for patriotic and school celebrations and it can be given effectively with accompaniment of either a small orchestra or the piano. The time required for performance is twenty minutes. Price, post-paid, 50 cents.

Copies sent for examination

The orchestral score and parts may be rented from the publishers.

JUST PUBLISHED

Ten Tone Pictures for Piano Solo

By H. L. CRAMM, *Op. 7*

Founded on poems by Eugene Field, Robert Louis Stevenson, and Mary Mapes Dodge.

1. The Hayloft . . . . . (1-A) .40
   A rather stately movement of much grace and real melodic interest. The change of key from F to B-flat, and back again, gives additional value. It contains practically no chord work, as both hands are almost entirely in single notes.
2. Sleep, Little Pigeon! . . . . (1-A) .25
   A lullaby in waltz time. Especially useful in helping a beginner to acquire a "singing" tone and a better sense of shading.
3. Marching Song . . . . . (1-A) .25
   In 4-4 time. One of those simple little gems which fill the same place in the world of music that is filled in literature by the children's poems of Stevenson and Field.
4. The Swing . . . . . (1-B) .25
   Quite characteristic in style and movement, and the composer has fully caught the spirit of Stevenson's
   "How do you like to go up in a swing
   Up in the air so blue!"
5. The Dinkey Bird . . . . . (1-B) .25
   A very pleasing little movement in 6-8 rhythm.
6. Rut-a-tut-tuts . . . . . (1-B) .25
   A rollicking little march.
7. Pittypat and Tippytoe . . . . . (1-B) .40
   A little intermezzo with clever introduction and ending. The frequent use of legato in one hand against staccato in the other adds to its usefulness.
8. The Ride to Bumpville . . . . . (1-B) .25
   Both as a recreation and as a study in rhythm, an important number.
9. So, So, Rock-a-bye So! . . . . . (2-A) .40
   Appeals strongly to the imagination of the young. A dainty, lullaby is suddenly interrupted by the minor strains of the Fumfay's dance, which in turn gives place to the lullaby.
10. Two Little Froggies . . . . . (2-A) .25
    A musical frolic. The little tragedy of the ants and the frogs is delightfully sketched.

Complete (Edition Wood, No. 406), $1.00

The composer of the above pieces is a well-known and successful teacher, and understands the exact requirements of music for the student upon the piano. The above compositions are delightful bits of melody, and combine the essentials of good teaching material.

Announcement

THE School of Music of Northwestern University, located at Evanston-Chicago, on the shore of Lake Michigan, has inaugurated a Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

P. C. LUTKIN, Dean.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

King Olaf

A Dramatic Cantata

By CARL BUSCH

THE text of this cantata is taken from Longfellow's poem, which has been abbreviated where necessary, to adapt it for musical treatment. The choruses are full of variety and are brilliant and effective—now vigorous as befits the hardy Norse warriors, now delicate and tender, or mystic in the wedding choruses; or, as in the final chorus, moving with great breadth and majesty. There is important work for the three solo voices, soprano, tenor, and baritone, both in extended passages and in incidental phrases.

The writer proves himself to be a resourceful composer—richness of harmony, polyphonic treatment of voices, thematic development, and melodic eloquence are all in evidence. The work is modern in spirit and in form, being written without break except where naturally suggested by the text.

The time required for performance is one hour and twenty minutes.

Price, postpaid, $1.25

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.
FRITZ KREISLER.

Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

The PUPIL'S LIBRARY

A DIFFICULT TASK confronting pianoforte teachers is to find and choose appropriate pieces for their pupils, especially the younger ones. Compositions are not so easily found which will both instruct and interest, have technical value, and are harmonious and pleasing as well. The following pieces have been carefully selected from the best of many easy sets written especially for children's use. It is hoped that this list will help in a real and satisfactory way to solve the problem of selection.

Thirty-three Easiest Pieces

Gurlitt, C. Lullaby 25
Ritter, G. P. The Echo . . .25
Rohde, E. Grandpapa's Music Box, .25
Gurlitt, C. The Good Little Girl . .25
Dennée, C. The Hobbyhorse Ride . .25
Ritter, G. P. Austrian Melody . .25
Dana, A. Children's Carnival Waltz, .25
Sartorio, A. The Favorite Spot . .30
Schnecker, P. A. Cuckoo's Song . .25
Gurlitt, C. Forest Brook . . .25
Ritter, G. P. Happy Birdling . . .25
Rohde, E. A Peasant Dance . . .25
Maylath, H. Sonatina 25
Lynes, F. Saltarello 30
Morley, C. Maybells. Schottisch . .25
Morey, F. L. Away to the Woods, .40
Porter, F. A. Dance by Moonlight, .30
Dennée, C. Echoes of the Past. Gavotte .25
Foerster, A. The First Ball. Waltz, .25
Marston, G. W. Styrienne . . .25
Marston, G. W. March of Tin Soldiers, .25
Dennée, C. Petite Valse . . .25
Dana, A. Hunting Song . . .25
Philipp, G. Gaiety 25
Lake, T. Spanish Dance . . .40

ORTH, L. E. Op. 29, No. 5. In Uniform. (2c) 1.25
SARTORIO, A. Op. 174, No. 5. The Victor's Return. March. (2c) 1.25

There is hardly anything more entertaining to piano students of the earlier grades than participation in the performance of arrangements for eight hands on two pianos. In the case of many such students, it is the nearest approach to orchestral or concerted playing that they ever make. All the details of their practice together, and the effects produced by their combined execution, invariably prove delightful to the participants.

Aside from the pleasure which such pieces give to the ear, they are of great educational value in teaching the performer to keep strict time, and to keep his wits about him and preserve his calmness and self-possession under all circumstances.

This collection of eight-hand arrangements by Edmund Parlow are capitally constructed adaptations of six selected and brilliant recital pieces.

THE DEVIL AND PAGANINI

GUSTAV KOBBÉ

"Du Maurier must have seen that picture before he created Svengali!" exclaimed a lady to whom I showed the daguerreotype of Paganini reproduced with this article.

"The devil guided my hand," said Lyser, the deaf artist, to Heine, when the latter congratulated him on his striking portrait of Paganini — "the pale, cadaverous face on which sorrow, genius, and hell had engraved their lines," to quote Heine's own description of this Mephistopheles among virtuosos.

In fact, Paganini lived ever in the nimbus of the weird. In 1828, while giving concerts in Prague, he was obliged to publish a letter from his mother to prove that the devil was not his father. Harris, an Englishman attached to the Hanoverian court, who became his secretary, and who, being of diminutive stature, danced along beside him with mincing steps, was believed to be a grotesque incarnation of the evil one and to have the violinist's soul locked up in an old trunk in Hanover.

Professor Julius Max Schottky, of Prague, who was intimate with him and whom he commissioned to write a book in refutation of the sinister stories regarding him, describes him as "so thin he could not well be thinner; with a pale yellow complexion, a prominent aquiline nose, and long, bony fingers." ("Talon-like," Fétis calls them.) "He hardly seems to hang together beneath his clothes," continues Schottky. "When he bows, one expects him to collapse into a heap of bones."

Is it a wonder that when this weird-looking creature performed miracles of technique for those days (and his technical feats have not been surpassed, if equaled, since), people vowed that they distinctly saw his satanic majesty standing beside him on the stage and guiding his hand and bow; or that his prolonged retirements from the public gaze, some of them caused by ill health, gave rise to the story that he had passed four years in the nether world taking lessons in violin playing from the devil — who, according to popular belief, appears to be a most accomplished instructor in many things?

We are familiar enough now with performances of entire pieces on the lowest string of the violin. But they were an innovation of Paganini's, who produced such a sensation with his playing of the prayer from Rossini's *Moise* on the G string, that the public gave ready credence to several stories invented in order to account for this *tour de force* of virtuosity. The one received with most favor, because it had a touch of the uncanny in keeping with his appearance and with other stories about him, stated that when in his youth he was *maestro*

NICOLO PAGANINI

di capella to the court of Lucca, he was imprisoned for eight years for killing either his *amie* or an abbate whom he had discovered in her room. In prison he asked for his violin, and, while this request was granted, the authorities, fearing that he might knot the strings together and hang himself, removed all but the G string, upon which he practiced during his long confinement, thus acquiring upon it the marvelous technique which enabled him, in the prayer from *Moise*, to play on that one string not only the baritone voice, but also the voice of Elcia, an octave higher.

Doubtless during the earlier years of his career Paganini encouraged stories like this, because they awakened public curiosity regarding him. But later on he resented the necessity of sharing with the devil and alleged jailers the triumphs due to his own genius and indefatigable industry. In Vienna he induced the Italian ambassador to deny the story of his imprisonment. Yet it continued to precede him wherever he went. In Paris, while he was walking in the street, he saw, in a shop window, a lithograph (reproduced in this article) representing him playing the violin in prison. Stopping to look at it, he was joined by one person after another until he was surrounded by a crowd of people who, recognizing the resemblance between himself and the prisoner in the picture, showed by their comments that they believed the story. Accordingly, he indicted a letter of denial to Fétis, but his own relation of the circumstances that led to his performances on the G string is quite as interesting.

Paganini claims that while he was in the service of Princess Eliza, Napoleon's sister, at Lucca, he was in love with a court lady. But, as it would have been imprudent for him to pay his *devoirs* too openly, he announced that at his next concert he would play a new *Scène Amoureuse* of his own composition. When he appeared on the stage with the two middle strings eliminated from the *accordatura*, curiosity was roused to the highest pitch. On the G string he played the accents of the lover, on the E string those of the girl — "at one time," as he himself describes it, "chords representing most tender appeals; at another, plaintive reproaches, cries of joy and anger, felicity and pain. Then followed the reconciliation, and the lovers, more persuaded than ever, executed a *pas de deux*, which terminated in a brilliant coda." All this on two strings. It earned him languishing looks from his amata and compliments from the princess. "You have performed impossibilities!" exclaimed the latter. "Would not a single string suffice for your talent?" This suggestion started his experiments on the G string, which led to such astonishing results — and to stories connecting his art with crime and the devil.

Nicolo Paganini, who is to the violin what Liszt is to the piano, — the greatest figure in its history, — was born in Genoa, on Feb. 18, 1784. His father, Antonio Paganini, a man in poor circumstances, but a passionate amateur in music, scenting a fortune in the child's evident genius, kept him at his violin lessons and practice with a severity that bordered on cruelty. When only nine years old, he played in a concert at Genoa, to the "frenzied acclamations" of the audience. At twelve he had progressed beyond the instructors of his native city and was taken to Rolla at Parma. Rolla was ill in bed and sent word declining to receive the visitors. Meanwhile, however, Nicolo had spied the manuscript of a concerto and a violin on the table, and, taking up the instrument, he began playing the music at sight. On inquiring

the name of the virtuoso and learning that it was a mere lad who was performing, Rolla rose from his bed, and, having satisfied himself that the report was true, agreed to accept Nicolo as a pupil. The youthful virtuoso, however, always was ahead of his masters in the difficulties he was ambitious to compass. For years after his twenty-four *Capriccios*, significantly dedicated *agli artisti*, were published, they were regarded as impossible monstrosities, and when touring artists, on their return from Italy, told of having heard him play them, these reports were received with incredulity as travelers' tales.

There were other stories regarding him — stories of a wild life which began in 1799, when he freed himself from his father's bondage by obtaining permission to attend the St. Martin's Festival in Lucca, and then started off on a concert tour on his own account. Surrounded by parasites, Nicolo, then only fifteen years old, plunged into every kind of dissipation, squandering in gambling and other vices the money he so readily made at his concerts. At times his losses at the gaming table even compelled him to part with his violin. This occurred at Leghorn, where he was billed for a concert. A resident French merchant and amateur, M. Livron, hearing of his dilemma, loaned him a Joseph Guarnerius. When Paganini went to return it after the concert, the enthusiastic Frenchman exclaimed, "Never shall my hands profane the instrument which yours have touched," and presented the violin to the virtuoso. This became Paganini's favorite violin, and is the one he left to the city of Genoa, where it is exhibited in the Municipal Palace. The threatened loss of this instrument cured him of gambling. According to Paganini himself, his means had been reduced at the gambling table to a few francs, and he felt that he would be obliged to accept a standing offer for his much prized Guarnerius, made to him by a prince who greatly coveted it. As a last desperate chance of saving his precious violin, he staked what little money he had left on one play, and won. But the risk he had run gave him such a fright that he quit the gaming table for good and all.

It is impossible in this rapid survey of Paganini's career to follow the numerous triumphs which he celebrated in his native land — his successful violin duels with the Frenchman Lafont and the Pole Lipinski; or how Meyerbeer, chancing to hear him, traveled after him from place to place, until he had heard him in eighteen concerts. He had an amusing, though somewhat exciting adventure at Ferrara, where he was obliged to substitute a singer for the one originally announced for his concerts. Learning that Pallerina, the *prima ballerina* of the theatre, had a pretty voice, although it had not been cultivated for public performances, he persuaded her to help him out. Her effort was marred by stage fright, and, when she retired, a violent hiss was heard above the kindly applause. Enraged, Paganini, when he went on for his last solo, began with an exhibition of his skill in imitating certain animal sounds on his violin, winding up with a tremendous "Hee-haw" (the braying of an ass), and calling out, "This is for the man who hissed!" But, instead of the expected laugh, the audience rose in a body, made a rush for the stage, and it was only by beating a precipitate retreat that the virtuoso escaped personal violence. It seems that the neighboring towns regarded the residents of Ferrara with contempt, and that visitors to that city on being asked, after their return, where they had been, would answer "hee-haw." For this reason Paganini's audience had interpreted his intended satire as an insult, and the affair created so much excitement that the authorities forbade him to continue his concerts.

NICOLO PAGANINI

Paganini was forty-four years old when he made his first appearance in a foreign city, Vienna, where his first concert took place March 29, 1828, "throwing the Viennese population into an indescribable paroxysm of enthusiasm." Shortly before the virtuoso's arrival, the Emperor of Austria had received from the Viceroy of Egypt a giraffe, an animal then new to Europe. Everything in Vienna had been *à la giraffe*. But, after the violinist's début, everything became *à la Paganini*. His bust in sugar was displayed at the confectioner's; in butter, at the grocer's. A brilliant stroke at billiards was called a *coup à la Paganini*, and there were Paganini hats and neckties. The violinist entered a store to buy a pair of gloves.

"*A la giraffe?*" asked the shopkeeper.

"No, some other animal," replied the virtuoso, whereupon the shopkeeper handed him a pair *à la Paganini*. His hackman, desirous of profiting by the general enthusiasm, put a sign, *Cabriolet de Paganini*, on his vehicle. Possibly this is the same driver who figures in one of the characteristic Paganini anecdotes. The violinist protested against the hackman's charges.

"People pay three florins to hear you play on one string," replied the driver.

"Very well," answered the virtuoso, "I will pay the same amount if you will drive me to my destination on one wheel."

Paganini's triumphs in Vienna, Berlin, Paris, and London can only be compared with those of Jenny Lind and Paderewski in our own country, with the difference, however, that his Mephis-

tophelian exterior awakened an uncanny interest in his personality, that probably never has been equaled in the case of any other notability of the concert stage. In London strangers stopped him in the street and spoke to him or felt him in order to satisfy themselves that he was a being of real flesh and blood.

Paganini's weird, emaciated appearance was due, in great part, to his having been, nearly all his life, a victim of bad health. The severe application to his studies to which his father subjected him when in childhood undermined a constitution which was none too strong to begin with. Dissipation made further inroads. He suffered from an indigestional disorder that was aggravated by frequent doses of a quack medicine in which he had implicit faith. Finally, phthisis of the larynx supervened and he was far gone with this when a group of Parisian speculators, seeking to reap advantage from his fame, induced him to join them in establishing a casino in the French capital.

NICOLO PAGANINI

But the expected gambling privilege being withheld, the concern failed, and a judgment for 50,000 francs, under penalty of imprisonment, was rendered against him. He escaped to Marseilles, journeyed by vessel to Genoa, but later went from there to Nice, where he died on May 27, 1840. Even in death his troubled spirit failed to find immediate rest. As is the case with many consumptives, he could not be persuaded that he was in danger of dying, and declined the last rites of the church. In consequence, five years passed before the ecclesiastical authorities could be persuaded to allow his remains to be interred in consecrated ground.

Paganini's importance to the violin cannot be overestimated. He was at once the founder of the modern school of violin technique and its greatest exponent. He recognized the individuality of the instrument, just as Chopin did that of the piano. Consider that he was appearing in public twelve years before Haydn died and thirty-four years before the death of Beethoven, and that Schubert heard him play; then reflect that the art of violin playing on its technical side has not advanced a step beyond him — and what he accomplished may be appreciated. It is much as if a Richard Strauss suddenly had appeared full-fledged a century ago and exploded his *Thus spake Zarathustra* or *Heldenleben* among the classical symphonists, discounting Berlioz, Wagner, and — himself. Meyerbeer, who is reported by Castil-Blaze in the *Journal des Debats*, paid this eloquent tribute to Paganini's technical skill: —

"Imaginez les effets les plus éttonans que l'on puisse produire sur un violin; rêvez les prodiges de l'archet et de la mélodie, Paganva surpasser encore votre attente."

The virtuoso believed himself even a greater composer than a player, and it is a fact that sixty-five years after his death his *Capriccios* remain the technical *ne plus ultra* in the *répertoire* of the modern violinist. Nor is their showiness on the side of technique all there is to commend them. They have genuine musical merit. "I consider this number especially fine and tender," wrote Schumann of the second *Capriccio*, and sufficient in itself to insure Paganini's position as one of the first among modern Italian composers. . . . His compositions [referring to the *Capriccios*, as a whole] contain many pure and precious qualities, worthy of being firmly fixed in the richer setting required by the pianoforte." It would be difficult to ask for higher praise from a critic who himself was a great composer. I am aware that there are violinists who cannot play Paganini's compositions and who, therefore, have made the profound discovery that they are the works of a charlatan. These violinists are ardent advocates of what they are pleased to call the "broad, classic style of playing" — which means that they would like to write down as a trickster any one who plays better than they themselves, or who has progressed beyond the polite drawing-room phrases of the Mendelssohn concerto.

In 1824 Paganini was assisted at a concert in Genoa by Signora Bianchi, a young singer. She became his companion on his tours and was the mother of his son, Achilles. Although she was driven to separate from him by jealousy, he continued to support her and left her an annuity by his will. For his son Paganini seems to have reserved the one tender spot in his nature. He explained his niggardliness — which led him to argue over a half-penny with his washerwoman; to present a gallery ticket for one of his concerts to his servant on condition that the latter should give him a day's service for nothing; and to complain because the police on duty at the theatres in which he played could not be charged admission — by his desire to preserve his son from the straits of poverty to which he himself had been subjected.

Professor Schottky has left a lively description of a visit which he paid to Paganini in the latter's lodgings in Prague. He found everything in disorder — a violin lay here, another there; a tabatière on the bed, another among his son's playthings. Music, money, a hat, letters, watches, books were in a general mix-up. Amid this chaos sat Paganini. "A black silk nightcap covered his blacker hair, a yellow tie was loose about his neck, a long, chocolate-colored jacket hung from his shoulders. On his knee he held Achillino, his four-year-old son, who was in very bad humor, because he had just been obliged to submit to having his hands washed."

Paganini as nurse and father! — perhaps the most human picture of this weird, uncanny being, and the most agreeable with which to take leave of him. Less of the devil, despite the black nightcap, the yellow tie, and the long, chocolate-colored coat. But is Schottky quite sure that he did not catch a glimpse of horns and a cloven foot?

OUR LIMITATIONS

D. A. CLIPPINGER

Why learning seems so difficult to most people, and why so few rise above mediocrity, constantly engages the inquiring mind. The story of the fall of man, whereby a hitherto perfect mind was dwarfed and became the inheritance of the race to the present day, fails to offer a satisfactory solution to the thinker.

Is the cause to be found outside of man? Is there a fundamental defect in his creation? If so, the condition is one for which he cannot be held responsible, and any attempt to rise would be futile, for the reason, that to have a mind more perfect than the one that created him must be an evident impossibility.

If the cause is within the consciousness of man, then what is it, and can it be removed?

If we analyze this condition, we will find it is due largely, at least, to the limited conception man has of his real nature and possibilities.

From birth we are hedged about with limitations which hamper our freedom of body and mind. We are walled in with custom, tradition, and superstition, and before we are many years old we begin strengthening this wall ourselves.

We limit our physical strength and our mental strength. We decide what we can learn and what we cannot learn; what we are able to do and what we are not able to do. One cannot learn mathematics, another cannot learn history, another languages, still another cannot learn to play the piano, and so on throughout the entire list of things to be learned.

Vocal students are no exception to this rule. Each one has his capacity outlined, and his expectations of course are within the boundaries he sets for himself.

If one will study his pupils, and see how many of them have bound themselves with a lot of senseless rules, he must inevitably conclude that they need other things more than they do voice culture.

One only wants to sing for herself and perhaps her friends, another places the limit at a choir position, another does not expect to study long, just enough to learn how to teach. Shades of Porpora and all the others! just enough to be able to teach. This is indeed the limit. One says, "I don't expect to make anything of my voice," and he never will so long as he feels that way about it.

One says, "It is impossible for me to learn how to place my upper voice." How she will learn to

place her upper voice when she is thoroughly convinced and is constantly reassuring herself she cannot, is a problem for the psychologist.

One misses a lesson every time it rains because she doesn't *dare* get her feet damp, although just why water should act differently in her shoes and in a bath tub is not quite clear.

One says, "I am sure I never can learn to play an instrument," and he is quite right so long as he feels that way about it.

Attempting to learn anything and at the same time believing he cannot, in the hope of being agreeably disappointed, indicates a negative state of mind from which very little positive good may be expected.

My belief that I cannot learn to sing has nothing whatever to do with the art of singing, but it does close the channel through which that form of beauty and truth might come to me.

The number of avenues of knowledge some people close in this way leads one to wonder sometimes if there are any still open. I have known people whose lives were a constant negation.

We limit our capacity to enjoy by expecting something is going to happen. We limit our capacity to do good by believing it will not be appreciated, which is putting a limit on others.

Look over your pupils and see how many have a sense of unlimited possibilities, that come with all the avenues open through which development may reach them. It will be found they are few. Probably not one, and yet the ideal pupil must be in this state of mind. What pessimists we are!

But are not reasonable limitations legitimate and proper? I should not like to admit it.

Why should we limit our development in any right direction? Why should we wish to do so?

The possibilities of man's development are infinite and progress is eternal. We do not all find ourselves in the same stage of development, nor do we develop with equal rapidity; but the possibilities are there, and the work must be done somewhere, somehow.

The question of limitation is a problem which is constantly confronting the voice teacher. He should not be blind to it. He who does most to destroy it in his pupils is not only rendering them the greatest possible service, but is making the actual work of teaching immeasurably easier for himself.

I do not believe in negative teaching. I have little confidence in the one who occupies the time telling the pupil what he is not doing and cannot do, when he should be telling him what is right and how to do it, thereby strengthening the pupil's confidence in himself and enlarging his conception of possibilities.

Many things are difficult because we are taught to believe them so. This kind of teaching does not affect the subject, but it does affect our mental possibilities by putting us in the wrong mental attitude toward it. Self-respect, confidence, and an enlarged understanding of our possibilities absolutely necessary to success.

For this reason it never was quite clear to me how man is to reach a state of perfection while constantly calling himself a worm of the dust.

Right knowledge is in the highest sense natural and should not be difficult to attain. We will find this to be true to the extent we understand our mental possibilities are unlimited.

A normal optimism should be the possession of every student, and it is the business of the teacher to assist in forming it.

The wide-awake teacher finds many things which, while no part of the physical process of singing, do stand as a bar to free expression and consequent growth, hence must be destroyed.

HOME CONCERTS

LOUISE KARR

There is such a desire for technical perfection abroad amongst our music students, that I sometimes think its tendency is to check the spontaneity of our musical life. This is by no means saying that we should not work for and admire technical perfection as far as in us lies. We should appreciate and learn as much about it as possible. But to strive constantly for more than we have time, talent, or money to obtain is to open our minds to discouragement and depression, where we should take satisfaction and pleasure. Music is given us to enjoy and for inspiration, and the extreme personal element in us which says: "If I cannot have perfection in myself and in others, I will not have anything to do with music," is a wrong thing to encourage, and in the end kills the spirit of music itself, which is what we really love and need after all.

This statement about the love of technical perfection may bring a smile to the earnest teacher's face, — that teacher who struggles week by week to arouse the conscientiousness of flighty pupils and of inattentive and dull pupils; but I will hold to my ground in spite of the satire lurking behind the smile. I have known many music lovers, young and older, and I am sure that by the time they get where they appreciate music at all and have the power to judge between well and ill done, they become self-deprecatory and unduly sensitive about their own efforts to do anything for an audience, however small and informal. If, for any reason, they are not able to keep up their systematic study, they are apt to take a back seat entirely, as far as contributing to the general pleasure in their own circle is concerned.

If we look carefully into the reason for this self-effacement, we shall find that if one part consists of genuine modesty, the remaining two are morbid self-esteem. If we could all take our music more naturally, and avoid shrinking uncomfortably into the background no less than blazoning ourselves unduly in the fore-front, we should get much more pleasure out of it and find it ministering more and more to our social happiness as well as to our individual improvement.

There is nothing more delightful than a truly musical circle, where each member contributes according to his own ability, and where each appreciates generously the efforts of the others, without envy on the one hand, or harsh criticism on the other. At the risk of repetition, let me say once more, the personal element should be eliminated. We may take a lesson from the Germans in this respect of all contributing according to their ability to an evening's pleasure. The German must have music at whatever cost, just as he must have coffee and beer. If it is of the best, he takes it and is thankful; if it is poor, he takes it, for he must have it. You hear more bad music in Germany than you do in any other country, just as you hear more good music; and the bad music has its place in making the most musical nation in the world as truly as the good, for it is the honest expression of the inward nature which must find an outlet in this way, and indicates the vitality at the root of the whole musical life.

I am by no means defending bad music or careless work as such. No one would urge on to honest study or laborious effort in getting technique more than myself; but what I do recommend is the simple, natural use of what we have been able to acquire, without regret or apology for what we have not.

Any one with an attractive drawing-room and a good piano should find it a pleasant thing and very well worth while to get up a series of home concerts during the winter. Even if people have unlimited opportunities of hearing good music in public, the making it for themselves and the bringing together of their friends who have some ac-

complishment is a delightful thing, and if people are somewhat shut out from city advantages, such a series may be very stimulating as well as attractive.

There are a number of things that go to make up the success of a private musicale, which at first sight do not seem to have so very much to do with the music. In the first place, there should be a certain air of informality about such an entertainment, however carefully it may have been prepared. In my opinion, at any rate, there should be no more people invited than the comfortable chairs, window seats, and sofas belonging to the household can accommodate. This is not saying that there may not be a few more seats in the drawing-room than usual, but they should be grouped in an easy way, so that people will feel at liberty to get up and move about between the numbers. In my own mind, many and many a private function is associated with an uncertain poise upon a creaking camp chair and the close proximity of numbers of other uncomfortable people weighing down a similar frail structure, which creaks at every breath. The room is too crowded for the possibility of good air, and though all are too polite to confess their misery, there is no real happiness in any heart. This may seem a trifling matter, but if people are seated comfortably, in a well-aired room, with an occasional small table perhaps to rest their elbow on, they are in a good mood and predisposed to enjoy whatever program there is to offer.

However much the air of informality is to be preserved, the hostess should always be perfectly sure of what she wishes in her own mind. Whenever it is possible to have a printed program, it is always a compliment to those participating to do so. It is not at all necessary, though, and I myself like very much to be a little surprised now and then. The hostess should have the program written out in this latter case, and keep a quiet control over the length of waits between the pieces. The program should not be quite as long with amateurs for performers, and the waits between numbers should be rather generous. A congenial group always have plenty to talk about, and it is proverbial that even the most silent tongues are loosed whenever music begins, so that if proper attention is to be given the latter, people must be allowed to talk out a little between times.

This matter of conversation during the performance is a very sore spot with all amateurs. It is particularly hard with the piano, and almost ruins the self-possession of a really fine player. A genuinely clever hostess can ensure those who do her the favor to play or sing, a proper amount of attention if she will make it a study. She can decidedly, but pleasantly, hush people up before the playing begins, and take her stand in a prominent place and give her whole attention to the music. If people will talk, in spite of this, she can go to the length of asking them not to, without risking her popularity, and she really ought to do this. She should be ready also with a prompt and cordial word of real appreciation instantly the performance is over. There are some houses where musicians love to play, and others where they go with the greatest reluctance, and the reason generally lies in the appreciativeness or unappreciativeness of the hostess herself. What a popular hostess really wishes, her guests are always willing to accord, and she can assure players of attention by making up her own mind to it.

The making of a program is a great art. Often, when amateurs play, it has to be made up from whatever material they have ready. Still, the hostess should hear the pieces beforehand herself, whenever possible, and make such an arrangement as to show off the good points of all. In a general way, the more serious and intellectual numbers should come first. It is very customary to begin with the piano. A piano duet makes a good beginning, or a violin, with piano accompaniment. Two very serious or dreamy pieces should not come together. It is always better to have two selections by the same person quite near together, as the nervousness natural to taking the floor wears off after the first, and the singer or player can do himself or herself more justice and give more pleasure in the second. Always remember that if you ask people to play or sing for you, to give them a fair show. Try to have the lights and the height of the piano stool right; let them play a number of times, and if they have any little peculiarities, find it out and endeavor to suit them. To illustrate my meaning about making up a program, I have arranged two, consisting of pieces of not more than average difficulty, some of them old music, and some new this season. All these pieces have been very much liked in studio and drawing-room musicales recently.

PROGRAM NO. 1

Piano Solos. Prelude in C, No. 1. In the Well-tempered Clavichord ..... *Bach*
All Right. Little Tone Poem ..... *Schytte*
Songs. Thou 'rt like unto a Flower ..... *Rubinstein*
Haide Roeslein ..... *Schubert*
Violin. Air Melodieux ..... *Bohm*
Songs. (*a*) The Woodpecker. (For Pure Contralto). ..... *Nevin*
(*b*) Slumber Boat ..... *Jessie Gaynor*
(*c*) There stands a Little Man. From Hansel and Gretel. (This Song is founded on an Old German Folk Song) ..... *Humperdinck*
Piano. Adagio and Rondo. Sonata Pathetique, Op. 13 ..... *Beethoven*
Violin. Air on the "G" String ..... *Bach*
Kniawiak. Polish Dance ..... *Wienawski*

PROGRAM NO. 2

Piano Sonata, Op. 49, No. 1 ..... *Beethoven*
Violin. Loure ..... *Bach*
Romanze ..... *Svendson*
Songs. My Luve is like a Red, Red Rose. Old Scotch, with Setting ..... *Frank Hastings*
Lethe ..... *Boote*
My Jean ..... *Burleigh*

MUSIC IN THE HOME
(Painting by J. Jordaens)

Piano. Shepherds All and Maidens Fair. From the Sketch Book ..... *Nevin*
Dodilenette. Lullaby ..... *Ch. Gounod*
Violin. Romance ..... *Beethoven*
Songs. I'm wearin' awa, Jean ..... *Arthur Foote*
Drink to Me only with Thine Eyes .. *Old English*
Piano. Melodie ..... *Paderewski*
Humoreske ..... *Dvorak*
(The latter new this season and very taking.)

A GALLANT BOY

A Bostonian was talking about the late Henry Harland.

"Harland was a graceful, gallant soul," he said. "Even in his boyhood he turned the prettiest compliments.

"In his boyhood he studied Latin under a charming young lady.

"This young lady, calling him up in class one morning, said, —

"'Henry, name some of the chief beauties of education.'

"The boy, smiling into his teacher's pretty eyes, answered, —

"'Schoolmistresses.'"

BEETHOVEN
(In his twenty-eighth year)

WHAT AN AMATEUR SHOULD KNOW

ARTHUR ELSON

I. — Piano

There have been many attempts to select the world's hundred best books, but we seldom hear of any effort to do the same in music. Yet every teacher knows that the student must become acquainted with certain epoch-making works, and this article may serve to outline a good selection for the amateur who is not under the teacher's guidance.

In the old days, the piano developed gradually, from the spinet, or virginal, and later the harpsichord. While the music for these old instruments is now little more than a curiosity, it is not without its interest; and such a piece as *Sellinger's Round*, a favorite of Queen Elizabeth, is an excellent illustration of the graceful, tinkling effects of long ago.

At a later period we find much that is of value in the old clavichord music. Martini's gavotte, *Les Moutons*, is a familiar example of this time. Galuppi, of Browning fame, is another of the early Italians, while Hasse, Mattheson, and Graun may represent Germany. Their Gigues, Courantes, and other dances are attractive even now. In France, Couperin and Rameau are the best exponents of the early style. Couperin's little tone pictures for piano include *The Harvesters*, *The Reveille*, *The Butterflies*, and other favorite themes, while Rameau's *La Poule* gives a remarkable imitation of a clucking hen.

In Italy, the name of Scarlatti deserves especial mention. Alessandro, the elder, is best known by his fertility and originality in opera, and except for a single fugue, his piano music is still unpublished. But Domenico, his son, was first of all a piano composer, and is regarded by many as the founder of the piano sonata. He has left us an immense number of studies and other works for the harpsichord, or old piano. Their clearness of utterance and modern qualities of style and brilliancy make them favorite selections for concert programs, even to-day. With the early Italian violinists, the sonata was merely a contrast between slow and quick movements, and Scarlatti's works are scarcely more; in fact, some of them are almost fugal in effect. Very often the sonata consisted merely of two movements, slow and quick, and some of the works of the great Dr. Arne, in England, show this structure. Handel did nothing for this form, limiting himself to a few harpsichord suites, or sets of contrasted dances.

The contrapuntal schools, which flourished from the fourteenth century and even earlier, found their noblest culmination in the works of Johann Sebastian Bach, who united an unrivaled skill for the interweaving of parts with a modern feeling and expressive power. There is a saying that formerly music was horizontal, while now it is vertical; and the student who notes how smoothly the different voices flow on, side by side, in a Bach work, will understand what it means, and contrast this music with our modern up-and-down sweeps of chords.

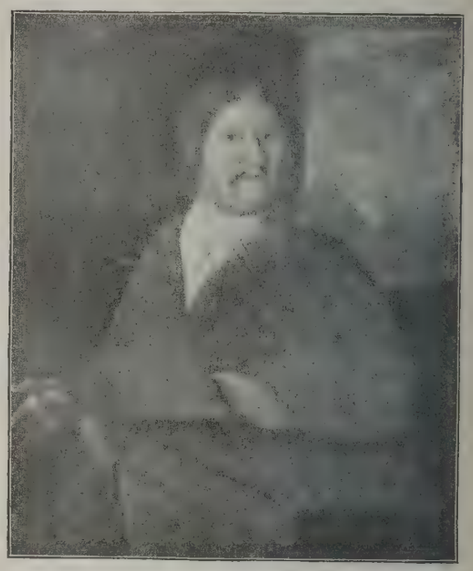
The greatest of all piano classics is surely Bach's *Well-tempered Clavichord*. This collection of forty-eight preludes and fugues did pioneer service to music in establishing the equality of every key, and thus paving the way for modern modulation; but the work still remains a monument of intrinsic musical worth. If the student have any real love for his art, he will soon find himself lost in admiration at the delicate musical tracery in these

HIERONYMUS FRESCOBALDUS

most beautiful of fugues. Other works of Bach, too, will amply repay study; but if the student must make a choice, he will find that the two and three part inventions form an excellent preparation for the "Clavichord."

Bach wrote sonatas of some merit, but one of his sons did far more than he for that form of composition. The sonatas of Leopold Mozart and Johann Christian Bach are full of spirit and grace, but Carl Philip Emanuel Bach is the name to be remembered in this connection. The deep feeling and strong expression in his works makes him really the forerunner of Haydn. His sonatas are in three-movement form, — an *allegro* in short sonata shape, an *andante* in song form, and a *presto* in rondo form. His chief work is his *Sonatas for Connoisseurs and Amateurs*, and he also wrote some effective piano variations. He was the first to express individuality in the new form.

With Haydn and Mozart we find the sonata form more fully outlined, and a definite thematic



JOHANN AMBROSIUS BACH
(Father of Johann Sebastian)

structure always present in the opening movement. The most noticeable quality of Haydn's works is their perennial brightness, united with a grace and humor that are always pleasing in effect. The set of ten celebrated sonatas by him must certainly have an honored place in our amateur's collection. Mozart's sonatas, too, should receive the same attention. To Haydn's theme, fantasia, and repetition of theme, Mozart added the more cantabile second theme, coming after the first subject; and a small closing theme, following this, brought the sonata to its complete shape.

Beethoven took up the form where these two left off. In his earlier sonatas we see him holding strictly to the old structure, though his mighty power of expression was even then far above that of his predecessors. The compositions of Beethoven are often divided into three periods, but in his sonatas we find the transition gradual. His rich fancy, deep emotion, and lofty intellectual consciousness soon began to show themselves, and by the time we reach such sonatas as the *Waldstein* or the *Appassionata*, we find more of freedom and less of form. Still later, we find him discarding form altogether, and his last five sonatas, beginning with Op. 101, are great tonal rhapsodies. Schumann once spoke of the sonatas of Brahms as "Veiled symphonies," and the term may be well applied to these earlier works. Beethoven's Variations and Bagatelles might also find a place in our collection, but they are less representative than the sonatas.

We can follow the technical side of modern piano playing, which began to be developed at this time, in the studies of Moscheles. Cramer's studies are

also worthy of a place, while Clementi's *Gradus ad Pa-nassum* is a classic in this field.

We now come to a more modern period, where form is of less account, and freedom of expression is everything. The first great representative of this school was Chopin, who has been well

IGNAZ MOSCHELES

called "the poet of the piano." Full of the strong feeling of his race, he gave the world compositions that have become the standard of passionate utterance on the piano. All of his works have their measure of value, but perhaps the student would do well to begin with the beautiful nocturnes, and the graceful mazurkas and waltzes. The noble polonaises, too, are the very highest form of national feeling in music. Then if the pianist would go further, he may take delicious etudes and romantic ballades.

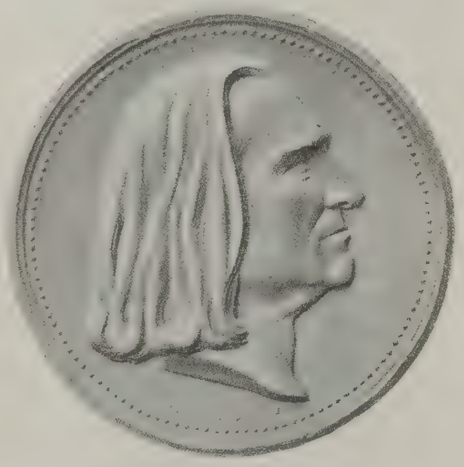
FRANZ SCHUBERT

Schumann is another composer who succeeded especially well in this field. It is said that he "thought in piano," that is to say, ideas presented themselves to him in piano form first, just as they appeared vocally to Schubert or orchestrally to Beethoven. In speaking of Schubert, too, we must not forget the beauty of his Impromptus and Moments Musicales, works of rare melodic grace.

CARL MARIA VON WEBER

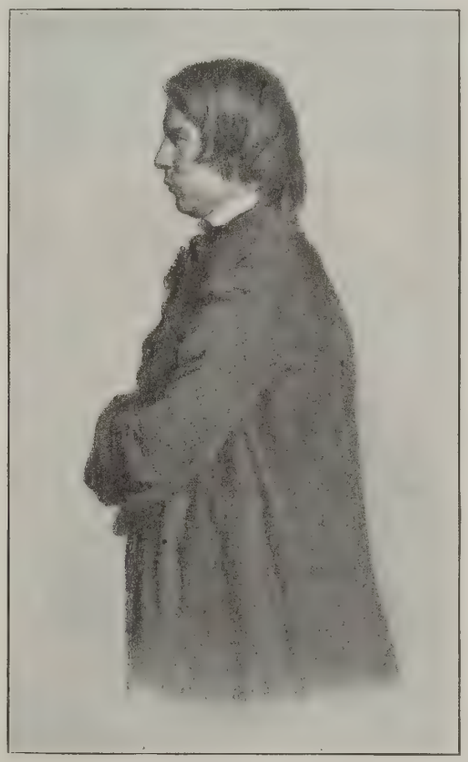
If our amateur is very young, he might begin his Schumann with the Children's Album; but for well-equipped players, the composer presents a large array of master works. It is hard to reject any of them, but an enforced choice would certainly include the *Carnaval*, with its entrancing tone pictures; the exquisitely woven *Arabesque;* the *Fantasiestücke*, with their varied moods of deep emotion; and the beautiful *Noveletten*. If our amateur is sufficiently well equipped, he must not omit the *Etudes Symphoniques*, greatest of all piano variations.

Mendelssohn, too, has left much worthy music for the piano. His *Songs without Words* are probably the most widely known of his works, for their simple style makes them easily appreciated. They contain much of real value, however, and their shapeliness is well worth our amateurs' attention. In more ambitious vein, the *Cappriccio* will serve as a good example of Mendelssohn's style, while the *Variations Serieuses* form a worthy pendant to Schumann's great work.



A LISZT MEDAL
(Edouard Louis Geerts)

With the advent of Liszt came a still further development of piano technique, not merely for display, but as a means of broadening the effects possible on the instrument. Influenced by the poetry of Chopin, the intricacy of Berlioz, and the expressive, "singing-tone" style of Thalberg, Liszt undertook the process that he himself called the "Orchestration of the Pianoforte." His thorough technical mastery of the instrument was of excellent service in this purpose. In his transcriptions, as well as his original works, we find a large complexity of effect, as if he were trying to imitate the mingled sounds and contrasted themes of an actual orchestra. This style is eminently suited to piano transcriptions of operas, and in this field we find Liszt going far beyond Thalberg. His song transcriptions, too, weave an intricate web of sound about the melody. These are still in demand for concert display, and the *Wanderer*, the *Erl-King*, and *Hark, Hark, the Lark* are familiar examples. Among Liszt's own works, similar effects of contrast and antiphony are found, as, for instance, in the exquisite *Sermon of St. Francis to the Birds*. Liszt is only now winning the recognition he deserves as a composer. His great series of symphonic poems, in the free modern vein, and his two noble concertos for piano, place him at once in the front rank of orchestral composers, while his piano works are now gaining the recognition they deserve. A companion to the *Sermon of St. Francis* is another notable piece, the powerful *St. Francis de Paul*. Among Liszt's earlier works, the *Années de Pélerinage* and the *Harmonies Poetiques et Religieuses* are excellent examples of his style, while the three Spanish



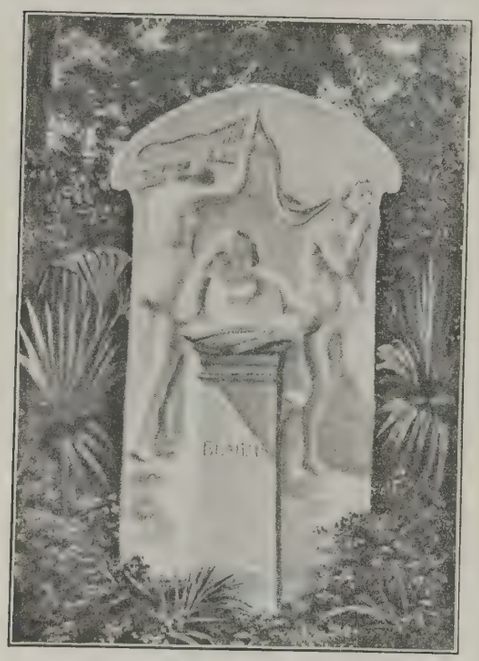
ROBERT SCHUMANN

pieces, Op. 47, may be taken, along with the two *Legendes* already mentioned, to represent the later works.

One of the most potent factors in modern music has been the development of a spirit of nationalism. In many countries, composers have gone directly to the songs of the people for inspiration, and have built their great works upon this firm foundation. Most notable among these composers is the Norwegian Grieg, who has enriched the sweet, plaintive music of his native land by fusing it with the rare melodic gifts of his own genius. His *Humoreskes*, Op. 7 and 19, his piano sonata, his *Romanzen and Balladen*, Op. 9, also Op. 15, and above all his *Norwegian Volkslieder for Piano*, show the distinctive national flavor at its best.

The *Norwegian Dances*, Op. 35, afford another characteristic example of his style.

In Germany, there seems to be comparatively little new piano music of importance. The *Moderne Richtung*, under Strauss, Hausegger, Mahler, and others, leads chiefly to orchestral



BRAHMS MEMORIAL, VIENNA
(Ilse Courat)

music, occasionally venturing into the domain of chamber music and opera. Yet even though Strauss has written little for piano, his early *Stimmungsbilder* form a welcome addition to the musician's collection. Of the five pieces in the set, the *Träumerei* shows the most ethereal delicacy, while *Auf Stillem Waldespfad* excels in beauty.

Saint-Saëns is still in the first rank in France, and his works display all the remarkable mastery of style that has made him renowned. The older school includes also such masters of miniature effects as Godard and Chaminade. Here, too, the new school is busy experimenting with the orchestra, but Debussy has found time to write piano pieces that have caused much discussion. Some critics rate them as uninspired strivings after novelty of effect, but others are loud in their praise. Thus the piano nocturnes, entitled *Nuages* and *Fêtes*, are described by De Breville as possessing the elusive fragrance of a perfume that pervades the air but defies analysis. More recent piano works by Debussy are the *Proses Lyriques* and *Les Estampes*, two sets of tone pictures.

In Russian music, the charm of Rubinstein and the power of Tschaikowsky are now known to the musical world. But a host of new composers have arisen, who have employed their national folk music in varying styles. Of the five who developed the new school, Balakireff has left the most notable piano work, in his oriental Fantasie, *Islamey*. Among the younger men, Glazounoff, who is now the leader in the orchestral field, has produced some piano pieces of much breadth, among them being two recent sonatas. Arensky shows the influence of Schumann in his works. Rachmaninoff's expressive power is now made familiar by concert programs. Others who deserve mention are Scriabine, a follower of Liszt and Brahms; Liapounoff, whose etudes also remind the hearer of Liszt; Rebikoff, who is prone to experiment; and the wildly passionate Stcherbatcheff.

Other nations, too, have their share of modern piano writers. Among these are Fibich, Novak, Suk, and Nedbal in Bohemia; Bossi and Martucci in Italy; Granados, Morera, and others in Spain; and Elgar, Bantock, and the new school in England. Norway furnishes Chr. Sinding, gifted and poetic, while Sweden adds the names of Stenhammar, Sjögren, and Peterson-Berger. Finland is represented by Kajanus, Wegelius, Mielck, and others, while Dirk Schaefer is the leader of the new movement in Holland. All these are important names; but time alone can tell whether they will take permanent rank with the great piano composers of history. Meanwhile, our amateur has enough music to choose from for the present.

HENRI HERTZ

INHERENT CHARACTERISTICS

ARTHUR W. SEDGWICK

That Music Study is infallible in bringing into prominence the many idiosyncrasies and characteristics of children, is an interesting fact. It not only shows the strong points of character, but also the many weaknesses; and it is in the power of the music teacher to eradicate many childish faults.

It is of these faults it is best to speak, for owing to them many lessons are a source of dread and discouragement. To the progressive teacher, however, minor troubles and irritations prove a means for character study and development rather than a destroyer of equanimity and nerve force.

By very little observation of the many types of children it will be found that their numerous habits may be classed under different heads; such as heedlessness, susceptibility, lack of control, laziness, perceptiveness, etc.; thus it becomes an easy matter to trace these influences *past* the music lesson into the general life.

The quickest way to reach conclusions is to enumerate various cases that come to us in the lessons, and make deductions for each case presented.

The first type is of a young lady of eighteen or twenty who wished to study piano; would like to learn some pretty pieces to play for her friends; so the lessons began. Naturally it was advisable for her to study exercises, that the technique could be increased and the "pretty pieces" thus mastered; but after two or three lessons the etudes were neglected, the pieces smatteringly played, and at last music discontinued for stenography.

By an investigation of her short-hand study it was shown that the word-signs were not thoroughly learned, so no practical use could be made of the later accomplishment.

Her various undertakings were of the same order, and would always fall short of mastery; and no music teacher could be called incompetent for failing to make a musician of this young woman. This is one form of "lack of purpose" which is continually coming to the foreground in so many lives.

Another case is illustrated in a little girl who came for her lesson one winter's morning at six thirty. This child's life represents alertness and activity in everything undertaken.

In the music lesson there is a quick intuition in grasping ideas, elateness in things well done, and corresponding discouragement with slight mistakes. Such natures should be carefully handled, for in them is either the making of an artistic temperament or a complete dislike for the study of music.

The phlegmatic disposition is readily brought to the surface in the lesson. The reading of notes is done very slowly, and it is not because of not knowing them (as a test in sight reading will show), but it is owing to a slow transmission of thought.

Such temperaments make good mathematicians, where careful thought and reasoning are necessary; also in many cases will become excellent musicians, for they will make conscientious students. Pupils like the foregoing will be found to take plenty of time in all movement, and very often show absent-mindedness to a large degree.

Some children are very susceptible and are very quick to receive impressions. In illustrating a piece where an imaginative mind is needed to bring corresponding results in rendition, this child can fully appreciate the fairy scene or what-not and reproduce the idea in a manner which will delight her teacher. As a usual thing this temperament is chiefly in girls, for it is only in extreme cases that boys show the romantic disposition in childhood.

Children with these characteristics are fond of reading stories and often will attempt writing poetry or compose little pieces. They are apt to be dreamers and are always living in imagination.

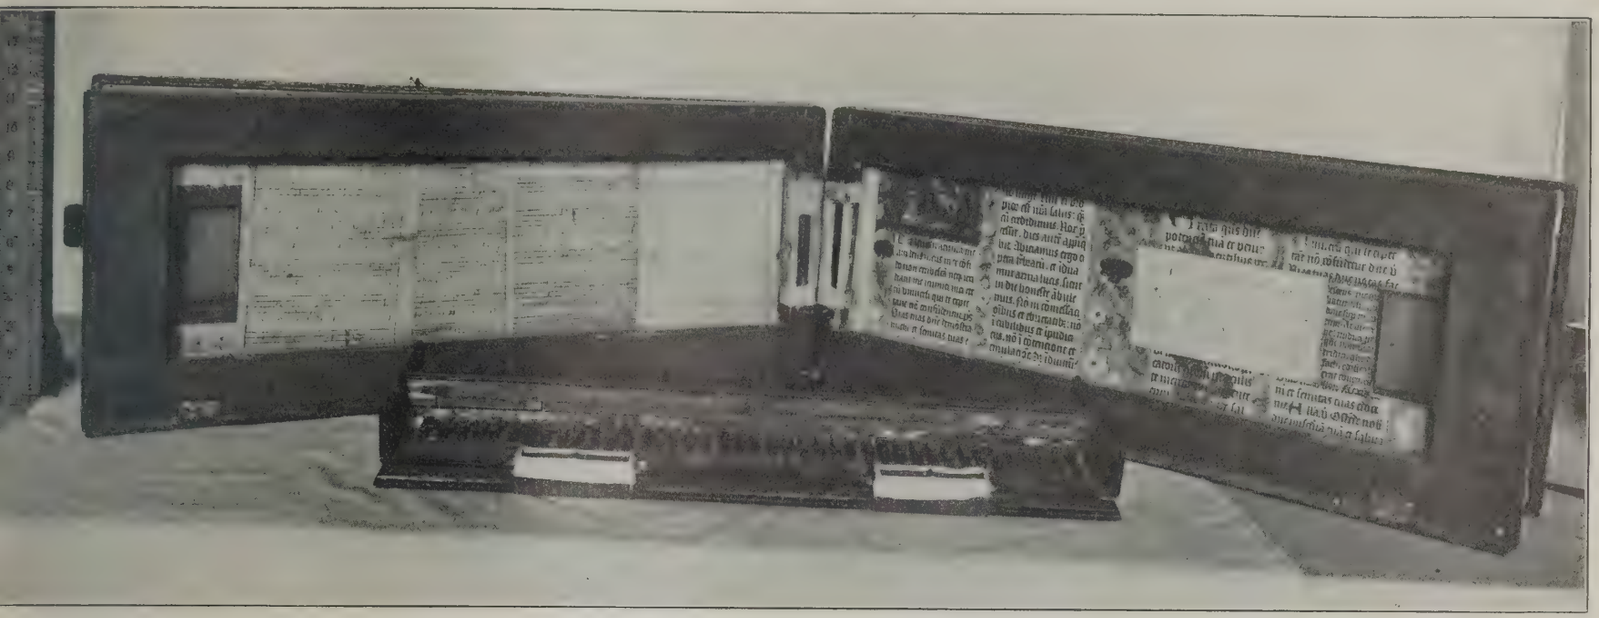
This temperament is very desirable in a music student and very good results may be obtained in extended culture.

Heedlessness is the nature that proves the most discouraging of any form of characteristic with which a teacher has to contend. Each lesson is

(*Continued on page* 243)

Musical Instruments in the Metropolitan Museum, New York

FRANK H. MARLING



FOLDING REGAL OF THE SIXTEENTH CENTURY
(Referred to in text as No. 1)

Any article on musical instruments, especially in such a comprehensive collection as the Metropolitan Museum, would be very incomplete without devoting considerable space to the organs. The pipe organ has been universally and rightly called the " King of Instruments," and it has been well said that it might justly be called an assemblage of instruments, since each individual stop or set of pipes represents to a large degree such orchestral instruments as the violin, viola, violoncello, double bass, clarinet, oboe, trumpet, trombone, flutes of various pitches, in addition to the diapason tones which are the foundation of the organ and to be found only in this instrument.

The Water Organ

The earliest organ known to the world is the hydraulic or water organ, invented in the second century B.C. at Alexandria, a Greek invention, and constructed according to the Greek ideas of music then current. Water came in to compress the air for the pipes, as bellows were used subsequently for this purpose. Mr. F. W. Galpin, an English clergyman and a most enthusiastic and well-informed student and collector of musical instruments, has, after a careful study of all known presentations of these ancient hydraulic organs, been successful in making a complete working model of this instrument by following in every detail the instructions given by Hero of Alexandria and Vitruvius. Want of space forbids description of this, but is described in full in Mr. Abdy Williams' admirable little volume, *The Story of the Organ*, which is recommended to all those who are desirous of making a detailed study of the instrument.

Medieval Organs

In the early medieval organs, no keyboard is visible, but instead the performer pulls a perforated slider, called in the old manuscripts a "linguor" or tongue, placed under each pipe or

CHAMBER ORGAN OF THE EIGHTEENTH CENTURY
(No. 7)

set of pipes and marked with the names of the notes represented. An interesting example of this class was built in the monastic church at Winchester, England, near the end of the tenth century, and in a Latin poem chronicling the event, it is written that "two brethren of concordant spirit sit together at the instrument and each controls his own alphabet," an allusion to the letter sliders.

At the beginning of the twelfth century keys seem to have come into use, small levers which, when depressed, push in the wooden sliders and when released were restored to their original position by means of a horn spring. The flat touches of levers had marked on them the letter of the note to which they corresponded, from which came the name "key" (*clavis*), because the letter gave the "clue" or "key" to the particular sound required. This practice of lettering the keys was continued for many years, being used even in the spinet and virginals of the sixteenth and seventeenth centuries until they were superseded by the keyboard. The Museum collection has a number of specimens of early organs, which are of fascinating interest to the music-lovers as showing its strange form in this period of its development. Among these is the

Folding Regal of the Sixteenth Century

This is shown in Illustration No. 1, and is a rare form of the sixteenth century organ, called the Folding Regal. It is supposed to have been invented by G. Voll, a Nuremberg organ builder, and was at first manufactured in a small case and carried in religious processions, particularly when the peasants prayed for blessings on their crops at harvest time. At this time it hung from the left shoulder by a strap, the bellows being operated by the left arm and the keys by the right hand. It was afterward made on a larger scale for use in chapels

and monasteries. The specimen shows an oblong case of painted wood in two parts, each containing a bellows filled to the back of the keyboard, by lifting which alternately, wind is supplied to a set of small metal pipes, fitted with beating reeds placed just behind the keys. The inside of the case is decorated with musical and illuminated manuscripts.

Bible Regal Organ

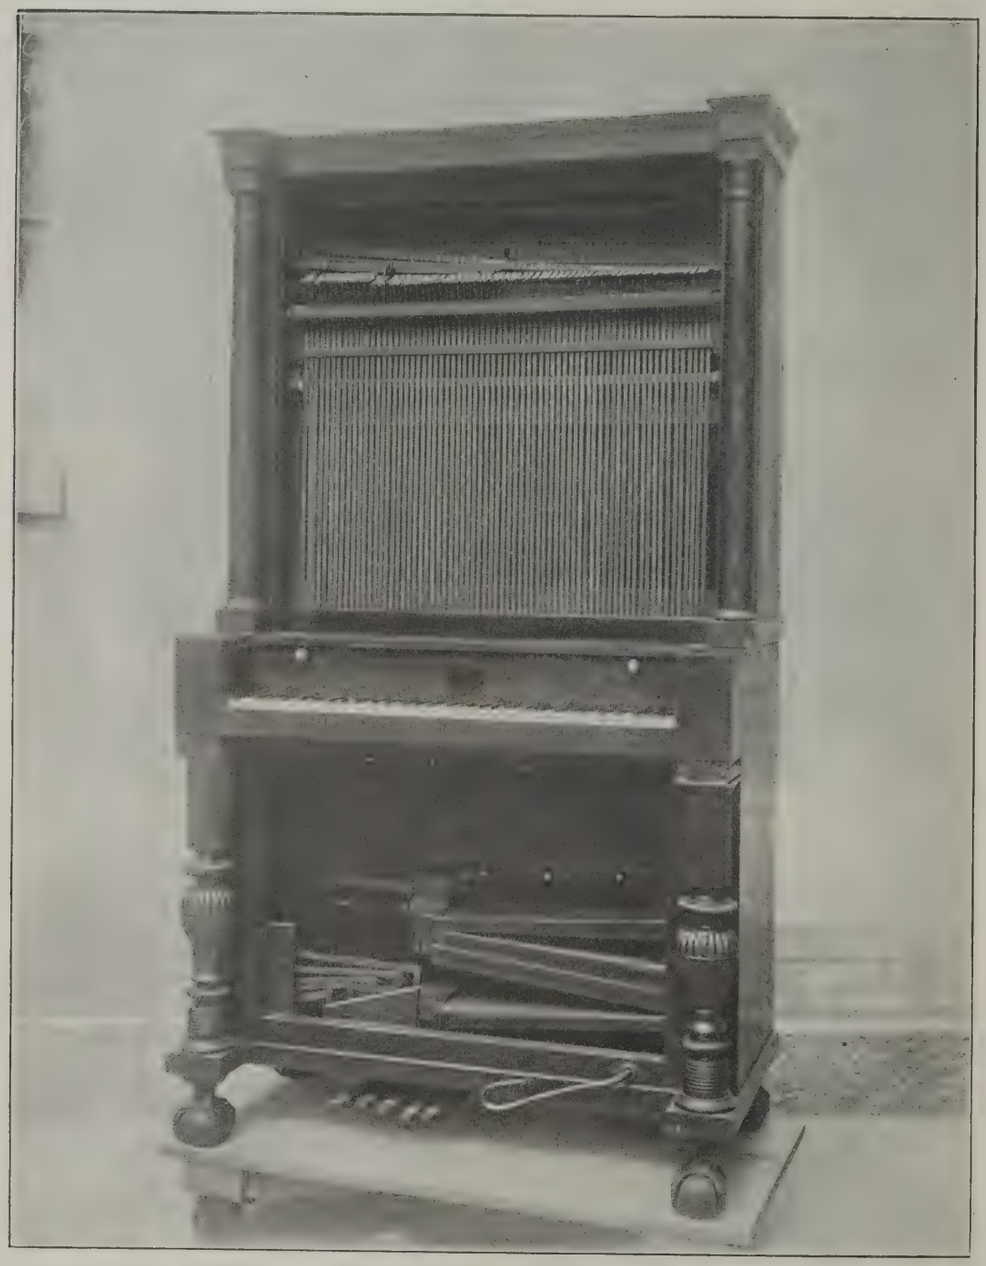
Of a similar class to the Folding Regal just described is the Bible Regal, shown in illustration No. 2. It consists of an oak case in book form. The keyboard folds in the middle, and with the pipes can be placed within the book-shaped case, hence the name, Book or Bible Organ.

Book Organ

Another Book Organ is shown in Illustration No. 3, which is in the form of four folio books, covered with stamped leather, each bearing the title *Traite des Pais Bas*. Inside the cover is an engraving of the supper at Emmaus. The first volume forms the cover, and opening this we find the keyboard in front and at the back a bellows operated by a lever with a carved handle outside the case. Below the case are the reeds. The keys are black naturals, with white sharps. It is of French make of the time of the seventeenth century.

Cabinet Organ, with Removable Spinet

The case of this instrument shown in Illustration No. 4 is of ebony veneered form, decorated with antique crimson velvet panels, on a four-legged stand. Inside the folding doors is a cabinet with fourteen drawers, and central cupboard with bronze door mounts, and a decorative bronze panel showing the entombment of Christ. Immediately over the keyboard is placed in a recess an octave spinet, which may be played in the cabinet, or withdrawn for separate use. Flowers are painted on the signboard. It was made by Laurentius Hauslais, in Germany, in 1598. A quaint inscription on the jack-rail of the spinet may be translated as follows: "By the favor of God, see what Laurence Hauslais of Nuremberg can do."



ORGAN PIANO
(No. 9)

Portative Organ

The name Portative Organ was applied to a little instrument which could be moved easily by one person from place to place, and in its smallest form could be played while carried about, as often seen in paintings representing Saint Cecilia. The specimen shown in Illustration No. 5 is a low wooden case, with blue exterior, with conventional ornaments of gilt, and gilt molding with a grotesque head in the centre below the keyboard. This was made in Italy, and is supposed to date from the seventeenth century. One set of wooden pipes is arranged in two rows at the back and outside the case.

Small Positive Organ

The Positive Organ was a larger organ than the Portative Organ, requiring greater effort to move, and only playable when placed in position. A seventeenth century example is shown in Illustration No. 6. This has forty-two pipes within the cabinet. The case is of dark wood with ordinary beading, with two coats of arms on the folding doors. It is blown by two small bellows on top of the instrument.

Chamber Organ

Another organ, which is more of the type as it is seen to-day, is shown in Illustration No. 7. This has a compass of four octaves and four notes and is in a tall mahogany case with ornamental pipe front. It has Sheraton tracery and is inlaid with black and white lines. The keyboard slides within the instrument when not in use. It is blown by a foot pedal placed below the keyboard, and on the left-hand side is one small composition pedal. It was made by an English builder, Thomas Chapman of London, in 1779.

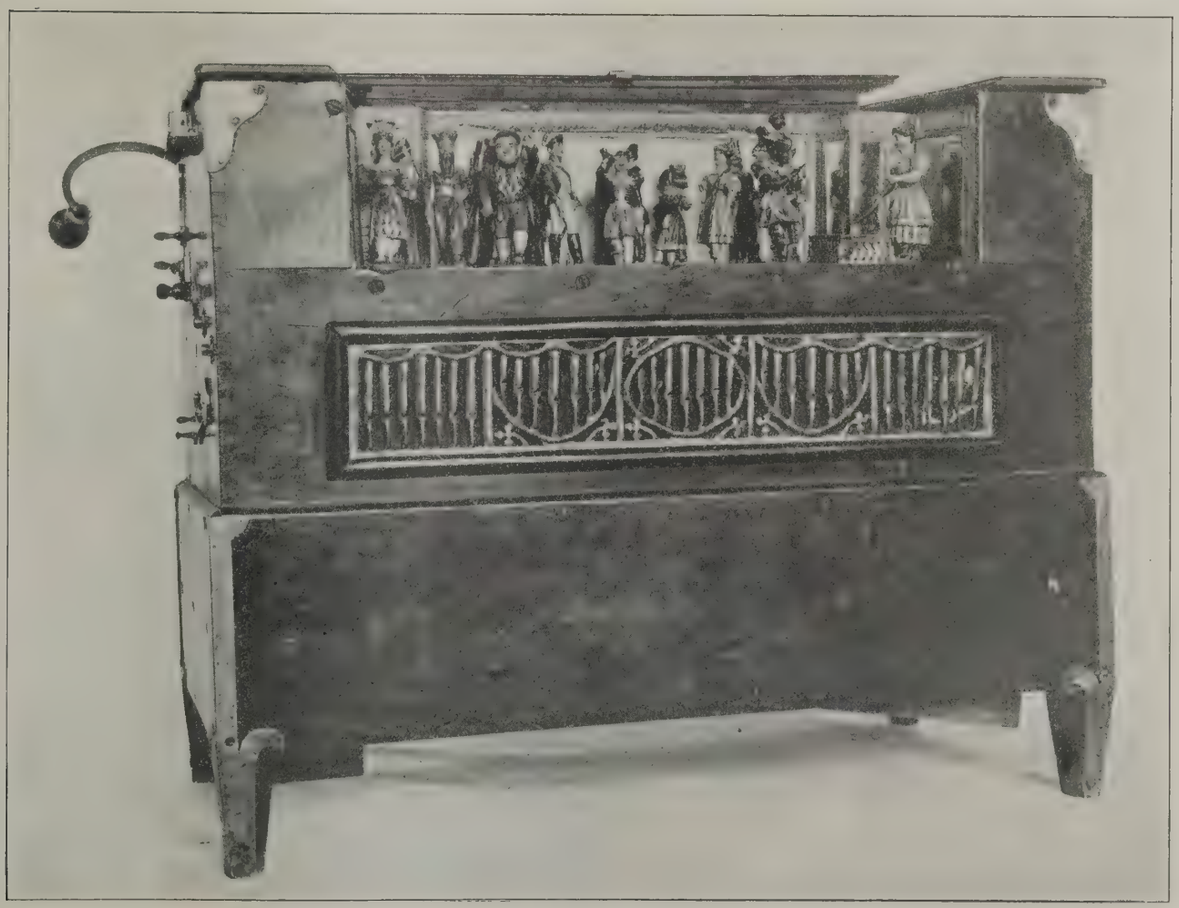
Small Cabinet Organ

A small Cabinet Organ is represented in Illustration No. 8. A walnut case in cabinet form, almost black from age, with carved pilasters, representing human figures at each side and ivory plaques in the corners representing saints at prayer. There are four small drawers in front with central cupboard which has carved folding doors, with brass mounts. The keys are in a recess beneath, which is lined with antique velvet and just above an oil painting, showing the raising of Dorcas. It is blown by a carved hand-lever projecting from the right-hand side of the cabinet. It is a beautiful German instrument of the early seventeenth century.

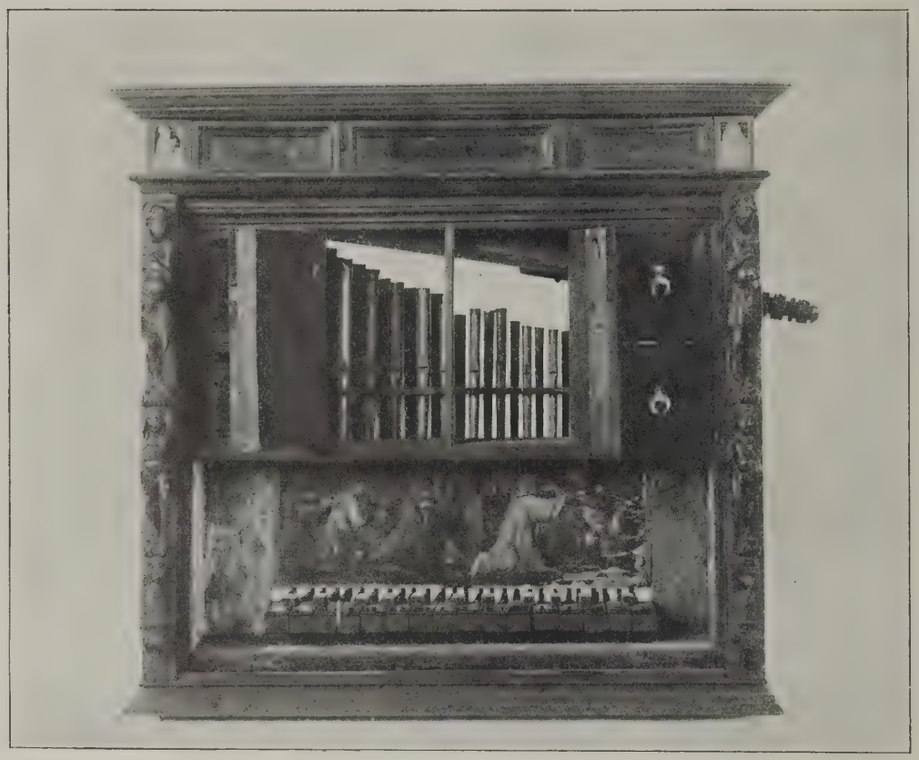
Organ Piano

A somewhat novel instrument is to be seen in Illustration No. 9, called an Organ Piano, and is a combination of organ and piano. The piano is in a tall upright mahogany case, with compass of five octaves and eight notes E to C. At the bottom

PORTATIVE ORGAN
(No. 5)



OLD BARREL ORGAN
(No. 10)



SMALL CABINET ORGAN, EARLY SEVENTEENTH CENTURY
(No. 8)

of the case there are five brass pedals, soft, loud, bassoon, and silent. The organ mechanism is the bottom of the case below the keyboard, and is made up of two small bellows with air reservoir, painted red and gold, and worked by a foot pedal on the right-hand side in front. The sound is produced by reeds of the free type. It was made in the United States in the early part of the last century.

Barrel Organ

A curiosity in organs is the barrel organ, or what we would call a street hand-organ, shown in Illustration No. 10. This small oblong wooden case contains two rows of small wooden pipes, one stopped, the other open. A large barrel is at the back, and in the front are nineteen revolving figures. As might be surmised, this picturesque creation of the organ-making art was made in Italy and is about a hundred years old.

Organ Action

The great size and bulk of the modern organ hardly permits of its being exhibited in a museum collection, but a most valuable exhibition of the action in an organ of the present time is shown in Illustration No. 11. One of the most practical features of the museum is a collection of working plans of this nature, by which any one interested can study in detail the inner workings of the most prominent instruments. In closing, mention must be made of the very carefully prepared catalogs to the collection, numbering several volumes, which represent an immense amount of patient and thorough work. The instruments are most carefully and intelligently classified, arranged and described in these catalogs, and the student without them would be sadly at a loss in gaining any consecutive and connected idea of the collection.

BOOK ORGAN
(No. 3)

COPIES SOLOMON'S CHOIR

Calvary Baptist Church, Fifty-seventh St., between Sixth and Seventh Aves., is soon to have the largest choir in the city. In the days of King Solomon twenty-four thousand singers, divided into twelve choirs, one for each month in the year, sang in the Temple. Professor Edward Morris Bowman, music director and organist at Calvary Church, will organize the new choir on the same lines. According to their merit, the singers will be divided into four grades. By this division, each section will get an off Sunday in each month.

While the chief aim of the choir is to lead the congregation in the service, it will also be made a great training school in choral music. Any one possessing only a knowledge of music sufficient to make a beginning will be received in the choir. From time to time promotion certificates from the lower to the higher grades will be given to such as pass the conductor's tests. Rehearsals will be held from 8 o'clock to 9.30 on Saturday nights.

THE RETORT COURTEOUS

A patronizing young woman was recently being shown through one of the Government schools for Indians, when she came upon a fine-looking Indian girl of perhaps sixteen years of age. The Indian girl was hemming napkins and the other girl watched for some moments in silence. Then she asked the Indian, "Are you civilized?"

The Sioux raised her head slowly from her work and glanced coldly at her interrogator. "No," she replied, as her eyes again sank to her napkins, "are you?"

THE VALUE OF BACH TO THE PIANO STUDENT

A. ROMMEL, A.C.M.

That the study of Bach is indispensable to the student of piano playing who expects to become proficient, is a principle upon which all musical pedagogues are united. His importance from the musical standpoint is so overwhelming that a secure foundation cannot be achieved without him. Music consists of several parts sounding together, even the solo, instrumental or vocal cannot very well dispense with an accompaniment. To learn to distinguish and follow parts in a composition is one of the necessary attainments of a musician and a good player. Without this ability there would be constant danger of turning things topsy-turvy; of making prominent what ought to be subdued, or playing everything in a passage with the same kind of tone when it should be otherwise; of not getting a rhythm right; of getting accents wrong, etc. Some years ago I listened to just such a performance of Beethoven's Sonata, Op. 27, No. 1, by a celebrated pianist. The last movement was frightfully butchered, not through want of digital dexterity — that was abundant for the purpose — but through an evident lack of perceiving the parts. Now, Bach is the greatest part writer the world has. To study real parts and learn to follow them cannot be done anywhere to better advantage and with more profit, than by studying Bach's works. In his two and three part inventions alone there is a veritable mine of wealth for musical development. Of course they must be studied, not simply skimmed over.

To study these compositions and learn to understand and "to hear" the relation the parts bear to each other, is to learn to comprehend music as it is to-day, perhaps as it may be for all time. It is often said that Beethoven is the finisher of the sonata form. Undoubtedly he brought the sonata up to a height and breadth and finish which has never been surpassed or even reached; yet as far as form is concerned, what we understand the word "sonata" to mean to-day, Bach in his Italian concertos has given us as perfect a specimen of a sonata as can be found anywhere. And because it is held pretty strictly contrapuntal throughout, it offers a splendid study of parts, which the more modern compositions do not always offer, because in them the real parts are often obscured by accompaniments so as to escape the notice of the layman. While Bach is of inestimable value to the music student in this vital respect, and attention has been called to it so often that it has finally been accepted as a musical axiom, there is one phase in the study of his compositions which is of peculiar value to the piano student and which to my knowledge has never been pointed out by any one. And this is the value Bach's works have for acquiring a correct method of fingering in piano playing. Fingering has its laws as well as everything else, and every piano teacher knows how difficult it is to get the pupils to study these laws and learn to apply them. In Bach they are forced to apply them *nolens volens*, or the thing never can be played. Let a finger go wrong in a passage of a Bach composition and a breakdown is the inevitable consequence. In a certain sense it may be said that music consists of sequences or repetitions. In our modern music these sequences are generally variations. A student who will not study the laws which govern fingering in piano playing will get a correct habit of fingering if he learns to play even only a few of Bach's piano compositions, because they absolutely cannot be played unless the fingering is exactly right. Hence one might say with perfect correctness, that a correct method of fingering can be obtained unconsciously by a careful study of Bach's piano or organ works.

One might object and say these sequences come everywhere else. Czerny's studies are nothing but sequences and the fingering can be studied there just as well. Perhaps, if the student is studious, but in a Czerny sequence a finger may be misplaced and the passage may still come out; in a Bach sequence a misplaced finger means absolute collapse. For this reason alone the serious study of Bach is an absolute necessity for the piano student who expects to achieve anything meritorious. — *Exch.*

THINGS HEARD

MARK HAMBOURG

ISRAFEL

Heard Marks are sweet, but those unheard are sweeter. Which is to say that sometimes Mark Hambourg promises rather more than he performs, and thereby gives a curious fascination to his art. He shows coy gleams of tropical sunshine, indicates rainbows, but does not always play the thing exactly as he was going to play it. Therefore those who admire suggestion and evocation more than realism — Maeterlinck more than Swinburne, leaves more than flowers — will delight in his piano playing, of which the inside is quite different from the outside.

Outwardly Hambourg is a player of fiery force and strenuous vigor; when applauding him, one wants to shout *banzai* rather than *encore*. Indeed he treats the piano as if it were an instrument of war rather than of music; he makes one dream of possible ironclad pianos with asbestos hammers and bullet-proof resonators. He takes the public by storm; ordinary concert goers cannot really like his sinewy, savage art, whose athletic beauty is not for their senses. Yet they go to hear him as little boys flock in the wake of a drum and fife band.

Throughout his performance one is under the illusion that one listens to an orchestra. Yet the most strenuous pianoforte is no more an orchestra than the most magnificent bullfrog is a bull. His finger articulation is so good that the keys of his instrument are as sadly loose as the fetlock joints of an old polo pony; his technique is as crisp as shortbread, and there is no pianistic feat he cannot accomplish with ease. This "outside" playing is so remarkably brilliant that, at times, it has a tendency to obscure the "inside," whose beautiful effects are oftener suggested than realized, as I have said. I think he is not enough enamoured of beauty; he has a frenzied passion for technics, which are undeniably most fascinating things. And he has probably more force and will power than an artist, and especially an interpretative artist, ought to have. He takes inspiration by the scruff of the neck, instead of waiting upon its caprice; so it will not altogether do his bidding, any more than a cat will do mine. For inspiration is a cat, and a cattish one at that; you cannot treat it like a pleasant dog; you must wait for its advances. To force inspiration he plays a great many notes in italics. Well, so does Felix Mottl, because he can't help it: the most beautiful notes sing themselves thus. Moreover, our pianist has the quality attending this defect of playing in italics: he can discover, articulate, and combine three melodies in a section that seems to hold but one and a half.

Oddly enough, Mark Hambourg is very successful in his interpretations of the dainty morning music of the toy composers Scarlatti and Rameau; realizing that it should be as delicate as porcelain and as crisp as hoarfrost, he makes it live with a sprightly artificial simplicity. And though he plays almost exclusively by daylight, he is good at nocturnes, since, like the jaguar and the rhinoceros, he has peaceful after-dinner moments.

* * * * * *

Lately I heard the unheard Mark. He played a Rubinstein concerto which suited him admirably. Himself a Russian, Russian music woos him as softly as a slave a despot (yet with a strange expression in her eyes). You know the peculiar note in Slavonic music (especially in Chopin's), something they have in the little jade island that lies between Wales and Boston.

His technique was perhaps more magnificent than ever; in addition, he had learned suavity, languorous rhythms, and how to be consciously unconsciously exquisite. His art seemed to derive from Paderewski's as the jewel-like tiles in old Arab palaces derive from the gazelle and the peacock. With languor had come honey of tone. Indeed, beauty has come to Mark Hambourg.

The Goatherd's Pipe

For me the pipe is the voice of Africa, the voice of the Desert. Yet its shrill ivory notes are known to the blackbird, and the woodbird in *Siegfried* has plagiarized them — when it tossed those crystalline songs from the tree-tops.

I have heard the pipe played on a hillside of gold,—the gold of the Nubian Desert that ripples round the feet of lion-faced Sekhet, the War goddess, who sits, like a black marble panther, angular, sinuous, and fierce, with her back to gray Karnak, and her face to a rolling ocean of sand that lifts immense, immobile waves as far as the eye can see; above her is the arc of the cloudless African sky, starred by a few brown hawks. She is housed in gold and azure; at night, in azure and silver.

The goatherd's pipe voices the spirit of Ancient Egypt, and reconstructs ruined cities as the pipe in *Tristan* paints the blue of the Atlantic. Its high, strident tones have the heat of dazzling summers in the desert, the strange whiteness of the African moon, and the harsh melancholy of the peacock's cry. That ageless, piercing music, at once so infinitely old and perfectly new, is made of loneliness, passion, and magic; it faints under the burden of the long, monotonous centuries.

I heard the pipe's cousin, the Arab flute, at Biskra, on a dazzling spring morning, when a tattered herdsman, with the lithe grace of the Bedouin, led his piebald flock afield. I remember it sang in a forest of date palms, which the wind swept softly and made to murmur like parched pines.

The sun had just risen; its rays slipped between the emerald fronds of the palms, and dappled with gold the brown earth fed by runnels of water. Sunlight spangled the herd of pied goats that frisked and frolicked after the player in his gay burnous. As he passed down a vista of shine and shadow, a laughing face peeped at him over a low mud wall, a profound Southern face of strange beauty. Barbaric turquoise trinkets set off the girl's blue-black hair and clear brown skin flushed with rose; her eyes were like the dusky pools that gleamed under giant palms.

Suddenly the music bubbled up like a desert spring. Its pure wild tones, that obeyed some unimaginable law of a harmonic scheme older than ours, struck the middle note between those of the skylark and the kid; they seemed older and fresher than anything else in the world.

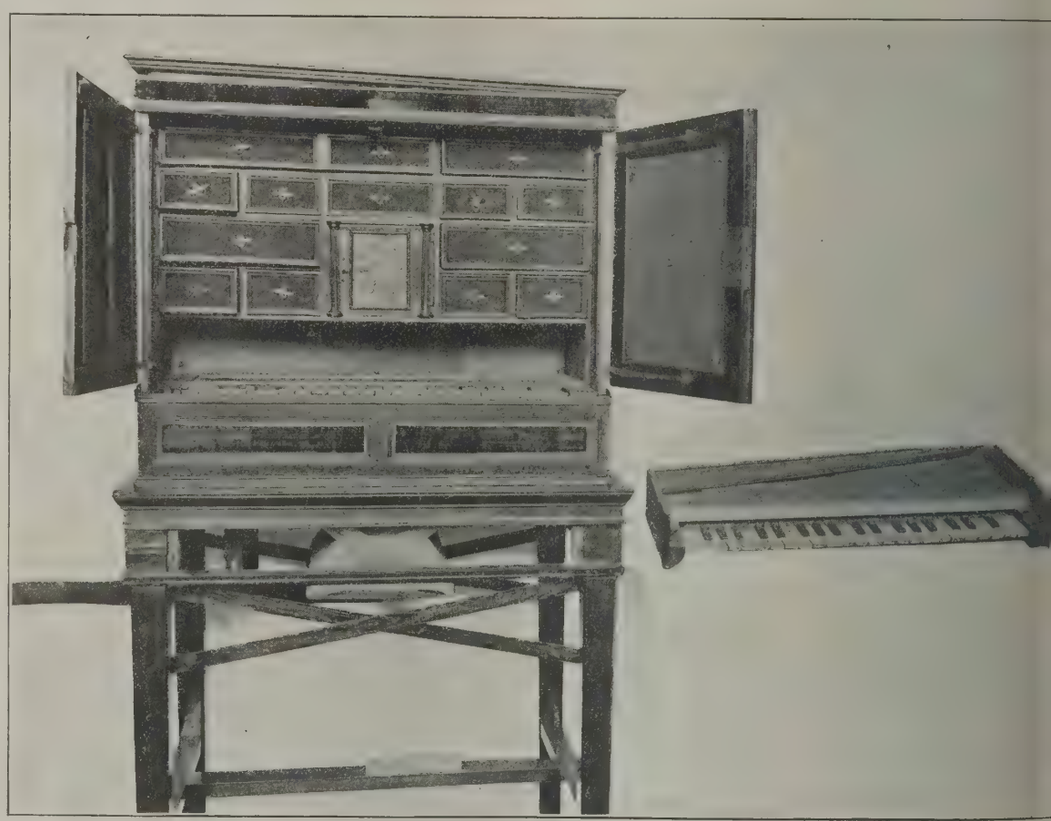
AMERICAN MUSICIANS

Probably because the patronage bestowed on art in the United States was very scanty until the middle of the last century, early American music was not of a brilliant order. Mr. Orton Bradley, lecturing on Saturday before the Incorporated Society of Musicians, gave a good account of the progress made in recent years, and the rapid growth of music in sixty years led him, from a lengthy study of the works of the native American composers, to express the highest hopes of the future of the art in the States. In the early years of the history of the New World only music of a religious character was known to the settlers, and the Puritans did not encourage a musical setting to their hymns. In 1713 an organ was imported for presentation to a Boston church, but the congregation was shocked, and refused the gift. Worshipers in another Boston church were, however, less rigid in their religious practice, and welcomed the offer to instal the instrument for their services. The innovation did not meet with ready approval by other assemblies, and it was another twenty years before, at Newport, Rhode Island, a second organ was erected. Having to contend against a strong public opinion, it is not surprising that no American was bold enough to devote his time to composition until after the middle of the eighteenth century. Mr. William Billings then tried his prentice hand, and his book, published in 1770, is a musical curiosity. Mr. Bradley's illustration of one of Billings's settings to a Puritan hymn was sufficient to show the pathetic results which attended that gentleman's musical efforts. There were no American composers worthy of the name until well into the nineteenth century. The musical tastes of the people were guided by importations, and in those days the fame of European masters traveled slowly. Wagner's music was not performed in the States until 1853, and *Tannhäuser* was not heard in Boston until 1859. Among the native pioneers was Mr. G. F. Bristow, who, after studying at the London Royal Academy of Music, produced his *Rip Van Winkle* in 1855. This was the first opera of American composition. Dr. William Mason, Dudley Buck, F. Grant Gleason, Silas G. Pratt, and C. C. Converse were among the first writers of music the States produced, and Mr. Bradley bracketed with these Mr. J. Knowles Paine, of Harvard, the first professor of music in any American University. From the standpoint of the general public, the most noteworthy of all the American composers is Stephen C. Foster, the author of the very effective, though simple, music of *The Old Folks at Home*, and *Come where My Love lies Dreaming*. Among the distinguished modern American composers Mr. Bradley mentioned were George Whitfield Chadwick, Horatio Parker, E. A. MacDowell, Henry K. Hadley, Van der Stucken, Arthur Whiting, Arthur Foote, and Mrs. H. H. A. Beach, the latter of whom was trained entirely in America. The lecture was charmingly illustrated by several vocal and instrumental examples of American compositions. — *Daily Telegraph, February* 12.

WHISTLE LANGUAGE OF THE GOMERAS

They have a whistle language on Gomera Island, in the Canary Archipelago. They can whistle there as articulately as a Bostonian can speak.

And since they can whistle very loud and shrill, the Gomeras can converse a long way off. A Gomera hunting a mile from home can ask his wife what there is for lunch. and if the menu does not please him he can scold her and order a change as well as though he stood beside her.



CABINET ORGAN WITH REMOVABLE SPINET
(No. 4)

The Gomeras talk in a sing-song, and their whistle language reproduces the spoken one's intonations. For instance:—

Children all over America have a taunting cry —

"Hiss for shame, hiss for shame,
Everybody knows your name!"

This cry is not sung. It is intoned. And so the Gomeras intone their guttural language.

It would be quite easy to whistle intelligibly the "Hiss for Shame" cry. So it is quite easy to whistle the Gomera's sing-song language. — *Philadelphia Bulletin.*

THE CINCINNATI FESTIVAL

I

Three happenings at the Cincinnati Festival are interesting. They are these: —

1. The participation in the Festival of one thousand children from the public schools.
2. The continued existence of the society.
3. The visit of Sir Edward Elgar.

In point of value the second is by far the greatest. The first should become intimate in relation with the second. In the third there is by all means the least value, though there will be found much interest in seeing at close range and in the active performance of his art the "greatest living English musician."

True though it is that this first professional visit Sir Edward Elgar to the United States does not transcend all else in importance, it has, nevertheless, many attractive elements of worth in it that should not be overlooked. Though this distinguished Englishman is not as great a musician as President Hadley of Yale dubbed him, he is a man of fine insight, unusual gifts, and sincere and of remarkable accomplishments. He has written some music that is not destined to win him invitations to cross the Atlantic; but fortunately he has not confined himself to this kind, and so he is requested to be with us.

It will be interesting to see this man in the performance of his own works. It will be a significant record in the annals of the Cincinnati May Festival Society that ahead of all other choral organizations in America it first sought his direction and inspiration. And it is an everlasting pleasure to those of us who do not limit the universe to the city in which we live to know that the conviction, courage, and wherewithal to accomplish these acts are springing up west of the Hudson river. To a society or two east of this water-way, the proposition to invite a distinguished foreigner to produce his own compositions, would bring an apoplectic termination to a sacred life or two. And so, here and there, conservatism is a safeguard, and the societies do not blossom forth into significance.

II

But the middle and the farther West are coming to their own. Mr. Krehbiel's article in this issue of THE MUSICIAN shows that the Cincinnati May Festival Society is not of recent formation. But it is young, vigorous, and determined in its impulses. The earnestness of many of the men who govern it, their business and artistic enterprise for safeguarding its interests mean much to the community. And in this tendency, and in it alone, are the value of such an organization and all its accomplishments to be found. It interests the community, shows the community that within itself there is the possibility of ideal achievement, it proceeds to attain this achievement, and to turn it back again as another and a stronger inspiration to the very source from which it comes.

This tendency to have community music means everything to us. In it lies all we have of expectation for becoming musical. It is less necessary that we have great composers than it is that we become a people who have the time and the inclination to hear music.

We must place a very great value on the efforts which are making in many of our cities to foster art within the community and to produce from the people an artistic result; training some of the people to delight and inspire as performers others who are listeners,—two distinctly equally valuable functions.

Hence, in the case of Cincinnati, the preservation of the society, the continuance of its performances, its adherence to high ideals, and its accomplishment of them quite outstrips in value any such attendant circumstance as whether one visiting conductor or another shall preside over its performances. And the reason for this is not only the evident one that the Society is a valuable addition to the city, but for the further reason that it is an invaluable asset to the country, — invaluable as a possession and as a suggestion. It is to be expected — certainly it is to be hoped — that the newly organized festival at Ithaca, under the direct patronage of Cornell University and in the care of Prof. Hollis E. Dann, will be perpetuated. It means that in one more centre we are becoming conscious of other things than Insurance Scandals, the falling of the Financial Mighty, their retirement, and anxiety to make compensating charities. It means that one new element enters the thought, and let us hope the heart, of the city and town. Here is a call to something at once beautiful, uplifting, good to witness, rare to think back upon.

And our need is many such communities, but first the men of sufficient outlook, conviction, and capacity for inaugurating the undertaking, encouraging it through its precious youth, and as if it were a Prodigal Son forgiving its sins and paying its bills, finding the great compensating joy in having it at home in the family, alive and well; doing good and keeping out of trouble.

III

I have set high value on the participation by the school children of Cincinnati in this Festival of 1906. One thousand of them will sing Peter Benoit's work, *Into the World.* They will sing it without notes, having learned it, however (so I am informed by the music director of the Cincinnati schools), by reading it from the music. Recently I heard six hundred of them sing it in rehearsal, and the same inquiry crossed my mind then, that ever does, when I hear children sing well in school: Why do communities permit this power to pass away, why do they not utilize it, why is there not a man in every community on the lookout for even a passably good chorus singer out of whom he shall proceed to create (what it is absolutely possible to create) a music-making factor bent on the study of fine music, caring for the art and for the skill which shall make one's own neighbors doers of this beautiful music word. Mr. Wolle did it in Bethlehem, Mr. Dann is doing it at Ithaca, some others are doing it — but why are they so few?

There is a strange plenitude of artistic music possibility in school children. In many communities the high point of development reached by the children in music is well-nigh incredible, *and yet in no community throughout the United States is this immense contribution to our artistic life used or conserved in after-school years.*

And still we hear about the poor but talented musician, who finds the profession so overcrowded that he has little or nothing to do.

Pinch him somebody, and wake him up.

A few men of some critical capacity decry all efforts at music teaching in the public schools and declare it a useless effort because the teacher who presides over the classes is not a musician. The two or three men of this class with whom I have talked have not been in public school since they escaped going there by compulsion.

Another case of Pinch and Wake up.

Personal visits to hundreds — perhaps to thousands of schoolrooms — are gradually bringing me to a realization of this fact, that the public schools can contribute as much to the music life of America as they do to the literary and business life, that many schools are doing it now, that when we realize the fact that children are leaving schools as well equipped in music as in reading, we shall set ourselves to using the raw material in the necessary products we should be preparing for the making of a singing, listening, music-loving public, — a public slowly realizing the great value of artistic pursuits as a community asset, who realize that to store up, as the years go by, a little money and a little land is an incomplete and a strangely poverty-stricken saving; that one may have truly on earth the promised treasures in heaven which, if they are anything whatever, are mental riches, revelations of the unattained, and beautiful rare thoughts.

But we must believe that as the merchant waits for the boy to come from school with figures and a quick wit, so should another man wait for him to come with his little knowledge of music and his trained voice — a knowledge fostered in many schoolrooms with love and veneration for the art, and all crowded hurriedly into fifteen minutes a day.

And so I place the contribution of the thousand Cincinnati children to its May Festival high — not so much in its actual accomplishment, as in its wonderful significance.

To a few it may seem a trivial contribution; but certainly it is far above the living-flag chorus or the municipal concert with its vast crowd of idle listeners, its everlasting balloon man, and the peanut vender.

And if only there were the men waiting for the annual product of the schools, waiting to turn its elementary artistic sense into power, what would not our communities become?

THOMAS TAPPER.

THE VOICE

Conducted by WILLIAM SHAKESPEARE

All communications regarding the Voice Department of THE MUSICIAN should be sent directly to the Editor-in-Chief. Students who follow the work which is outlined in this Department may write freely regarding any further helps and hints that they need. If there is any point in your study or teaching which you desire to have discussed here, please communicate with us about it.

In acting for a time as Editor of the Voice Department of THE MUSICIAN, *I feel that I must first express my admiration of the earnestness of purpose and high standard of this journal, in which I have read with the deepest interest many valuable articles.*

With warm regards

Yours truly

W. Shakespeare

TONE IN ITS RELATIONSHIP TO PRONUNCIATION

WILLIAM SHAKESPEARE

We have stated many times that the Art of Singing is revealed when every note speaks fully to the rightly controlled breath. We must know, first, how to *prepare* and *control* the breath before singing, and then, how to *place the voice* so that it speaks to this controlled pressure.

The unconscious freedom which enables us to start in the very centre of the sound intended and the facility of singing scale passages in the *legato* (or joined) style, are the *signs* of a good production.

Let us now briefly consider the important subject of tone production.

In reality it is most difficult to differentiate between tone production and pronunciation. If pronunciation, in its highest sense, demands the production of the purest vowel sounds, it means equally the production of the fullest tone — the purity of the one is synonymous with that of the other. In a scarcely secondary sense perfect facility in the articulation of the consonants, demanding, as it does, absolute freedom of the tongue and lips, is equally a sign of the capability of the singer to produce a pure tone.

In my *Art of Singing* (Part I, page 32) this question has been fully discussed. In Part III (page 166) a short but complete classification of the vowel sounds has been made and likewise of the consonants. In Part I (page 23) is a plate showing the different muscles of the tongue which come into play during pronunciation and bring about the greater part of the vowel sounds, which, in the English language, are thirteen in number. By silently pronouncing *ah* we can easily discern the tongue in its most quiescent state and the throat feels wide open low down. We shall in the same way observe that the tongue rises a little for vowel sound, No. II (page 167) which I have described phonetically as a^t, (the small "t" is not to be pronounced), but the throat is just as wide open as for *ah*. For vowel sounds Nos. III, IV, V, and VI, viz., *a*, e^t, i^t, and *ee*, the tongue rises more and more until it almost touches the roof of the mouth, but the throat is *wide open*. The lips come into play for the vowels *oo* and $^hoo^d$, but for the remaining vowels *aw*, *oh*, o^t, *er*, and u^t, the back part of the mouth is modified and partially closed through the tongue being drawn backwards and downwards in different characteristic ways. Let us often pronounce these in silence and we shall soon learn how to observe the throat changes which are, however, in reality, changes in the position of the tongue.

Now while it is quite probable that the highest notes in the voice are not produced with the throat so wide open as the lowest notes (this would seem to be in agreement with the different sizes of organ pipes), yet, such closure is a natural effect and is unconscious to the singer to whom it should seem that the throat is wide open, that is to say, not rigidly constricted. And while it is quite certain that the tongue is drawn backwards and downwards for some of the vowel sounds, yet this is also a natural effect of pronunciation and should be unconscious, and quite different from certain distortions of the throat, so disastrous to the singer and unpleasing to the listener.

In some languages the prolongation of the open vowels *ah*, e^t, *ee*, etc., produce a sensation and habit of singing with an open throat.

In other languages which use very often such sounds as *aw*, *o*, o^t, *er*, and u^t, the singer would be apt to close his throat by a distortion of the tongue muscles connected with these vowels; in other words, whilst intending to sing a pure *ah* he would substitute not a pure *aw*, but a distortion of *aw*. Such an effect has been termed "throaty singing" (although all the distortions caused by bad production are, in reality, throaty).

Again, when the vowel sound is produced in such a way that the under lip is rigidly drawn back, the result is a kind of bleating effect, like the speech

MADAME SONTAG, AS ADINA IN "ELISIR D'AMOUR" SIG'R. LABLACHE AS DR. DUKAPMO

of the half witted, and we say the voice is "white" or blatant.

When the production of the vowel is accompanied by the additional effect of a distortion of *er*, a sense of vibration is felt on the forehead, a hooting sound is heard, and the tone is said to be "frontal."

Finally, when the vowel sound is accompanied by a distortion in the direction of *ang* it is said to be "*nasal.*" Although some masters try to bring about what is called "nasal resonance," let us hope they do not mean nasal singing, which is faulty, although less so than the other forms of wrong production.

Pure resonant sounds, then, can and must be produced without any of these four distortions of pronunciation or tone.

The vowel sounds *oo* and *ʰoo*^{d} (as in the words cool and could) are produced by pursing the lips while the throat is open. They help to form a criterion of good singing. The round muscle of the mouth is incapable of pursing in faulty production.

The pronunciation of the tongue consonants *l, d, t, n, r, g, k,* and *th,* are only free if the voice is rightly produced.

The bad singer cannot pronounce the buzzes *th* (in *th*em, etc.), *v* (in the words *v*oice and wa*v*e, etc.), nor the *z* (in such words as the*s*e, wave*s*, o*f* *th*em, thy clo*th*es).

Lastly, the consonants *b, ch, f, j, m, p, s,* and *sh* are rigidly fixed in bad singing; indeed in some so-called singers it is difficult to discern, not only *what* they are singing, but *in what language* they are singing.

In good singing it is impossible to mistake any word uttered. We need no "book of the words."

The Expression of the Voice is revealed through a right production, as all expression depends on the freedom and independence of the lips, face, and eyes. Every emotion simulated by the artist is conveyed in living sound and the audience is moved at his will, in accordance with the words of the poet and the music of the composer. The old masters held that "He who can pronounce and hold the breath in song knows how to sing." They might with equal justice have said, "He who can *express* and hold his breath while singing, sings rightly!"

Should he attempt at too early a period of his studies to employ the heavy and powerful notes at the extreme ends of the registers, the student is apt to yield to the vice of assisting the great pressure required for these dramatic effects by closing the throat and drawing back the tongue.

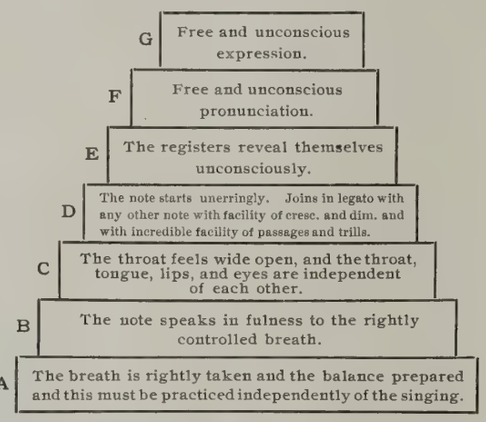
Now come into play the distortions of the *aw* muscles, the *oh, o*^{t}, or *er* muscles, and distressing, although often powerful, notes are the result. These shouting, bawling, or shrieking effects are often heard in theatres and have been accepted as dramatic effects. Watch, however, the distress shown about the eyes and the distorted appearance of the mouth when the so-called artist is astounding the audience with what he would have them believe to be a *love* scene.

I am aware that I am repeating, but I trust not in vain, that the chief fault of the singer is this closing of the throat space which should feel *as though it were wide open.*

Irrespective of registers, force, word, or agility, the throat should not be felt at all.

In conclusion: each and all the vowel sounds *ah, a*^{t}, *a, e*^{t}, *i*^{t}, *ee, oo, ʰoo*^{d}, *aw, oh, o*^{t}, *er,* and *u*^{t}, (see *Art of Singing*, page 167) should be sung on every note with a sense of the throat naturally open and unconstrained, whereas, marred by a simultaneous and rigid contraction of the *aw* muscles, they become throaty; or by a simultaneous and rigid contraction of the *er* muscles they become *frontal* (resounding on the forehead); or by a drawn down lower lip they become "*white* (or blatant), or by a faulty contraction of other muscles, *nasal.*"

Here is presented a figure in the shape of a pyramid representing a scheme of voice production and its right development from base to summit.



The exercises by which every good master tests the skill and advancement of his pupils are based upon similar principles, all of which lead toward the truth, viz., the inculcating of a right breath control and the necessity of freedom in the action of the tongue, or, as we often say, the throat.

Any rigidity in his exercises is revealed by the inability of the student to breathe noiselessly and imperceptibly before he sings; he must not raise the shoulders.

He must prove his capacity for singing vowel sounds without distorting the purity of the pronunciation; he must be able to commence without hesitation the consonants; and he must be able, without changing the quality of the note, to pass from one vowel to another. Arpeggios may then be introduced in which the voice must be produced evenly and without changing the quality of the notes. Scales of all kinds must be sung in the "legato style." In my Part II, the importance of staccato notes has been strongly insisted on, and many exercises of scales, both Diatonic and Chromatic, have been suggested. Exercises for the head voice have been recommended. Later on the study of vocalizes introduces to the pupil, as it were, "songs without words." Lastly, the practice of adding words.

It is of the gravest importance that the student first conquer, say an octave or twelve notes of his voice with a right production, before attempting the arpeggios and scales, and he should be careful not to attempt songs until mastery over the legato style in the scales has been assured. Then the practice of swelling notes, or *Messa di voce* and trills and other embellishments should be assiduously studied before attempting the final triumph of aria and dramatic singing.

FRANK VAN DER STUCKEN

Since 1894 the Cincinnati Symphony Orchestra has been conducted by Frank van der Stucken, who is a native of Texas. Early in his musical career it was his good fortune to be associated with such masters as Benoit, Grieg, and Liszt, who were quick to recognize his talent and encouraged him greatly in his work. In fact, it was under the protection of Franz Liszt that he first attracted the attention of the musical world, by conducting a concert of his own compositions at Weimar. In 1884 Mr. van der Stucken came to America to accept a position as leader of the Arion Singing Society of New York, succeeding Dr. Leopold Damrosch; and it was at his instigation that the society made the now historical tour of Europe in 1892. In 1889 Mr. van der Stucken conducted a concert of American compositions at the Paris Exhibition, and in 1900 was appointed official delegate of the United States to the Musical Congress at the Paris Exposition. The French government bestowed on him the title of "Officier d'Academie." While in New York he conducted the Novelty Concerts at Steinway Hall, the Symphony Concerts at Chickering Hall, and was the first to give orchestral works of American composers in a series of concerts. He also conducted two of the Sangerfests of the Northeastern American Sangerbund, in Newark and New York.

FRANK VAN DER STUCKEN

After accepting the directorship of the Cincinnati Symphony Orchestra, in 1893, he conducted several May Festivals at Indianapolis.

For four years after assuming the directorship of the Symphony Orchestra, Mr. van der Stucken was dean of the Cincinnati College of Music, which position he resigned that he might devote himself exclusively to the orchestra and to composition. He is still associated with the institution as honorary dean.

Among Mr. van der Stucken's most familiar compositions are the symphonic prologues, *Pax Triumphans* and *William Ratcliff*, which have been played both in this country and in Europe. He has also written music for Shakespeare's *The Tempest*, beside numerous songs and other compositions for orchestra. In the spring of 1904, by invitation from the Bureau of Music of the Louisiana Purchase Exposition, he wrote the official *World's Fair March*, the first number on the program at the opening of the exposition at St. Louis.

THE MAY MUSIC FESTIVALS OF CINCINNATI

A Retrospect

H. E. KREHBIEL

Reference to the records are scarcely necessary to enable one whose memory, quickened by personal association, goes back to the very inception of the enterprise, to review the history of the May Music Festivals which have been held in Cincinnati biennially since 1873. That recollection, that association, is mine. I sat in the audiences of the first festival. When the second came, in 1875, it was my privilege and duty to review it for the Cincinnati *Gazette*. The Music Hall was a mere architectural plan when I first saw it; and when ground was broken for its foundations I, too, threw out an official shovelful of earth. I reported the festivals of 1875, 1878, and 1880 for the *Gazette* and every one of the festivals since, save one, for the New York *Tribune*. If I were inclined to be boastful I might say with reference to the story of the institution what Æneas said to Queen Dido of the incident attending the fall of Troy: "All of which I saw, and some of which I was." But I have chastening memories which bid me maintain the characteristic and habitual modesty of the American newspaper writer. The death of Mr. Theodore Thomas was followed by occurrences of a deplorable nature which seemed to threaten the continued existence of the institution which has given Cincinnati her chief musical glory. But the danger appears now to be past; and it is well to forget the follies which produced them in the contemplation of the glories of the past and the prospect opened up anew by the approaching meeting.

Like every other large manifestation of culture the Music Festivals of Cincinnati have a history antedating the records by many years. In one respect, and that a marked and extremely tangible one, they are the product of the festivals of the confederation of German singing societies called the North American Sängerbund, for it was the existence of a hall erected by one of the Sängerfeste in Cincinnati which gave practical force to Mr. Theodore Thomas's suggestion that a festival of American singing societies, like to and yet very unlike the German festivals, be held in Cincinnati. That suggestion was made at the dinner table of George Ward Nichols on the occasion of one of Mr. Thomas's visits to Cincinnati with his orchestra in 1872. The lady, who was then the wife of Mr. Nichols (who died years ago after having become estranged from the enterprise which he had been largely instrumental in building up), is now the wife of the Hon. Bellamy Storer, who has represented the United States at the courts of Belgium, Spain, and Austria. She, too, was an active spirit in the early days of the undertaking, as was her present distinguished husband. A quarter of a century ago, when I was much nearer the sources than I am now, I summed up the influences which had combined to create the festivals as follows: the love for music and festivity of the citizens of German birth, which had given rise to the male singing societies and their monster conventions; the capacity of Americans to assimilate the characteristics of other peoples, coupled with their own peculiar enthusiasm, public spirit, and local pride; the freshness and newness of our social soil which, obeying a law of nature, sprouts and grows those things which are needful to refined civilization with tropical vigor.

It is significant of the peculiar ripeness of Cincinnati for the festivals when they were called into existence in 1873 that the German festivals had also had their origin in the same city a quarter of a century before. The first Sängerfest held in America took place in Cincinnati in 1849. Thus was set an example which the East followed. But choral culture among the American population was much older than the German manifestation. There are more phases than one in which the

HENRY EDWARD KREHBIEL

musical culture of Cincinnati is an interesting study. Twenty-six years ago I spent a long time searching through the old newspapers preserved in the office of the *Gazette* back to the *Centinel of the Territory North West of the Ohio River* (which appeared in the last decade of the eighteenth century), and turning over all the data furnished by public and private libraries in a search for facts touching the origin and growth of music in the Ohio Valley. To the discoveries made then I have often turned since with a feeling of surprise at the vigor and fertility of Cincinnati's social soil. Let me cite one or two facts. The settlement at Marietta was made in 1788; that at Cincinnati the same year, I believe. Twelve years later the population of Cincinnati was only 750. In 1819 the town already boasted a Haydn Society composed of the best singers from "the different societies." How numerous these societies were and how long they had already been in service can be guessed from the fact that in 1815, the year that saw the organization of the Handel and Haydn Society in Boston, one John McCormick was out with an invitation to subscriptions for *The Western Harmonist*, which he had had long years in contemplation and which he flattered himself would furnish "the different societies" with the most useful tunes and anthems. An Episcopal Singing Society was organized in the same year as the Haydn Society. Arthur St. Clair gave this society a lot of ground and Jacob Baymiller gave it a house. I wonder if there was another singing society at that time in the United States which owned its meeting place. There are not many now. All this within a generation after the first settlement northwest of the Ohio River and scarcely more than twenty years from the time when the members of the First Presbyterian Church were subject to fine if they came to meeting without their rifles.

When the German Sängerfest of 1870 came to Cincinnati it was necessary to build a hall capable of accommodating three thousand singers and instrumentalists besides the audience. This was done, and the hall became the visible bond between the German festivals with their large devotion to *Gemüthlichkeit* and the meetings with loftier aims and purer measures established by Theodore Thomas and a committee of prominent citizens in 1873. The hall had been saved to the city for exhibition purposes, a successful exposition of textile fabrics having stimulated a desire on the part of merchants and manufacturers to establish annual industrial shows of a more comprehensive kind. In these expositions the talents were developed or matured which enabled A. T. Goshorn to direct so successfully the destinies of the Centennial Exposition at Philadelphia. The festival of 1873 was like a galvanic shock to the people of Cincinnati and for many hundreds of miles around. Its financial success surprised its organizers, who had so little to pay out of their pockets to meet a deficit which was discovered only when the last payments were to be made that they did not call upon the guarantors. A second festival in 1875 was immediately resolved upon, and that, too, was successful financially, and at the same time a great advance artistically on its predecessor. These triumphs suggested the need of a permanent music hall; that of the Industrial Exposition of a permanent Exposition Building. Both needs were filled when the present central building devoted to music, and containing one of the dozen gigantic organs of the world, and its wings devoted to mechanics and the fine arts, were erected through the liberality and public spirit of Reuben R. Springer and the citizens of the city. This music hall, it should be borne in mind, is a public institution, — a gift to the city, under the control of a self-perpetuative and incorporated organization of citizens; it is not a private enterprise like the music hall built by Mr. Carnegie and bearing his name in New York. The festivals given by Dr. Damrosch and Mr. Thomas in New York in 1881 and 1882, the festivals which have been given at various times since in a number of American cities, were fruits of the Cincinnati affairs, as was indicated plainly enough by the imitation of the Cincinnati plan which they all disclosed. So are the music halls and exposition buildings in several Western cities.

The high-water mark of financial success was reached by the festival of 1878, when the new Music Hall, its great organ, and other things stimulated popular interest to such a degree that

with expenses aggregating $55,595 there was yet a profit from the enterprise of over $32,000, one half of which was given to the fund then raising for the organ, the building of which had been undertaken by a separate organization.

Cincinnati's main contribution to all the festivals that have thus far been held has been the choir and the audience. The orchestral forces were drawn from New York so long as Mr. Thomas was a resident of New York, and from Chicago after he went to the great metropolis of the Northwest. This year the nucleus of the orchestra will be that of the symphonic organization which public-spirited citizens of the city have maintained since 1894 without the help of the Festival Association. This division of interests had long been a deplorable thing, and every friend of music and Cincinnati must join in the hope that the coming festival will see the festivals start out on a new path of usefulness. The circumstances of the case justify a backward glance over the history of the chorus.

It is plain enough to all who remember the beginnings of the festivals and witnessed their development that they are something very much better and very different than the affairs which were in Mr. Thomas's mind when he proposed them at the dinner in the house of Mrs. Nichols. The existence of the large hall prompted the thought of a large musical meeting. It was to consist of choirs of mixed voices, and there was to be none of the convivial excess which had always characterized the German meetings. But other features were retained; even the outdoor merrymaking was a feature of the original plan. Jupiter Pluvius interfered to change that at the first festival, and when the second was planned the artistic idea had already taken on such dignity that it was no longer thought of. The plan of making the festival the occasion of a union of many singing societies is proved by the first circular which was issued; it was addressed to the "Choral societies in America," and stated the object of the projected festival to be "to elevate the standard of choral and instrumental music, and to bring about harmony of action between the musical societies of this country, and especially of the West." Thirty-six societies, representing 1250 singers, accepted the invitation, one acceptance coming from Des Moines, Ia., one from Milwaukee, and one from Titusville, Pa. Most of the acceptances, however, were from societies in Cincinnati and other cities and towns in Ohio. At the first mass rehearsal for the first festival there were present representatives of twenty-nine societies, of which fourteen came from Cincinnati and vicinity. As I recall the first choir it numbered eventually about 1000 voices (one of my records says explicitly 1083), and Mr. Thomas did not hesitate to intrust it with the choral movement of Beethoven's *Ninth Symphony*, Handel's *Dettingen Te Deum*, scenes from Gluck's *Orpheus*, and smaller works. In the choruses of 1875 and 1878 the same principle of a union of societies was maintained, the cities outside of Cincinnati represented at the meeting of 1878 (when the new Music Hall was dedicated) being Dayton, Hamilton, and Urbana. About two hundred singers were from out of town. The effect of the local influence of the plan of organization was not only observable in the work of the choir, but also in the attendance. Now, however, Mr. Thomas dreamed of a virtuoso choir, one that should be always at work and accomplish marvelous things. There had been a little friction between the societies and the festival management, and to get rid of all annoyances of this kind and have a body of singers under single control the Festival Chorus was organized, the old Harmonic Society, which had been the principal representative of choral culture in Cincinnati and had formed the nucleus of the festival choruses in 1873, 1875, and 1878, being disrupted for the purpose. At first the effect was admirable, but it soon turned out that the choir could not be kept at work two years for the sake of a week's festival. The stimulus of performance which the old society concerts had brought was wanting. Then the experiment of giving a choral concert in the off years was tried, but the extra concerts proved unremunerative and were discontinued. Meanwhile, I regret to say, the choir degenerated not only in numbers but in quality. There were 697 singers in 1878 and only 353 in 1892. As all who are familiar with volunteer choirs will imagine, this falling off in numbers was not the worst feature of the decay. Until 1888 no difficulty was found with the women's voices; it was the tenor and bass contingent that went to pieces. As a rule the basses outnumbered the tenors two to one, but the tenors ran down the scale in the following manner: 115 in 1878, 97 in 1880, 67 in 1882, 61 in 1884, 56 in 1886, 39 in 1888, 38 in 1890, and 39 in 1892. In 1894 the figures looked better, for there were 71 tenors in a choir of 478 voices, 56 out of 406 in 1896, and 57 out of 439 in 1898. But in 1894 the full choir sang only on the last night in Berlioz's *Requiem*, for which occasion men singers were brought from Dayton and hired from the Apollo Club of Cincinnati. The policy of thus strengthening the volunteer body by the employment of mercenaries (a policy which, by the way, is not unknown in New York and is the rule at English festivals), has prevailed ever since and has yielded good results. A division of opinion touching the wisdom of giving a concert in memory of Mr. Thomas in conjunction with the Chicago Orchestra caused a disruption of the chorus last spring, and compelled a reorganization of the choral body. This has been accomplished through the energy of Mr. Frank van der Stucken, who was elected conductor of the Festival after the death of Mr. Thomas, thus uniting in harmonious cooperation two musical and social elements which had pursued their separate ends independently of each other for many years to the hindrance of progress in the Queen City of the West.

As for the rest, it may be read to a large extent in the appended list of choral works set down in the order in which they were produced at the festivals. That list provides the measure of value for Eastern people who naturally look upon the choral feature of these festivals as their most significant element. To Cincinnati and the widely dispersed patrons of the festivals, however, the orchestral performances had almost as great a value, and the solo singers who came to take part in the concerts were accepted and celebrated as the highest exemplars in their art. For many years the attitude was naïve to a degree, but it was at least amiable, and it contributed much to the enlightenment as well as the gaiety of the community.

1873: Gluck, Scenes from *Orpheus;* Handel, *Dettingen Te Deum;* Beethoven, *Choral Symphony.*

1875: Bach, *Magnificat in D;* Brahms, *Triumphal Hymn;* Liszt, *Prometheus;* Mendelssohn, *Elijah.*

1878: Gluck, Scenes from *Alceste;* Handel, *Messiah;* Liszt, *Missa Solemnis;* Otto Singer, *Festival Ode* (written for the dedication of the Music Hall).

1880: Bach, *A Stronghold Sure;* Beethoven, *Missa Solemnis;* Dudley Buck, *The Golden Legend* (Prize Composition); Handel, *Utrecht Jubilate,* and *Zadock, the Priest.*

1882: Bach, *The Passion according to St. Matthew;* Berlioz, Scenes from *Les Troyens;* Gilchrist, *The Forty-sixth Psalm* (Prize Composition); Mozart, *Requiem;* Schumann, Scenes from *Faust* (Part III).

1884: Brahms, *A German Requiem;* Gounod, *The Redemption;* Handel, *Israel in Egypt.*

1886: Bach, *Kyrie* and *Gloria* from the Mass in B minor; Haydn, *The Creation;* Rubinstein, *The Tower of Babel.*

1888: Dvořák, *The Spectre's Bride;* Mendelssohn, *St. Paul;* John Knowles Paine, *A Song of Promise;* Rubinstein, *Paradise Lost;* Weber, *In seiner Ordnung schafft der Herr.*

1890: Bach, *The Passion according to St. Matthew;* Dvořák, *Stabat Mater;* Saint-Saëns, *The Deluge;* Verdi, *Manzoni Requiem.*

1892: Bach, *Christmas Oratorio* (Parts I and II); Albert Becker, *Cantata composed for the celebration of the ninetieth anniversary of the birth of William I, German Emperor;* Bruckner, *Te Deum;* Dvořák, *Requiem.*

1894: Berlioz, *Requiem;* Brahms, *Songs of Destiny;* Goetz, *By the Waters of Babylon;* Horatio W. Parker, *Hora Novissima;* Rubinstein, *Moses* (Scenes III and IV).

1896: Handel, *Judas Maccabaeus;* Saint-Saëns, *Samson and Delilah;* A. Goring Thomas, *The Swan and the Skylark;* Tinel, *St. Francis.*

1898: Berlioz, *The Damnation of Faust;* Grieg, *Scenes from Olaf Trygvasson;* Schumann, *Paradise and the Peri.*

1900: Berlioz, *Te Deum;* Stanford, *East to West.*

1902: Bach, Mass in B minor (complete); Franck, *The Beatitudes.*

1904: Bach, Mass in B minor; Elgar, *The Dream of Gerontius;* Beethoven, *Missa Solemnis* and *Choral Symphony.*

In this list I have omitted the majority of the repetitions, which naturally have marked the festival schemes of a full generation. Where I have mentioned them, as in the case of the last festival, it was for the sake of drawing attention to the extraordinary character of the scheme. It was to be Mr. Thomas's last festival, and as if he had felt a premonition of that fact, he set a task before the festival forces which my memory and records of choral music throughout the world fail to parallel. The work of the chorus was not all; the orchestra was also called upon for Herculean labors, and the public for many times more than Bayreuth pilgrims were ever asked to assimilate.

JULIEN TIERSOT

Julien Tiersot, the French composer and litterateur, was born at Bourg, department of the Ain, July 5, 1857. His father (1822–1883) was a physician in his native city, and also deputy to the National Assembly in the year 1871, being also an enthusiast in musical matters, as indicated by his authorship of a book on *Elementary Lessons in Music Reading*, as well as being organizer of a movement in his native province to further the cause of popular music.

Julien was first instructed in music by his father, whom he accompanied to Paris in 1871. After a course of study at the Lyceum, St. Louis, he practiced medicine for a year, but after that began music in earnest by entering the Paris Conservatoire, where he studied under Savard, Massenet, and Cesar Franck. In 1883 he was appointed to the position of assistant librarian of the Institution.

Two years later young Tiersot won a prize offered by the Academy of Fine Arts, with a work on French Popular Songs, and this was the preliminary to a long series of publications and critical essays on the same subject.

At the same time, besides studies in the history of music, Tiersot produced several musical works, both symphonic and lyric, at concerts of the Société Nationale, as well as at the Opera, and Colonne concerts, also contributing to many leading French and foreign magazines. During these years he was also a Wagner enthusiast, being a regular attendant at the Bayreuth festivals.

In 1894 he received special honor from the Academy of Fine Arts, for a work on Rouget de l'Isle, the composer of the *Marseillaise*, and the Festivals of the French Revolution.

In 1891 Tiersot, with Ch. Bordes, directed the first concerts devoted to the music of Palestrina given at the church of St. Gervais, the object being a revival of old ecclesiastical church music which previously had been quite neglected in France. He edited a French edition of the works of Gluck in the Pelletan collection, and in collaboration with Saint-Saëns, wrote introductory prefaces for *Orpheus*, and *Echo and Narcissus*.

The Minister of Public Instruction commissioned Tiersot, in 1895, to collect and arrange the many traditional Folk Songs preserved by the inhabitants of the French Alpine Provinces (Savoy and Dauphine). A year later he wrote a stage adaptation of Adam de la Halle's *Jeu de Robin et Marion*, which was produced under his direction at the Opéra-Comique, afterwards at Arras in a festival held in honor of M. de la Hallé.

Recognizing the importance of music as a factor in common life, M. Tiersot composed or arranged a number of choral works for the use of schools, and at National Festivals. The music of the festival held at Bourg, in 1883, for the dedication of a statue of Edgar Quinet, was directed by him, as were later affairs of similar nature at Bourg (tricentennial of the union of the provinces of La Bresse and Du Bugey), also at Paris in 1903, Grenoble, the same year (Berlioz centennial). His work on *Hector Berlioz and His Times* was honored by the French Academy in 1905, and many lectures have been given by him on folk music of France, Belgium, Holland, and Scandinavia.

The following are the more important works of Julian Tiersot: —

Literary

Histoire de la Chanson Populaire in France, 1889.

Musiques Pittoresques, 1889.

Rouget de l'Isle, Son oeuvre, Sa Vie, 1892.

Les Fetes de la Revolution Française, (Menestrel, 1893, 1894).

Etude sur les Maîtres Chanteurs, 1899.

Ronsard et les Musiciens de Son Temps, 1902.

Chanson Populaires des Alpes Françaises, 1903.

Musical Index for Doncieux's *Romancero Populaire de la France*, 1904.

Hector Berlioz et la Société de Son Temps, 1904.

Notes d'Ethnographie Musicale, 1905.

Musical

Hymne à la Memoire d'un Penseur. (Festival at Bourg, 1883.)

Rhapsodie sur les Chants Populaires de la Bresse, for orchestra. (Société Nationale concert.)

Hellas, scene, chorus, and orchestra. (Société Nationale Concert.)

Adaptation of *Jeu de Robin et Marion.* (Opéra-Comique, 1896.)

Incidental Music for Corneille's *Andromède.* (L'Odeon, 1897.)

Chansons Populaires Françaises, for chorus and orchestra. (Concert de l'Opera, 1897.)

Sire Halewyn, Symphonic Legend, awarded prize by Conservatory of Nancy, 1897. (Lamoureux Concert, 1898.)

Danses Populaires Française, orchestral suite. (Colonne Concert, 1900.)

Also various smaller pieces for chorus, songs, etc.

M. Tiersot has also in preparation, *Berlioziana l'oeuvre d'Hector Berlioz*, and *La Correspondence Generale de Berlioz.* He has edited jointly with Maurice Boucher, *Chants Populaires pour les Ecoles*, also revised and harmonized, *Les Melodies Populaires des Provinces de France*, *Noëls Français* with other minor works.

Those interested in M. Tiersot and his life work can obtain the following through Brentano's, New York City. Originally published in Paris.

Histoire de la Chanson Populaire en France (*History of French Folk Music*). (Librarie Plaen Neurret.)

Hector Berlioz et la Société de Son Temps (*Hector Berlioz and Society of His Time*). (Nachette.)

Rouget de l'Isle et La Marseillaise (*Rouget de l'Isle and the Marseillaise Hymn*). (Belagave.)

Musiques Pittoresques (*Picturesque Music*). (Fischbacher.)

Notes d'Ethnographie Musicale, 1st series (*Notes on Musical Ethnography*). (Fischbacher.)

Sur le Jeu de Robin et de Marion (*Concerning the Comedy Robin and Marion*). (Fischbacher.)

Rosnard et la Musique de Son Temps (*Ronsard and the Music of His Times*). (Fischbacher.)

Trois Chants du 14 Juillet sous la Revolution (*Three Songs of July 14, 1789, French Revolution*). (Fischbacher.)

Etudes sur les Maîtres Chanteurs (*Studies on the Mastersingers*). (Fischbacher.)

Chansons Populaires des Alpes Françaises (*Folk-music of the French Alpine Provinces*). (Duclez à Moutiers.)

The following musical works of M. Tiersot are imported by G. Schirmer, New York.

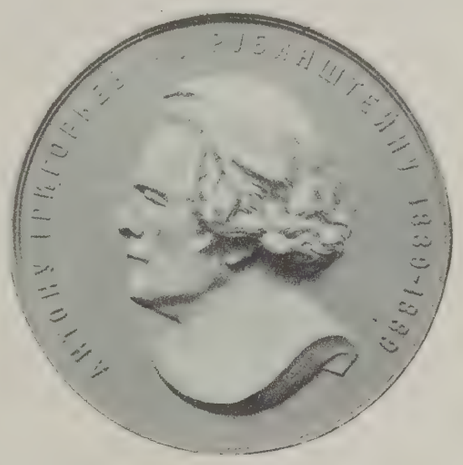
Folk Songs of the French Provinces, revised and edited by J. Tiersot in four volumes.

Twenty *Noëls Français*, Christmas Folk Songs.

Old French Songs, thirteenth to eighteenth centuries (20). Piano accompaniment.

Folk Songs for School Use on Texts by Maurice Boucher. With or without piano accompaniment, solo voice or chorus.

Orchestral Suite on Folk Melodies. Published score and parts, also arrangement for piano four hands.



ANTON RUBINSTEIN

TEACHING NOTATION TO BEGINNERS

M. K. STEAD

A musical magazine is doing good work of sterling value, when it publishes an exchange of ideas on the best methods of teaching, culled from the actual experiences of practical teachers. In The Musician for November was detailed a method with the caption as above. Here is another method which has the advantage of teaching a little musical history at the same time, and this added interest and coloring helps very materially to impress the memory, for children almost invariably love to hear of the beginnings of things.

Well, then, in the beginning, the notation or writing of music was very different from what it is now. Signs were used to show when the voice should go higher and when lower, but there was no guide as to how high or how low: this was left to the singer's judgment, or his memory of how he had heard the same words sung by some one else.

A similar system can be seen in the very primitive notation of the Indians of Lake Superior, who used a sign resembling a little ladder, and they tilted it up over the word which was to be sung high and down over the word at which the voice must drop.

But our notation was in part copied from the Greeks, who had several very complicated systems; the most popular one had many lines, and the words were placed in sliding directions, something like this: —

OLD HUNDRED.

praise
skies Let the Cre a Re
the a rise the deem
From all low tor's Let er's
that
dwell
be

etc.

Then along about the ninth and tenth centuries this was simplified by naming certain lines so that their pitch was fixed and unalterable. We are indebted for this great improvement to the monks of the Christian Church. The fact is, that, at that time, the monks were practically the only educated classes, and writing of any sort was confined to them. Hucbald (840–930), a Benedictine monk of Flanders, and Guido d'Arezzo (995–1050), share the honors of naming the lines and also of using the spaces between the lines.

First a red line was introduced and it was called F, and the letter F was placed at the beginning of this red line. Now, as every one knows, the monks used to write most ornately, and this F was so beautifully written and so fancifully curved that it has been retained as the sign of our bass clef and *the F line always passes through the middle of this sign.*

Then a yellow line was introduced and it was called C, and was written some distance above the F.

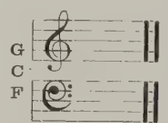
Later again, the G line was named, and this G was also fantastically written and has become our sign for the treble clef, and *the G line always passes through the middle of this sign.*

Three lines were now named.

G
C
F

and each was a fifth apart from the other, and from these three fixed points it was, and is, an easy matter to extend to other notes up and down the scale.

Besides giving a mental picture focusing the memory on the salient points, this method also fixes forever the relative place of the notes in the bass and treble clef, showing the middle C as the connecting link, both in the printed book and on the keyboard.



MUSICAL DIRECTORY

A musical directory of Greater Cincinnati has just been issued from the Lawriston Press of that city. The directory was compiled by H. Eugene Hall, one of the best-known promoters of Cincinnati's musical interests and events notable in its history. The directory is complete in every detail and gives a list of all musical people, teachers, professors, clubs, church choirs, colleges, schools, bands, orchestras, and everything pertaining to the history of music in Cincinnati and surrounding cities.

YSAYE AND HIS FAMILY

THE ELEMENTS OF COUNTERPOINT

PERCY GOETSCHIUS, MUS. DOC.

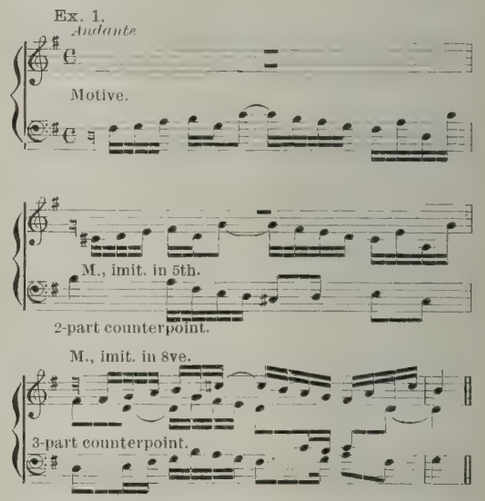
LESSON XIV

The application, finally, of the elements of three-voice counterpoint to the manipulation of a *Motive*, is conducted in practically the same manner as was shown in our eleventh lesson (February issue), with reference to two-voice counterpoint. That lesson should be first carefully reviewed.

The character of the motive is not materially affected by the number of contrapuntal parts employed, excepting that it may be a trifle more serious and rhythmically subdued for three parts than for two. Consequently, any of the motives given in Lesson XI may be utilized here, in slightly moderated tempo, for illustrating the methods of manipulation in a contrapuntal association of three parts.

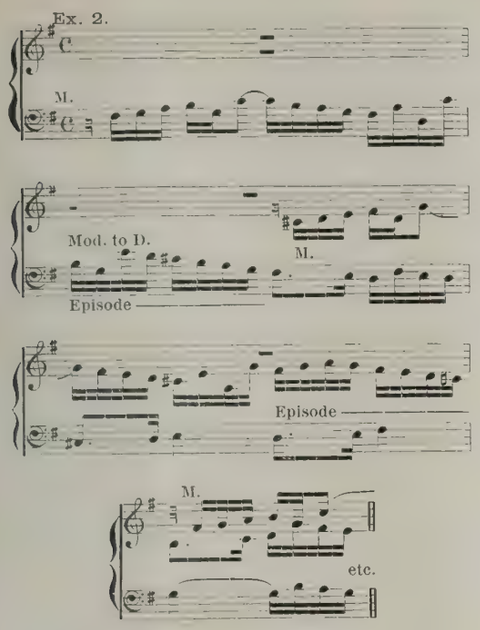
The motive may be first announced in either the upper, inner, or lower part; but its first imitation should follow in the next higher or lower one. The most effective and most frequent practice is to place the first imitation of the motive in the *Dominant key* (that is, each tone a perfect fifth higher, or a perfect fourth lower, than in the preceding announcement). The next imitation (the third announcement) is then made again in the original key, usually an octave higher or lower than at first. During these imitations of the motive, the other part, or parts, continue their melodic movements, as usual, according to the rules of counterpoint with which the student is familiar. For example, with the first motive given in Lesson I, beginning in the lower part: —

Ex. 1.



The motive is first announced in the lower part, and ends upon the accented beat of the second measure. The imitation, assigned to the next higher (inner) part, enters somewhat abruptly, especially as it instantly denotes the change of key — to the Dominant. (There are various ways of avoiding such an abrupt entrance of a new part, when sufficiently rude to require modification; the best of these is illustrated in Ex. 2.) During this second announcement of the motive, the lower part continues, of course, as ordinary contrapuntal associate. The third announcement of the motive occurs in the remaining (upper) part, an octave higher than at first; the two other parts meanwhile run on without interruption, forming an association of three contrapuntal melodies.

The abrupt entrance of the inner part may be mollified by adding two beats to the first part, shifting its final tone to the *second* accent of the measure, and effecting an entrance into the new key; this may be done without injuring or obscuring the motive, if the additional tones are chosen in strict conformity with its rhythmic and melodic character. The result is, simply, to shift the imitation of the motive from the first accent to the second one; this can do no harm, but is possible only in *duple* measure, of course. Such "interlined" beats would come under the head of *episodic* passages (or interludes). For illustration: —



A significant remark made in the eleventh lesson must again be emphasized here; the difference between the three-part counterpoint seen in the third measure of Ex. 1, and the exercises made in the preceding two lessons, may seem to the student to be much greater than it actually is. It is merely a difference in *rhythmic* appearance, and does not involve any essential distinction whatever. Here, also, the vital requirement is to secure some good *chord-effect* (possibly modified by a Suspension or a Passing-note) at the accents; and to lead each of the three parts smoothly and melodiously from one of these chord nodes to the next. To this fundamental rule two others may be added: —

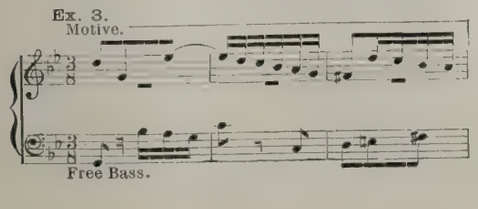
Rule 1. — It is absolutely necessary to restrain the movements of one (or two) of the three parts, in order to avoid rhythmic confusion, and too much commotion; very rarely indeed should all three parts at once run in rapid rhythm (for instance, four notes to a beat); at least one of the parts should move at a much quieter pace than the others, — this may be *any* part, and should frequently interchange with the others.

Rule 2.—Very free use indeed must be made of parallel sixths and parallel thirds.

The validity of these three essential rules may be tested by careful analysis of the three-voice Inventions of Bach. For example, the first ten measures of Invention No. 10; the first six measures of No. 14; the first six measures of No. 12; the first seven measures of No. 8; the first seven measures of No. 3; the first five measures of No. 1.

In analyzing these passages, from the beginning of the three-voice Inventions, the student will observe that the design suggested in our examples (with reference to the treatment of the motive) is followed in a general way, but with considerable freedom. He will notice that Bach usually announces his motive first in the upper or inner part, and that the lower part accompanies it from the start, in somewhat free contrapuntal association; further, that his motives are often longer than the one we have used; and that frequent episodic "interludes" are introduced between the announcements of the motive. The more carefully and extensively the student prosecutes the important study of analysis, the more he will see and learn. After very thorough scrutiny of *all* the three-voice Inventions of Bach, he may venture to extend the present exercise, and write complete Inventions with the given motives of this lesson, or with motives of his own.

In conclusion, we add a manipulation of the second given motive of Lesson II, — exercising a little more freedom: —



Exercise. — Manipulate each of the following motives, in the manner above shown. Each motive three times, beginning first with the upper, then with the inner, and then with the lower part, as first announcement of the motive. The key may be altered, if necessary, to secure the proper register: —

Besides these, manipulate the motives given in Lesson II; and also a number of original motives, closely imitating the form and character of the given models.

THE IDEAL IN EVERYDAY LIFE

The inward enthusiasm which gladdens us, sustains us, lifts us again when we fall, is more necessary than our daily bread. Man lives on the ideal. All of us have need of its sublime grandeur, which, while defying all comparison, yet associates itself with the smallest actions. Do not scorn any lowly labor. The secret of the true life consists in understanding the close relationship existing between that which is so wonderfully beautiful, so highly spiritual, and the things seemingly so small, destitute of beauty and of spirituality.

The words "everyday life" recall the days of the week, the commonplace days, without variety or brightness. Days are not all one like the other. We have Sundays and holidays which have an altogether different aspect from other days. There is a mental condition for holidays; and, having so long been under the Dominican influence, a mood for Sunday, and, in the sweet contagion of hopes which each Sunday reawakens in us, some find the mountain and the forest, the harvest and the flowers, more beautiful on Sunday than on other days. — Charles Wagner, *in Harper's Bazar.*

THE MANSFELDT "TECHNIC"

This office is in receipt of several letters, asking about the technical equipment of Alma Stencel, the young pianist, who has made such a notable success abroad during the last few weeks. It is true that this young girl became well known in Bar Harbor and Newport the summer before she went abroad, and attracted a great many admirers by her remarkable technique. In answer to these inquiries it is only fair to say that Alma Stencel received her entire technical training at the hands of Hugo Mansfeldt. This course is obtainable from Leo. Feist, who has published the Mansfeldt *Technic* in four parts. All artists and teachers who have seen the work unite in saying that it is the most remarkable exposition of technical details ever put on paper, and that it is thoroughly in keeping with the most modern demands in this direction. In short, it is possible to teach this method from the work itself, which puts it within the reach of those living far from musical centres to acquire sufficient technique, so that when they come to the large cities for the study of music, it will not be necessary to overthrow all that they have done in that direction. The Mansfeldt *Technic* is well worth the investigation of teachers, not only for the pupils, but to keep up their own agility and flexibility. — *The Musical Leader and Concert Goer*, Chicago, Ill.

THE SECRET OF LONG LIFE

Sir James Sawyer, a noted physician of Birmingham, England, has been talking recently to an audience in that town on longevity. Its secret, he thinks, lies in keeping the nineteen commandments following: —

Eight hours' sleep.
Sleep on your right side.
Keep your bedroom window open all night.
Have a mat at your bedroom door.
Do not have your bedstead against the wall.
No cold tub in the morning; but a bath at the temperature of the body.
Exercise before breakfast.
Eat little meat, and see that it is well cooked.
For adults: Drink no milk.
Eat plenty of fat, to feed the cells which destroy disease germs.
Avoid intoxicants which destroy those cells.
Daily exercise in the open air.
Allow no pet animals in your living-rooms; they are likely to carry about disease germs.
Live in the country if you can.
Watch the three D's: drinking water, damp, and drains.
Have change of occupation.
Take frequent and short holidays.
Limit your ambition.
Keep your temper.

CARUSO'S STRENUOUS FAREWELL

Signor Caruso made his official farewell for the present season on the stage of the Metropolitan, but his last parting was saved for the last matinée, when, in frock coat and silk hat, he marched up and down the corridors. Strange women brought programs, photographs, librettos, and visiting cards for him to sign. During the intermissions he had not time to put his pencil back in his pocket. The news that he was distributing free autographs spread through the opera house and women climbed down from the galleries to get them. Every kind of paper was in demand. Otto Weil declares that one woman got an autograph on a transfer slip. Many were written on coupons. It was only before the last intermission that the friends of the tenor, reminding him that he had to sing that night in a private concert, persuaded him to go home.

THE MISSION OF MUSIC

FRED R. COMEE

I

Like opinions on most any topic of general interest, judgments on the mission of music have been, are now, and always will be as unique as individual bias, leaning, "broughten-up," or prejudice can make them. As our familiar old Dickens friend, Reginald Wilfer, would say, far be it from us to decide between the right and wrong opinion, the good or bad idea; but rather be it our province to touch lightly yet honestly on both high and low places in the musical scale as we find it to-day.

Many of us find an exquisite happiness in the angelic voices of the boy choir, yet it is not a far cry to the guilty conscience which stifles, though it cannot stop, its stings with the seductive song of the siren. The selfsame melody so gloriously declared by an operatic queen, marvelously seconded by a perfect orchestration, wins boisterous cheers when shouted with just enough coherence to pass muster at a college class dinner, and who among us shall, forsooth, dare say which atmosphere, everything considered, gives the greater measure of enjoyment?

The greatest musical genius, the marvel of a century, worshiped almost to hysteria by maids and madly cheered by men, can never resist the financial fascination of having his or her photograph sold at the door. It is a rare and gloriously isolated artist who by playing Beethoven as Beethoven meant it foregoes the applause easily won by forced climaxes, overdrawn sentimentalism, and other exaggerated readings.

One of the sweetest singers ever endowed with a heavenly voice always allowed the three other members of his famous quartet to precede him to the stage, that his oncoming might stun the groundlings with its solitary stateliness. The tenor, whose name and fame was world-wide, dared for dollars to crack out broken notes in a doting age suited only to the shelf. A woman old enough long ago to know better shouted her rôle in the costume of a queen, for a fee, forsooth, adequate for her royal highness. Another operatic star, whose youngest son was older than Romeo, sang Shakespeare's immortal lover to a Juliet acknowledging a daughter with six children. Yet so magnificent is the mission of music that its lovers gladly close their eyes to all this glaring inconsistency and still find their fill of frenzied enjoyment.

II

The boy soprano, who for a few brief years carries his listener very close to heaven, becomes in manhood, mayhap, the baseball umpire with lungs of leather. The baritone in the village choir may varnish chairs week days, and the bass viol, who at once plays for and "calls off" the Saturday evening dance, quite likely mopped and waxed the floor as janitor. The "barker" at the entrance to the itinerant minstrel show, when his face is blackened for business, becomes the interlocutor and sings *Down Deep in a Dark Cellar*, or dear old *Robin Ruff*. The B♭ cornet and leader of the brass band, the town's one and only pride, utilizes his embrochure between parades in blowing the sawdust from a wood-turning lathe.

Italy, so prolific of great artists, sends us a singer, one of a thousand, with a noble voice quite enough for three; yet, though he sings so like a god as to be more than independent of a claque, there's a glut of garlic in the horde of his hired countrymen, who the untutored think want a speech when they shriek again and again the sibilant *Bis*. But for such a voice one would gladly smother in an onion bed, so long as only the sense of hearing was left

It is indeed difficult for a conductor of a great orchestra to enthuse over the tinny twang of a Neapolitan band unanimously acknowledged the most popular attraction of an always crowded café. Yet give this same band the chance to hear the exquisite *ensemble* of the unrivaled organization led by this supersensitive critic, and how gladly they both forgive and forget his ill-concealed disgust at their own performance. The breathless boy pumping the leaky organ cries sooner over the wasted wind than the *Lost Chord*, and the most passionate devotee of melody who wants to sleep in the morning curses discordantly at the street organ playing his favorite tune.

So even Music, divine, gloriously sweet, all potent as she is, perverts her mission when unfortunately inopportune.

At a funeral, where the mixed quartet sat with the relatives next to the remains, the tenor, nervous and ill at ease, for want of something better to do picked up a photograph album which on opening it played *Yankee Doodle*. With no earthly way of checking the national air, the desperate vocalist at last threw the jingling nuisance out on the lawn, where its mission to amuse was harmlessly wasted.

We suppose the man or woman who sings well and feelingly enjoys the pleasure given quite as much as the listener; but what shall we say of the wretched singers who surely do not, cannot suffer the torture they inflict, else obviously they would not sing? And what retaliation can be suggested? Critics, hated mortals that they are, even though they but tell the truth, cannot daunt musical mediocrity by their caustic comments, for the fatuous praise of one fond parent easily offsets a dozen critical condemnations. To tell offending amateurs they do well is a crime all the more heinous because there is no punishment which fits it. Yet who of us has never heard our host's daughter, the family pride and prodigy, jangle the *Bluebells of Scotland*, and then calmly complimented while inwardly cursing the child, especially if the offense was committed just before or after an excellent dinner?

It was once our personal experience to sit in the same box with one of the best-known musical managers in this country, temporarily in a Western city, at one of the concerts of the local symphony orchestra. With just enough endurance to stay through two selections, our impresario sweetly said to the two principal guarantors whose guests we were: "That, gentlemen, is as perfect *ensemble* playing as I ever heard." Then escaping *allegro vivace*, the selfsame hypocrite, truthful at last when outside, muttered: "The worst ever!" Obviously, the mission of such music was to develop the art of diplomacy.

III

To every age and period there comes an air or tune which, by the very magic of its melody, sweeps men onward and upward to deeds of glorious daring, or steels their nerves to smile at torture and even welcome death itself. How varied the range of these tunes of the times from the mighty *Marseillaise* to *John Brown's Body* and the weirdly fantastic *Dixie*. And how many a father, son, or husband has been swept away from home and those he loved to the hardship and horror of war by the blood-tingling magnetism of a superb military band.

Whistling, especially by impromptu, self-elected composers, is often ear-splitting and wearisome, yet who ever heard a man with the "blues" whistle? Almost everybody is familiar with the pertinent inquiry of our most unctuous American comedian, when serenaded by a somewhat seedy quartet: "Say, gentlemen, can't we compromise this in some way?"

Nowadays the trend of American sympathy is toward the Japanese, for three obvious reasons: they were "the under dogs," at least when the fight began, Russia is rightly or wrongly supposed to be harsh to her women, and the popular sentiment that personal liberty of action, thought, and speech, is sacred and dear to mankind. Yet, somehow, one wishes a Jap could or would compose another Pathetic Symphony or bring forth a second Rubinstein, for the mission of either would be a holy one, beginning, above all, at home and spreading the world over. And is it not significant, even strange, that Japan can furnish exquisite art and atmosphere for homes, plays, or operas, yet never the music?

Music must take its share of the inevitable iron-clad law of averages, and the joyous notes of the song-birds on a bright morning, laden with the sweet odors of early spring, has its negative in the doleful chirp of the cricket on a dark summer's night. There is also the familiar fashion of a dirge to the grave and the military march home, though there be some, we know, who "soldier" so selfishly they deserve the quickstep both ways.

For many years an organist friend, with a keen love of fun, played as the voluntary in a village church *Yankee Doodle* so distempo-ed, that not until a critical ear detected his deceit was he at last exposed.

But let us wander away from this lighter vein to as grand, imposing, and overwhelmingly beautiful spectacle as the world has ever seen. From stately Trinity Church, not so many years ago, was buried a great, yet humble, man. With the solemn, sad edifice packed to suffocation, thousands stood in the public square to pay sweet, reverential tribute to the glorious dead. Of a sudden, a trumpet pealed forth the simple melody *Nearer, My God, to Thee*, and now with one accord every man, woman, and child in the vast throng, with bared heads, sang tremulously, yet true, the dear old familiar hymn, until one magnificent volume of melody rose triumphant to God Himself. Such a reverence, such a spontaneous tribute, no monarch on earth could ever dare hope to win. Yet he who so received this rare recognition wore no crown save the halo of a Christian gentleman and a lieutenant of the Lord.

(*Continued from page 226*)

a repetition of careless preparation, and by looking at the pupil's daily life, one would see ill-prepared school lessons, untidiness in dress, etc., and with maturity there is always the haphazard living which is the culmination of badly formed habits in early life.

The lazy child may not always be unmusical or careless, but through lack of physical stimulus never exerts energy to prepare his lessons. Great care should be taken before attributing the seeming indolence to laziness, for oftentimes the child is chronically unwell, and if such is the case, one should be very careful before judging.

The really lazy pupil can readily be detected, for there is always the degree of shiftlessness; and the foregoing subject (heedlessness) can usually be included in the temperament.

A source of annoyance to many teachers is the child who is disrespectful and discourteous, and one is often brought to a point where it seems impossible to keep the temper. This child at home is ungoverned and answers back to his parent with impunity.

A teacher should never lose control in such a case, but should overlook this lack of culture, and by his own actions and manner instill in the mind of the child a sense of complete respect, and though it is never given elsewhere, the teacher will always have it shown him.

A peculiar subject is inherited tendencies. By analyzing both children and their parents one will find there are closely allied traits. A child taking lessons was unable to count evenly, but would always hurry the time so that there would be no sense of rhythm. He discontinued study, but the mother took it up and the same difficulties were presented in almost the exact form.

Children who talk freely during the lesson will be found to have a parent with a large amount of conversational ability.

Affectation is indulged in to an extreme in piano playing, and even among men pianists this is very noticable. Girls who are affected in their playing are also affected in conversation and manner. Men who indulge in mannerisms at the piano are usually effeminate or foppish, as their dress and actions will testify.

As before stated, any intelligent teacher will never become discouraged by meeting any difficulty in the way of adapting himself to various natures. Instead, it proves a very interesting psychological study.

MISDIRECTED EFFORTS

"BLACKBOARD"

I

It has been said that in the musical brotherhood there are no longer any amateurs, but it must have been a hopeful spirit indeed that fathered the remark. The United States is dotted over with towns and cities where the species is still active, and even aggressive. The never dying problem before the majority of piano teachers is to turn out amateur players who are also musicians; so to train those who cannot be described by any other term that it may lose the derogatory flavor that it undoubtedly carries with it now.

In places where there is no musical "atmosphere," where the yearly concerts, ranging from brass bands to song recitals by singers with a past, may be numbered on the fingers of one hand, pianists may be divided broadly into two kinds: those who play nothing that is not "classical," feeling that whatever Shakespeare may say to the contrary, a rose does not smell as sweet by any other name; and those who never play anything but popular music. The latter class, of course, can only be ranked with the misguided people whose reading lies solely among the "books of the day, the week, the hour." They do nothing to raise the standard of cultivation, though as they are for the most part very obliging, at least they contribute something to the general amusement. The former appear to me in the light of musical Pharisees, who are very superior to the common run, but who do not promote musical intercourse simply because they present such an unyielding front to the vast army of music lovers, who may be inclined to bestow their affections on unworthy examples, but who are apt to be a trifle restive under too much instruction. Both kinds are unequal to the demands of their public. What real enjoyment is there in a party of amateurs gathered together for the purpose of playing their carefully prepared "pieces" before an audience of friends and acquaintances? The mind of the player is so concentrated on technical perfection in her performance by rote that a note or two missed by the trembling fingers is sufficient to destroy her composure, and her hearers are infected with her nervousness. If a singer needs an impromptu accompanist, there is rarely a volunteer; and if the key is too high or too low, and transposition would remedy matters, it is either out of the question or so boggled over, no matter how simple the harmonies, that the listeners become of a mind with Dr. Johnson's famous retort when a lady told him the piece she had just played was very difficult, "Would to God, Madam, it had been impossible!"

II

Observation, both as student and teacher, has led me to think this state of affairs can be improved by the application of common sense to the teaching of music as to other branches of knowledge; as far as my experience goes, the cart is generally put before the horse. Undue attention is paid to the acquiring of facility, while other things, equally necessary to musicianly playing, are slurred over. After the usual six or seven years of music lessons the pupil ought to be at home in the handling of the different keys; the feel of the keyboard, the sound of the chords, should give her confidence as a life-buoy does the "man overboard," whereas it is not so.

By way of analogy, consider the way in which a foreign language is studied. Under ordinary conditions no one expects to speak it intelligently without knowing something of its grammar and construction, without learning to write and translate. These are the great foundation stones of speech, which follows with practice. In the case of music, the entire framework, Harmony, and Theory, Transposition, Writing, How to listen to Music, is left to be learned at the fag-end of one's education. Is it not a very frequent experience, that when the ambitious, hopeful student journeys at great cost to one of the big musical centres to be finished, polished off, as she supposes, the horrible truth slowly dawns on her that her technique is not only insufficient, — that could be remedied, — but so full of faults that it has to be remodeled painfully, while her theoretical knowledge is *nil?* My serious opinion is that in the musical education of drawing-room musicians technique can be postponed with less dread of consequences than any of the other branches. Give your scholars an insight into the glorious inspiring possibilities of music, and they will themselves compass the means. Let them, early in the game, realize that music is not a ready-made article bought at so much a page in shops, but that they themselves can compose it of a sort; that the materials of the great masterpieces are there to be used by them also, though the genius that put them together may be missing. Show them how to change arpeggio passages to chords, and *vice versa;* give them the beautiful old melodies that have sung in the hearts of generations, folk songs with historical associations, and encourage them to make their own accompaniments. Teach them to criticize their efforts by the sound, and prove them by writing them down. If done on a blackboard, helped by the teacher's explanations, the children are always willing and interested.

III

The chances are ten to one that they will make for themselves the discovery that technique is the outward and visible sign of all these delights, and they will give with eagerness the time necessary for its cultivation which many a teacher has found was not rendered in obedience to her exhortations, entreaties, or scoldings. In this method of procedure there is also less room for those sins of omission and commission that are almost irreparable in the case of technique, because the teacher can be guided in it by books; whereas technique cannot be required by industry alone, but requires careful personal training, which very often the teacher has not had herself. It undoubtedly requires more thought and concentration on the part of the teacher than the old-fashioned way, but it carries with it this compensating advantage, that a business which has a tendency to degenerate into the most nerve-wearing drudgery is transformed into a study full of intellectual fascination, which interests the children, equally with oneself, and instills into them from the beginning a love for their art, based on understanding. Then with this firm comprehensive foundation, they will be in a position to attain higher technical levels under some master of note; or, if Fate is against them, and their lessons cease with their school days, they will still be able to make of music, for themselves and others, a hardy growing plant, with tendrils that twine their way through all the affairs of life, merry or sad, instead of the carefully nurtured exotic that it now too often is.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

THE FUNDAMENTAL PRINCIPLES OF PIANO TECHNIQUE

A. D. JEWETT

I

Anything to be fundamental must be "serving for the foundation," and the fundamental principles of piano technique must be those upon which rest the whole superstructure. Furthermore, the absence or weakness of the foundation makes the superstructure, however elaborate, practically valueless. Hence follows this fact — that as artistic piano playing demands a good technique, every successful piano virtuoso has, whether knowingly or not, built upon the right fundamental principles. It only remains to learn what they are, and go and do likewise.

I do not mean to say that having acquired good technique, one will become a great virtuoso, for much more is needed; but I do say that one will not be a great player or even get above mediocrity unless one has a good technique.

The musical world is full of earnest students of all ages and years of study, who are working and praying for the ability to express by piano playing their love and knowledge of music. They have not the power to do this because they have not worked intelligently, not knowing what the principles were or how to acquire and apply them.

You and I meet these people every day among our friends, and possibly our pupils. They are musical, we feel sure of that — they show it by appreciation in many ways. We do not care to hear them play — we do not want to hurt their feelings, so we say pleasant things to them, but we do not ask them to play.

It remains for this day and generation to get down to business, and know and teach those principles step by step that shall lead out of this "slough of despond," and I leave it to you if the fundamental principles from and upon which we must build are not

1. CONDITION.
2. POSITION.
3. ACTION.

II

By CONDITION I mean such a state of muscle and nerve control that shall allow us to use any one or more muscles without the involuntary tension of other muscles. Both velocity and good tones are necessary, and wrong condition is fatal to each. Watch the cat as she lies by the fire, a perfect picture of repose, and again when on the point of pouncing upon a mouse. Is repose any the less apparent then? By no means; it is simply repose in action, and becomes control. We had this repose once — in infancy; but years of growing self-consciousness have done their best to rob us of it, and we must get down to rock bottom and know that it is ours now, and only needs the proving.

Do not think because you can wiggle the wrist in a lively manner that you necessarily have good condition. The writer remembers one pupil — a teacher of some twenty years' experience who, at the first lesson, vouchsafed the following: "You see my wrists are perfectly free. I have always worked for that," and thereupon began shaking the hand violently to prove it, and the writer also remembers that it took three weeks to get that teacher to realize, even in a remote degree the first rudiments of the knowledge of condition, and much longer before that teacher could drop the arm naturally, for the reason that the larger muscles in the upper arm, upon which condition so much depends, had formed habits of muscular tension very difficult to remove.

It is usually a fact that a pupil appreciates the subject of condition more after a few weeks of conscientious thought and application than when first brought to a consciousness of the lack of it; and I guarantee that nine tenths of the piano students would find this lack at the bottom of their difficulty.

III

POSITION does not mean simply the position of the hand, but the large subject of position in general, — the position at the piano, the general rule of which is to sit so that the knees come just in line with the edge of the piano; the height of the chair so that one should be neither too high or too low for an erect position of the body. In fact, it is necessary to know all points in the subject of position, taking that position that shall give every possible advantage to all playing members. We often hear, "Why, I simply take a natural position." All right, that is proper, but be careful to differentiate between natural and habitual. I have seen many a player struggle to do the impossible thing — impossible because he had mistaken habitual for natural.

The natural position of the hand for piano playing is the position that gives every advantage to each finger. Equality of finger action is one of the first steps in piano technique, and the position must be such as to allow the fourth and fifth fingers, which are usually less developed from the start, an equal chance with the stronger ones. We have not habitually held the hands over the piano keys for this purpose, and consequently it requires some diligent practice before we find it a perfectly natural position. The muscles of the forearm are the ones to look after in this, for the elbow must not be stuck out and the upper arm must hang easily.

It is a mechanical principle that the point of action should be the highest point; therefore, as we take hand position that we may have finger action, the knuckle joints should be slightly elevated; this is a general rule, —just how high is specific, and it depends upon the individual hand. As the thumb has to act up and down by the side of the hand from the metacarpal joint, it is necessary that it should be well rounded out at the other two joints. It is certainly not habitual for most people to do this, but it is a perfectly natural position for piano playing when we have done the needed work to make it so.

IV

A more or less perfect welding of these two principles — Condition and Position — is necessary before introducing the third — ACTION. Accuracy always has a tendency to upset conditions, and a condition of suppleness as naturally militates against accurate position; but when it is possible to take a perfect position of the hand and at the same time to realize in some degree right conditions, it is safe to take up the study of Action.

One of the first things to learn in Action is to decide the point of action, and to see that action at other points is suppressed — in other words, to see that there is no involuntary action that shall spoil the desired effect of the voluntary action. Involuntary action at a smaller joint weakens the effect, at a larger joint completely absorbs it. For instance, in finger action the knuckle joint is the acting joint. If there be action at the second or third joint, and yielding of the third or lowest joint of the finger (a common fault), the effect of the proper finger action is weakened and a meaningless tone results; if the wrist is allowed to act, the whole action immediately deteriorates into the pernicious punching of keys so usual among young students and amateurs in general.

Another important point in finger action is that there must be some definite moment of action, and as an antithesis, a definite moment of rest or cessation of action. This is necessary for two reasons; first, for the quality of tone produced, and secondly, and especially, for velocity. Unless each finger action is quick and prompt as a unit, it certainly will not be in the aggregate. The muscles that lift the finger must be drilled to do as accurate and quick work as the muscles that make the attack of finger action — they must properly balance. Finger must rise quickly and with perfect control, and have its moment of quiet in the air, and the drop of the finger must be also decisive and with right condition, — action only at the knuckle joints.

The principle of Action must in no way disturb Condition and Position. Remember, these are fundamental principles, and it would be folly to build a good foundation simply to destroy it when you come to build higher. Know that each succeeding step is built upon and embodies these

foundational principles, and if there is any doubt, go back and look over every step and prove its security.

Can this be done successfully at the piano, playing exercises and tunes? Yes, for it has been done many times, as the many artists of the past prove; but history also proves that it is only a chosen few that have been successful in this way, and the path is strewn with wrecks. The wiser way is to get away from the piano, leave it alone — sit down to a table — use your brains — know that you have made these foundational principles a part of yourself, and be wise enough to apply them in piano playing.

THE MINOR MODE AS RELATED TO MUSICAL ART AND PEDAGOGY

W. S. B. MATHEWS

The criminal neglect of the minor mode is, perhaps, next to neglect of ear training, the most serious defect in our elementary teaching of music.

My reason for this seemingly too strong indictment of current pedagogy is primarily the place which the minor mode holds in the higher art of music — in the *musical* art of music. It is a curious fact that while theorists every now and then tackle that same old file of "perfect intonation," as distinguished from "temperament," and assume that what all music has in mind as an ideal is that of a purely attuned chord (major triad) in which all tones are harmonious with the fundamental, the creative artists do not seem to have any such ideas.

It is not so recognized in books of theory, but it is fact, nevertheless, that the minor triad itself is a dissonance, a self-contradiction, in which the very expression of the harmony turns upon the fact that its third does not harmonize at the same moment with the root and the fifth. It is capable of harmonizing with either, but not with both at once. In the minor triad of C, for instance, C-E♭ generates an A♭ below as root; E♭-G generates an E♭ below as root; C-G generates a C below as root. The chord is therefore contradictory. Yet we accept it as a workable triad of C, in the minor mode. Thus the minor triad has been in fact the door through which dissonance has entered into music, and the minor triad is the great ground type of all dissonance.

Moreover, so far are creative artists from desiring the unrestricted harmoniousness of major triads exclusively, or even as largely predominant elements in their music, they delight in the minor mode, and in fact have composed their most soul-moving music in this mode. Not alone the high-strung, almost hysterical, music of the modern school, but even the old composers, such as Bach and Beethoven, wrote more pieces in minor mode than in major — not only more, but also their greatest. Mendelssohn, as we all know, commenced his career by giving in the fairy music of the *Midsummer Night's Dream* his own instinct of the elfishness, fantastical and temperamental possibilities of the minor mode. In short, great art without the minor mode is impossible. Hence to neglect it all through the early education is to leave the student at odds with the most significant and far-reaching element of the creative musical art. It is also the element along which music has progressed in its way to its latest achievements.

It was news to me, lately, to find that the theorists themselves do not even define what they mean by "mode" in music. Almost without exception they take the minor for granted, and neither take the trouble to characterize its wonderful possibilities, nor even define the word itself. Creative artists go on composing in minor modes, using even to this day three different minor scales, and nobody supposes it necessary to explain what this is which they are continually doing.

To the average teacher it seems enough to recognize that children generally are averse to the minor mode; therefore we leave it until that musical "to-morrow," — which they never reach. As for this objection to teaching the minor mode, it explains itself. Children are not taught to listen to music, nor what to listen for. As soon as they begin to study the minor, from a harmonic standpoint, it becomes very interesting to them; in our own school, where the Dingley-Mathews second-year work occupies itself with the minor tonalities exclusively, this part of the course is regarded as far more interesting than the first year, where the major tonalities exclusively are studied. It comes back to St. Paul's argument, "How can they hear when they do not know how? And how can they know how when they are not taught?"

Here is one place where melody study has much to answer for. The vocalist's idea of minor, and the sol-fa handling of the minor as being exclusively a scale of La, give a limitation to the minor mode which it does not deserve; a limitation which no good composer recognizes; a limitation, moreover, which is contrary to harmonic feeling.

What then do we mean by mode in music? I begin by calling attention to the fact that the two words mode and mood are closely allied in history, but that while the form mode means a method of arrangement (as "mode" in clothes), mood means a mode of psychic arrangement — a disposition or state of mind. Now the minor mode in music is the relation between the scale-tones and the tonic. There are two modes in modern music, major and minor. The names are given from the fact that in major mode the chord of final repose is major; in minor it is minor. Many other differences there are between the two modes, but the foregoing are those upon which the name turns. This distinction also is the one which influences the characteristic color of music in the minor mode or major.

As we actually find it in our best music, not only does the minor mode vary through no less than three scales,— the natural minor, the harmonic, and the melodic,— but it varies still more in its harmonic relation to the ruling key of the movement. The vocal expectation that the minor is going to be the relative minor, the natural scale of La, of the same signature, is by no means borne out in our best music. Beethoven makes great use of what we now call the "tonic minor," — *i.e.*, the minor mode of the same tonic. This occurs very frequently with him, and the resulting melodies are always melodies in which Do is the tonic, even when the tonic triad is minor. The harmonic bearings do not change, but simply the tonic triad, and perhaps the subdominant triad, are taken minor. This musical caprice is a thing to hear when the music is played; to be able to write from having heard it; to write from simply having conceived it, as the composer conceived it.

The transition into the relative minor is a modulation, and carries the effect of modulation in changing the harmonic bearings. As for the uses of the natural minor and the melodic minor, they have often the force of dialect, as when Grieg uses the natural minor with supporting harmonies. This, however, is not from any reason in the nature of things, but it is a result of ear habit.

From a standpoint of musical logic, the natural minor is even more coherent within itself than the harmonic minor in our modern music. In the natural minor all the three principal triads, the tonic, subdominant, and dominant, are minor, just as they are all major in the major mode. But for the sake of a better repose, our modern art has preferred to make the dominant major, although we no longer find it necessary to close a long movement in the minor mode with a major chord, of the tonic, as they always did before Bach, and in the organ fugues of Bach he also does the same. I do not know why he did this in his organ music and not in his piano music, but I think it will be found that he does make this difference.

Thus when we take up the minor mode we have three different scales to deal with; we have signatures which correspond with those of the relative majors; and we find minors continually occurring by arbitrary change from a major tonic upon the same tone.

On the whole, perhaps the best way of teaching children the minor mode is to leave it until they are familiar with the major mode, — that is to say, with really good teaching, they ought to know all the major scales, to read, play, hear, or write, and all the triads of all the major keys, at the end of the first year of instruction; or if this be "too sudden," by the end of the first eighteen months. They will not do this unless there is a system to make them do it; but such a system has been in existence a long time now, and practically working. This training also included hearing correctly all chord successions of triads entirely within the major keys; to hear the color of the chord and to know certainly its place in key by its sound as played in connection with the remaining part of a harmonic phrase.

When it is possible to begin the minor mode after such a foundation as this, perhaps the best way might be to introduce the three different scales at once. Or the natural minor might easily be built up by taking the three triads minor. For instance, with C as tonic, the triad of F minor (F-A♭-C), triad of C (C-E♭-G), and minor triad of G (G-B♭-D). When these three triads are superimposed, that of C standing upon that of F, and the G triad again upon that of C, and the tones reduced and brought back within the octave, we have the natural minor scale of C, namely, C, D, E♭, F, G, A♭, B♭, C. This is a scale of La, unquestionably; and its signature may be found from its Do, or may be taught straight out, which is perhaps the better way. The natural minor scale is that which entirely agrees with its signature.

I used to give a rule of thumb to assist memory of minor signatures — that the minor mode has three flats more or three sharps less than the major of the same tonic. The minor of F♯, for instance, has three sharps less than the major of the same tone — six sharps major, three sharps minor. The minor of G drops the sharp and adds two flats, and so on.

Next, to get the harmonic minor, raise the seventh degree a chromatic half step from what the signature requires. For instance, C minor has B♭ in signature, this becomes B natural, and in reciting I make it important to mention the natural, because I want it remembered and expected. This seventh is always an accidental, when the key occurs with its own proper signature.

The melodic minor uses a major sixth, as well as a major seventh — raises the sixth as well as seventh — both in ascending and in descending. The usual way of descending with harmonic minor produces not a true melodic minor but a mixed scale, melodic in ascending, harmonic in descending. The trick of descending by the natural minor is also a mixed scale, melodic in ascending, natural in descending.

When the scales (the three of them) have been so taught that the pupils can recognize each kind by ear, play each kind upon any tonic, write them correctly, then a systematic training would go on to familiarize him with the harmonic contents of the harmonic minor, in such a way that he can hear all possible progressions of triads within the key, and this training, we find, makes the pupil much more certain in his hearing of chord successions in the major mode.

A later development of this training is to take up the question of modulation, to be able to hear and note modulations from major to relative minor and *vice versa*, from major to tonic minor, from minor to tonic major, and all the usual transitions into the subdominant, dominant, relative minor or major, and to the major third below. When a student can hear these relations as the music passes him, he is well along towards being able to follow and enjo musical discourse.

That this form of primary education involves no hardship, but on the contrary an increase of pleasure, I have formerly pointed out. Also, perhaps, I mentioned the case of a third-year boy of eleven, supposedly without musical ear at beginning, who remarked concerning the Brahms Rhapsody in B minor, which occurred in the playing meeting as an incident, without any explanation or emphasis, that he thought he liked it; especially what he thought to be a trio, in the tonic major, at least it sounded to him like tonic major. Anybody who will go through this piece and observe Brahms' habitual vagueness of tonality will see that any eleven-year-old boy, not gifted with musical temperament or musical ear, primarily, who gets this impression from that charming middle piece in B major, has learned a part of the art of listening to music which many alleged "musicians" still lack.

And whether the pathway follow the stakes I have here set down, or other and better ones, does not matter. What we are after is to make sure that music pupils are introduced to the musical qualities of the wonderful minor mode, and introduced early enough to lead them to appreciate those sacred things in music which too often elude them.

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

FORTISSIMO ORGAN PLAYING

There is a tendency with many organists to be too profuse in the use of the Full Organ in recital. When a classical fugue is on the program all the stops are drawn and the brain is soon excited into a whirl of confused sounds. There is a limit to the ear's appreciation of the volume of tone, apart from any esthetic consideration. How soon the listener wearies of fortissimo orchestral passages if the trumpets and trombones are in force for too long a period! How great the relief in the return to delicate shades of expression in which the quieter instruments revel!

The place for the Full Organ is in climactic periods and phrases which give a sense of grandeur by the contrast and crescendo, but it is not good taste to include too many loud pieces in a program, nor to execute fugal compositions with every stop drawn. Even in accompanying congregational hymns or a large chorus, the Full Organ should be modified to prevent a blaring monotony. There should always be a well-poised balance of organ power in gradations of strength, and this is one of the first essentials in the study of registration, in which articulate expression should be the desideratum, reserving the full power for effective climaxes, and the quieter stops will then show forth their beauty.

AN ASTONISHED MINISTER

A contemporary relates the following incident in an organist's experience: —

A new clergyman was coming to officiate on a certain Sunday, and the organist, a young lady, was very anxious to make a good impression. The organ was blown by a somewhat self-willed old sexton, who had his own idea how long a voluntary should last, and was in the habit of leaving off blowing when he thought there had been enough music.

On this particular Sunday the organist determined to forestall any such accident by writing a request at the outset. So as she took her place at the organ she handed her note to the blower, expecting him to read it and govern himself accordingly. But he, supposing it to be intended for the minister, hastened off. In spite of her frantic beckonings, he carried it to the preacher, whose eyes opened with astonishment as he read these words: "Oblige me this morning by blowing away till I give you the signal to stop."

CORRESPONDENCE

A HELP IN IMPROVISING

G. F. A.

"Is there any book published which will lead a young organist into correct methods of improvising?"

Novello & Co., of New York and London, publish an *Extemporization Primer* by Dr. Sawyer, which will aid you if you study it thoroughly. You can order it from the publishers of THE MUSICIAN.

COMPARATIVE VALUE BETWEEN A TWO AND THREE MANUAL ORGAN

E. G. C.

"We are intending to make an investment of $6000 in a new organ. As a committee we are undecided on the question of having a two or three manual organ, and would esteem it a favor if you would publish an outline of a specification of speaking stops of both a two and three manual organ which would be well balanced, using only such registers which would always be in tune with each other. for the amount mentioned. The organs should have all the modern improvements in mechanism and accessories. We should also like to have your own opinion of each in comparison, and to have you state what advantage there would be in having a three-manual instrument over one of two manuals?"

The comparative capacity of each instrument will thus be seen: —

TWO MANUALS		THREE MANUALS	
GREAT		GREAT	
16 ft.	Tibia Major	16 ft.	Tibia Major
8 "	First Open Diapason	8 "	Open Diapason
8 "	Second Open Diapason	8 "	Viol d'Orchestre
8 "	Viol d'Orchestre	8 "	Doppelfloete
8 "	Dulciana	4 "	Octave Diapason
8 "	Doppelfloete	4 "	Concert Flute
8 "	Melodia	SWELL	
8 "	Quintatoen	16 "	Bourdon
4 "	Octave Diapason	8 "	Violin Diapason
4 "	Concert Flute	8 "	Salicional
4 "	Octave Gamba	8 "	Aeoline
SWELL		8 "	Stopped Diapason
16 "	Bourdon	8 "	Quintadena
8 "	Violin Diapason	8 "	Oboe Gamba
8 "	Salicional	4 "	Harmonic Flute
8 "	Aeoline	4 "	Violina
8 "	Stopped Diapason	2 "	Flageolet
8 "	Quintadena	CHOIR	
8 "	Oboe Gamba	8 "	Geigen Principal
4 "	Harmonic Flute	8 "	Dulciana
4 "	Violina	8 "	Melodia
2 "	Flageolet	8 "	Saxophone
PEDAL		4 "	Flute d'Amour
32 "	Sub Bourdon	2 "	Piccolo
16 "	Open Diapason	PEDAL	
16 "	Violone	16 "	Open Diapason
16 "	Piano Sub Bass	16 "	Violone
16 "	Bourdon, augmented	16 "	Bourdon
16 "	Octave, augmented	8 "	Octave, augmented
8 "	Violoncello, augmented	8 "	Violoncello, augmented
8 "	Unison Bass, augmented	8 "	Unison Bass, augmented

In the contrasted specifications, it will be perceived that the Swell Section of each has the same musical capacity, and that the Pedal Section in the two-manual scheme has the greater value. In the three-manual outline, the Choir Section coupled to the Great would give about the same relative power as the two-manual instrument.

The advantage of a three-manual organ in comparison, is in having the use of the Choir stops in readiness for combinations which may be set so that contrasts may be made in power without changing the stops of the Great Section. In itself alone, the Great Section of the two-manual organ when full, is superior to the three-manual organ.

The 16 ft. Tibia Major is a full-toned stopped flute tone register which adds much dignity to the organ, and is even more effective than a 16 ft. Open Diapason, which would add $300 to the price of the organ. Its chief advantage is in giving twenty-nine or thirty pipes for front display pipes, especially the large pipes of the lower octave.

HE OBTAINED THE SITUATION

Sir William Herschel (1738–1822), the eminent astronomer, was a professional musician in his early years, and soon after he came from Hanover in 1759, he applied with six others for the post of organist in Halifax, England.

In those days there were no pedals to English organs, and the manual keys extended down to GGG below the present CC standard. A new organ had been built for a church in Halifax by Father Snetzler, and among the candidates was a noted local organist from Manchester, Mr. Wainwright.

The organ was of unusual power for those days, and when Mr. Wainwright played upon it in his accustomed style, old Snetzler exclaimed frantically:—

"He run over de key like one cat; he allow not my pipes time to speak!"

During the performance, a friend of Herschel asked him what chance he thought he had of obtaining the situation.

"I don't know," said Herschel, "but I am sure that fingers will not do."

When his turn came, Herschel ascended the organ-loft and produced so uncommon a richness, such a volume of slow harmony, as astonished all present; and after this extemporaneous effusion, he finished with the Old Hundredth Chorale, which he played better than his opponents.

"Ay! ay!" cried Snetzler, "tish is very goot, very goot, inteet; I vill luf dis man; he gifs my pipes room to speak."

Herschel being asked by what means he produced so full an effect, replied, "I told you that fingers would not do," and taking two pieces of lead from his waistcoat pocket, said, "One of these I laid on the lowest key of the organ, and the other upon the octave above; and thus, by accommodating the harmony, I produced the effect as with another hand."

This superiority of skill, united to the friendly efforts of the celebrated composer, Joah Bates, obtained Herschel the situation, which he held until he was called to the post of organist of the Octagon Chapel in Bath in 1766.

COMBINATION PISTONS AND PEDALS

The first piston knobs which were inserted in the key slips consisted only of couplers which brought the manual sections into connection with the pneumatic lever action, and they were not in use until the general introduction of that alleviation in lightening the touch. At first, when these pneumatic couplers were introduced, the keys of the manuals thus affected dropped when the couplers were applied. At that time composition pedals with pneumatic action effected desired combinations of stops without any indication of what stops were on or off, thus taxing the memory of the organist.

The next development was to use the piston knobs for combination effects in addition to the composition pedals, which added more complication. Next came a series of piston knobs either over the upper row of keys, or on each side above the regular stop knobs. With these series, combinations could be set way ahead of the music, but there were no indications of what these were to be, unless the player should write down on his piece just the order in which they were to be used.

This development became so complicated for both organist and instrument, that as soon as the combination mechanism ceased to be a novelty, there was no further use for it, and it was set aside, especially as the connections were frequently out of order. In view of the great additional expense of this needless mechanism, many experienced organists will welcome the time when combination effects shall be produced by direct manipulation of the stops, whether knobs, key stops, key touches, or tilting tablets.

THE GRAND CRESCENDO PEDAL

The first Grand Crescendo Pedal which was introduced in large organs was a cumbersome and expensive piece of mechanism. There was no indication of what stops were on excepting by a dial which indicated the proportionate number. In these days of Tubular Pneumatic action, the addition of a Grand Crescendo Pedal is of so little cost, that many builders are applying it to small organs, because

of the ease of the attachment. Where key stop action is used, it is actuated by a small roller with adjustable cams operating on the stop keys, and it is also readily applied to other forms of tubular or electric action. It brings on a gradual crescendo or diminuendo, or even sforzando, according to the rapidity of the movement of an additional balanced pedal independent of the regular balanced swell pedal.

THE ESTEY MEMORIAL ORGAN

On the evening of February 22, a beautiful three-manual organ, the gift of the sons of the late Gen. Julius Jacob Estey to the First Baptist Church of Brattleboro, Vt , in memory of their father, was formally presented and accepted, and inaugurated, the artist being S. Arthur Gibson, organist of the Brick Presbyterian Church, New York City. This unusually fine instrument embodies the latest ideas, equipments, and devices known in modern organ building, and the musical qualities are said to be unexcelled by any instrument of its capacity thus far constructed. In addition to the usual accessories, there is an automatic self-playing device which operates the whole organ by means of music rolls, which gives access to the most intricate organ and orchestral compositions thus arranged.

On the following Sunday, February 25, the renovated church edifice was rededicated, and there were three services when the organ was presided at by Reginald McAll, organist of the Church of the Ascension, New York City.

DEATH OF AN ACCOMPLISHED ORGAN VOICER

Mr. Henry H. Bartlett, the well-known organ pipe voicer, who had been connected with the largest firm of organ builders in Boston for the past fifteen years, died at his residence in Newton, Mass., February 7. Mr. Bartlett continued his duties up to within a few weeks of his death. He voiced most of the flue pipes of many of the large organs which this firm have built in the last decade.

A ROMAN CATHOLIC ORGANIST

The Rev. Florian Zettel, O.F.M., organist of the Old Mission, Santa Barbara, California, thus writes to the editor of the Organ Department:—

The organist of a Roman Catholic Church, if he wants to be true to his position, has not much occasion to indulge in long-drawn improvisations, or to perform lengthy masterpieces, except at the end of divine service. For the Liturgical Chant, if performed in its entirety, consumes almost the whole time of the service. And since for the Catholic, the whole attention ought to centre around the altar, a noble, unselfish organist will exclude from the organ-loft during divine service, everything that tends too much to absorb the mind of the hearer.

The organist and his choir, if ideal, will not draw the attention of the worshipers from the altar to the music, but will incite them to greater devotion, thus bringing them nearer to the altar. For on the altar is repeated the great drama of the ages, to be conscious of which we can never thank God enough.

Therefore the organ, during divine service, is not the end, but the favored handmaid, — the stepping-stone, — bringing the people nearer to their God.

But at the end of the service, just and worthy masterpieces, so long as they are in conformity with the spirit suggested by the time and place, should be wafted in noble strains to the ears of the listeners, confirming them, and impressing them with inspired thoughts.

From all this, it is evident that there must be an essential difference between the music of our churches and that of secular places. Both have their right of existence, but each in its proper place. In both the highest achievements of musical art ought to be employed.

It is a false notion, that true church music is averse to the progress of musical art. Many of our best church compositions (here I speak not of the Masses of Haydn, Mozart, Beethoven, or such musicians. which are not true church music), such music, as, for example, the compositions of Stehle, Witt, Haller, Piel, Filke, etc., many of which, in the strictest sense of the word, are masterpieces of art. Familiarity with these leads us into a love for them, and gives an insight into the genuine spirit of piety that pervades them.

An Organ Builder's Complaint

R. M. D.

"I am a veteran of many years of hard-earned experience as an organ builder, who has carried on an intricate business from pure love of the art, without an adequate recompense for the mental strain and the capital invested. I have the same love for the art as in early years, and have kept in touch with all modern improvements in a practical way.

"One of the most discouraging things an organ builder meets is the lack of appreciation which many committees exhibit, after spending much time in answering their questions through voluminous correspondence, drawing plans, making estimates, and expenses of visitation.

"While I know that other builders are doing the same on the same prospective contract, it seems to me but fair that when the award is made, we unfortunate bidders, as a matter of courtesy, should receive notice from the committee, of the award, to save us suspense, and to enable us to cross off the prospect from our list of hoped-for trades.

"I am led to write thus because in several instances where I had been awaiting weeks for a response to my inquiries, no attention was given to my letters, after I had previously spent my time in answering questions which were acted upon in decisions where the successful builder received the benefit of my experience, the answer to these inquiries being solicited by the committees, my information being freely given, and no thanks acknowledged.

"In some instances a member of a committee will write privately to know what will be paid him in case the award will be made in my favor, which at once indicates that I shall lose the award because that method of securing contracts does not enter my system of organ building."

You have alluded to a common experience among organ builders which would be well for committees to consider as a matter of courtesy to all the manufacturers with whom they correspond, in notifying them of the name of the builder to whom the award is made. A charitable view to take concerning this neglect might be the fact that an organ committee is only a temporary organization appointed by a Society for investigation and securing an organ; its duties often cease when the legal trustees sign the contract. Organ builders have enough to contend with in carrying on an arduous business where the actual profit is not large enough above the actual cost of labor, material, and contingent expenses, to tempt those who only love dollars and cents to engage in it. Considering the amount of talent, experience, and mental effort employed, organ building is probably the most unremunerative of any vocation where the work is conscientiously performed.

The Vibrations of Organ Pipes

N. R.

"I am deeply interested in the science of musical acoustics, and should be much gratified if you would name a modern work on the subject which would enlighten me on the theory of the vibrations of organ pipes, showing the difference of vibration between open and stopped pipes. I have studied Helmholtz, and Tyndal on *Sound*, but wish for further information."

You will find additional help in the book entitled *Sound and Music*, by Sedley Taylor, published by Macmillan & Co., of London and New York.

Pedal Sharps

W. A. L.

"I think that we organists could attain better pedal execution if the sharps should be made ten inches long and extend inward with quite an incline toward the remote end. This would afford opportunity to use both toe and heel on the sharp keys, and although it would be an innovation in pedal technique, it could be easily tested by screwing on some strips to an old detached pedal board which every organ builder has on hand. Will some builder try this and let different organists execute upon such a keyboard?"

Greater Simplicity in Accessories

W. B. T.

"After playing an organ with simple couplers and composition pedals for years, on sitting down at a modern console with its bewildering mass of stop keys, pistons, pedals, switches, crescendo movements and triple balanced swell pedals, one might well fancy himself in a telephone exchange with its branch lines and switch movements. Now while I would not discourage any improvement which will advance an interest in organ music, yet I think that legitimate organ compositions may be artistically interpreted without such multitudinous accessory mechanism.

"I have known players of rare ability produce the most remarkable changes in registration by their skill in manipulating the stop knobs without any accessories excepting the plain Forte and Piano composition pedals belonging to the Great and Swell departments. I have heard no more remarkable effects produced from the modern keyboards by our present players. The simpler form of construction did not so tax the memory, and gave the educated organist greater freedom in interpreting the musical thought of the composer. Here is a point to be considered in this comparison, viz., the musical thought does not rest in the accessory mechanism of an organ, but in the capacity of the organ and the ability of the organist to interpret the idea of the composer, and also to develop true musical ideas in proper form through the cultivation of improvisation."

Light and Heavy Organ Touch

M. S.

"Which do you think is the better in organ practice, a light or heavy touch? The instrument I have been playing upon has a heavy and deep touch, and I find it difficult to play cleanly on an organ of light touch. What should be the dip of the naturals of the manual keys?"

A fairly heavy touch is best for strengthening the fingers in organ playing. You can regulate this strength by the use of the couplers in practice. Many players, where direct tracker action is used, prefer to play the Great with the Swell coupled in order to make the touch firm. With pneumatic or electric action the addition of couplers does not increase the heaviness of the touch. The trouble with young organists is that they do not devote time enough to scales and pianoforte technical studies to give better control to the fingers, and this lack of practice causes them to be defective in the ready execution of many passages, especially in sight reading, so essential in choir rehearsals.

The usual dip of the keys is three eighths, and a sixteenth of an inch, but four eighths is preferable, if the black keys are what is termed five eighth sharps, particularly with direct tracker action, in which there is a slight "render" of the action when the wind pressure is on, and the deeper touch secures a better opening of the valves.

Incomplete Stops

R. W. F.

"In contracting for a three-manual organ to take the place of our two-manual instrument, the amount of money at my disposal is so limited that in order to get much tone variety I have been anxious to make my means go as far as possible, and made my specification accordingly. By using a 16 ft. Tibia Major (stopped wood) instead of a 16 ft. metal Open Diapason, I saved enough to add an 8 ft. (Gemshorn) to the Great, to say nothing of the fact that the Tibia Major is as effective as the Diapason, and not only will give greater smoothness to the organ, but is a more useful solo stop, both alone and in combination with other stops.

"Theoretically in such an organ, I know that the stops ought to run all through, but practically it makes but little difference with some of them, hence I left off the lower twelve pipes of the Choir Dulciana, dividing the Melodia into Treble with a St. Diapason Bass to draw either for the Dulciana or Melodia, and save enough to add a 4 ft. Flute d'Amour, and by running the Clarinet down only to Tenor C, I saved enough to add the Piccolo. In the Swell, by dividing the St. Diapason into Treble and Bass and stopping off the Aeoline at Tenor C, I was enabled to add a Gemshorn Quint, which practically gives me a Quintadena stop in combination effects.

"Your suggestions in regard to the voicing I have carried into effect. I am not fond of mixtures and have used them sparingly, having had them voiced as you proposed, which makes them more useful than the old way, as I did not like to have an organ of this size built entirely without them."

CONDITIONS FOR SECURING TONE COLOR

ELEANOR P. SHERWOOD

IV

There is probably no one thing which so distinguishes the artist from the amateur as the power to produce, at will, a tone ever satisfactory as to quality, variety, and volume.

Even with fine natural touch there is too apt to be a deadly monotony, until the fingers become *informed* and sensitive to every demand of Musical Content. This is only possible where there is, first, the full conception of tonal delivery, and secondly, a technique adequate in resource to its expression.

As the painter has his palette of colors, so the pianist requires his *répertoire* of *touches*. And both must be "mixed with brains" before desirable effects can be produced.

Since there is nothing — from lightest comedy to most woful tragedy — which music, the all-embracing, international language of emotion, hesitates to attempt, it is evident that one cannot know too much of the character of a work before seeking to interpret its world-wide message through the medium of tone.

In instrumental music, unassisted by words, and unhampered, as well, the tonal spirit, or content of a piece, is discernible largely through its form — the phrase arrangement, *à tempo*, of its melodic and harmonic material. Tempo, quite as well as tonality, reveals much of the general style of a work, and consequently affords atmosphere and environment. I once had the misfortune to hear Beethoven's *Funeral March* in A♭ minor played like a lively Festival March. The effect of this misconception of tempo was a curious parody of its true and fitting atmosphere of gloom, and the deep import of the movement was lost entirely. As tempo is environment, so melody and harmony impart personality, and rhythm provides action to the picture. It is to the full appreciation of musical content, therefore, that touch is indebted for tonal ideals. These are, however, impossible of realization without adequate technical agency.

Quality in tone, of whatever sort or variety, depends upon the poise gained by a happy balance between extensor, or lifting, and flexor, or playing muscles and energies.

For the control of *all* touch there must be both the proper shaping, or adjustment of elbow, wrist, fingers, with regard to each other, — the details of which have been described in a former article, — and also the ability to *hold* a fixed shape or position, above a key or group of keys until the desired instant of touch. Any premature fall, by the dead weight law of gravitation, defeats control. The result may be a *thud*, as of hitting with a block of wood, or merely an indistinct or even inaudible effect, but, by no means, control over tone. To clog *any* muscular action by a dragging, sagging, heavy wrist, as though a cow were treading the keys, rather than to maintain the desirable conditions of elasticity and buoyancy, will ruin the quality of every sort of tone.

Dead weight, therefore, must be invariably avoided. Its preventive consists in the cultivation of extensor or lifting energy. Whatever the action employed, whether of fingers, wrist, or hand, separately or combined, there must be extensor strength developed, requisite to keep off of the keys and hold above them, in desired shape of position, until the playing, or flexor energy, may be directed with control and without haphazard dropping, flopping, or bumping against the keys. It is the difference between letting a trunk fall and of lowering it without a jolt.

All kinds of touch, therefore, depend, for their satisfactory *quality*, upon poise and appropriate shaping of position.

But for variety in touch, demanded by every degree and shade of tone color, there must be *deviations* from the "normal" in shaping positions. The day is past for teaching that the same degree of finger curve, one invariable height of wrist, one or two methods of finger and hand action, will suffice for all emergencies. On the contrary, "circumstances alter cases" without scruple, and variety in touch must depend upon variety in shaping and in action, and upon the power to vitalize and devitalize the finger tips, at will. Such is the range of expression in piano playing that there is a "time for everything" — except the loss of aim and poise. Ever subject to these main principles of control, variations in position-shaping and in degree and kind of action have directly to do with variable conditions of power, speed and nature of tone, and with close or extended key intervals.

In general, wide apart intervals and broad tonal effects demand expansion of finger curve, low level of wrist, and large, rotary action; while pianissimo and velocity in trills, cadenza, etc., with crisp, sparkling, frosty, scintillating, incisive, electric touch call for miniature shaping, close curves, finger vitality, and prompt action, of minute range and extreme flexibility.

For singing tone, varying from the dreamy, liquid, caressing tenderness of the pianissimo in Chopin's Berceuse, to heavy chord playing of infinite depth and sonority, the gradation in finger energy and sensitiveness is extreme. In the first case, there is great extensor strength and control of nerve to keep the weight suspended from the keys; the finger descending so gradually as to avoid all effect of percussion, and yet touching the key with just enough pressure and clinging power to make the string sing; and with the requisite sense of legato and shading to permit each sound to blend and coalesce with the next, in a manner to produce a *unit* of tonal flow throughout the phrase.

Satisfactory chord playing requires an open hand-about-to-grasp arrangement of palm and fingers, *together* with *double* forearm action, consisting alternately of a triple "down-out-in-over-keyboard" compound of a move, followed by lifting, the fingers keeping a firm hold upon their keys until the last, while the wrist (or forearm) rises.

Here, flexor and extensor energy seem about equalized. And where tone, of the true ring in quality, towers to a thundering fortissimo, massive with cubic contents of length, breadth, and thickness, piling climax upon climax through page after page, it is not amiss to have at command the reserve power of a giant, at least. Also, the intelligence of a general. For if such tone be at the expense of beauty in melody, and of perfect balance of voices in harmony, it fails in significance.

In addition to all that touch can achieve in chord playing, it is indispensable that the damper pedal *fit in exactly*, in a manner to produce the desirable sostenuto and legato, for the reason that there must be continual *breaks* in touch necessitated by inevitable transfers of position.

However, for less stalwart effects, the *gliding* action of fingers in legato chord and octave passages will do much towards smoothing the progress.

The most complicated conditions of touch occur in polyphonic playing where fingers of the same hand frequently have occasion to produce, simultaneously, tone varying in power and kind; and furthermore, to make use of holding, lifting, gliding, and repeating processes at the same instant.

Nor does it help matters that the *ear*, in this order of composition, especially, demands *constant flow and progression* for correct effect of the "incidental" harmony resulting from interweaving threads of melody which are rhythmically independent.

Of course the only remedy for such a contradictory state of things is mental calculation previous to manual effort.

In staccato, the position is generally "normal" and the action that of up-and-down hand, with fixed curves and aim of fingers. It is often desirable to change the *level* of the wrist for purposes of accent and inflection, as well as to relieve a tendency to stiffen. But this change of level must not take place *during* the up-and-down hand swing, or the tone will lack firmness. It is perfectly possible and frequently desirable to maintain uninterrupted staccato tone by *alternating* down-wrist, hand-swing, down-and-up, and up-wrist movements, in relation to accent, non-accent, and phrase divisions.

Whether *side* forearm action would apply, *between* these moves, would depend upon whether the key interval requires mere repetition or transfers of poise.

How much to do at a given fraction of a beat is also to be considered.

In groups of sixteenth notes, a staccato scale in octaves might demand: at *first* sixteenth, down wrist *and* side forearm; at *last* of the series, up wrist and side forearm preparatory to starting a new series; at each intermediate sixteenth, between

first and last of the same series would be, down-and-up hand and side forearm action. Thus, the amount to accomplish at a given fraction may easily vary.

Mezzo-forte may be considered the neutral tint of tone against which dashes of color, flashes of light, and depths of shadow stand out with their varying intensities; abruptly or in graduated shadings, according to the manner in which tone may be *molded* by tempo and phrasing.

Thin as gauze and light as air, volatile, evanescent as a fleecy cloud, delicate, shadowy, almost imperceptible; or solid, mighty, magnificent, firm as granite; or again, even, smooth as velvet —flawless of whatever texture — placid, calm, serene, brilliant, assertive or turbulent; plaintive, beseeching; stern, inflexible, commanding; sorrowful, or merry, rapturous, rollicking; infinitely tender and earnest, or jeering, harsh, relentless: *tone*, whatever poor adjectives of mortal invention aspire in vain to describe it, becomes, at the hand (and under foot) of an artist, satisfactory in quality, variety, and intensity, and of precisely the appropriate psychical significance as well.

The first-class piano is taken for granted — something of a liberty, no doubt.

This, together with a *répertoire* of touch and pedal effects, sufficient to embrace the entire firmament of tone color, will finally achieve the production of music's psychic paintings, having world-wide power to influence humanity.

IS THE PRESENT MINOR SCALE AN ANOMALY?—A SUGGESTION

JOHN CARVER ALDEN

At the present day, when the prevailing tendency is to demolish ideas and beliefs sanctioned by custom and long usage, when even the writings of Saint Paul are no longer unquestioningly accepted, why should not music come in for her share in the general overhauling?

It would seem as if the possibilities of the scale tones in their present relationships were well-nigh exhausted and that the time was about ripe for the establishment of a new order of things. This question has, I know, been raised many times in the past, and each time a prophet has arisen to refute it. But the time may soon come when a change will be imperative, when we may have to recognize future, as well as past conditions. And where so well to begin as at the very foundation —the scale itself?

While it is pretty generally conceded that there is no such thing as an independent minor scale, I shall endeavor to show that its dependency, so long as the major scale is as it is, rests not upon the key that lies a *minor* third *over*, but rather upon the key that lies a *major* third *under* its tonic. This means, of course, the change from the minor mediant to the minor sub-mediant, and if music is an exact science, as so many of its exponents claim that it is, this should be no difficult task.

Having a rule, we are enabled to deduct from it both a premise and a conclusion, and the rule in question is as follows: —

MAJOR INTERVALS INVERTED BECOME MINOR

Premise. — If a series of intervals in a certain order in one direction produces the major scale, then a series in the same order in the opposite direction must produce the minor scale.

The ascending diatonic scale, relationing all the other tones to a common tone (this, of course, understands all the other tones lying *over* it), evolves a major scale section.

The descending diatonic scale, relationing *in like manner*, a common tone to all the other tones (this, of course, understands all the tones lying *under* it), evolves a minor scale section. In the key of C this lead takes us to D♭ as the super-dominant or second degree of the scale, which leads directly to C as a mediant, thus shifting the tonic to A♭, showing the last-named tone to be the parallel major tonic. The only possible way that E♭ can be considered as the parallel major key would be by introducing interpolated or secondary chromatic alterations in the ascending scale (*vide* example above) which, owing to its dissimilarity ascending and descending, would render it useless theoretically.

Although we may be obliged to hold fast to conditions already existing, may we not hope to find, by still further exploration, novelties in these newer relationships in the tonal art not yet thought of?

STRAUSS AND "SALOME"

LAWRENCE GILMAN

Has Richard Strauss, as the most zealous of his critical champions recently affirmed, entered upon an artistic decline? Are his latest productions, in the impatient phrase of Ernest Newman, truly the work of "an enormously clever man who was once a genius"? That the most adored and the most execrated personage in the contemporary tone-world should have become something very like a bore to his admirers and detractors alike is a curious outcome of one of the most fiercely waged esthetic battles in the history of any art. Let me say here that I, for one, have not the slightest wish to retract anything whatsoever that I have written, in my minor way, in praise of the great master who gave us his *Don Quixote*. Eight years ago, when Strauss presented to a somewhat indifferent world that marvelous tragi-comedy in tones, the few who gave attentive and eager heed to it recognized in its creator a genius who had achieved a quality of musical utterance quite without any precise parallel — a fulfilment of the magnificent promise disclosed by the author of *Tod und Verklärung* and *Zarathustra*. *Don Quixote* is indisputably one of the great things of music — a work charged to the brim with humanity, with eloquence, with essential beauty: there is nothing quite like it in the entire literature of the art. It marked the summit of Strauss' achievement. But what has come over him since? *Ein Heldenleben*, which followed *Don Quixote* some years later, was marred, for all its wonderful impressiveness, by evidences of a growing tendency on the part of Strauss to prostitute his great gifts — in the phrase of Mr. Newman, "to deface his picture by some piece of malicious folly; to thrust his head through the canvas and grin at the public." Of the incredible fatuity of the *Symphonia Domestica* one has not the heart to speak — a work in which triviality and ignoble burlesque do their utmost to obscure the glimmering of a persuasive and lovely motive.

But if the *Domestica* proved an exasperation and a disappointment, *Salome*, the latest product of the Straussian intelligence, has almost the character of an affliction. His predilection for an unsuitable subject-matter, so flagrantly evidenced in the *Domestica*, has here reached what it is comforting to regard as its probable climax. Not content, apparently, with satisfying the impulse which led him to devote his incomparable abilities to depicting the incidents of an infantile day, he has gone to the sufficiently violent extreme of writing music for Oscar Wilde's revolting version of the story of the dancing daughter of Herodias and her imputed passion for John the Baptist. Like certain of the opera-makers of modern Italy, he has developed, it would seem, a *flair* for brutal and repellent themes. So far as the dramatic substance of *Salome* is concerned, the work is affronting, perverse, and artistically futile, despite its maleficent power. The conception of Wilde imputes to Salome a ruthless and consuming passion for the Prophet; and the drama reaches its climax in a horrible expression of this infatuation in its maddest and most ungovernable moment — Salome's voluptuous and insatiable caressing of the severed head of John.

Grotesquely impossible, however, as the subject is for musico-dramatic exposition, one's quarrel with *Salome*, in this instance, is primarily concerned with another matter: the essential emptiness and banality of Strauss' score. The decline in vitality and felicity of inspiration which had begun to make itself evident in the music of the *Domestica* is here undeniably manifest. One's objection to this latest score of the author of *Don Quixote* is not that it is cacophonous or unlovely, but that it is weak. It lacks both saliency and vividness. The musical thought never grips, never seizes the imagination, as it is seized and enthralled by many of the electrifying and unforgettable themes of *Tod and Verklärung*, *Zarathustra*, *Heldenleben*, and *Don Quixote*. The lack of distinguished invention in Strauss' thematic conceptions has been, from the first, a subject of critical comment; but never before has it been possible truthfully to say of him that his ideas lacked saliency and the power of graphic denotement. Hitherto, his themes have always gripped one, whether they delighted the ear or not. Consider the seizing quality of even so unprepossessing an idea as the phrase in consecutive fifths which, in *Ein Heldenleben*, limns the abhorred and abhorrent critics. It is, of course, intentionally preposterous; yet it

is a master-stroke of felicitous satire — it bears the authentic stamp of the creative imagination.

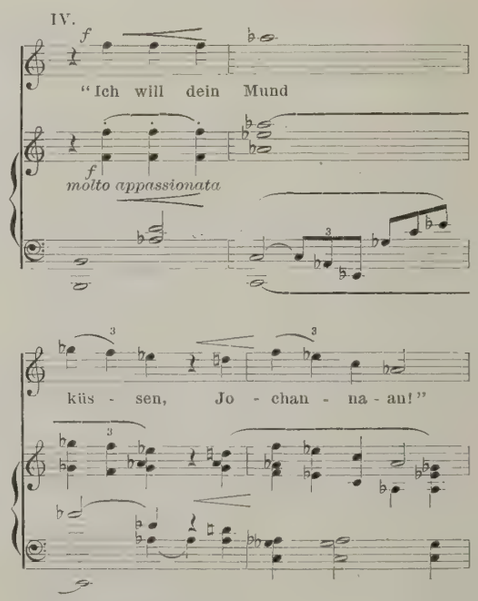
There is nothing of this in *Salome*. Its score is rich in the familiar audacities of Strauss' style, but they are without point, without grip. It may be said that it is not possible to base a just estimate of such a work upon the piano score alone; but this is true only in a measure. One cannot, of course, form any adequate conception of the effect of the color combinations and of the instrumental polyphony from the bare outline which the piano score affords; but one *can* appraise quite fairly the value of the thematic substance and its development: for in these matters, of course, orchestral color plays no vital part.

That Strauss has invoked in this score harmonic effects of the most daring order is apparent upon almost every page; and he employs them continuously, not merely for the appropriate enforcement of particular moods and situations. Here, for example, is one of his expedients, which I quote from page 53 of the piano score: —

And here is another, from page 54: —

Apparently, there is no dramatic reason of pressing importance which would justify these things; and it is unlikely that any one would maintain that they are either lovely or eloquent as mere music. Let me say at this point that I, for one, have not the slightest objection to any imaginable combination of tones, no matter how anarchistic and unprecedented, so long as it is either truly delineative or truly eloquent. Those amazing chords, for instance, which Strauss has contrived to denote the final shattering of Don Quixote's reason seem to me one of the most wonderful inspirations in all music, as do some of the academically unhallowed procedures in the superb passage which pictures the dejected home-coming of the broken-hearted Knight. These things, and many others much more audacious in the later works of such undaunted adventurers as Debussy, d'Indy, and Loeffler, are justified by their essential eloquence: they speak, they are vital and communicative. But it is not so with these newest cacophonies of Strauss. I shall be told, perhaps, that I do not apprehend them — that they are music of to-morrow, and that the pedestrian intelligence of to-day is incapable of perceiving their just value. The response is simple. Such things as I have quoted are neither subtle, ingenious, or expressive; they are perfectly easy of comprehension, and of duplication, by the most ordinary musical brain. If Strauss' incomparable ingenuity is to culminate in the simple expedient of, in Mr. Whistler's phrase, "sitting on the keyboard," his art has surely fallen upon evil days. It is the easiest thing in the world to sound a figure in A♭ minor over an F major triad, and let it go at that; but the result is neither recondite nor impressive — it is merely irritating and abortive. In *Salome*, even at moments when the tension and horror of the dramatic situation justify extreme means, the musical background fails to convince — as in the final scene of the drama, at Herodias' words — "Es wird schreckliches Geschehn!" where the orchestral enforcement consists of a reiterated scale passage in E♭ major against one in D minor, over a B♭ minor chord: —

If it were merely the futility of Strauss' cacophonies with which one found excuse to quarrel, the case would be less serious. But the barrenness and flaccidity of his thought is evident on almost every page of *Salome*. The music that he assigns to the Prophet is at times both apt and moving; but what is perhaps most surprising of all the surprising things in this disappointing score is the ineffectiveness of most of the music which is intended to voice the passionate utterances of Salome. What appears to be the theme which particularly characterizes her longing is inexpressive — almost commonplace. Here, for example, is the best that Strauss can do with one of Salome's most burning declarations: —



The most memorable pages in the score are those which comprise the concluding scene; yet even in the supreme moments of her amorous ecstasy, Salome's utterances and their orchestral reflection do not quite satisfy one — they lack that final and unforgettable felicity, that incisive power of characterization, that biting eloquence, to which Strauss has elsewhere accustomed us. Salome's horrible adoration of the severed head and her wildly triumphant chantings over it are denoted with an unmistakable power and a maleficent beauty which one does not soon forget; but the Strauss who speaks here is a minor Strauss — not he of the greater tone-poems, who swayed and enthralled us with a unique and resistless magic. In *Salome* there are but occasional hints of this earlier and towering genius, — *pace* certain clamorous critics of Dresden and elsewhere who have heard the work. But it is easy to understand that the gorgeousness and artistry of its orchestral investiture might, in a measure, blind one to the essential poverty and dulness of this remarkable music — remarkable for the definiteness with which it seems to mark an artistic decline of tragic proportions.

THE CURFEW IN RIPON

A custom which recalls a very distant past is still to be observed in the Yorkshire city of Ripon, where a pleasant variation from the more common curfew is performed at nine o'clock every evening in the market-place, opposite the town hall. The curfew in this instance is blown on a horn by a man dressed in a uniform reminiscent of a bygone period. In addition to this, the ordinary curfew is rung at the cathedral.

The horn blower blows three blasts, and such was the custom so far back as 1790, when the blower divided his attentions, first at the market cross and then at the mayor's door. — *London Daily Graphic.*

MUSIC BEFORE CARPETS

There appears to be a growing demand in Mexico for pianos and musical instruments. Many of those of American manufacture are popular with Mexican people, and American manufacturers of pianos and musical instruments of superior quality have a very fair opportunity for increasing their business in Mexico. The Mexicans are a musical people, and, as a rule, the so-called cheap instruments are not greatly in demand. It is a common thing there to find a high grade piano and several high-class musical instruments in a Mexican home where there are no carpets on the floor and where the furniture of the house is of the most ordinary kind.

STEVENSON'S ADDRESS

On one occasion Stevenson was asked to give an address to "Miss ——'s Sunday school," and was rather upset at the first sight of his audience, "for all the little pupils sit in front — a most uninspiring infant school, gazing at him with goggle eyes without a spark of intelligence in them." He took the parable of the talents for his text: —

"Then he told them that there were three talents at least that they all possessed and must try to make a good use of — tongues that they must use to cheer and make happy all around them; faces that they must keep bright as new shillings, so that they might shine like lamps in their homes, and hands that must be kept employed in useful work cheerfully done — and if they spent their lives in doing these things for the good of others they might be told at the last, 'Inasmuch as ye did it to the least of these, ye did it unto me.'"

BE AN OPTIMIST

If you find any one determined to talk failure and illness and misfortune and disaster, walk away, says an exchange. You would not permit the dearest person on earth to administer slow poison to you if you knew it. Then why think it your duty to take mental foods which would paralyze your courage and kill your happiness?

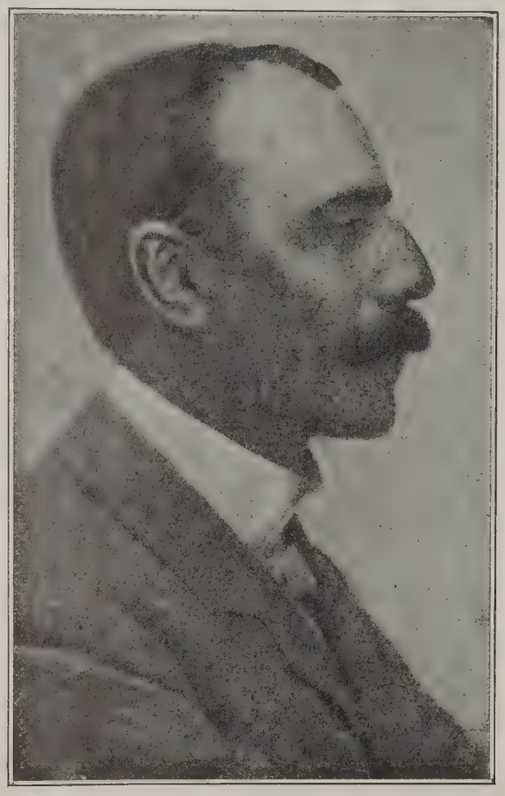
EDWARD ELGAR*

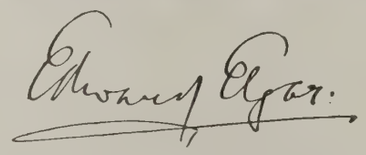
ERNEST NEWMAN

The English and the Americans are generally regarded as the two most unmusical nations on the face of the earth; but we have at any rate this advantage over the Americans, that *one* composer of purely English birth and English training has made a reputation, not only at home, but in all countries where music is cultivated. And this he has done not by any wire-pulling, or by the force of wealth, or by the influence of friends, but solely by the simple device of turning out good work and letting it speak for itself. A great impetus was indeed given to his reputation by the famous encomium of Richard Strauss, to which I shall refer later on; but as Strauss's eulogy came spontaneously out of his joy at having discovered that another man could write great music, it was really Elgar's work itself, and not any backstairs politics, that brought him this magnificent advertisement.

The social conditions in which music lives over here are so different from those of America that I must enlarge upon them for a moment, even at the risk of repeating a story that will be pretty familiar to most English readers.

Every one knows that during the late eighteenth and early nineteenth centuries English music was crushed by two influences — that of Handel's oratorios and that of the fashionable Italian opera. In the second and third quarters of the nineteenth century the malign influence of Mendelssohn was added to these. There was practically no independent musical life anywhere. London, where the bulk of the wealth and fashion of the nation was gathered, was then, as it is now, almost destitute of original spirit. London is and has always been merely a musical market. Everybody goes there, and music of some kind or other is always being produced there; but it is all just an amusement, — a modern variation upon the old gladiatorial show. London is too much interested in the mere outside of things to give birth to any serious and powerful musical movement. And while the metropolis was thus intent merely on getting a good show for its money, and clinging with pathetic persistence to two or three great names among the composers, the provinces were in an even worse state. Few of the large towns had any musical life at all that was worthy of the name, and even these were chronically a generation or two behind the times. Here and there periodical festivals were held. They were frequented then, as they are now, by a number of persons almost ignorant of the rudiments of music, who, in between the festivals, probably never listened to a note of first-class music from one year's end to another. Under these circumstances one can easily imagine how the typical "festival work" came into being, — a long piece of music constructed upon an accepted formula, usually written to a sacred text, with the composer keeping one eye on Handel and another on Mendelssohn all the time; a work hopelessly artificial through and through, quite divorced from real life, a mere repetition *ad nauseam* of time-worn platitudes. One has only to look through the catalog of Novello & Co. — who acquired practically the publishing monopoly of these works, — to realize the vast amount of utter trash that must have been written in those sad days, — and since. And we might have been writing it yet had not Elgar done two things. In the first place he himself, after bringing out three or four works that in themselves put the average oratorio or cantata in the shade, suddenly produced the superb *Dream of Gerontius*, that simply killed all the country-organist rubbish as the sun extinguishes a candle; in the second place the enthusiasm this oratorio excited both here and abroad did more than any other single factor has done to interest the English people in





English music, to make them believe that Englishmen *can* write music, and so to bring to the front a new breed of native composers, who speak of the ideals of the country organist with the most refreshing irreverence and contempt. Their enemies sneer at them for being under the influence of Wagner and Tschaikowski and Strauss. Well, it is better for them to be under these contemporary influences than under those of two or three generations ago; and after all, even a decent copy of *Tristan* or *Ein Heldenleben*, is better than the dull and ponderous imitations of Bach and Handel and Mendelssohn that have been inflicted on us by a number of gentlemen who shall be nameless.

The musician who achieved this revolution was born at Broadheath, near Worcester, on June 2, 1857. His father was organist of the Roman Catholic Church of St. George's in that town, and also had a music business. Young Elgar learned both organ and violin, but his general musical education was unsystematic. He was left very much to find things out for himself, — a fact to which we owe most of the originality, not only of his music and of his technique, but of his views upon musicians and upon the theory of the art. As he grew up he tried to master one orchestral instrument after another, and studied feverishly any scores upon which he could lay his hands. In 1872 he entered a lawyer's office, but left a year later. In 1879 he became conductor of the band of the County Lunatic Asylum, consisting of first and second fiddles, a flute, a clarinet, two cornets, a euphonium, a bombardon, a double-bass, and the piano. For this weird conglomeration he wrote and arranged a lot of music.

He was becoming better known in local circles, mainly, of course, on account of his violin playing. He was a member of Stockley's Birmingham Orchestra, which played an intermezzo of his on Dec. 13, 1883. In 1882 he had been appointed conductor of the Worcester Amateur Instrumental Society; and in 1885 he succeeded his father as organist of St. George's Church. Marrying in 1889, he resigned his organist's post and settled for a time in London. Here he studied hard and made the most of his opportunities for hearing music; but as a composer he found almost every door barred to him. So in 1891 he removed to Malvern, near his native Worcester, where he engaged in teaching.

It was about this time that he began to attract attention at the provincial festivals. In 1890 his charming *Froissart* overture was given at Worcester. I heard it again the other day, and was struck by the mastery of the orchestra that it reveals. Even in those days the young Elgar knew how to make his score sound well; even then there was something of the later sureness in the calculation of effects. In 1893 his cantata, *The Black Knight*, was given at Worcester. Then followed *Scenes from the Bavarian Highlands* (1896, Worcester), *King Olaf* (1896, Hanley), — the work that really made people begin to see that a new composer of power had come among us, — an *Imperial March* (1897), *The Banner of St. George* (1897), *Te Deum* and *Benedictus* (1897), and *Caractacus* (1899, Leeds). In 1899 also came two other works of great significance. At Norwich the *Sea Pictures* were produced; they are not all equally successful; but there are moments of exquisite beauty and deep feeling in them, while no one can deny the beauty of the scoring, or the general originality of outlook which they display. In the same year Richter brought out the "Enigma" Variations. The blindest could now see that there was a new spirit at work in English music; for scholarship of the best and most vital kind, beauty, fancy, imagination, and graphic power there was simply nothing in our English music of the time that could be named in the same breath with the Variations. In 1900 *The Dream of Gerontius* was produced at the Birmingham Festival. It was a difficult work, and had been insufficiently rehearsed, and at first its reception was cold. Elgar, who had put his

* Reprinted by request.

very life-blood into this music, was naturally depressed. But among the audience was Prof. Julius Buths, the conductor at Dusseldorf. He was so struck with the work that he translated it into excellent German, rehearsed it with the greatest thoroughness, and gave a fine performance of it in December, 1901. It aroused so much interest that it was repeated at the Lower Rhine Festival of May, 1902. Here Richard Strauss made his famous speech, in which he praised Elgar most highly, recognizing him as one of the "forward" men of modern music. This was sufficient to make Elgar the man of the hour in England; and from that time to the present, *Gerontius* has been perhaps the biggest "draw" that any concert-giver could announce. It is always certain of filling the house; and it is a gratifying sign of the times that at the last few festivals *Gerontius* has drawn larger audiences than the *Messiah* and *Elijah*.

Some smaller works followed *Gerontius*, — such as the *Coronation Ode*, the *Pomp and Circumstance* marches, and the *Cockaigne* overture; then, in October, 1903, came *The Apostles* (Parts I and II only; the remainder is not yet finished). It has moments of unquestionable grandeur; but on the whole it has not made its mark so emphatically as *Gerontius*. In March, 1904, a three-days Elgar Festival was held at Covent Garden, on which occasion another new work — the overture *In the South* — was produced. Last year Elgar was knighted; and a Chair of Music has been founded at the Birmingham University, to which he has been appointed as first professor.

Space fails me in which to discuss his music at adequate length. He is an orchestral writer in the sense that his scoring is invariably sure and beautiful; but on the other hand, he sometimes finds a difficulty in framing purely instrumental ideas — as in his overtures — into an organic design. Is he better, then, as a vocal writer? Yes, in the sense that a fine text always brings out the best of him; no, in the sense that he does not always handle words with an instinctive feeling for the poetic rhythm. (See, for example, the Angel's Farewell in *Gerontius*.) But take what I conceive to be his three best works, — the lovely String Serenade (Op. 20), the Variations, and *Gerontius* — and you cannot help recognizing the power and originality of Elgar's gift. The Variations are a collection of cunningly and preciously wrought gems, each perfect in itself, each perfectly set. The *Gerontius* is, I take it, an epoch-making work, — one in which the composer sings not merely himself but all the best aspirations and sorrows of his generation. But whatever may be the ultimate fate of Elgar's music, there is no doubt that his place in the history of English art is secure. He has broken the old tradition, — shown it in its real hollowness and worthlessness. He has raised English music to a degree of eminence that it would have taken many more years of weary struggle to reach without his aid. Owing practically nothing to London either in the way of education or encouragement, he has worked consistently to realize that dream of all our lives, — the decentralization of music in England, the endowing of it with healthy, independent life in every large and small town in the kingdom. He has not hesitated to express his views on this point with considerable freedom, — London was shocked a year or so ago to be told that it was not the real musical centre of England, — and now that he is Professor of Music at a provincial university, we may, I hope, expect a musical revival in the Midlands to which our past history affords no parallel. The most refreshing feature of his career is his freedom from all academic influences. He owed nothing to academic teaching; the academic rulers of things in the seventies and eighties would have none of him; he made his success in spite of them, in their very teeth; he owes his new appointment not to any academic circle but to the enlightened zeal of people who are not held in leading-strings by the academic cliques in London. Just over the road from his new university is Mr. Granville Bantock at the Midland Institute School of Music; and with two such moderns working in the one town for the same result, it will not be their fault if something is not done towards the decentralization of music in England.

MUSIC IN THE CINCINNATI SCHOOLS

WALTER H. AIKEN

In 1838, a young man, who had just graduated at Dartmouth College, imbued with an intense longing to teach music, and bubbling over with youthful enthusiasm for the art, left his New England home in quest of a people who were willing to open to the musician their doors and hearts.

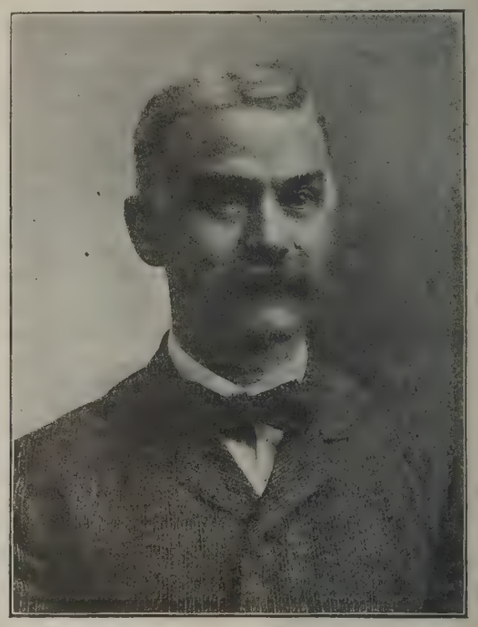
Nearly a year was spent in this itinerancy. In the log schoolhouses of Pennsylvania he finds it necessary to cut the bark from the logs in the schoolrooms to provide a surface on which to draw his staff.

In Kentucky he ventures to introduce to his patrons Mason's *Sacred Harp;* but alas for the success of the experiment! the community, still acutely mindful of the Morgan outrage in New York, was ripe for despising and rejecting anything or anybody that smacked of the word *Mason,* — thus proving that Shakespeare was certainly nodding when he queried, "What's in a name?" and so "Mason's Harp" was metaphorically hanged upon the willows, where, doubtless, the fiery "Corncrackers" would have literally hung its author, had he chanced to have been at hand. The young man, somewhat alarmed at the temper of his singing class, quietly disappeared from the troublesome neighborhood and arrives in the fall of 1839 at Cincinnati, where he makes the acquaintance of that prominent physician and musical amateur, Dr. Reuben D. Mussey, and introduces himself as Charles Aiken of Goffstown, N. H.

Mr. Aiken's stay in Cincinnati was of short duration, and availing himself of the river route, went to St. Louis, where he spent three years as a leader of a choir and teacher of music; when through the influence of that earliest and staunchest of Cincinnati friends — Dr. Mussey — he returned to Cincinnati in 1842 and immediately organized a music class for adults in the basement of the old Sixth Presbyterian church.

It was in this class, which was taught free of charge, that Mr. Aiken inaugurated the movable Do system of musical instruction, which, according to the judgment of the leading musicians of the then young city, was eminently adapted for public school usage.

It was some three years, however, before the wise Solons of the Board of Education — who laughed at the thought of teaching fifty children to sing at the same time — and the public generally, were satisfied that vocal music was a wholly practical and desirable branch of study for the youth as well as the adult; but Mr. Aiken finally gained the consent of the Board of Education to allow W. F. Colburn — who had been a student of his methods at the Presbyterian church — to go into the schools and teach music to the children of the upper grades. This consent was obtained under the promise that he would act as examiner and adviser to Mr. Colburn and would give this service without compensation. This was in the fall of 1846. Mr. Colburn acted in this capacity for two years, when Mr. Aiken succeeded him in 1848. Hardly had the study of music been introduced generally into the schools, than the insufficiency of the singing books then available was sorely felt. This early lack of material was sought to be partially counteracted by blackboard exercises, which he prepared for the particular needs of his various classes. But this method had its defects, involving, as it did, very considerable preparatory work on his part, and the consumption of no small portion of the already limited time of the class for musical instruction. A fuller remedy was sought, which was realized in 1860, by the appearance of a nicely graded music book, in two parts, called *The Young Singer.* This was followed, some six years later, by an amended and enlarged work entitled *The Young Singer's Manual.* And this again was supplanted, in 1875, by series of music books known as *Cincinnati Music Reader.* It was these books that became the most potent and direct means of reducing the musical instruction of the schools to a thorough rational and normal system.

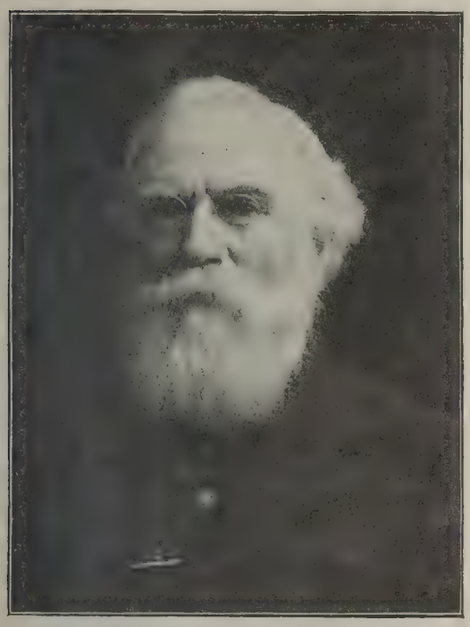


WALTER H. AIKEN

These books, however, were only adapted to the needs of the pupils of the primary schools. A similar want in the high schools was supplied by the *High School Choralist,* — a work published in 1866, by Oliver Ditson & Co., of Boston. And when this work had served its day of usefulness, *The Choralist's Companion* appeared in 1872 from the publishing house of John Church & Co. As one runs his eye down the tables of contents of these two works not a name of those eminent among composers will occur to his mind that is not to be found there represented by some worthy and characteristic specimen of his genius. The sweet Mendelssohn, the sublime Handel, the profound Beethoven, the sparkling Mozart are the most conspicuous and the most frequently heard members of this distinguished choir.

Educated in the midst of such company as this, was it possible that the young people of the high school could go hence uninfluenced by the best in impulse and example that the science of music is capable of bestowing? And as in time these youth identified themselves with the various choral organizations of the city, was it not inevitable that they should, in a measure, at least, shape the course of those organizations in harmony with their own pure and high training? It is a recognized fact throughout the nation that the people of Cincinnati possess an extraordinary love and aptitude for the highest grade of musical

culture, and that its achievements in this direction are not a little wonderful. And in casting about for the causes of this preeminence, while some of them are to be traced unmistakably to the divers musical societies that have always existed in the city, it would seem justifiable to assign



G. F. JUNKERMANN

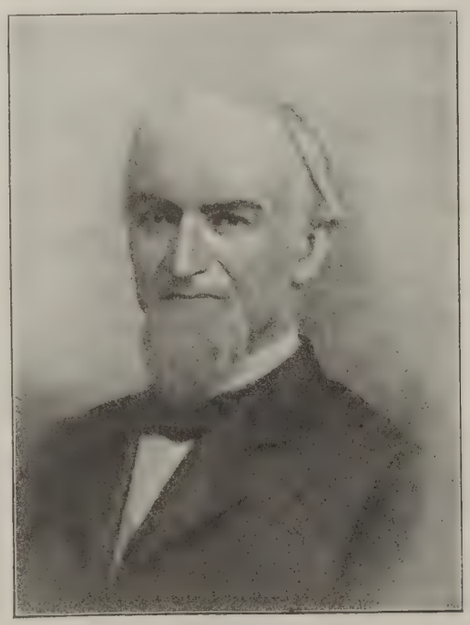
as the chief cause of the present ripeness, the sweetening and mellowing influence of the long course of judicious training in the public schools.

For it is there that the large majority of the present chorus singers have received that elementary, at least, if not that more advanced, discipline, which now enables them to read with fluency and to appreciate readily the sterling and classical music they are called upon to render at the great festivals. And if this be so, then to those who have labored in the past and given their lives to the uplifting of the community and have striven to supply us with the best of musical models and text-books the community owes a debt as large as the local achievement is eminent and as enduring as our reverence for the art itself.

G. F. Junkermann, who had been teaching for some five years under the supervision of Mr. Aiken, succeeded to the office of Superintendent of Music in September of 1879. Mr. Junkermann was born on December 8, 1830, at Bielefield, Westphalia, Germany. He was the scion of a prominent family of that province, his father having been connected with the government. Mr. Junkermann received a very thorough education in the classic schools of his home. Being a youth of exceptional spirit and high ideals, he became involved in the revolutionary movements that spread all over Europe in 1848 and filled the minds of the liberty-loving people with dreams of a European republic. But these dreams were scattered when the reactionary elements became victorious, and the best blood in the country was ruthlessly sacrificed for the cause of liberty. The activity of Gustavus F. Junkermann in that struggle made him a marked man, and with many others he was captured and condemned to be shot. However, he was more fortunate than others. Through the assistance of true and daring friends, he managed to escape the night previous to the hour of his execution, and embarked for England. On board of the vessel that carried him from his native land he read a detailed report of his own execution. After many years had passed, through the influence of his father his pardon was obtained from Emperor William, but he never went back to his native land to live, but made several visits to his former home. In Germany he had studied in order to become an architect, and when he came to the United States it was natural for him to try to embark upon that profession, but he found no occasion to do so. His first work in this country was the arduous labor of pitching hides in a tannery, and later he was employed as a bricklayer.

Upon his coming to Cincinnati he was engaged as a teacher of German in the Jewish schools, and later held the position as a principal of the Vine St. and Camp Washington schools. While principal of these schools he was closely identified with the musical interests of the city. It was while playing at the National Theatre that he organized the first complete orchestra in the city. Soon after leaving the schools as a principal he went to St. Louis, where he followed the musical profession, and then to Memphis, where he became interested in mercantile business, but was so outspoken in his sympathies for the negroes that his business was ruined and he was compelled to leave the city. From Memphis he went to New Orleans, where he played the 'cello in French opera. He returned to Cincinnati in the early seventies and sought a position in the music department of the schools. To this position he was appointed in 1872, and being a man of refined taste and a painstaking teacher, he was chosen to guide the musical forces of the schools upon the retirement of his predecessor.

Mr. Junkermann was emphatically a liberal-minded eclectic. During his twenty-one years of dealings with his colaborers, suggestions were not only permitted, but welcomed and even solicited from each member of his musical cabinet; and it was only after free and full discussion of measures that any particular policy was adopted. While the distinctive lifework of Charles Aiken closed in 1879, and G. F. Junkermann in 1900, it would take an uncommonly astute forecaster of human influences to fix the future limit of the duration of their wisely conducted services. That they taught is not more true than that they still teach; and both are sureties of the fact that, in the gradual unfolding of the vital and hardy seed that they sowed up and down the virgin furrows of a community for fifty years of incessant activity, will continue indefinitely to exercise a clearly discernible influence upon the musical status of Cincinnati. Upon the retirement of Mr. Junkermann from service Walter H. Aiken was appointed as his successor. Mr. Aiken came to the office credited with five years of training from his father and twenty-one years under Mr. Junkermann.



CHARLES AIKEN

Mr. Aiken has a force of nine men, trained for their work, to counsel with him as to conditions that obtain in different parts of the city. They are ever mindful of the grade teacher, lightening her load wherever possible and bringing to her aid such expert service as is within their power to render.

With the grade teacher lies the secret of the success of the Cincinnati schools. It is questionable whether any city in the world places the requirements higher for primary and secondary teachers than Cincinnati. Not only must she be a high school graduate, but she must afterwards spend five years in preparation for her work — in the university and as a cadet — before she can even be considered for appointment. During this time — or a portion of it, at least — she receives instruction in the special branches, including music, as well as the regular work of the school curriculum. She then appears before the city examiners to be tested as to her powers of reading new music at sight or writing what may be sung to her.

With this increased power of the grade teacher a still brighter future is promised to the schools; for then, and then only, will the music master be enabled to turn aside from drills which can be done by others and devote more and more of his time to the art phase of his subject.

It certainly would be pleasant, as Tennyson says, to sleep a charmed sleep, and every hundred years to "wake on Science grown to more" and see what the results may be when the woods and cobwebs of old habit and fond prejudices are cleaned away by the sure, though gradual, hand of Time and Evolution from the path which is being opened by the pioneers of a "more excellent way." Some may say that there is no Royal road to Music, but there are some ways more than others that hold the clue to the overgrown path through thorny mazes to the inner recess where lies the Sleeping Beauty, only waiting for the "right voice" to waken her.

NOTES

Max Schillings has finished his new opera, *Moloch*, based on Hebbel's poem of that name. The work will be produced in Vienna and Dresden next season.

* *

The Schubert Club of Providence, an organization composed of teachers of music, primarily piano, has recently become a member of the National Federation of Musical Clubs. Mrs. Carrie L. Smith, the president, has been made State Director for Rhode Island. The club this season has taken up such subjects as, "The Metronome, Its Uses and Abuses," "How shall we make Careless Pupils Accurate?" "An Ideal Course of Piano Study," "The Financial Side of Teaching," "How to train Abnormal Hands," "The Teacher's Attitude toward the Pupil," and other equally valuable topics. Mrs. Emma Winslow Childs addressed the club upon "Key Study." Albert T. Foster, one of the members, has recently joined the faculty of Wellesley College as head of the Violin Department.

* *

Bertram Shapleigh, an American composer, formerly of Boston, now residing in England, achieved a great success on March 26 at Wolverhampton, when a new work of his for chorus and orchestra was performed for the first time by the Festival Choral Society of that city. The following is from a review of the concert which appeared in the Birmingham *Daily Post* of March 27.

"The second part of the program began with a choral piece, *The Song of the Dervishes*, by Bertram Shapleigh. Of this composer we only recall some remarkable songs, but this piece increases the good opinion already formed. The poem is by Heinrich Stieglitz, the English version by the composer's wife. It is mystic, and relates apparently to the worship and the dance of the Dervishes. The music, based on short motives, is Oriental, descriptive, characteristic. The scoring brilliant, with abundance of percussion. The performance was spirited, about the best work of the chorus during the evening. The fiery themes were relieved by a lyrical strain at *Let flute tones tremble*. There is imaginative power in the composition, which created a great effect. The composer, who was present, was called to the platform at the close of the performance, and received an ovation."

LONDON LETTER

ORTON BRADLEY

For the first time on record the management of the Royal Italian Opera at Covent Gardens has published an official list of the *répertoire* for the forthcoming season. Hitherto the list of operas in contemplation has been supplied only to the press, and this year is the first occasion when the names of the operas for the season have been included in the prospectus. The outlook is most encouraging and the publication of the list would seem to be an official guarantee that the operas named therein will really be mounted. Besides two series of the *Ring*, Wagner will be represented by the *Meistersinger*, *Tristan and Isolde*, *The Flying Dutchman*, and *Tannhäuser*. *Don Giovanni* alone of Mozart's operas finds a place, and the rest of the list of twenty-six operas contains more or less familiar names except the following: Gluck's *Armide*, Cornelius' *The Barber of Bagdad*, Tschaikowsky's *Eugen Onedin* (which was last heard in London in 1887), Massenet's *Le Jongleur de Notre Dame*, and Poldini's *Der Vagabund und die Prinzessin*. The names of the company include Melba, Destinn, Donalda, Giachetti, and Kirkby Lunn among the women, as well as one or two newcomers. The tenors and basses are headed by Caruso, Burrian, Sammarco, Scotti, and Van Rooy. The conductors will be Richter, Messager, and Campanini. As usual no operas of English origin are among those selected for performance, although in other countries British operas sometimes meet with appreciation. At the Stadt Theatre at Leipsic a new opera by G. H. Clutsam, entitled *die Narrenkappe* (*The Fool's Cap*), has been recently produced, and Ethel Smyth's *Les Naufrageurs* has been accepted at the same theatre for production in September. This evidence of musical exchange with Germany is strengthened by the fact that a new scheme is on foot to take about three hundred singers from Leeds, Sheffield, and Huddersfield with one of the best English orchestral combinations, for a week's tour in Germany during the autumn or early winter of this year. In London Viennese music seems likely to receive considerable recognition this season. The famous Vienna Philharmonic Orchestra with Schalck as conductor is to give a series of concerts here during the month of June, and in a less serious vein a new Viennese comic opera, *Die Lustige Weibe*, by Franz Lehar, has recently been acquired by George Edwardes for production in London.

The details for the Birmingham Festival next October are being arranged in a manner which augurs well for all concerned. Elgar's new work in continuation of *The Apostles* is to be produced. It will be remembered that *The Apostles* was written for the Birmingham Festival, 1903. By the way, the work has recently been given by Professor Georg Schumann at the Sing-Akademie at Berlin with most enthusiastic success, a further illustration of the *entente musicale*. The other works for Birmingham that have been already decided upon are Granville Bantock's new choral setting of words from Fitzgerald's *Omar Khayyam*, four dramatic ballads (new) for chorus and orchestra by Joseph Holbrooke and a new orchestral work by Percy Pitt, with *Elijah*, *Messiah*, and Beethoven's Mass in D.

The past months have produced nothing in London of greater importance to musicians than the new edition of Grove's Dictionary, the second volume of which has now made its welcome appearance. The work has been so well done by the new editor that it cannot fail to fill the place which the first edition with all its great merits just managed to miss, owing to certain less worthy work which was included in it. Among the artists who are contemplating long tours this year is Kubelik who is going to Australia and will visit Melbourne at the beginning of September. The following autumn, that is in 1907, it seems likely that Madame Clara Butt will undertake an Australian tour.

It always seems doubtful if these long tours are really beneficial to the great artists. Of course, from a financial point of view there is nothing to be said. The artists generally return from a well-organized concert tour with several years' income to the good. It is with reference to the health of the artist that there seems to be a doubt, and in any case there is no doubt that the modern musical life does not tend to longevity. Our oldest musicians — such as Manuel Garcia, who has just celebrated his one hundred and first birthday, or August Manns, who is just twenty years younger — are not among those who have shared in the modern system of rush. Their nerves were not shattered at forty and they had not to retire from work at an early age. The name of a Mr. James Robson was mentioned recently as a man of ninety-six years of age who, until a few days ago, was teacher of vocal music at the Hutcheson school for boys at Glasgow. He resigned his appointment with the words: "I find there is no help for it but to acknowledge that like others I am growing old." These examples are, of course, exceptions to the general rule, and one might reasonably suppose that the examples of breakdown are exceptions also, if they were not all too frequent in these days. There is MacDowell, for example, whose case has excited so much sympathy in both continents, and Paderewski, who, every one is glad to hear, has now quite recovered from his illness of last year and has finished his new opera, which will probably be produced in Paris or Vienna. It is reported that Paderewski will soon reappear on the concert platform at a series of concerts in Italy.

It is said also that Nikisch finds his health not sufficiently strong for all he has undertaken, and that he has resigned the direction of the Leipsic Opera House. However, when one man is at the same time director of the Leipsic opera and of the Conservatoire, and conductor of the Gewandhaus concerts as well as of the Berlin Philharmonic and the new Concert Orchestra at Hamburg, his health may well be expected to compel him to give up something. Again Weingartner has announced his intention of retiring entirely from public life on the score of impaired health. The modern musician may well feel some little discouragement, and the news of the death of Arenski at the early age of forty-four is calculated to add still more to his melancholy forebodings were it not for veterans such as I have just mentioned and others like Saint-Saëns and Joachim, who still continue to lead the strenuous life.

The month's news from Paris includes accounts of a very successful piano recital by Ferruccio Busoni, two appearances of Madame Schumann-Heink with Colonne, and a cycle of Beethoven programs at the Lamoureux concerts.

At the Opéra the rehearsals for the production of Massenet's *Ariane* (poem by Catulle Mendès) have begun, with the following principals: Lucienne Bréval, Louise Grandjean, Lucy Arbell, Muratore, and Delmas. At the Opéra-Comique is to be recorded the production of *Aphrodite*. The receipts of the first performance are to be devoted to the fund for the relief of the sufferers at Courrières.

The opera in rehearsal is Massenet's *Marie Madeleine* with the following cast: Ackté as the Magdalen, Cocyte as Martha, Salignac as Jesus, and Dufranne as Judas. The work has already been staged recently at Reims with very great success. One of the latest additions to the *personnel* of the Opéra is Geraldine Farrar, who is forsaking Berlin for Paris with a three-years contract, and will make her début in Capoul's opera *Clown*.

Paris will very soon be able to decide as to the success or otherwise of the musical salon which has just been arranged in connection with the annual exhibition of pictures by the Société Nationale des beaux Arts. The jury of thirty-eight eminent musicians, headed by Camille Saint-Saëns, Gabriel Fauré, Vincent d'Indy, Claude Debussy, Alfred Bruneau, Messager, Charpentier, Leroux, Widor, and Colonne have with much difficulty, and be it whispered, many differences of opinion, selected a hundred works for performance. Every Wednesday and Friday afternoon a program chosen from these works will be presented. It is a most interesting experiment, and has at least the merit of novelty.

Berlin has now a Russian opera company at the Theater des Westens performing *Nero*, *The Demon*, and *Macchabées* of Rubinstein, with other works by Tschaikowsky, Seroff, and Dargomyski.

In St. Petersburg, musical life is beginning to be resumed in normal fashion. There are to be two opera companies this season, one at the Petit Theatre and the other at the Conservatoire. A monument to the composer Glinka has recently been inaugurated with much ceremony, and in the presence of the Grand Duke Constantin and the Grand Duchess Miliza Nicolaïevna. Two new operas have been produced at Monte Carlo: Saint-Saëns, *L'Ancêtre* and Bizet's *Don Procopio*, which has waited on the shelf for nearly fifty years.

The Theatre des Westens has also recently produced a most successful new comic opera by Hermann Kirchner, a young Thuringian, and will presently give Richard Strauss' *Salomé*, it is supposed, by way of contrast.

Other new operas have been de Lara's *Sanga* at Nice, which has brought him a commission to set to work on another opera for Madame Calvé, Alfano's *Resurrection* at the Scala, Milan, and Franchetti's *La Figlia di Jorio* at the same theatre, where they have also recently revived *Freischütz*. At Frankfort Widor's new opera, *Les Pêcheurs de Saint Jean*, is now in rehearsal.

SALE OF PIANOS RETURNED FROM RENTAL

This has been one of the greatest years ever known for people to rent pianos in Chicago. All classes of pianos have been in demand—the Steinway, Weber, Krakauer, Washburn, Sterling, Huntington, and many other celebrated pianos, have been used in large numbers. These rented pianos are now being returned in great quantities to the largest Chicago Music House, Lyon & Healy. Their position in the matter is this: These pianos can no longer be classed as new, they must be sold as second hand, no matter how little they may have been used by the persons renting them. Some of them, as a matter of fact, have merely been standing in a private parlor for six months or a year.

If you want one of these pianos or if you think you might be interested, why not drop a postal to Lyon & Healy for particulars? State about the kind of a piano you would like, and they will send you quite a list to look over. On every one of these pianos you are sure to make a large bona-fide saving. Furthermore, you may be certain that any one of these pianos will be exactly as represented, for Lyon & Healy particularly guarantee this fact.

These pianos may be purchased for a small cash payment and easy monthly payments when desired. Write in the near future for the list to Lyon & Healy, 28 Adams Street, Chicago.

Popular Piano Music

A new catalog containing a selected list of galops, marches, two-steps, mazurkas, polkas, schottisches, waltzes, and salon music. Of the more popular numbers the first pages are given in miniature.

Copies will be sent, post-paid, to any address on request.

OLIVER DITSON COMPANY, Boston

Beautiful Spanish-Californian Folksongs

Two love songs: "The Hours of Grief," and "The Black Face." English words. Harmonized by Arthur Farwell. All the charms of Spanish rhythm and melody. Price, 50c. Send for catalog.

Twenty Quartets
For Men's Voices
By ALFRED WOOLER

This new collection consists of numbers suitable for many occasions. Comic songs, love songs, and patriotic songs, are well represented. Three of the selections, "The Fadeless Union Blue," "Our Soldier Dead," and "Sleep, Comrades, Sleep," are especially appropriate for Memorial Day. There are also two Scottish songs, a cradle song, and a characteristic boat song. All of the numbers are to be sung without accompaniment, and the interest is well distributed among the different parts. None of the songs are beyond the capacity of the average quartet or glee club.

For appropriateness and beauty of both text and music, and for effectiveness as program numbers this collection can be recommended to every organization of men singers as one of the most interesting novelties of the season.

Copies sent for examination. **Price, post-paid, 50 cents**

ELSON'S Music Dictionary

By LOUIS C. ELSON

Professor of Theory of Music at the New England Conservatory of Music

OVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation.* By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rachh-*mahn*-nee-noff.

In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music, are the following:

Rules for pronouncing Italian, German, and French.

A list of popular errors and doubtful terms in music.

A list of prominent foreign composers and artists, with their chief works, the pronunciation of their names, and the date of their birth, etc.

A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.

The book comprises 306 pages and is bound in serviceable cloth covers.

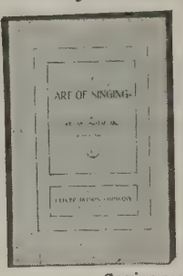
The Art of Singing
By WILLIAM SHAKESPEARE



This work is a modern exposition of the principles which were practiced and perfected by the Italian masters before the influence of instrumental music caused the study of the voice on its own account to be neglected. Breath control and the production of the voice and registers are dealt with in a thorough and scientific manner and their application illustrated by photographs and exercises.

Published in three volumes.
Price, each, post-paid, $1.00.

Mass in C (No. 6)

For Women's Voices

By A. MONESTEL

Missa Immaculatae Conceptionis

For Mixed Voices

By ARTHUR F. M. CUSTANCE

In these works all the conditions of the Motu Proprio have been complied with. There are no extended introductions or interludes for the organ nor repetitions in the text. In the "Gloria" and "Credo" the choir begins with the words "Et in terra pax" and "Patrem Omnipotentem," instead of repeating the words sung by the priest.

Both masses are melodious and not difficult. The former is for two-part chorus and is intended for convents and for women's and children's choirs. In the latter the treble parts, if desired, may be sung by boys' voices.

GILBERT'S RESPONSES

Revised and Edited by HANS LICHTER

Those numbers which in its original form were relatively uninteresting have been omitted in the present edition of this popular collection of Responses. The remaining numbers have been carefully revised, and many new ones have been added. There are fifty responses in all; three for men's voices, two for women's voices, and the remainder for mixed voices.

CONTENTS

Abide with Me	*Joseph Barnby*	Inspirer and Hearer	*W. C. Williams*

HYMN TO LIGHT

***By* P. A. SCHNECKER**

This work is suitable for performance as a cantata or as a cycle for four voices. It is a setting in eight movements of a poem by Abraham Cowley. Both the text and music are in the style of Liza Lehmann's "In a Persian Garden," and it may be given effectively by singers of average proficiency. There are solos for the four voices, also a duet for soprano and alto. The accompaniment is for the piano or organ. The time required for performance is twenty-five minutes.

THE GENIUS

By MARGARET POTTER
Author of "The House of de Mailly," Etc.

¶ A novel of stirring plot, and yet a striking presentation of the artistic temperament in its most interesting phases. The story is based upon the life of a famous Russian composer, the sensitive, gifted son of a powerful, iron-handed government official. His career is a strange and deeply moving tale of shifting fortunes, dramatic episodes, and final artistic triumphs.

MUSIC STANDS

for the STUDIO and the HOME

There has been a demand in the past for MUSIC STANDS of quality, and we have encouraged with all our might the manufacture of an improved product. The Stands described on this page represent what we consider the most artistic, and carefully worked out designs presented to Music Lovers, up to the present time.

The adjustable desk, with patent brass tilting attachments, make it possible to incline the Stands when in use to any angle. Besides being of beautiful design these Stands are all substantially built with a desire to make them wear well and last long, as well as being ornamental in any Studio or Home.

AMERICA'S MUSICAL STRING HOUSE

Cosmopolitan School of Music and Dramatic Art

AUDITORIUM BUILDING, CHICAGO

Students Enrolled at Any Time

Special Summer Session of Five Weeks Begins June 25th, Fall Term Opens September 10th

Piano Department, Victor Hienze, Jeannette Durno-Collins, Howard Wells, Mrs. Bruno Steindel, Mrs. Howard Wells, Dr. N. J. Elsenheimer, Daisy Waller, Lillian Dawes, Isaac Levine, Vivian Scott, Edith Laver, Grace Sloan, Laura Smith, and Olive E. Atwood. Vocal Department—Minnie Fish-Griffin, L. A. Torrens, Mrs. Willard S. Bracken, Charles Sindlinger, William Beard, Hanna Butler, Mrs. L. A. Torrens, Jennie Thatcher Beach, and Marion Green. Harmony, Composition, and Lectures—Dr. N. J. Elsenheimer. Violin—Leopold Kramer, Franz Esser, and Fritz Itte. 'Cello—Bruno Steindel. Harp—Enrico Tramonti. Organ—Clarence Dickinson. Chamber Music—Franz Esser. Public School Music—Margaret M. Salisbury. Foreign Languages—Ernest Sicard and Mina Pfirshing. Donald Robertson, Director of Dramatic Art Department; Eloise B. MacMinn, Assistant.

Donald Robertson, the eminent actor and producer of plays, will be the director of the new and permanent theatre, called the "Players' Theatre," an organization devoted to educational influences of dramatic art, the promotion and welfare of players and the maintenance of high standards in the profession. This theatre will open in August.

As the school controls its own recital hall the pupils will be afforded the opportunity of hearing numerous concerts, recitals, and lectures, including six chamber music concerts, three by the Steindel Trio, composed of Mr. and Mrs. Bruno Steindel and Fritz Itte; and three by the Chicago String Quartet, composed of Leopold Kramer, first concertmaster; Ludwig Becker, second concertmaster; Franz Esser, first viola, and Bruno Steindel, first 'cellist, of the Theodore Thomas Orchestra.

The artist teachers in this school will be available for concerts and recitals under the direction of the Dunstan Collins Musical Agency. This agency will also assist pupils of the school in securing professional engagements and positions free of charge.

Secular Songs

HIGH VOICE

GILBERT, HENRY F. PRICE
Croon of the Dew. [D min.] [d to F]..... 60
Rich and unusual harmonic structure and poetic fancy characterize this interesting song.

MEDIUM VOICE

ALDRICH, PERLEY DUNN
The Dream of the Rose. [G] [d to E]..... 60
New edition for high voice of a popular song in simple melodious vein.

BULLARD, FREDERIC FIELD
My Wife. [B♭] [f to F]..... 60
A noble song, strong in structure and virile in emotion; a worthy setting of Stevenson's tribute to his wife.

ROECKEL, J. L.
In Love's Garden. [F] [d to F]..... 50
Graceful melody, a simple, playable accompaniment, and good vocal style are united in this useful lyric.

LOW VOICE

BULLARD, FREDERIC FIELD
My Wife. [B♭] [f or a to D]..... 60
(See above.)

COLERIDGE-TAYLOR, S.
Once Only. [D] [b to E]..... 60
A dramatic, vigorous setting of verses by Stevenson, strongly thematic in structure and broad in treatment.
She rested by the Broken Brook. [E♭] [b♭ to E♭]... 60
In lyric style, emotionally appealing, expressive, and admirable in detail. Verses also by Stevenson,

COWLES, EUGENE
Dear, did You Know? [F] [a to D]..... 50
An eminently singable, sentimental song, somewhat in the popular style, but very attractive and well written.

GILBERT, HENRY F.
Croon of the Dew. [B Min.] [b to D]..... 60
(See above.)

Sacred Songs

LOW VOICE

COWLES, EUGENE
Spacious Firmament, The. [F] [f or a♭ to C, E, or F].. 60
A broad and dignified setting of Addison's hymn, strong in rhythm and direct in character.

BASS VOICE

COWLES, EUGENE
Remember now Thy Creator. [E♭] [G to *c*]..... 60
A setting in serious and elevated style of stately scriptural text. The voice part is very singable and effective, moving in a sort of lyric recitative.

Piano Solos

ALETTER, W.
English March (Marche Anglaise). [C] [II]..... 50
A fine footstep rhythm. The trio has a songful melody in the left hand.
Love Song (Chant d'Amour). [C] [II]..... 30
Useful melodic study for the left hand, which carries the air throughout, simply accompanied by the right.

Piano Solos—Continued

PRICE
Music Box. [C] [II]..... 60
Both hands in the high treble clef throughout. The writing is largely two-voiced, and the little piece is entertaining and original.
Valse de Salon. [C] [II-III]..... 60
Simple single-voiced melody for each hand, regularly accompanied.
Valsette. [F] [II]..... 30
Useful study in phrasing a slow melody.
White Rose. (Valse Lyrique.) [F] [II-III]..... 60
Varied in style, at once lyric and rhythmic.

SCHMOLL, ANTON
Children's Round Dance. [C] [II]..... 30
Brightly melodious piece in tripping rhythm.

VINCENT, CHARLES
A Hailstorm. [F] [IV]..... 60
An excellent and interesting wrist study in the form of a characteristic piece.
Piquancy. (Rhythmic Sketch.) [F]..... 60
Fluent and melodious piano piece of moderate difficulty.

Piano Duet

KLEMMER, MARTIN
Love's Confession. [C]..... 60
A melodious, sentimental salon piece in effective four-hand arrangement.

Organ Compositions

ABERNETHY, FRANK N.
Postlude, in E♭. [E♭]..... 50
Fine, stately march rhythm.

BARNARD, ERNST W.
Nuptial March. Op. 8. [E♭]..... 60
Brilliant and vigorous, with songful trio.

BRAGA, GAETANO
Angels' Serenade (La Serenata). (Transcribed by Edwin M. Lott.) [F]..... 50
Excellent transcription of a beautiful song.

CHOPIN, FRÉDÉRIC
Eleventh Nocturne. (Transcribed by Edwin M. Lott.) [G Min.]..... 50
The beautiful composition containing the so-called chant of the monks; very effective for organ.

GOUNOD, CHARLES
Lovely appear over the Mountains. (From "The Redemption." (Transcribed by George C. Martin.) [E]..... 50
Pure and elevated melody; very devotional.

HARRIS, CUTHBERT
Postlude, in D. [D]..... 50
Vigorous, pompous march of medium difficulty.

JACKSON, B.
Prelude, in F. [F]..... 50
In 6-8 rhythm, and rather pastoral in character.

MEALE, JOHN ARTHUR
Eventide. Op. 24. [A♭]..... 50
Quiet, devotional composition of simple structure.

MENDELSSOHN, FELIX
Song without Words (Consolation). (Transcribed by Hans Lichter.) [E]..... 40
A very effective transcription; not difficult.

RAFF, JOACHIM
Cavatina. (Transcribed by Edwin M. Lott.) [D].. 50
A famous melody, which translates well into the idiom of the organ.

STEANE, BRUCE
Angelus. Op. 106. [A]..... 40
Devotional, quiet number, very suggestive in registration.
Intermezzo. [A♭]..... 40
Easy, melodious, and churchly composition.

Organ Compositions—Continued

WACHS, PAUL PRICE
Triumphal March (Entrée Triomphale). [E♭]..... 50
Stately and stirring number, containing interesting pedal passages.

Mandolin Orchestra

BOREL-CLERC, CH.
La Sorella: (Spanish March.) (Arr. by H. F. Odell.) 50
The very popular new characteristic march.

ROLLINSON, T. H.
Sobre La Plaza (On the Plaza). (Mexican Dance.) (Arr. by H. F. Odell)..... 60
Characteristic piece in Spanish style.

Piccolo or Flute Solo

BEEDLE, KARL R.
The Redbird. (With Piano Accompaniment)..... 90
Brilliant and showy solo number.

OCTAVO EDITION

(PLEASE ORDER BY NUMBER)

Anthems for Mixed Voices

STORER, H. J.
No. 11,499. **The Day is Past and Over.** (Short Hymn-Anthem for Even Song.) (With Soprano Solo)..... 12
Well-harmonized, quiet number, with short solo passage.

Part-song for Mixed Voices

FORD, JAMES S.
No. 11,491. **Why?**..... 08
Short and simple number, with amusingly ridiculous words.

Part-song for Men's Voices

DRESSLER, LOUIS R.
No. 11,497. **My Laddie**..... 12
Effective, though not taxing for the voices, and very melodious.

Part-songs for Women's Voices

CLOUGH-LEIGHTER, H.
No. 11,501. **The Butterfly Chase.** (Trio Capriccio).. 20
A brilliant and broadly conceived number of some length. Highly original and impressive, with important piano part.

HERMES, E.
No. 11,486. **The Lonely Rose.** (Three-part Song).. 10
Simply melodious, with flowing accompaniment.

MANNEY, CHARLES FONTEYN
No. 11,498. **Orpheus with His Lute.** (Trio)..... 12
Effective transcription of a successful and original song. With independent piano part.

PUBLISHERS' NOTES

FANTASY PIECES BY SCHUMANN

The eight splendid tone pictures which together compose the *Phantasiestücke* (*Fantasy Pieces*), Op. 12, were written in 1837 and belong to Schumann's earlier period,—the period of his most genial, sometimes even boisterous humor, of his most emotional dreaming. Broader in conception than the *Davidsbündlertänze* with which they were contemporaneous in composition, they approach, perhaps they realize, the ideal of delicate piano creations. The soulful *Des Abends* (*At Evening*); the passionate and stormy *Aufschwung* (*Soaring*); the tender, heart-felt *Warum* (*Why*); the *Grillen* (*Whims*), full of humor; the deeply fanciful *In der Nacht* (*In the Night*), which attains the height of art; the *Fabel* (*Fable*) with its strongly contrasted emotions; the poetic *Traumswirren* (*Restless Dreams*); and the genial *Ende vom Lied* (*Epilogue*): in these exquisite products of his genius the great tone poet shows himself in his most characteristic and compelling moods. It is the Schumann of the *Papillons* who stands before us again in the *Phantasiestücke*, but with more profound emotional depth, greatly enriched expression and ripened art. The occasional harsh crudities in melody and harmony have vanished; and the spirit of romance breathes a subtle perfume over all, whether it be daring humor or tender reverie which finds wondrous utterance.

We are about to issue a new edition of Schumann's *Fantasy Pieces*. It will be edited by Xaver Scharwenka, and will be No. 81 of the Ditson Edition. The book will contain a biographical preface by Charles Fonteyn Manney.

The price of the book will be 50 cents, but in advance of publication we offer it for 20 cents, which includes postage if cash accompanies order.

THE FIRST SIX MONTHS ON THE ORGAN

It is said that Mendelssohn acquired his remarkable mastery of the organ by diligently practicing the great concert fugues of Bach. Such a heroic measure is of course out of the question with the average beginner. Contrapuntal studies, however, are absolutely necessary for the attainment of perfect control of the hands and feet.

The First Six Months on the Organ by George E. Whiting serves as an introduction to the instrument for those who have studied the piano. The work was first published over thirty years ago. It consisted of twenty-five studies and was designed for the organ course at the New England Conservatory of Music.

A new edition of *The First Six Months on the Organ* is now in preparation. It will contain five additional studies. Some of the numbers in the first part of the book have been transposed, and notation of smaller value has been used in several exercises in order to facilitate reading. The registration and fingering have been altered so as to better adapt the work to the average church organ of the present day.

These studies may be used on two or three manual organs. The pedal parts are not difficult. A preface has been provided by the author containing advice to young organists and suggestions as to the use of stops.

The book will be No. 100 in the Ditson Edition and the price will be $1.50. In advance of publication we offer copies for 60 cents, which includes postage if cash accompanies order.

REED ORGAN SELECTIONS FOR CHURCH USE

Reed Organ Selections for Church Use, compiled and edited by Hans Lichter, will contain pieces suitable for ordinary use or special occasions. There will be thirty selections in all, including many well-known compositions which have not been available heretofore for this instrument. The collection will also prove of value to teachers.

Until publication the special introductory offer of 25 cents will remain open. This includes postage if cash accompanies orders. The regular price will be 50 cents.

CLOTH-BOUND BOOKS AT HALF PRICE

Of the following cloth-bound books we have on hand a large surplus stock, which we offer to our readers at one half the retail price:—

Songs of Ireland, new and revised edition; sixty-six airs, including the most beautiful vocal compositions of Moore, Lover, Molloy, Benedict, Crouch, Balfe, and others.

Comic and Minstrels Songs, containing forty-six popular numbers. These songs are not of the "rag-time" variety, but are suitable for parlor entertainments and concerts of a high character.

Operatic Piano Collection, containing selections from nineteen operas, including *Carmen*, *Faust*, *Martha*, *Il Trovatore*, *La Traviata*, *Tannhäuser*, and *Lohengrin*; arranged by Beyer, Cramer, Dorn, Spindler, and others.

Popular Dance Collection, Vol. II, containing waltzes, galops, marches, schottisches, polkas, etc.; twenty-five selections suitable for dancing and as solos for occasional playing.
